The process and improvement targets have been chosen based on the project goals of chronic care self-management, care transitions, self-management goal setting, and a community based coordinated system of care. Clinically healthy range for HbA1c is less than 5.7 %, values between 5.7% and 6.4% are considered pre-diabetes and values higher than 6.4 are referred to as diabetes. For a diabetic patient, it is recommended to maintain the HbA1C level below 6.5-7 % [(1).] HbA1C indicates how well one is controlling the blood sugar over the last 60-90 days, which helps the patients and their care providers to adjust the diet, physical activity and medication accordingly. HbA1C is also considered as the' gateway' to care for individuals with type-2 diabetes. This projectinvolves establishing a comprehensive Diabetes Wellness Center will offer a community based center in an underserved community with one of the highest incidence of diabetes.

According to the *Houston Hospitalizations at a Glance Report,* chronic conditions accounted for 78% of all adult preventable hospitalizations in Houston, with 26% of those being related to diabetes. This same report indicates that in Council District D, (most consistent with the targeted service area of the DAWN Center) the annual average cost of adult preventable hospitalizations for District D is $69,644,160 (the highest annual average cost for any District). Additionally, 22% of adult preventable hospitalizations in District D are diabetes-related. City Council District D has the second highest number of preventable diabetes hospitalizations (2,420). It also has the highest average cost per discharge of adult preventable hospitalizations by Council District ($32,038).

Additionally, the literature (*Economic Costs of Diabetes in the U.S. in 2007,Diabetes Care31: 596-615, 2008*) indicates that a program similar to the Diabetes Awareness and Wellness Network (DAWN) Center that focuses on enhanced education, physical activity, self-management education, hemoglobin A1C tracking and monitoring, BMI measurements, behavioral change coaching, and case management can reduce costs based on less hospitalizations, decrease in loss of productivity decrease in absenteeism, and decrease in unemployment from disease-related disability.

(1) American Diabetes Association. Diabetes Statistics. Website. 2010. http://www.diabetes.org/diabetes-basics/diabetes-statistics/

Outcome Measure Valuation:

The Outcome measure was valued at 11.67% of the overall assigned project value for the associated Category 2project in year 3, 11.67% in Year 4 and 11.67% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

HDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4)Cost Avoidance 5) Partnership Collaboration and 6)Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-

occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease , 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDHHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. DAWN received a composite Prioritization score of 7.10 and a Public Health Impact score of 7.

<u>Title of Outcome Measure (Improvement Target):</u>IT-9.4 Other Outcome Improvement Target; (Non emergent ER visits and hospitalizations in Sobering Center Participants)

<u>Unique RHP Outcome identification number(s):</u>0937740-08. 3.9

<u>Outcome Measure Description:</u>
IT – 9.4 Other Outcome Improvement Target (Non emergent ER visits and hospitalizations in Sobering Center Participants)
Rate: Preventable admissions to ER and hospitals due to non emergent alcohol/other substance use intoxication symptoms in Sobering Center Participants in previous 6 month period
The performing provider, along with its partner, the Houston Police Department will establish a short-term care facility called the "Sobering Center", designed as a medically supervised location to transport and house individuals who are under the influence or alcohol or other substances. Many of these individuals would either travel to or are taken to the emergency room for follow up care and the Sobering Center will serve as an alternative to a non emergent ER Visit. Others recycle through the criminal justice system due to non emergent Alcohol or Drug disorder (and frequently, comorbid other mental health conditions). The Sobering Center offers an alternative that saves health care system costs. The individual will remain at the Sobering Center until they are sober enough to safely return to the community. Prior to discharge from the center, every individual will be offered alcohol and/or drug treatment options tailored to their specific needs and followed up to ensure appropriate utilization of care according to protocol.
Data Source: Program Data System
Project Milestones:

- DY2: [P-X1]: Development of Outreach and Education Plan to Target population
- DY 3
  - P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve
  - P-5: Milestone: Disseminate lessons learned and best practices

Outcome Improvement Target(s) for each year:

- DY 4:
  - IT-9.4 Other Outcome Improvement Target
    - Reduce rate of all ER visits or hospitalization related to intoxication or substance use that are non emergent by 2% over baseline among program participants during a 6 month period
- DY 5:
    - IT-9.4 Other Outcome Improvement target
    - Reduce rate of all ER visits or hospitalization related to intoxication or substance use that are non emergent by 4% over baseline among program participants during a 6 month period.

<u>Rationale:</u>
We chose our outcome measure from outcome domain "Right Setting Right Care" under Other Outcome Improvement target. We will be measuring **preventable admissions to ER/ hospitals/criminal justice setting due to non-emergent alcohol/other substance use intoxication** as our outcome indicator. Frequent visits to the emergency room is an indicator of alcohol or drug disorders and mental illness, according to a report by DSHS Research and Data Analysis Division in Washington State. This study reports that **55 percent** of clients who visited the ER 21 times or more in Fiscal Year (FY) 2002 had diagnoses **of both an Alcohol or Drug**

(AOD) disorder and mental illness An additional 7 percent of the most frequent ER visitors had an AOD disorder only and 23 percent had a mental illness only. Only 15 percent of the most frequent ER visitors had no indication of an AOD disorder or mental illness. Few Frequent Emergency Room Visitors With Alcohol Or Drug Disorders Receive AOD Treatment www.dshs.wa.gov/pdf/ms/rda/research/11/119-31.pdf.

The Sobering Center will provide a cost-effective alternative to using **ER/ hospitals/criminal justice settings** for non-emergent AOD disorders (frequently with comorbidity such as mental illness), at no cost to the patient. Other cities adopting such sobering centers have seen reductions in arrests and jail time for these offenders, as well as fewer emergency room and hospital check-ins for this often indigent population, on top of the cost savings found in jail bed diversions. This approach is more effective because it addresses the underlying issue of alcohol and or other substance abuse inherent in most public intoxication offenses. A 2003 study on the Impact of the San Diego Serial Inebriate Program on Use of Emergency Resources concluded that the program reduced the use of EMS, Emergency Department and inpatient resources by individuals who were repeatedly intoxicated in public. By using patient care navigators and assisting patients to get appropriate care and referrals as necessary, there is less of a burden on the health care system.

Outcome Valuation

The Outcome measure was valued at 9.04% of the overall assigned project value for the associated Category 2 project in year 3, 9.04% in Year 4 and 9.04% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

HDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs, 4)Cost Avoidance, 5) Partnership Collaboration, and 6)Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease , 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDHHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. The Care Houston Links Program received a composite Prioritization score of 5.35 and a Public Health Impact score of 6.

DRAFT

Title of Outcome Measure (Improvement Target): IT-8.2 Percentage of Low Birth- weight births (CHIPRA/NQF # 1382)263 *(Standalone measure)*

Unique RHP Outcome identification number(s): 0937740-08.3.10

Outcome Measure Description:

IT-8.2 Percentage of Low Birth- weight births (CHIPRA/NQF # 1382)263 ***(Standalone measure)***

Numerator: The number of babies born weighing <2,500 grams at birth enrolled in NFP program

Denominator: All births of women enrolled in NFP program

Process Milestones:

- DY2:
  - P – 2: Establish Baseline
  - P-3: Develop and test Data systems
  - P – 1: Project Planning
- DY 3:
  - P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve
    - Metric: Document use of PDSA in planning process
  - P-5: Milestone: Disseminate lessons learned and best practices
    - Metric 1: Documentation of best practices and lessons learned

Outcome Improvement Targets for each year:

- DY 4:

  IT-8.2 Percentage of Low Birth- weight births (CHIPRA/NQF # 1382)263 *(Standalone measure)*
  - Reduce Low Birth Weight Births by 2% over baseline
- DY 5:

  IT-8.2 Percentage of Low Birth- weight births (CHIPRA/NQF # 1382)263 *(Standalone measure)*
  - Reduce Low Birth Weight Births by additional 4% over baseline

Rationale:

The outcome measure selected for this program was Percentage of Low Birth Weight Births. This outcome was selected because:

Pre-term birth is defined as babies born alive before 37 weeks of pregnancy is completed. Being born too soon places the life of the baby in a precarious position. According to the World Health Organization, pre-term birth is the leading cause of newborn deaths (death during the first 4 weeks of life) and the second leading cause of death in children under the age of five. Many cost effective strategies have been identified to reduce pre-term birth and produce better birth outcomes such as home visitation programs and other interventions.

Nurse Family Partnership is one such evidence based home visitation program that has demonstrated better birth outcomes and better outcomes for the new mother by providing care before, during and after pregnancy. According to the Nurse Family Partnership website, data from the 1990 Nurse Family Partnership (NFP) Memphis trial noted that the NFP nurse-visited families gained academic and employment skills to become economically self-sufficient.

According to this analysis, NFP services resulted in lower enrollment in Medicaid and Food Stamps, with a 9% reduction in Medicaid costs and an 11% reduction in Food Stamps costs in the 10 years following the birth of the child. Federal savings were estimated at 154% of costs, yielding a net 54% return on the federal investment.

Outcome Measure Valuation:

The Outcome measure was valued at 11.75% of the overall assigned project value for the associated Category 2 project in year 3, 11.75% in Year 4 and 11.75% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

HDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4)Cost Avoidance 5) Partnership Collaboration and 6)Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease , 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDHHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. NFP received a composite Prioritization score of 6.95 and a Public Health Impact score of 7.

Title of Outcome Measure (Improvement Target): IT-8.1 Timeliness of Prenatal/Postnatal Care45 (CHIPRA Core Measure/NQF #1517)

Unique RHP Outcome identification number(s): 0937740-08.3.11

Outcome Measure Description:

IT-8.1 Prenatal/Postnatal Care45 (CHIPRA Core Measure/NQF #1517) (Non-standalone measure)

Numerator: Deliveries of live births for which women receive the following facets of prenatal and postpartum care: Received a prenatal care visit as a member of the organization in the first trimester or within 42 days of enrollment in the organization.

Denominator: Deliveries of live births between November 6 of the year prior to the measurement year and November 5 of the measurement year

Process Milestones:

- DY2:
    - P – 2:Establish Baseline
    - P-3: Develop and test Data systems
    - P – 1: Project Planning
- DY 3
    - P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve
        - Metric: Document use of PDSA in planning process
    - P-5: Milestone: Disseminate lessons learned and best practices
        - Metric 1: Documentation of best practices and lessons learned

Outcome Improvement Targets for each year:

- DY 4:
    - IT-8.1 Timeliness of Prenatal/Postnatal Care262 (CHIPRA Core Measure/NQF #1517) (Nonstandalone

      measure)
        - Increase the percentage of women receiving timely prenatal and postnatal careby 5% over baseline
    - IT-8.1 Timeliness of Prenatal/Postnatal Care262 (CHIPRA Core Measure/NQF #1517) (Nonstandalone

measure)

- Increase the percentage of women receiving timely prenatal and postnatal careby 10% over baseline

Rationale:

The outcome measures selected for this program was Timeliness of Prenatal Care. This outcome was selected because:

Provision of timely and adequate recommended prenatal care is extremely important to improve birth outcomes in low-income women who may typically not have access to regular primary and preventive care. Prenatal care given starting the first 3 months of pregnancy can have an impact on the health of the baby as well as the mother. Access to early prenatal care By allowing women and providers to identify and address health problems and behaviors that may cause particular harm during early fetal development, first-trimester prenatal care can lead to improved outcomes, according to the US Department of Health and Human Services. Early prenatal care is likely to matter most for women who are at elevated risk of poor birth outcomes due to smoking, poor nutritional status, HIV-positive status, or other serious health problems prior to pregnancy.

Extensive evaluation of the NFP program indicates that it is predictive of better birth outcomes, including fewer pre-term births. According to the Nurse Family Partnership website, data from the 1990 Nurse Family Partnership (NFP) Memphis trial noted that the NFP nurse-visited families gained academic and employment skills to become economically self-sufficient. According to this analysis, NFP services resulted in lower enrollment in Medicaid and Food Stamps, with a 9% reduction in Medicaid costs and an 11% reduction in Food Stamps costs in the 10 years following the birth of the child. Federal savings were estimated at 154% of costs, yielding a net 54% return on the federal investment.

Outcome Measure Valuation:

The Outcome measure was valued at 11.75% of the overall assigned project value for the associated Category 2 project in year 3, 11.75% in Year 4 and 11.75% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

HDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs, 4) Cost Avoidance, 5) Partnership Collaboration, and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease , 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDHHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. NFP received a composite Prioritization score of 6.95 and a Public Health Impact score of 7.

DRAFT

Title of Outcome Measure (Improvement Target): IT-12.3 Colorectal Cancer Screening

Unique RHP Outcome identification number(s): 0937740-08.3.12 / Pass 2

Outcome Measure Description:
IT-12.3 Colorectal Cancer Screening
Number of adults aged 50-75 years of age that received colorectal cancer screening by FOBT in target zip codes.

Process Milestones:
DY2:

- P-3: Develop and test data system

DY3:

- P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve program
- P-5: Milestone: Disseminate lessons learned and best practices

Outcome improvement targets for each year:
DY4:

- IT-12.3 Colorectal Cancer Screening: Increase by 2% over baseline the number of people in target population that were screened for CRC by FOBT each year, in accordance with screening guidelines.

DY5:

- IT-12.3 Colorectal Cancer Screening: Increase by 5% over baseline the number of people in target population that were screened for CRC by FOBT yearly, in accordance with screening guidelines.

Rationale:
Screening for cancer implies testing for early stages of disease before symptoms occur. It involves application of an early detection test to a large number of apparently healthy people to identify those having unrecognized cancer. People with positive screening tests are subsequently investigated with diagnostic tests and those with confirmed disease are offered appropriate treatment and follow-up. The objective of screening is to reduce incidence of and/or death from cancer by detecting early preclinical disease when treatment may be easier and more effective than for advanced cancer diagnosed after the symptoms occur. It is important to evaluate the efficacy of a given screening approach to reduce disease burden, harm and cost, as well as its overall cost-effectiveness, before it is considered for widespread implementation in large population settings. The only justification for a screening program is early diagnosis that leads to a cost-effective and significant reduction in disease burden.

Outcome Measure Valuation:
The Outcome measure was valued at 18.63 % of the overall assigned project value for the associated Category 2 project in year 3, 18.63% in Year 4 and 18.63 % in Year 5. HHDHS utilized the following method to determine the Category 2 project value.
HDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the

DRAFT

following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4)Cost Avoidance 5) Partnership Collaboration and 6)Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease , 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDHHS gave the Prioritization score a weight of 50% and the Public Health Impact score a weight of 50% to determine the overall project value for the plan. CRC received a composite Prioritization score of 2.29 and a Public Health Impact score of 2.29.

<u>Title of Outcome Measure (Improvement Target):</u> IT-11.3 Improve utilization rates of clinical preventive services (testing, preventive services, treatment) in target population with identified disparity

<u>Unique RHP Outcome identification number(s):</u> 0937740-08.3.13 / Pass 2

<u>Outcome Measure Description:</u>
IT-11.3 Improve utilization rates of clinical preventive services (testing, preventive services, treatment) in target population with identified disparity.
Increase utilization of preventive services among individuals enrolled in the COCAS program.

Process Milestones:
DY2:

- P-X1: Establish partnerships and protocol for COCAS project for follow up after FOBT screening.

DY3:

- P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve program
- P-5: Milestone: Disseminate lessons learned and best practices

Outcome improvement targets for each year:
DY4:

- Increase utilization rates of clinical preventive services by 5% (testing, preventive services) in target population with identified disparity over baseline.

DY5:

- Increase utilization rates of clinical preventive services by 10% (testing, preventive services) in target population with identified disparity over baseline.

<u>Rationale:</u>
Screening for cancer implies testing for early stages of disease before symptoms occur. It involves application of an early detection test to a large number of apparently healthy people to identify those having unrecognized cancer. People with positive screening tests are subsequently investigated with diagnostic tests and those with confirmed disease are offered appropriate treatment and follow-up. Title of Outcome Measure (Improvement Target): IT-9.4 Other Outcome Improvement Target (Right Care, Right Setting)

Unique RHP Outcome identification number(s): 0937740-08.3.14 / Pass 2

Outcome Measure Description:
IT-9.4 Other Outcome Improvement Target (Right Care Right Setting) – Reduce ER use in homeless population enrolled in program
Numerator: Number of non-emergent ED visits for target population served by the program in past 12 months
Denominator: Total number of target population served by the program in past 12 months

Process Milestones:
DY2:
- P-X1 Needs Assessment to determine number and types of needs of the target population

DY 3:
- P-4 Metric: Conduct Plan-Do-Study-Act
- P-5 Milestone: Disseminate findings, lessons learned and best practices

Outcome Improvement Targets for each year:
DY 4:
- IT-9.4 Other Outcome Improvement Target
  - Metric: Reduce non emergent ED usage in program participants by 5% over baseline

DY 5:
- IT-9.4 Other Outcome Improvement Target
  - Metric: Reduce non emergent ED usage in program participants by 10% over baseline

Rationale:
The outcome measure chosen for this project under Outcome Domain "Right Setting Right Care" is "Other Outcome Improvement Target. We anticipate that comprehensive navigation and care management will reduce the number of homeless program participants that end up in ER due to any number of comorbidities. This program plans to provide housing, program services, physical and behavioral health services, financial services and other services (peer trainers etc.) to homeless individuals enrolled in the program. Provision of this type of an integrated service to this indigent group with special needs along with follow-up will improve physical and behavioral health outcomes as well as address their acute housing needs.

Outcome Measure Valuation:
The Outcome measure was valued at 11.67% of the overall assigned project value for the associated Category 2 project in year 3, 11.67% in Year 4 and 11.67% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

HDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). Consistent with other participants in the regional partnership, HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1)

Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4)Cost Avoidance 5) Partnership Collaboration and 6)Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease , 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDHHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. Integrated services for the homeless received a composite Prioritization score of 10 and a Public Health Impact score of 10.

Title of Outcome Measure (Improvement Target): IT-7.8 Chronic Disease Patients Accessing Dental Services: Percentage of patients with chronic disease conditions accessing dental services following referral by their medical provider

Unique RHP Outcome identification number(s): 0937740-08.3.15 / Pass 3

Outcome Measure Description:

IT-7.8 Chronic Disease Patients Accessing Dental Services: Percentage of patients with chronic disease conditions accessing dental services following referral by their medical provider

(Standalone measure)

Process Milestones :

- DY 2
  - Develop and test data systems
- DY3:
  - P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve program
  - P-5: Milestone: Disseminate lessons learned and best practices

Outcome improvement targets for each year:

- DY 4:
  - IT-7.8 Chronic Disease Patients Accessing Dental Services: Increase by 5% over baseline percentage of patients with chronic disease conditions accessing dental services following referral by their medical provider
- DY 5
  - IT-7.8 Chronic Disease Patients Accessing Dental Services: Increase by 10% over baseline percentage of patients with chronic disease conditions accessing dental services following referral by their medical provider

Rationale:

The process milestones P4 and P5 were chosen for this project based on the need for documentation of baseline and continuous quality improvements in program for reduction of dental caries. The PDSA cycle will inform systematic data driven program improvements. Inadequate access to dental services compounds other health issues. Chronic diseases and oral diseases share many common risk factors.

Poor oral health can result in untreated dental disease that not only affects the mouth, but can also have physical, mental, economic and social consequences. Severe gum disease is associated with chronic disease and severe health conditions such as diabetes, heart disease, stroke and respiratory disease. Fortunately, many of the adverse effects associated with poor oral health can be prevented with quality on-going dental care, both at home and professionally. Increasing, expanding, and enhancing dental services will improve overall health outcomes in the elderly.

Outcome Measure Valuation:

The Outcome measure was valued at 15.82 % of the overall assigned project value for the associated Category 2 project in year 3, 15.82 % in Year 4 and 15.82 % in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

The HDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4)Cost Avoidance 5) Partnership Collaboration and 6)Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease , 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDHHS gave the Prioritization score a weight of 50% and the Public Health Impact score a weight of 50% to determine the overall project value for the plan. Geriatric Oral Health received a composite Prioritization score of 1.88 and a Public Health Impact score of 1.88.

DRAFT

Title of Outcome Measure (Improvement Target): IT-3.2 Congestive Heart Failure 30 day readmission rate *(Standalone measure)*

Unique RHP Outcome identification number(s): 0937740-08.3.16 / Pass 3

Outcome Measure Description:

IT-3.2 Congestive Heart Failure 30 day readmission rate *(Standalone measure)*

Process Milestones:

- DY 2
  - Develop and test data systems
- DY3:
  - P-4: Milestone: Conduct Plan Do Study Act cycle to continually improve program
  - P-5: Milestone: Disseminate lessons learned and best practices

Outcome improvement targets for each year:

- DY 4:
  - IT-3.2 Reduce Congestive Heart Failure 30 day readmission rate by 10% over baseline.
- DY 5
  - IT-3.2 Reduce Congestive Heart Failure 30 day readmission rate by 25% over baseline.

Rationale:

The process milestones P4 and P5 were chosen for this project based on the need for documentation of baseline and continuous quality improvements in program for reduction of dental caries. The PDSA cycle will inform systematic data driven program improvements. Inadequate access to dental services compounds other health issues.

Congestive heart failure is one of the most common conditions that is associated with rehospitalizations. Each year over 1 million people are admitted to an inpatient setting for HF, and 27% of patients with HF on Medicare are readmitted within 30 days (Jencks, Williams, & Coleman, 2009). For chronic heart failure patients, case management interventions involving telephone follow-up reduce all-cause readmissions and all-cause mortality a year after discharge. Therefore, our outcome measure relates to reducing readmissions due to congestive heart failure.

Some of the reasons identified for re-admissions are nonadherence (medications, diet, self-monitoring, and communication with provider) is a significant problem in patients with heart failure and frequently contributes to morbidity and increased resource utilization.

Outcome Measure Valuation:

The Outcome measure was valued at 84.18% of the overall assigned project value for the associated Category 2 project in year 3, 84.18% in Year 4 and 84.18% in Year 5. HHDHS utilized the following method to determine the Category 2 project value.

HDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4)Cost Avoidance 5) Partnership Collaboration and 6)Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease , 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDHHS gave the Prioritization score a weight of 50% and the Public Health Impact score a weight of 50% to determine the overall project value for the plan. Community Care Transitions received a composite Prioritization score of 10 and a Public Health Impact score of 10.

Columbus Community Hospital

Pass 1

DRAFT

Title of Outcome Measure (Improvement Target): IT-3.1 All cause 30 day readmission rate – NQF 1789 [250] (Standalone measure)

Unique RHP Outcome Identification Number: 135033204.3.1

Outcome Measure Description

OD-3 Potentially Preventable Re-Admissions – 30 day Re-admission rates IT-3.1 All cause 30 day readmission rate – NQF 1789[250] (Standalone measure)

Process Milestones:

- DY2 – P-1
- DY3 – P-3

Outcome Improvement Targets:

- DY4 – IT-3.1
- DY5 – IT-3.1

Rationale:

Telehealth is being implemented at Columbus Community Hospital for the purpose of expanding weekend pharmacist oversight to include Saturdays, Sundays and Holidays. Presently there is no pharmacist coverage on those days. The presence of an oversight pharmacist via telehealth capabilities will lead to a reduction in medication errors. This is a direct relationship to readmission rates which has been increasing and on the last Pepper report (March 2012) had risen to 21.4%.

Improvement measure 3.1 will help us tract the readmission rate for all-cause admissions. The population will only include patients 65 are older.

Outcome Measure Valuation

The addition of the telehealth service is the primary cost in year two and three. This will require implementation and training of the staff to use the service effectively. In subsequent years the hospital will experience a reduction in the rate of unplanned readmissions thereby initiating cost savings to respective payers such as CMS. The total anticipated values are estimated to be (total of years 2, 3, 4, 5).

El Campo Memorial Hospital

Pass 1

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1(1) Percent improvement over baseline of patient satisfaction scores

Unique RHP outcome identification number(s): 131045004.3.1

Outcome Measure Description:

Since this is a new project for El Campo Memorial Hospital, we will use DY 2 & DY 3 to plan the project and establish baseline rates. In DY 4 & DY 5, we will measure IT-6.1 Percent improvement over baseline of patient satisfaction scores specifically related to the measure IT-6.1.1 Patients are getting timely care, appointments, and information. Currently, a patient satisfaction survey does not exist to capture this measure at El Campo Memorial Hospital. Therefore, the baseline will be set at 0. However, we expect to improve this measure by 5% by the end of the waiver.

Rationale:

El Campo Memorial Hospital has selected the process milestones and outcome improvement targets because we are certain if the patient receives timely healthcare and education, they are more likely to continue leading healthy lives and obtaining preventing healthcare on a regular basis which ultimately leads to reduced healthcare costs.

Outcome Measure Valuation:

We considered both the costs and benefits to our organization and community in order to value the Outcome Measure – IT-6.1 Percent improvement over baseline of patient satisfaction scores. We believe it will take DY2 and DY3 to effectively develop and plan the Outcome Improvement Targets in DY4 and DY5. We do not currently perform or contract with a company to perform surveys for outpatient services, but we intend to select a vendor in DY 2. We believe with the improvement in patient satisfaction scores specifically the improvement target of patients getting timely care, appointments and information, this will decrease unnecessary Emergency Room visits, hospital stays, etc. because patients will be receiving the care and attention they need on a consistent and dependable basis. This Outcome Measure will serve the total outpatient service population of El Campo Memorial Hospital, and it will ultimately assist El Campo and the surrounding communities to live healthier lives and be healthier communities.

DRAFT

Fort Bend County Clinical Health Services

Pass 1

DRAFT

Title of Outcome Measure (Improvement Target): IT-9.2 ED appropriate utilization

Unique RHP Outcome Identification Number: 2967606-01 3.1

Outcome Measure Description:
OD- 9 – Right Care, Right setting will be defined as the number of persons with behavioral health crisis who had a preventable visit to emergency rooms (ER)

Process Milestones:
DY2: P-1
DY3: P-2, P-3
DY4: P-4, P-5
DY5: P-4, P-5
Outcome Improvement Target(s) for each year:
DY 4: IT 9.2 Emergency Room visits for target conditions
- Reduce % (TBD) of ER visits for behavioral health/ substance abuse

Dy 5: DY 4: IT 9.2 Emergency Room visits for target conditions
- Reduce % (TBD) of ER visits for behavioral health/ substance abuse

Rationale:
Process milestone P-1 was chosen to ensure engagement of multiple stakeholders, delineation of project timeliness and activities. Process milestones P-2 and P-3 are especially critical to the project and include definition of data to be collected, data sources, data tracking mechanisms, and establishment of baselines. The success of the FBC project will be determined by the ability to track outcomes for persons with behavioral health needs who are in "crisis" and access crisis services. Data systems need to be integrated to facilitate communication about the patients' needs, linking to appropriate services and measuring outcomes. The project will work with various partners in the region as well as the county's IT department to develop the most efficient data tracking system. The data will be used as part of the project's quality improvement cycle.

Process milestones P-4 and P-5 ensure continuous quality improvement, data driven decision making, identification of "lessons learned" and dissemination to stakeholders. These will allow the use of real time data for continuous quality improvement, engagement of multiple stakeholders, and identification of best practices. The need for information sharing and continuous evaluation cannot be overstated. Within the project, staff will implement the Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities. Achieving high quality outcomes depends on continuous assessment of what has been done and flexibility to apply lessons learned to the next phase of a process. The PDSA improvement process will provide for a continuous quality improvement process, which will guide decision making and timelines developed to reach milestones while delivering quality products.

Findings will need to be disseminated, including lessons learned and best practices, so that stakeholders can, in turn, provide additional input and/or validation. To achieve this feedback loop, the project will conduct meetings of stakeholders, project staff, RHP partners, and other key parties to gather relevant information. These stakeholder meetings will be quarterly.

Stakeholder input is not only critical to the design and implementation of this project but also to its sustainability. Dissemination of our activities to the community and the various stakeholders will be critical. Persons with behavioral health disorders or their families often

DRAFT

access 911 crisis services as their first choice for help, and first responders have become the default interveners for behavioral health crisis in FBC. First responders have limited options for these patients and complex situations often arise that require a diligent assessment and delineation of safety and clinical need. The goal is to direct the person to the right level of care and to ensure patient and community safety. There will be many challenges as we implement this project including community education and awareness of a new "response" system.

The Improvement Target will be defined in DY4 and DY5 based on the data collected in DY2 and DY3. The baseline percentage will be determined in DY3. The outcome measure chosen, reduction of ER utilization for behavioral health/substance abuse crises is of great significance and directly related to the Category 1 project. In 2011, FBC Emergency Management Services (EMS) responded to 1, 171 mental health crisis calls, representing almost a 100% percent increase in the past 6 years. Analysis of the EMS response calls indicated that the majority of the behavioral health calls are not medical emergencies and unnecessary. The FBC project will create a "Behavioral Health Crisis Response and Intervention" system that will reduce EMS transports and ED visits and admissions.

Outcome Measure Valuation:

Outcome valuation follows the same process as for the program metrics. Cost avoidance of State Hospital visits, incarceration, EMS transport, ER visits and in-patient stays for the county indigent program if the established targets are met. The total cost avoidance value anticipated is in excess of $16 million. This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of $10,016,863.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region, 3 Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's healthcare system.

Title of Outcome Measure (Improvement Target): IT-1.10 Diabetes Care

Unique RHP Outcome Identification Number: 2967606-01 3.2

Outcome Measure Description:

DY2 and DY3 will focus on the Process Milestones necessary to establish and test the system prior to measuring health outcomes for the patients and cost avoidance for the program.

DY2 Process Milestones:

- P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- P-3 Develop and test data systems

DY3 Process Milestones:

- P-2 Establish baseline rates of HbA1c in the targeted population with diabetes.
- P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

DY4 and DY5 Outcome Improvement Target

IT-1.10: Reduce the percentage of referred diabetic patients with HbA1c poor control (>9%)

Rationale:

The process milestones were selected to help expand a new program of Care Coordination (patient navigation) within the local FQHC. The project with involve coordination of several entities who provide care for or interact with the target population of medically indigent, uninsured or underinsured individuals in the county, particularly those who inappropriately or repeatedly use high cost medical resources for chronic conditions that could better be managed in a medical home on an outpatient basis with effective care coordination and other resource provision. The planning stage and development of a data system will be the focus of DY2. During DY3, the project will be implemented and as patients are identified and referred in to the program, baseline data, which is not currently available on the population will be gathered. At the same time, PDSA cycle evaluation will be initiated to modify the program to fit the needs of the population and the entities involved.

The focus of DY4 and DY5 will be to continue the program as designed or modified and measure the outcome change for the target population. Target change for the outcomes were developed from similar program outcomes in other locations. As a measure of the success of the program in handling chronic disease conditions in the population, one measure of positive outcome was selected, that of reduction in poor control of blood glucose levels in diabetics measured by the HbA1c level.

Outcome Measure Valuation:

Outcome valuation follows the same process as for the program metrics. Cost avoidance of EMS transport, ED visits and in-patient stays for the county indigent program if the established targets are met, to be replaced by the lower cost Care Coordination at the FQHC. The total cost avoidance value anticipated for the related category 2 project 2967606-01 2.1 is $2,997,280. This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of $2,942,005. $2,611,029 of the total maximum payment is distributed to the category 2 project 2967606-01 2.1. The remaining

$330,976 of the maximum payment is distributed evenly among the 3 outcome measure improvement targets (IT-1.10, IT-9.2, and IT-9.4).

Fort Bend County Clinical Health Services

Pass 2

DRAFT

Title of Outcome Measure (Improvement Target): OD-9- Right Care, Right Setting

Unique RHP Outcome Identification Number: 2967606-01 3.5
Performing Provider: Fort Bend County Clinical Health Services / 297606-01

Outcome Measure Description:
IT9.1 – Decrease in mental health admissions and readmissions to criminal justice settings (juvenile detention)

Process Milestones:
DY2: P-1
DY3: P-2, P-3
DY4: P-4, P-5
DY5: P-4, P-5
Outcome Improvement Target(s) for each year:
DY 4: IT 9.1 Admissions to juvenile detention for youth with complex behavioral health needs

- Reduce % (TBD) admissions to juvenile detention for youth with complex behavioral health needs

Dy 5: IT 9.1 Admissions to juvenile detention for youth with complex behavioral health needs
Reduce % (TBD) of admissions to juvenile detention for youth with complex behavioral health needs

Rationale: Process milestone P-1 was chosen to ensure engagement of multiple stakeholders, delineation of project timeliness and activities. Process milestones P-2 and P-3 are especially critical to the project and include definition of data to be collected, data sources, data tracking mechanisms, and establishment of baselines. The success of the FBC project will be determined by the ability to track outcomes for persons with youth with behavioral health needs who come into contact with law enforcement and are diverted into appropriate community based clinical services. The project will work with various partners in the region as well as the county's IT department to develop the most efficient data tracking system. The data will be used as part of the project's quality improvement cycle.

Process milestones P-4 and P-5 ensure continuous quality improvement, data driven decision making, identification of "lessons learned" and dissemination to stakeholders. These will allow the use of real time data for continuous quality improvement, engagement of multiple stakeholders, and identification of best practices. The need for information sharing and continuous evaluation cannot be overstated. Within the project, staff will implement the Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities. Achieving high quality outcomes depends on continuous assessment of what has been done and flexibility to apply lessons learned to the next phase of a process. The PDSA improvement process will provide for a continuous quality improvement process, which will guide decision making and timelines developed to reach milestones while delivering quality products.

Findings will need to be disseminated, including lessons learned and best practices, so that stakeholders can, in turn, provide additional input and/or validation. To achieve this feedback

DRAFT

loop, the project will conduct meetings of stakeholders, project staff, RHP partners, and other key parties to gather relevant information. These stakeholder meetings will be quarterly. Stakeholder input is not only critical to the design and implementation of this project but also to its sustainability. Dissemination of our activities to the community and the various stakeholders will be critical.

The Improvement Target will be defined in DY4 and DY5 based on the data collected in DY2 and DY3. The baseline percentage will be determined in DY3. The outcome measure chosen, reduction in mental health admissions and readmissions to criminal justice settings (juvenile detention) is of great significance and directly related to the Category 2 (Fort Bend County Behavioral Health Juvenile Diversion) project. In 2011, approximately 40 to 45% of the youth "booked" into the Fort Bend County Juvenile Detention had a mental health disorder. This represents an estimated 100% increase in the last 6 years. The length of stay for youth with mental illness (average of 41 days for 2011) is 51% higher than youth without out a mental health disorder (average of 27 days). The average daily cost for treating a youth in detention facility is also significantly higher (approximately $350 per day). Juvenile probation departments and detention facilities have become the default mental health treatments centers for many youth with behavioral health disorders especially those with no insurance or Medicaid. The scarcity of appropriate clinical services for these youth and their families is a significant gap in Fort Bend County. As a result, juvenile probation, much like the adult criminal justice systems, has become the default intervention system. Yet, we know that many of these youth would achieve better outcomes if treated in community based programs with appropriate level of services. The cost effectiveness of community based programs versus incarceration has been well documented throughout the literature. The FBC BHJD project will implement and evaluate evidence based interventions for youth with complex behavioral health needs at risk of involvement in juvenile probation with the goal of improving outcomes for these youth and reducing admission to juvenile detention.

Outcome Measure Valuation:

Outcome valuation follows the same process as for the program metrics. Cost avoidance of days in Juvenile Detention if the established targets are met. The total cost avoidance value anticipated is in excess of $750,000. This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of $750,000.

DRAFT

Title of Outcome Measure (Improvement Target): IT 9.2 – ED Appropriate Utilization / Reduce ED use in target population managed by the Community Paramedic Program

Unique RHP Outcome Identification Number: 2967606-01 3.6 / Pass 2

Performing Provider: Fort Bend County Clinical Health Services / 297606-01

Outcome Measure Description:

DY2 will focus on the Process Milestones necessary to establish and test the system prior to measuring number of successful interventions for the patients and cost avoidance for the program.

DY2 Process Milestones:

P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

P-3 Develop and test data systems

DY3 Process Milestones:

P-2 Establish baseline rates – of projected ED use by target population encountered.

P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

DY4 and DY5 Outcome Improvement Target

IT-9.2: ED Appropriate Utilization / Reduce ED use in target population managed by the Community Paramedic Program.

Rationale:

The process milestones were selected to establish a Community Paramedic Program in Fort Bend County. The project will involve coordination of several entities who provide care for or interact with the target population of medically indigent, uninsured or underinsured individuals in the county, particularly those who inappropriately or repeatedly use high cost medical resources for non-urgent or chronic conditions. The planning stage and development of a data system will be the focus of DY2. During DY3, the project will be implemented and as patients are identified and managed by the program, baseline data, which is not currently available on the population will be gathered. At the same time, PDSA cycle evaluation will be initiated to modify the program to fit the needs of the population and the entities involved.

DRAFT

The focus of DY4 and DY5 will be to continue the program as designed or modified and measure the outcome changes for the target population in terms of use of the ED. Target changes for this outcome were developed from similar program outcomes in other locations.

Outcome Measure Valuation:

Outcome valuation follows the same process as for the program metrics. Cost avoidance of EMS transport, ED visits and in-patient stays for the county indigent program will be attained if the established targets are met The total cost avoidance value anticipated for the related category 2 project is $1.4 million. This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of $750,000.

DRAFT

Title of Outcome Measure (Improvement Target): IT 9.4 – Other Outcome Improvement Target / Reduce EMS transport use in target population managed by the Community Paramedic Program

Unique RHP Outcome Identification Number: 2967606-01 3.7 / Pass 2

Performing Provider: Fort Bend County Clinical Health Services / 297606-01

Outcome Measure Description:

DY2 will focus on the Process Milestones necessary to establish and test the system prior to measuring number of successful interventions for the patients and cost avoidance for the program.

DY2 Process Milestones:

P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

P-3 Develop and test data systems

DY3 Process Milestones:

P-2 Establish baseline rates – of projected ED use by target population encountered.

P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

DY4 and DY5 Outcome Improvement Target

IT-9.2: ED Appropriate Utilization / Reduce EMS transport use in target population managed by the Community Paramedic Program.

Rationale:

The process milestones were selected to establish a Community Paramedic Program in Fort Bend County. The project will involve coordination of several entities who provide care for or interact with the target population of medically indigent, uninsured or underinsured individuals in the county, particularly those who inappropriately or repeatedly use high cost medical resources for non-urgent or chronic conditions. The planning stage and development of a data system will be the focus of DY2. During DY3, the project will be implemented and as patients are identified and managed by the program, baseline data, which is not currently available on the population will be gathered. At the same time, PDSA cycle evaluation will be initiated to modify the program to fit the needs of the population and the entities involved.

DRAFT

The focus of DY4 and DY5 will be to continue the program as designed or modified and measure the outcome changes for the target population in terms of use of the ED. Target changes for this outcome were developed from similar program outcomes in other locations.

Outcome Measure Valuation:

Outcome valuation follows the same process as for the program metrics. Cost avoidance of EMS transport, ED visits and in-patient stays for the county indigent program will be attained if the established targets are met The total cost avoidance value anticipated for the related category 2 project is $1.4 million. This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of $750,000.

Title of Outcome Measure (Improvement Target): IT-6.1 Patient Experience with Access to Specialist, Shared Decision Making

Unique RHP Outcome Identification Number: 2967606-01 3.8 / Pass 2

Performing Provider: Fort Bend County Clinical Health Services / 297606-01

Outcome Measure Description:

DY2 and part of DY3 will focus on the Process Milestones and baseline data gathering necessary to establish and test the system prior to measuring patient satisfaction with the increased screenings and access to specialty care.

DY2 Process Milestones:

P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

P-3 Develop and test data systems

DY3 Process Milestones:

P-2 Establish baseline rates of colonoscopy screening in the targeted population.

P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

DY4 and DY5 Outcome Improvement Target:

IT-6.1: Patient Experience with Access to Specialist, Shared Decision Making

Rationale:

The process milestones were selected to help establish a colonoscopy screening program for the prevention and early detection of colorectal cancer. The project will involve coordination of several entities who provide care for or interact with the target population of medically indigent, uninsured or underinsured individuals in the county. The planning stage and development of a data system will be the focus of DY2.

The outcome measure of patient satisfaction was selected to determine the acceptance and satisfaction of the program in the targeted population. Baseline experience with access to specialists and shared decision making using the CG-CAHPS survey will be undertaken for the target population in DY2. During DY3, the project will be implemented, and at the same time, PDSA cycle evaluation will be initiated to modify the program to fit the needs of the population and the entities involved. The focus of DY4 and DY5 will be to continue the program as

DRAFT

designed or modified and measure the experience of the target population after program implementation.

Outcome Measure Valuation:

Outcome valuation follows the same process as for the program metrics. Cost avoidance of colorectal cancer treatment costs for the county indigent program if the established targets are met, to be replaced by the lower cost colonoscopy screening and cancer prevention procedures. The total cost avoidance value anticipated for the related category 2 project 2967606-01 2.2 is $660,000. This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of $539,044.

DRAFT

Title of Outcome Measure (Improvement Target): IT 12.3 – Colorectal Cancer Screening

Unique RHP Outcome Identification Number: 2967606-01 3.9 / Pass 2

Performing Provider: Fort Bend County Clinical Health Services / 297606-01

Outcome Measure Description:

DY2 and part of DY3 will focus on the Process Milestones necessary to establish and test the system prior to measuring increased screening and results for the patients and cost avoidance for the program.

DY2 Process Milestones:

P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

P-3 Develop and test data systems

P-2 Establish Baseline Rates of Colonoscopy Screening in the target population

DY3 Process Milestones:

P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

DY3 Outcome Improvement Target:

IT 12.3 – Colorectal Cancer Screening

DY4 and DY5 Outcome Improvement Target:

IT 12.3 – Colorectal Cancer Screening

Rationale:

The process milestones were selected to help expand a new program of colorectal cancer screening in the uninsured and underinsured population of Fort Bend County. The project with involve coordination of several entities who provide care for or interact with the target population of medically indigent, uninsured or underinsured individuals in the county. The planning stage and development of a data system will be the focus of DY2, and rates of colonoscopy screening in the population will be measured. The program will be implemented in DY3. At the same time, PDSA cycle evaluation will be initiated to modify the program to fit the needs of the population and the entities involved.

DRAFT

The focus of DY4 and DY5 will be to continue the program as designed or modified and measure the outcome change for the target population. The outcome measure is the proportion of the target population screened for colorectal cancer using a colonoscopy.

Outcome Measure Valuation:

Outcome valuation follows the same process as for the program metrics. Cost avoidance of colorectal cancer treatment costs for the county indigent program if the established targets are met, to be replaced by the lower cost colonoscopy screening and cancer prevention procedures. The total cost avoidance value anticipated for the related category 2 project 2967606-01 2.2 is $600,000. This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of 539,044.

Fort Bend County Clinical Health Services

Pass 3

DRAFT

Title of Outcome Measure (Improvement Target): OD-1 – Primary Care and Chronic Disease Management / IT 1.1 – Third Next Available Appointment

Unique RHP Outcome Identification Number: 2967606-01 3.10 / Pass 3

Outcome Measure Description:

DY2 and DY3 will focus on the Process Milestones necessary to establish and test the system prior to measuring access outcomes for the patients and cost avoidance for the program.

DY2 Process Milestones:

- P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- P-3 Develop and test data systems

DY3 Process Milestones:

- P-2 Establish baseline rates – of third next available appointment for the target population.
- P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

DY4 and DY5 Outcome Improvement Target

- IT-1.1: Third Next Available Appointment

Rationale:

The process milestones were selected to help expand the hours of operation within the local FQHC. The project will involve staffing a new care team of medical providers and support staff to allow for standard 7am to 7pm hours on weekdays and to include Saturday hours. Promotion of the hours and referral for use will take coordination with several entities who provide care for or interact with the target population of medically indigent, uninsured or underinsured individuals in the county, particularly those patients who inappropriately or repeatedly use high cost medical resources for non-urgent or chronic conditions that could better be managed in a medical home on an outpatient basis with effective care coordination and other resource provision. The planning stage and development of a data system will be the focus of DY2. During DY3, the project will be implemented and as patients are identified and referred to the program, baseline data, which is not currently available on the population will be gathered. At the same time, PDSA cycle evaluation will be initiated to modify the program to fit the needs of the population and the entities involved.

The focus of DY4 and DY5 will be to continue the expanded hours as initiated in DY3 and to measure the change for the target population in terms of third next available appointment.

Outcome Measure Valuation:

Outcome valuation follows the same process as for the program metrics. Cost avoidance of EMS transport, ED visits and in-patient stays for the county indigent program if the established targets are met, to be replaced by the lower cost Care Coordination at the FQHC. The total cost avoidance value anticipated for the related category 1 project 2967606-01 1.2 is $2,195,200. This value is distributed among the initiatives and outcome measures using the RHP formulation to achieve an estimated maximum payment of $2,100,000. $1,855,899 of the total maximum payment is distributed to the category 1 project 2967606-01 1.2. The remaining $249,101 of the maximum payment is distributed evenly among the 3 outcome measure improvement targets (IT-1.1, and IT-9.2).

Title of Outcome Measure (Improvement Target): OD-9 Right Care, Right Setting - IT 9.2 – ED Appropriate Utilization / Reduce ED use in target population referred to Care Coordination Program

Unique RHP Outcome Identification Number: 2967606-01 3.11

Outcome Measure Description:

DY2 and DY3 will focus on the Process Milestones necessary to establish and test the system prior to measuring health outcomes for the patients and cost avoidance for the program.

DY2 Process Milestones:

- P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- P-3 Develop and test data systems

DY3 Process Milestones:

- P-2 Establish baseline rates – of ED use by target population encountered and referred.
- P-4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities.

DY4 and DY5 Outcome Improvement Target

- IT-9.2: ED Appropriate Utilization / Reduce ED use in target population referred to Care Coordination Program

Rationale:

The process milestones were selected to help expand the hours of operation within the local FQHC. The project will involve staffing a new care team of medical providers and support staff to allow for standard 7am to 7pm hours on weekdays and to include Saturday hours. Promotion of the hours and referral for use will take coordination with several entities who provide care for or interact with the target population of medically indigent, uninsured or underinsured individuals in the county, particularly those patients who inappropriately or repeatedly use high cost medical resources for non-urgent or chronic conditions that could better be managed in a medical home on an outpatient basis with effective care coordination and other resource provision. The planning stage and development of a data system will be the focus of DY2. DRAFT

Gulf Bend

Pass 2

DRAFT

Title of Outcome Measure (Improvement Target):
OD-2 Potentially Preventable Admissions, IT-2.4 Behavioral Health/Substance Abuse Admission Rate

Unique RHP outcome identification number: 1352544-07.3.1/Pass 2
Performing provider/TPI: Gulf Bend Center/135254407

Outcome Measure Description:
The related Category 3 outcome improvement measure chosen for the Gulf Bend Person-Centered Behavioral Health Medical Home project is OD-2 Potentially Preventable Admissions, specifically IT-2.4 Behavioral Health/Substance Abuse Admission Rate including the following:

1. One for BH/SA as the principal diagnosis
2. A second category in which a significant BH/SA secondary diagnosis is present (e.g. reduction in admission rate with a primary diagnosis of asthma/diabetes/COPD with a secondary diagnosis of mood/affective disorders.

Through this project Gulf Bend expects to decrease admissions due to asthma, depression, and diabetes with an underlying or co-existing mental health disorder by 10% by the end of DY 5.

Outcome Improvement Targets for each year:

Rationale:
Process milestones P-1 through P-3 were chosen so we can establish a detailed project plan including identifying current capacity and needed resources and baseline information in which to effectively manage and monitor the project. Gulf Bend expects to see a decrease in the admission rates as described above bydeveloping and implementing the Person-Centered Behavioral Health Medical Home. Targeting at risk populations with co-morbid diseases of mental illness and chronic disease who currently go untreated or under treated and who routinely access more intensive and costly services such as emergency departments, inpatient hospitals or jails and through this outcome measure we expect to see the success of a reduction in hospital admissions with a primary diagnosis of chronic disease and a secondary diagnosis of behavioral health.

Outcome Measure Valuation:
Due to the high number of admissions to the local hospitals due to co-occurring mood/affective disorders and chronic co-morbid disease, Gulf Bend feels that an initial decrease for all three admissions by 20% by the end of DY 5 is a great starting point. This could lead to an overall savings of $3,249,179 in just one year. These numbers may seem low, but this is because the integration of primary care and behavioral health services is new to the area. It will take time for patients to take full advantage of the integrated services offered by Gulf Bend.

DRAFT

Title of Outcome Measure (Improvement Target): IT-1.18 Follow up after Hospitalization for Mental Illness-NFQ 0576

Unique RHP Outcome Identification Number: 178815001.3.1

Outcome Measure Description:

IT-1.18

- Rate 1: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 30 days after discharge.
- Rate 2: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 7 days after discharge.

Process Milestones:

- DY 2: P-1; P-2; P-3
- DY 3: P-5

Outcome Improvement Target(s) for each Year:

- DY 4
  - IT-1.18 Increase in percentage of patients with follow up care after hospitalization for Mental Illness

  Rate 1: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 30 days after discharge.

  Rate 2: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 7 days after discharge.
- DY 5
  - IT-1.18 Increase in percentage of patients with follow up care after hospitalization for Mental Illness

  Rate 1: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 30 days after discharge.

  Rate 2: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 7 days after discharge.

Rationale:

Process Milestone P-1, P-2 and P-3 were chosen to establish a foundation for the establishment of an inpatient adult psychiatric unit and consideration for an outpatient center for follow up care. The focus was to ensure that an initial timely response to a potential need for psychiatric care was addressed. Delay in treatment in the care of an individual with mental illness may result in adverse outcomes. During DY 2 a baseline will be established and DY 3, 4, and 5 has a percentage increase annually to complete admission process from time of referral to arrival on unit.

Improvement targets were placed in DY 3, DY 4 and DY 5 based upon the timeframe allowed to put in place the proper education/training and process implementation. Although all

DRAFT

the overall goal is to ensure that individuals within the county, and surrounding counties ~~and the military~~ have expedited access to mental health care and receive quality inpatient care for the treatment of mental disorders it is of utmost importance that when patients move to the next continuum (discharge) treatment continues on an outpatient basis to ensure compliance with the treatment plan thus preventing readmissions. Patients in the project will need to be followed over time. Based upon the need to ensure compliance on an outpatient basis regarding the treatment plan established for the patient while hospitalized, follow up after hospitalization for mental illness is a targeted improvement outcome.

<u>Outcome Measure Valuation:</u>

Areas considered when allocating funds for this project included the importance of ensuring individuals within Wharton County and the surrounding rural areas ~~as well as the military~~ the care needed with regard to mental disorders. A 28 bed inpatient adult psychiatric unit would allow individual's timely access to care for mental disorders whereas currently delay in care is experienced frequently as bed availability is limited and waiting lists for beds are being utilized. In addition, upon discharge from an inpatient psychiatric follow up care by a mental health practitioner is of utmost importance to ensure that the patient remains compliant with his/her treatment plan to ensure a positive outcome with their care and prevent readmissions.

DRAFT

Title of Outcome Measure (Improvement Target): IT-1.20 Timeliness of Inpatient Admission for Mental Illness

Unique RHP Outcome Identification Number: 178815001.3.2

Outcome Measure Description:

IT-1.20

- Timely admission to Inpatient Psychiatric Unit—based upon systems and processes instituted at the time of the establishment of the adult inpatient psychiatric timely respond to referrals for inpatient treatment will be measured and targets set to improve response rates.

Process Milestones:

- DY 2: P-1; P-2, P-3
- DY 3: P-3

Outcome Improvement Target(s) for each Year:

- DY 4
  - Improve rate for DY 4 as compared to baseline rate established in DY 2. Increase admission rate to an average daily census –TBD.
- DY 5
  - Improve rate for DY 5 as compared to baseline rate established in DY 2. Increase patient rate to an average daily census-TBD.

Rationale:

Process Milestone P-1, P-2 and P-3 were chosen to establish a foundation for the establishment of an inpatient adult psychiatric unit and consideration for an outpatient center for follow up care. The focus was to ensure that an initial timely response to a potential need for psychiatric care was addressed. Delay in treatment in the care of an individual with mental illness may result in adverse outcomes. During DY 2 a baseline will be established and DY 3, 4, and 5 has a percentage increase annually to complete admission process from time of referral to arrival on unit.

Improvement targets were placed in DY 3, DY 4 and DY 5 based upon the timeframe allowed to put in place the proper education/training and process implementation. Although all the overall goal is to ensure that individuals within the county, surrounding counties and the military have expedited access to mental health care and receive quality inpatient care for the treatment of mental disorders it is of utmost importance that when patients move to the next continuum (discharge) treatment continues on an outpatient basis to ensure compliance with the treatment plan thus preventing readmissions. Patients in the project will need to be followed over time. Based upon the need to ensure compliance on an outpatient basis regarding the treatment plan established for the patient while hospitalized, follow up after hospitalization for mental illness is a targeted improvement outcome.

DRAFT

Title of Outcome Measure (Improvement Target): IT- 6.1 Percent improvement over baseline of patient satisfaction (1) are getting timely care, appointments, and information

Unique RHP outcome identification number(s): 133355104.3.1

Outcome Measure Description:

IT- 6.1 will measure improvement in satisfaction scores over time relating to timeliness of care at the Gulfgate same day access clinic, specifically measuring the mean score for the Press Ganey survey question- "Ease of scheduling appointments."

Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health center providers are currently 95% empaneled. Moreover, physicians in Harris Health centers carry a panel of 2,250 patients, which is higher than the industry standard of approximately 1,500 patients. Full panels lead to decreased access to primary care appointments at health centers. These health centers are approaching maximum capacity for empaneled patients. From March 2012-September 2012, the Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care. For the Gulfgate Health Center, there were 792 unduplicated patients for which there were no Family Practice appointments available in the month of September 2012 alone. As a result, patient satisfaction scores reported by Press Ganey can be greatly improved. From November 2011-October 2012 at Gulfgate Health Center, the mean score for "Ease of scheduling appointments" was 68.0.

Same day access clinic operations will differ from current health centers, resulting in a need for a customized survey. The baseline patient satisfaction score at Gulfgate same day access clinic will be established in DY3 after a new, custom survey is developed and implemented through Press Ganey for same day access clinic usage.

Process Milestones:

- DY2: P-1; P-5
- DY3: P-2; P-4

Outcome Improvement Target(s) for each year:

- DY4:
  - IT- 6.1 Percent improvement over baseline of patient satisfaction (1) are getting timely care, appointments, and information
    - Increase "Ease of scheduling appointments" score by 1% above baseline
- DY5
  - IT- 6.1 Percent improvement over baseline of patient satisfaction (1) are getting timely care, appointments, and information
    - Increase "Ease of scheduling appointments" score by 2% above baseline

Rationale:

P-1 was chosen to ensure that all necessary stakeholders are consulted to develop strategies and processes necessary to reach patient satisfaction goals. Moreover, a new, customized patient satisfaction survey will be developed for same day access clinics in partnership with Press Ganey. P-5 will also be approached in DY2. We plan to share finding and lessons from project planning with internal and external stakeholders. In DY3, P-2 will produce a baseline "Ease of scheduling appointments" score at the new clinic based on available

DRAFT

performance. In DY3, we will also conduct PDSA cycles for P-4 to ensure that strategies and processes for identified interventions are effective.

IT-6.1 will be measured beginning in DY4 to allow for time and resources needed to purchase lease space, hire staff, and operate the same day access clinic for patient care and successful survey calculation. Improvement targets were chosen with the expectation to reach patient satisfaction goals gradually to coincide with improvements in operations at the clinic.

Outcome Measure Valuation: This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in this area of Harris County. The value of the project is based on the clinic's capacity to provide primary care services, including laboratory point-of-care testing, along with timely referrals for specialty care, imaging and other needed services within the Harris Health System network. The clinic can ultimately care for the episodic primary care needs of over ten thousand patients annually, and refer new patients with chronic disease management needs to one of the NCQA certified medical home clinics that are operated by Harris Health. In addition, the availability of same day primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1 Percent improvement over baseline of patient satisfaction (1) are getting timely care, appointments, and information

Unique RHP outcome identification number(s): 133355104.3.3

Outcome Measure Description:

IT- 6.1 will measure percent improvement over baseline of patient satisfaction scores over time relating to timeliness of care, specifically measuring the mean score for the Press Ganey survey question – "Ease of scheduling appointments".

The expansion of primary care capacity in the existing Health Centers will increase capacity for primary care visits within the Harris Health System, which will enhance access and improve the patient experience in obtaining services. Patient satisfaction scores for timely access to care for the Health Centers have historically been below expectations. The expansion of primary care capacity in the existing Health Centers will offer additional access, affording patients the opportunity to seek care in the right setting. The current score for Ease of scheduling appointment for the Health Centers is 71.3%. The additional providers will add capacity for appointments, which will increase appointment availability for both new and return patients. The enhanced access to care will result in improved patient satisfaction scores as related to Ease of scheduling appointments.

Process Milestones:

- DY2: P-1
- DY3: P-2

Outcome Improvement Target(s) for each year:

- DY4:
  - IT- 6.1 Percent improvement over baseline of patient satisfaction score of (1) getting timely care, appointments, and information
    - Increase Getting Timely Care, Appointments, and Information survey dimension score by 1% above baseline
- DY5:
  - IT- 6.1 Percent improvement over baseline of patient satisfaction score of (1) getting timely care, appointments, and information
    - Increase Getting Timely Care, Appointments, and Information survey dimension score by 2% above baseline

Rationale:

P-1 was chosen to ensure that all necessary stakeholders are involved and addressed to develop the strategies necessary to improve Access to Care patient satisfaction scores.

Improvement targets were chosen based on the time and resources needed to hire and train physicians and support staff. The improved patient access may begin in DY3, Ease of scheduling appointments patient satisfaction score improvements will be measured in DY4 and DY5. Improvement target 1 aims to increase patient satisfaction in relation to Ease of scheduling appointments by 1% above baseline, while improvement target 2 aims to increase patient satisfaction in relation to Ease of scheduling appointments by 2% above baseline.

Outcome Measure Valuation:

DRAFT

This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in Harris County. The value of the project is based on the expansion of services in Harris Health System's NCQA certified medical home clinics, substantially increasing our capacity to provide primary care services, including laboratory testing, imaging, and other ancillary services, along with prescription medications and timely referrals for specialty care and other needed services within the Harris Health System network. The increase in provider staffing throughout the existing medical home network can ultimately care for the primary care needs of an additional twenty-three thousand patients annually, including the coordination of chronic disease education and management for patients needing those services. In addition, the availability of incremental primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

DRAFT

Title of Outcome Measure (Improvement Target): IT- 1.10 Diabetes care: HbA1c poor control (>9.0%)

Unique RHP outcome identification number(s): 133355104.3.4

Outcome Measure Description:

IT1.10 will measure improvement in the percentage of patients 18-75 years of age with poorly controlled diabetes. Poorly controlled will be defined as patients with diabetes (type 1 or 2) who had hemoglobin A1c (HbA1c) control >9.0%.

Diabetes is one of the most costly and highly prevalent chronic diseases in the United States. Approximately 20.8 million Americans have diabetes, and half these cases are undiagnosed. Complications from the disease cost the country nearly $100 billion annually. In addition, diabetes accounts for nearly 20 percent of all deaths in people over 25 years of age. Many complications, such as amputation, blindness, and kidney failure, can be prevented if detected and addressed in the early stages. Although many people live with diabetes years after diagnosis, it is a costly condition that leads to serious and potentially fatal health complications. Diabetes control can improve the quality of life for millions of Americans and save billions of health care dollars.

Process Milestones:

- DY2: P-1; P-5
- DY3: P-2; P-4

Outcome Improvement Target(s) for each year:

- DY4:
  - IT- 1.10 Diabetes care: HbA1c poor control (>9.0%)
    - Decrease the percentage of patients with poorly controlled diabetes by 0.5% below baseline
- DY5
  - IT- 1.10 Diabetes care: HbA1c poor control (>9.0%)
    - Decrease the percentage of patients with poorly controlled diabetes by 1.0% below baseline

Rationale:

P-1 was chosen to ensure that all necessary stakeholders are consulted to develop strategies and processes necessary to reach patient satisfaction goals. P-5 will also be approached in DY2. We plan to share finding and lessons from project planning with internal and external stakeholders. In DY3, P-2 will produce a baseline HbA1c poor control (>9.0%) at the new West and Northwest 1 area health centers based on available data. In DY3, we will also conduct PDCA cycles for P-4 to ensure that strategies and processes for identified interventions are effective.

IT-1.10 will be measured beginning in DY4 to allow for time and resources needed to purchase lease space, hire staff, and operate the West and Northwest 1 area health centers for patient care and successful data calculation. Improvement targets were chosen with the expectation to decrease the percentage of patients with poorly controlled diabetes gradually to coincide with improvements in operations at the clinic.

Outcome Measure Valuation: This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in this area of Harris County. The value of the project is based on the clinic's capacity to provide a medical home for primary care

DRAFT

services, including laboratory point-of-care testing, some imaging, other ancillary services and prescription medications along with timely referrals for specialty care and other needed services within the Harris Health System network. The clinic can ultimately care for the comprehensive primary care needs of over five thousand patients annually, including the coordination of chronic disease education and management for patients needing those services. In addition, the availability of timely primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

DRAFT

Title of Outcome Measure (Improvement Target): IT- 6.1 Percent improvement over baseline of patient satisfaction (1) are getting timely care, appointments, and information

Unique RHP outcome identification number(s): 133355104.3.6

Outcome Measure Description:

IT- 6.1 will measure improvement in satisfaction scores over time relating to timeliness of care at the Southwest, Medical Center, and Northeast same day access clinics, specifically measuring the mean score for the Press Ganey survey question- "Ease of scheduling appointments."

Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health center providers are currently 95% empaneled. Moreover, physicians in Harris Health System health centers carry a panel of 2,250 patients, which is higher than the industry standard of approximately 1,500 patients. Full panels lead to decreased access to primary care appointments at health centers. These health centers are approaching maximum capacity for empaneled patients. From March 2012-September 2012, the Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care.

Same day access clinic operations will differ from current health centers, resulting in a need for a customized survey. The baseline patient satisfaction score at Southwest, Medical Center, and Northeast same day access clinics will be established in DY3 after a new, custom survey is developed and implemented through Press Ganey for same day access clinic usage.

Process Milestones:

- DY2: P-1; P-5
- DY3: P-2; P-4

Outcome Improvement Target(s) for each year:

- DY4:
  - IT- 6.1 Percent improvement over baseline of patient satisfaction (1) are getting timely care, appointments, and information
    - Increase "Ease of scheduling appointments" score by 1% above baseline
- DY5
  - IT- 6.1 Percent improvement over baseline of patient satisfaction (1) are getting timely care, appointments, and information
    - Increase "Ease of scheduling appointments" score by 2% above baseline

Rationale:

P-1 was chosen to ensure that all necessary stakeholders are consulted to develop strategies and processes necessary to reach patient satisfaction goals. Moreover, a new, customized patient satisfaction survey will be developed for same day access clinics in partnership with Press Ganey. P-5 will also be approached in DY2. We plan to share finding and lessons from project planning with internal and external stakeholders. In DY3, P-2 will produce a baseline "Ease of scheduling appointments" score at the new same day access clinic based on available performance. In DY3, we will also conduct PDSA cycles for P-4 to ensure that strategies and processes for identified interventions are effective.

DRAFT

IT-6.1 will be measured beginning in DY4 to allow for time and resources needed to purchase lease space, hire staff, and operate the same day access clinic for patient care and successful survey calculation. Improvement targets were chosen with the expectation to reach patient satisfaction goals gradually to coincide with improvements in operations at the clinic.

Outcome Measure Valuation: This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in this area of Harris County. The value of the project is based on the clinics' capacity to provide primary care services, including laboratory point-of-care testing, along with timely referrals for specialty care, imaging and other needed services within the Harris Health System network. Each of the three clinics can ultimately care for the episodic primary care needs of over six thousand patients annually, and refer new patients with chronic disease management needs to one of the NCQA certified medical home clinics that are operated by Harris Health. In addition, the availability of same day primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

DRAFT

Title of Outcome Measure (Improvement Target): IT-1.1 Third next available appointment

Unique RHP outcome identification number(s): 133355104.3.7
Outcome Measure Description:

OD-1 Primary Care and Chronic Disease Management
IT-1.1 Third next available appointment

Process Milestones:
- DY2:
  P-2 Establish Baseline
  P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

Outcome Improvement Targets for each year:
- DY3: decrease wait time from specialty referral to specialty clinic visit 20% from baseline
- DY4: decrease wait time from specialty referral to specialty clinic visit 30% from baseline
- DY5: decrease wait time from specialty referral to specialty clinic visit 40% from baseline

Rationale:
This particular improvement target, IT-1.1 (Third next available appointment) was chosen because a goal of this project is to produce more efficiencies in primary care visits that lead to appropriate specialty clinic referrals. With this goal in mind, a primary goal of the project is to decrease the backlog for diabetes and rheumatology clinics, which will ultimately decrease the wait time for next available appointment. Process milestone P-1 was chosen for DY2 because of the nature of this project. In order to see improvement in outcomes for this project, it is essential to plan and engage physician and other clinical stakeholders. During this year, a baseline will also be established (P-2) to measure improvement in later years. Based on the outcome of baseline, we plan to decrease the wait time 20% in DY3, 30% in DY4, and 40% in DY5.

Outcome Measure Valuation:
This project will focus primarily on diabetes mellitus (DM)/pre-diabetes and rheumatologic conditions, making it possible for providers to efficiently order the most appropriate best practices algorithm driven laboratory workups for particular patients. The value of the project is based on cost savings and efficiencies through (1) increasing the capacity of clinics and consulting services by reducing the number of patient visits required to solve diagnostic problems, (2) reducing the need for emergency room visits and hospitalizations that result from delayed or inaccurate diagnoses in the clinics. (3) increasing the throughput and productivity of the specialists consulting services by eliminating unnecessary consults, and (4) improving quality of care by decreasing the waiting time and eliminating unnecessary repeated visits due to incomplete pre-consult testing; thus enhancing patients' satisfaction. In addition, these improvements will facilitate providing quality care for expected significant influx of patients due

to implementation of ACA and the 1115 Waver without a major increase in the number of providers and capital investment.

Title of Outcome Measure (Improvement Target): IT-1.14 Diabetes care: Microalbumin/Nephropathy- NQF 0062 (non-standalone)

Unique RHP outcome identification number(s): 133355104.3.8

Outcome Measure Description:

OD-1 Primary Care and Chronic Disease Management
IT-1.14 Diabetes care: Microalbumin/Nephropathy- NQF 0062 (non-standalone)

Process Milestones:

- DY2: P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3: P-2 Establish Baseline

Outcome Improvement Targets for each year:

- DY4: TBD based on established baseline in DY3
- DY5: TBD based on established baseline in DY4

Rationale:

This particular improvement target, IT-1.14 (Diabetes care: Microalbumin/Nephropathy- NQF 0062) was chosen because a goal of this project is to produce more efficiencies in primary care visits that lead to appropriate specialty clinic referrals. There will be a focused algorithm on the diabetic population through this project. This is a large need in Harris County and the region. In creation of this algorithm, we plan to improve the percentage of patients 18-75 years of age with diabetes (type 1 or type 2) who had a nephropathy screening test or evidence of nephropathy. This is an important measure in improving the population health of our diabetic population served. The improvement targets for this outcome measure will be determined based on the baseline that will be established in DY2. In order to see improvement in outcomes for this project, it is essential to plan and engage physician and other clinical stakeholders.

Outcome Measure Valuation:

This project will focus primarily on diabetes mellitus (DM)/pre-diabetes and rheumatologic conditions, making it possible for providers to efficiently order the most appropriate best practices algorithm driven laboratory workups for particular patients. The value of the project is based on cost savings and efficiencies through (1) increasing the capacity of clinics and consulting services by reducing the number of patient visits required to solve diagnostic problems, (2) reducing the need for emergency room visits and hospitalizations that result from delayed or inaccurate diagnoses in the clinics. (3) increasing the throughput and productivity of the specialists consulting services by eliminating unnecessary consults, and (4) improving quality of care by decreasing the waiting time and eliminating unnecessary repeated visits due to incomplete pre-consult testing; thus enhancing patients' satisfaction. In addition, these improvements will facilitate providing quality care for expected significant influx of patients due to implementation of ACA and the 1115 Waver without a major increase in the number of providers and capital investment.

Title of Outcome Measure (Improvement Target): IT-6.1(3) Percent improvement over baseline of patient satisfaction scores: patient's rating of doctor access to specialist (Standalone measure)

Unique RHP outcome identification number(s): 133355104.3.9

Outcome Measure Description:

OD-6 Patient Satisfaction
IT-6.1(3) Percent improvement over baseline of patient satisfaction scores: patient's rating of doctor access to specialist (standalone measure)

Process Milestones:

- DY2: P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3: P-2 Establish Baseline

Outcome Improvement Targets for each year:

- DY4: 3% increase above baseline
- DY5: 5% increase above baseline

Rationale:

This particular improvement target, IT-6.1(3) (Percent improvement over baseline of patient satisfaction scores: patient's rating of doctor access to specialist) was chosen because while Harris Health System produces more efficiencies in primary care visits that lead to appropriate specialty clinic referrals, we do not want to ignore the importance of satisfied customers. In an effort to decrease wait time to specialty clinic visits, we hope to better serve our patient population and improve our satisfaction scores. Process milestone P-1 was chosen for DY2 because of the nature of this project. In order to see improvement in outcomes for this project, it is essential to plan and engage physician and other clinical stakeholders. During DY3, a baseline will be established (P-2) to measure improvement in later years. Based on the outcome of baseline, we plan to increase patient satisfaction scores 3% in DY4 and 5% in DY5. We chose these goals based on historic patient satisfaction data for other areas within the system.

Outcome Measure Valuation:

This project will focus primarily on diabetes mellitus (DM)/pre-diabetes and rheumatologic conditions, making it possible for providers to efficiently order the most appropriate best practices algorithm driven laboratory workups for particular patients. The value of the project is based on cost savings and efficiencies through (1) increasing the capacity of clinics and consulting services by reducing the number of patient visits required to solve diagnostic problems, (2) reducing the need for emergency room visits and hospitalizations that result from delayed or inaccurate diagnoses in the clinics. (3) increasing the throughput and productivity of the specialists consulting services by eliminating unnecessary consults, and (4) improving quality of care by decreasing the waiting time and eliminating unnecessary repeated visits due to

incomplete pre-consult testing; thus enhancing patients' satisfaction. In addition, these improvements will facilitate providing quality care for expected significant influx of patients due to implementation of ACA and the 1115 Waver without a major increase in the number of providers and capital investment.

Title of Outcome Measure (Improvement Target): IT- 6.1 Percent improvement over baseline of patient satisfaction scores related to whether patients (1) are getting timely care, appointments, and information

Unique RHP Outcome ID: 133355104.3.10

Outcome Measure Description:

IT- 6.1 will measure improvement in overall satisfaction scores over time at FQHCs, specifically measuring the mean score relating to timeliness of care, as a result of expanded access.

The baseline score will be set in DY2, before providers are added. The baseline will be established using patient satisfaction survey data from each FQHC, with each FQHC's score to be tracked and trended separately. At Harris Health System, timeliness of care scores is negatively affected by access and capacity. From March 2012-September 2012, the Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care. As a result, the mean patient satisfaction score for Moving Through Your Visit for the last 12 months (9/2011-9/2012) was 70.2 for all primary care health centers at Harris Health System, as reported through the survey administered by Press Ganey. Expanded capacity and optimized referrals to FQHCs can improve patient satisfaction regarding timely care.

Process Milestones:

- DY2: P-1; P-2
- DY3: P-4; P-5

Outcome Improvement Target(s) for each year:

- DY4:
  - IT- 6.1 Percent improvement over baseline of patient satisfaction (1) is getting timely care, appointments, and information (measured separately for each FQHC).
    - Each FQHC that has added providers in DY3 will improve satisfaction scores overall by 1% above baseline
- DY5
  - IT- 6.1 Percent improvement over baseline of patient satisfaction (1) is getting timely care, appointments, and information (measured separately for each FQHC).
    - Each FQHC that has added providers in DY 3 will improve satisfaction scores overall by 2% above baseline, and each FQHC that has added providers in DY4 will improve satisfaction scores overall by 1% above baseline.

Rationale:

P-1 was chosen to ensure that all necessary stakeholders are consulted to develop strategies and processes necessary to reach patient satisfaction goals and collect data from each FQHC. In DY2, P-2 will produce a baseline score for timeliness of care at FQHCs. In DY3, we will also conduct PDSA cycles for P-4 to ensure that strategies and processes for identified interventions are effective. P-5 will also be approached in DY2. We plan to share findings and lessons from project planning with internal and external stakeholders.

IT-6.1 will be measured beginning in DY4 to allow for time and resources needed to hire providers and staff, begin seeing patients, and successfully collect significant survey data. Improvement targets were chosen with the expectation to reach patient satisfaction goals gradually to coincide with improvements in operations at the FQHCs.

DRAFT

Outcome Measure Valuation: This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved/uninsured population in Harris County. It will expand capacity for primary care medical homes and connect patients to care in a timely fashion that might not otherwise be possible. A referral system will be developed for patients who seek an appointment at the Harris Health System for whom the demand cannot be met in a timely manner, as well as for patients who seek care for primary care treatable conditions in the Harris Health Emergency Centers. The value of the project is based on the incremental capacity to provide primary care services at the community FQHCs, along with timely referrals for specialty care and other needed services within the Harris Health System network. This expansion can ultimately care for the primary care needs of over eight thousand patients annually. In addition, the availability of incremental primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

Title of outcome measure (improvement target): IT-6.1 (1) - Percent improvement over baseline of patient satisfaction scores: patients are getting timely care, appointments, and information

Unique RHP outcome identification number: 133355104.3.11 / Pass 1

Outcome Measure Description:

Process Milestones

- DY2: P-1
- DY3: P-2

Outcome Improvement Targets: IT-6.1(1)

- DY3 Target: 1% improvement over baseline
- DY4 Target: 1.5% improvement over baseline
- DY5 Target: 2% improvement over baseline

Will be determined based on patient satisfaction scores for timely care, appointments, and information from Press-Ganey survey results. These surveys are currently being gathered by Press-Ganey and will incorporate the new services upon implementation of pediatric and adolescent behavioral health services.

Rationale:

The goal of this project is to increase psychiatry and behavioral therapy staffing at existing pediatric locations within Harris Health System. Expanding pediatric and adolescent behavioral health services has the potential to help decrease the future need for inpatient behavioral health beds by addressing issues at earlier stages in life. Untreated behavioral health needs may lead to school failure, behavioral conflicts, and substance abuse; the longer the issues are left untreated, the more difficult and costly it is to provide effective treatment. The increase in provider staffing throughout the existing pediatric services network can ultimately meet the behavioral care needs of an additional eight thousand patients annually.

We have selected process milestone, P-1, for DY2 in order to begin expansion of pediatric and adolescent behavioral health services at Harris Health System. This process milestone will allow us to plan for outcome reporting of patient satisfaction per our chosen outcome measure. We have selected process milestone P-2 for DY2 to establish the baseline for our outcome improvement targets to be measured in DY4 and DY5. We will begin reporting on improvement target IT-6.1(1) in DY3. By DY5 we want to increase patient satisfaction by 2% across all targeted sites. We selected 2% because many of the existing sites have higher than average patient satisfaction scores within the Harris Health System.

Outcome Measure Valuation:

The goal of this project is to increase psychiatry and behavioral therapy staffing at existing pediatric locations within Harris Health System. Expanding pediatric and adolescent behavioral health services has the potential to help decrease the future need for inpatient behavioral health beds by addressing issues at earlier stages in life. Untreated behavioral health needs may lead to school failure, behavioral conflicts, and substance abuse; the longer the issues are left untreated, the more difficult and costly it is to provide effective treatment. The increase in provider staffing throughout the existing pediatric services network can ultimately meet the behavioral care needs of an additional eight thousand patients annually.

Title of Outcome Measure (Improvement Target): IT- 1.20 Other outcome target: Percent of patients diagnosed with major depression that are adherent to prescribed medication treatment plan

Unique RHP outcome identification number(s): 133355104.3.12

Outcome Measure Description:

IT- 1.20 will be defined as adults age 18 and older with a diagnosis of major depression who show evidence of prescription medication adherence.

Process Milestones:

- DY2: P-1
- DY3: P-2, P-4

Outcome Improvement Target(s) for each year:

- DY4:
  - IT- 1.20 Other outcome target: Percent of patients diagnosed with major depression that are adherent to prescribed medication treatment plan
    - Adherence will be 15% of the identified patient population
- DY5:
  - IT- 1.20 Other outcome target: Percent of patients diagnosed with major depression that are adherent to prescribed medication treatment plan
    - Adherence will be 20% of the identified patient population

Rationale:

The outcome measures of adherence are important specific to the patient engagement in their disease process and the ability to effect mental health distress and behaviors exhibited as a result of major depression. Adherence to medications is a common issue in the United States and accounts for as much as 50% in chronic disease populations[275] and there is approximately only 30% adherence for patients diagnosed with major depression.[276]

Lack of adherence to medication regimes can be indicative of financial limitations that decrease access to necessary medications. Such barriers can be addressed by the mental health professional and the social worker in the community health center. Adherence to medications can be impacted by cultural beliefs and family dynamics that will be identified as part of this initiative and addressed in mental health sessions. Non-adherence can be related to medication side effects, guilt, and insufficient time allowed for the medication to be effective[2] ; all of which can be explained by increasing access to mental health providers and professionals.

Process improvement milestones of P -1 and P-2 were selected as a means to permit time for engagement of stakeholders to discuss, collaborate, and implement a comprehensive approach to promote medication adherence for patients diagnosed with major depression The

[275] Peterson AM, Takiya L, Finley R. (2003).Meta-analysis of trials of interventions to improve medication adherence. *American Journal Health Syst Pharm. Apr 1*;60(7):657-65. PMID: 12701547.

[276] Bucci, K., K, Possidente, C., L., Talbot., K., A. (2003). Strategies to improve medication adherence in patients with depression. *American Journal Health Syst Pharm. Apr 60* . Available from http://www.hawaii.edu/hivandaids/Strategies_to_Improve_Medication_Adherence_in_Patients_with_Depression.pdf

provision of planning to secure supplies, and stakeholder involvement in the types of services to be offered is essential, to promote the necessary collaboration required as part of an enhanced psychiatric and mental health access to services. Project planning will also include the necessary education of providers, existing staff, recruited staff, and also development of patient materials in the healthcare language of patient choice, and at the 5th grade literacy level, specifically for Harris Health patient population. Additionally, the ability to secure key performance indicators required as part of the project and the reporting required to evaluate the outcomes delineated in DY4 and DY5 is paramount to tracking and monitoring quality, access, and cost of care. Improvement targets were placed in DY4 and DY5 in order to collect data and improve upon the established baseline determined in DY3.

Outcome Measure Valuation:

The goal of this project is to increase psychiatry and behavioral therapy staffing at current medical home primary care clinics, in existing underutilized space. All of the targeted health centers offer behavioral services; however the hours and appointment availability are limited. Service hours and appointment capacity will be expanded within each of the clinics. Enhanced access to mental health services and the ability to track and monitor medication adherence will promote a decrease in acute care and emergency center visit utilization, as well as potentially decrease the need for additional inpatient psychiatric beds, thereby lowering the overall cost of care. The increase in provider staffing throughout the existing primary care services network can ultimately meet the behavioral care needs of an additional seven thousand patients annually.

<u>Outcome Measure (Improvement Target):</u> IT-3.2 Congestive Heart Failure 30 Day Readmission Rate

<u>Unique RHP Outcome ID:</u> 133355104.3.13 (133355104.1.11)

<u>Outcome Measure Description:</u>

IT-3.2 Congestive Heart Failure 30 Day Readmission Rate will measure the rate of readmissions, for any cause, within 30 days of discharge from the index HF admission. If an index admission has more than 1 readmission, only first is counted as a readmission.

The implementation of a chronic disease registry will permit the timely identification of patients at risk for acute care utilization relative to chronic disease and the respective patient's ability to appropriately self-manage their disease process. The disease registry will be utilized to identity patients with chronic disease to include the ambulatory sensitive conditions of COPD, Asthma, Diabetes, heart Failure and hypertension. The outcome measurement is specifically pertinent to self-management of the heart failure disease process to educate and manage patients to decrease readmissions for heart failure (IT-3.2); within 30 days of the index admission.

A disease registry stratifies the patients according to geographic location to promote the development of accessible programs to foster education, classes, telephonic outreach and case management services specific to the chronic disease diagnosed. The disease registry tracks utilization which will promote transparency of information sharing relative to appropriate and inappropriate utilization, and facilitates provider education respective to evidence based practice for the treatment of chronic disease. The disease registry additionally displays the gaps in service availability via the monitoring of patterns of utilization locations and the hours of service accessed.

Process Milestones:

- DY2: P-1; P-2
- DY3: P-4

Outcome Improvement Target(s) for each year:

- DY4:
  - IT-3.2 Congestive Heart Failure 30 Day Readmission Rate
    - Decrease the congestive heart failure 30 day readmission rate by 3% of baseline
- DY5:
  - IT-3.2 Congestive Heart Failure 30 Day Readmission Rate
    - Decrease the congestive heart failure 30 day readmission rate by 5% of baseline

<u>Rationale:</u>

Process improvement milestones of P -1 and P-2 were selected as a means to permit time for engagement of stakeholders to secure comprehensive registry system to provide the definitive functionality required. Additionally the ability to secure key performance indicators required electronically as part of the initiative, and the capacity for reporting will require cohesive planning, implementation and testing prior to go-live. Improvement targets were placed in DY3-

DRAFT

5 in order to collect data and improve upon the established baseline determined in DY2. The baseline will dictate an appropriate improvement target goal.

Outcome Measure Valuation:

The purpose of the implementation of a disease registry is to provide the ability to identify patients at risk based on chronic disease states and associated utilization patterns that will facilitate the ability to identify gaps in service and deficits in patient understanding and self-management of their disease. Patients with chronic illness will have improved health, via education and case management, the cost per patient is decreased due to decreased acute care and emergency visit utilization, and the patient's quality of life is improved. Harris Health internal data for the most recent year has 47,000 patients with one or more of the top 5 diagnoses of chronic disease – heart failure, hypertension, obesity, depression, and chronic respiratory. With a disease registry allowing us to establish clear incidence and prevalence data, the cost saving opportunity related to the potential improved management of these conditions is substantial.

DRAFT

Title of Outcome Measure (Improvement Target): IT-4.2 Central line-associated bloodstream infections (CLABSI) rates

Unique RHP outcome ID: 133355104.3.14

Outcome Measure Description:
IT- 4.2 will measure the number of cases of CLABSI as designated by IQR criteria. Reduction of Central line associated bloodstream infection rates was chosen as an outcome measure as it requires process improvements from an interdisciplinary team of providers and innovators. Sustained improvements can be reached by redesigning our process around insertion and care of devices.

Process Milestones:

- DY2: P-1
- DY3: P-2; P-4

Outcome Improvement Target(s) for each year:

- DY4:
  - IT- 4.2 Central line-associated bloodstream infections (CLABSI) rates
    - Decrease the number of cases of CLABSI as designated by IQR criteria by 20%
- DY5:
  - IT- 4.2 Central line-associated bloodstream infections (CLABSI) rates
    - Decrease the number of cases of CLABSI as designated by IQR criteria by 50%

Rationale:

Process milestones –P-1 through P-3 develops the infrastructure of quality improvement, clinical effectiveness , systems engineering and other expertise to build the foundation for all subsequent processes. A baseline rate (P-2) for Central line-associated bloodstream infections (CLABSI) at Harris Health System will also be established in DY2 for performance purposes.

Improvement targets were placed in DY4 and 5 based on implementation of practices with rapid testing cycles for sustainable change in multiple clinical units and hospitals.

Outcome Measure Valuation:
The goal of the center is to define high impact opportunities in patient safety, clinical effectiveness of evidence based best practices, population health, care coordination and unmet patient needs in Medicaid and uninsured patients. The center design team will partner with healthcare providers, patients and other stakeholders to develop innovation strategies and plans, and pilot the implementation. As noted earlier, centers of healthcare innovation at other prominent healthcare organizations are excellent references. The success of these programs demonstrates high reliability organizations in patient safety, clinical effectiveness, cost of care and integration of nontraditional community resources to improve health. These centers have reduced patient harm, improved mortality, reduced patient admissions, readmissions and emergency room visits, improved patient satisfaction and reduced disparities in healthcare delivery.

DRAFT

Title of Outcome Measure (Improvement Target): IT-5.1- Improved cost savings: Demonstrate cost savings in care delivery

Unique RHP outcome identification number: 133355104.3.15

Outcome Measure Description:

OD-5 Cost of Care – IT-5.1 Improved cost savings: Demonstrate cost savings in care delivery

Central fill will decrease costs through efficiencies gained with central fill automation (robotics, conveyor system, sorting and packing technology) thus decreasing labor costs. Therefore, we will measure the decreasing average labor cost per prescription as the percentage of total prescriptions processed through automation increases.

a) We will implement cost accounting systems to measure intervention impacts by monitoring average labor cost per prescription.
b) We will establish a method to measure cost containment by using the total salaries and benefits (as the numerator) and total number of ambulatory prescriptions filled (as the denominator) as stated on the monthly operating statements.
c) We will use the current state from the month preceding implementation as our baseline for cost. We currently have no automation.
d) We will measure cost containment by comparing the project's average labor cost per prescription and the percentage of prescriptions filled at the central fill site to the baseline at yearly intervals.

This cost savings is based on the current volume of 2.5M total prescriptions per year**.**

Process Milestones:

- **DY2**: P-2 Establish a baseline rate

Improvement Milestones:

- **DY3-DY5**: IT-5.1 Improved cost savings: Demonstrate cost savings in care delivery (stand-alone)

Outcome Improvement Targets:

- **DY3:** Cost savings: 7% decrease in average labor cost per prescription when processing 40% of the total Harris Health ambulatory volume at the central fill facility by the end of the year.
- **DY4**: Cost savings: 19% decrease in in average labor cost per prescription over established baseline by processing 50% of the total Harris Health ambulatory volume at the central fill facility.
- **DY5**: Cost savings: 31% decrease in in average labor cost per prescription over established baseline by processing 60% of the total Harris Health ambulatory volume at the central fill facility.

DRAFT

Rationale:

Our process milestone P-2 is to establish a baseline cost based on current state before implementation of central fill.

Outcome Improvements will be analyzed by the Cost Benefit Analysis comparing the average labor cost per prescription at the goal percentage rates compared to baseline average labor cost per prescription.

Considering that there is no current automation at Harris Health Department of Pharmacy for prescription processing, the baseline rate will be the average labor cost per prescription when 0% of prescriptions are filled at the central fill facility. The data source will be the monthly operating statement from the month prior to go-live.

In DY3 cost savings result from a 7% decrease the average labor cost per prescription using the total salaries and benefits/total number of Harris Health prescriptions as found on the monthly operating statement compared to baseline. The cost savings are a result of automation efficiencies.

In DY4, cost savings result from a 19% decrease from baseline in the average labor cost per prescription using the total salaries and benefits/total number of Harris Health prescriptions as found on the monthly operating statement compared to baseline. The cost savings are a result of automation efficiencies.

In DY5, cost savings result from a 31% decrease from baseline in the average labor cost per prescription using the total salaries and benefits/total number of Harris Health prescriptions as found on the monthly operating statement compared to baseline. The cost savings are a result of automation efficiencies.

Outcome Measure Valuation:

This project is a supporting pillar for one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in Harris County. The value of the project is based on cost avoidance, projecting savings associated with reducing the costs incurred in filling 2.5 million current patient prescriptions on an annual basis. Based on the increase in primary care volumes addressed in several other Harris Health System Waiver projects, further growth in volume to over 3.0 million prescriptions is projected. Despite this increase in prescription volume, processing costs are projected to decrease in total with the addition of the central fill function. The prompt availability of needed prescriptions for our underserved patients, particularly those with chronic disease that can be managed effectively with appropriate pharmaceuticals, will result in fewer emergency room visits for public and private hospitals located in the service area, and will also help to prevent future downstream inpatient admission

Title of Outcome Measure (Improvement Target): IT-9.4 Reduce ER Utilization for Frequent User Cohort

Unique RHP Outcome Identification Number: 133355104.3.16

Outcome Measure Description:

IT-9.4 will measure the reduction in ER utilization for the identified frequent user cohort.

This project will identify the highest utilizers of emergency room services in the Harris health System, and implement personalized navigation and management plans in order to decrease the annual rate of usage for these patients. The value of the project is based on cost savings associated with a substantial reduction in the utilization of emergency services, as well as helping to prevent future downstream inpatient admissions that frequently occur in this population. While the initial focus will begin with the top 100 patients, as the program expands we will drill further into the emergency room population and enroll more patients, as appropriate.

Process Milestones:

- DY2: P-1
- DY3: P-2

Outcome Improvement Targets:

- DY4: Reduce utilization rate by 10% compared to baseline
- DY5: Reduce utilization rate by 20% compared to baseline

Rationale:

Because this is a new service, process milestones P-1 and P-2 were selected in order to plan for the program and establish baseline metrics. Outcome IT-9.4 was selected to measure overall utilization of ER resources by the most frequent users. Decreases in ER resource utilization will reflect the success of the navigation program. The goals reflect that not all patients may engage fully in the navigation program. [277]

In 2010, over 40% of Harris County ER visits by Harris County residents were primary care related, these include visits for conditions that are non-urgent, primary care treatable, and primary care preventable. The average cost to treat these patients in the ER versus a primary care setting was approximately $800 per visit for all age groups. Connecting patients who frequent the ER with consistent, coordinated primary and specialty care access will improve clinical outcomes, which will decrease the need to access emergent services.

Outcome Measure Valuation:

[277] Gawande A. The Hot Spotters: Can we lower medical costs by giving the neediest patients better care? *The New Yorker.* 2011. http://www.newyorker.com/reporting/2011/01/24/110124fa_fact_gawande. Accessed October 25, 2012.

DRAFT

Title of Outcome Measure (Improvement Target): IT-9.4 Reduced EC Utilization for ESI Level 5 Patients

Unique RHP Outcome Identification Number: 133355104.3.17

Outcome Measure Description:

Because this is a new service, process milestones P-1 and P-2 were selected in order to plan for the program and establish baseline metrics. Outcome IT-9.4 was selected to measure overall utilization of EC resources. Because the volume of patients who present to the EC cannot be controlled by the hospital system, we will measure the percentage of eligible patients who are referred to more appropriate care settings.

Process Milestones:

- DY2: P-1
- DY3: P-2

Outcome Improvement Targets:

- DY4 and DY5: IT-9.4 – Reduced EC Utilization with year over year improvements

Rationale:

In 2010, over 40% of Harris County ER visits by Harris County residents were primary care related, these include visits for conditions that are non-urgent, primary care treatable, and primary care preventable. The average cost to treat these patients in the ER versus a primary care setting was approximately $800 per visit for all age groups. Referring patients with primary care treatable conditions to proximate same day clinics can help to reduce costs of care for the affected individual patients, freeing resources and improving efficiency for patients who need emergent care.

Outcome Measure Valuation:

This project will improve patient throughput times for patients appropriately utilizing emergency room services, and improve the overall efficiency of the healthcare system by helping patients with non-urgent conditions receive appropriate care in a more cost effective setting. The value of the project is based on cost savings associated with a reduction in the utilization of emergency services by non-urgent patients. Referring patients with primary care treatable conditions to proximate walk-in clinics can also help to reduce costs of care for the affected individual patients, freeing resources and improving efficiency for patients who need emergent care.

DRAFT

<u>Title of Outcome Measure (Improvement Target):</u> IT-10.1 Quality of Life

<u>Unique RHP Outcome ID:</u> 133355104.3.18 / Pass 2

<u>Outcome Measure Description:</u>

The outcome measure used for this program to measure improvement in quality of life is the Short Form Health Survey (SF-36). This is an outcome domain OD-10 Quality of Life/Functional Status Measure that is specifically IT-10.1 Quality of Life. The performing provider will be the physical or occupational therapist providing services.

This outcome measure was selected because it is able to be used on individuals from a wide range of age groups and treatment groups with a variety of diseases and conditions. In addition, this outcome measure is available in over 140 translations. This tool is evidence based and validated for a wide range of diagnostic groups that are routinely seen in outpatient services.

The SF-36 is a multipurpose, 36-item survey that measures eight domains of health: physical functioning, role limitations due to physical health, bodily pain, general health perceptions, vitality, social functioning, role limitations due to emotional problems, and mental health. It yields scale scores for each of these eight health domains, and two summary measures of physical and mental health: the Physical Component Summary (PCS) and Mental Component Summary (MCS). Patients will complete the Short Form Health Survey (SF-36) upon initial evaluation and upon discharge from Physical or Occupational Therapy to measure the patient's perceived quality of life before and after therapy intervention. With this outcome measure, improvement in quality of life will be demonstrated by an increased score at discharge from the score at initial evaluation. The scores will vary from patient to patient, but an average score is above a 50. The determined outcome improvement target for each year and patient will be to improve the score to greater than 50 at discharge from physical and occupational therapy.

Process Milestones:

- DY2: P-4
- DY3: P-2
- DY4: P-5

Outcome Improvement Target(s) for each year:

- DY4:
    - IT-10.1 Quality of Life
    - Improve quality of life (QOL) scores to greater than 50 at discharge from therapy for at least 10% of the patients seen in DY4
- DY5:
    - IT-10.1 Quality of Life
    - Improve quality of life (QOL) scores to greater than 50 at discharge from therapy for at least 20% of the patients seen in DY5

<u>Rationale:</u>

Milestones P-2 and P-4 were chosen to determine the baseline Quality of Life data for the population served and design a method to organize data and determine appropriate interventions to improve Quality of Life in order to determine the outcome improvement targets for the specific population served in years 3, 4, and 5. Milestone P-5 was chosen to ensure that the baseline data, lessons learned, and best practices be disseminate to the stakeholders and specialty providers to improve Quality of Life with improved access to care.

DRAFT

The average QOL score is above a 50; therefore, Improvement Targets in DY4 and DY5 aim to improve QOL scores to greater than 50 at discharge from therapy for at least 10% of the patients seen in DY4 and 20% of patients seen in DY5.

Outcome Measure Valuation:

This project will increase the capacity to provide outpatient physical and occupational therapy services to the underserved areas of Harris County, primarily low-income, uninsured and Medicaid populations. The expanded Outpatient Physical Therapy and Occupational Therapy (PT and OT) services will be targeted to populations who are at risk for impairments in activities of daily living resulting from a lack of access to specialty care. The project will improve access by providing an additional 23 PT and OT providers to the Rehabilitation Services department and by adding additional outpatient therapy treatment space near the referring clinics, facilitating an increase in the number of patients seen per month by specialty Physical and Occupational Therapy services of 1,320 patients. The project will result in improved quality of life by persons served, measured by a standard health survey.

Title of Outcome Measure (Improvement Target): IT- 6.1 Percent improvement over baseline of patient satisfaction (1) are getting timely care, appointments, and information

Unique RHP outcome identification number(s): 133355104.3.19 / Pass 2

Outcome Measure Description:

IT- 6.1 will measure improvement in satisfaction scores over time relating to timeliness of care at the Casa de Amigos (Casa) same day access clinic, specifically measuring the mean score for the Press Ganey survey question- "Ease of scheduling appointments."

Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health center providers are currently 95% empaneled. Moreover, physicians in Harris Health System health centers carry a panel of 2,250 patients, which is higher than the industry standard of approximately 1,500 patients. Full panels lead to decreased access to primary care appointments at health centers. These health centers are approaching maximum capacity for empaneled patients. From March 2012-September 2012, the Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care. For Casa de Amigos Health Center, there were 107 unduplicated patients for which there were no Family Practice appointments available in the month of September 2012 alone. As a result, patient satisfaction scores reported by Press Ganey can be greatly improved. From November 2011-October 2012 at Casa de Amigos Health Center, the mean score for "Ease of scheduling appointments" was 74.7.

Same day access clinic operations will differ from current health centers, resulting in a need for a customized survey. The baseline patient satisfaction score at Casa same day access clinic will be established in DY3 after a new, custom survey is developed and implemented through Press Ganey for same day access clinic usage.

Process Milestones:

- DY2: P-1; P-5
- DY3: P-2; P-4

Outcome Improvement Target(s) for each year:

- DY4:
  - IT- 6.1 Percent improvement over baseline of patient satisfaction (1) are getting timely care, appointments, and information
    - Increase "Ease of scheduling appointments" score by 1% above baseline
- DY5
  - IT- 6.1 Percent improvement over baseline of patient satisfaction (1) are getting timely care, appointments, and information
    - Increase "Ease of scheduling appointments" score by 2% above baseline

Rationale:

P-1 was chosen to ensure that all necessary stakeholders are consulted to develop strategies and processes necessary to reach patient satisfaction goals. Moreover, a new, customized patient satisfaction survey will be developed for same day access clinics in partnership with Press Ganey. P-5 will also be approached in DY2. We plan to share finding and lessons from project planning with internal and external stakeholders. In DY3, P-2 will produce a baseline "Ease of scheduling appointments" score at the new same day access clinic based on

available performance. In DY3, we will also conduct PDSA cycles for P-4 to ensure that strategies and processes for identified interventions are effective.

IT-6.1 will be measured beginning in DY4 to allow for time and resources needed to purchase lease space, hire staff, and operate the same day access clinic for patient care and successful survey calculation. Improvement targets were chosen with the expectation to reach patient satisfaction goals gradually to coincide with improvements in operations at the clinic.

Outcome Measure Valuation:

This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in this area of Harris County. The value of the project is based on the clinic's capacity to provide primary care services, including laboratory point-of-care testing, along with timely referrals for specialty care, imaging and other needed services within the Harris Health System network. The clinic can ultimately care for the episodic primary care needs of over ten thousand patients annually, and refer new patients with chronic disease management needs to one of the NCQA certified medical home clinics that are operated by Harris Health. In addition, the availability of same day primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

DRAFT

Title of Outcome Measure (Improvement Target): IT-7.8 Chronic Disease Patients Accessing Dental Services: Percentage of patients with chronic disease conditions accessing dental services following referral by their medical provider. (Standalone measure)

Unique RHP outcome identification number: 133355104.3.20 / Pass 2

Performing Provider name/TPI: Harris Health System / TPI 133355104

Outcome Measure Description:

Process Milestones
- DY2: P-1
- DY3: P-2

Outcome Improvement Milestones and Targets:
- DY4:
  - IT-7.8 Chronic Disease Patients Accessing Dental Services: Percentage of patients with diabetes accessing dental services following referral by their medical provider. Target: 5% increase over baseline
- DY5:
  - IT-7.8 Chronic Disease Patients Accessing Dental Services: Percentage of patients with diabetes accessing dental services following referral by their medical provider. Target: 7% increase over baseline

Rationale

In DY2, we will focus on process milestone P-1 chosen to ensure that all necessary stakeholders are consulted to develop strategies and processes necessary to reach patient satisfaction goals. P-5 will also be completed in DY2 as we share findings and lessons from project planning with internal and external stakeholders. In DY3, we will establish the baseline rate to be used for measuring and reporting purposes in DY4 and DY5. During DY4 and DY5, we will begin to measure improvement targets. Our goal is to increase the percentage of patients with diabetes who access our dental services following a referral. We chose a low target because the demand is greater than the access.

Outcome Measure Valuation:

There is limited access for oral health, particularly for the low-income, uninsured, and Medicaid populations. Oral health is vital in disease prevention. Bad oral health care increases the risk of heart disease, diabetes and stroke. By adding and expanding dental services to seven sites, we will be increasing access to oral health services for the underserved in Harris County, and thereby helping to reduce disparities. The expanded services in Harris Health clinics can ultimately address the routine dental care needs of over ten thousand patients, or 25,000 additional visits, annually. Treating cavities and other oral health problems will assist in providing healthcare cost savings by preventing or mitigating the effects of other chronic diseases, with a specific focus on the diabetic population.

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1 (1) Percent improvement over baseline of patient satisfaction scores: Patients are getting timely care, appointments, and information

Unique RHP outcome identification number: 133355104.3.21 / Pass 3

Outcome Measure Description:

OD-6; IT-6.1(1)

- **Process Milestones selected:**
  - DY2: (P-2) Establish baseline rates – The current house call program does not collect patient satisfaction rates. Harris Health will use patient satisfaction will be measured in DY2 to establish a baseline for improvement.
- **Improvement targets selected:**
  - DY3: (IT-6.1(1)) Improvement Target: 5% improvement above baseline
  - DY4: (IT-6.1(1)) Improvement Target: 10% improvement above baseline
  - DY5: (IT-6.1(1)) Improvement Target: 15% improvement above baseline

Rationale:

It would be no challenge to save money by reducing services, and therefore reducing satisfaction. Therefore while saving money it is critical to assess satisfaction to insure that the patients are not "suffering" from these interventions.

Outcome Measure Valuation:

This project will expand the House Calls Program in order to improve access, maximize independence, and realize cost savings by providing comprehensive, coordinated, multidisciplinary primary care at home to a population of patients that are homebound or have difficulties getting to clinic visits. The geographical challenges of the region will be addressed by a logistics approach using regional cohorting, and the house calls model will create patient-centered, coordinated primary care delivery that improves patient satisfaction and health outcomes, reduces unnecessary services, and builds on the accomplishments of our existing health care system. The present house calls team is very modest, delivering care to 180 housebound patients. By the end of the demonstration period, the four interdisciplinary teams including physicians, nurse practitioners, social workers, pharmacists, therapists, and integrated call center and support team are expecting to manage close 2,000 patients in their homes and make approximately 10,000 house calls in the year. The expected impact will be several thousand fewer ambulance rides, 2,000 fewer EC visits, 670 fewer admissions, resulting in millions of dollars in cost avoidance and realized savings.

DRAFT

Title of Outcome Measure (Improvement Target): IT-7.2 Cavities: Percentage of children with untreated dental caries (Standalone measure)

Unique RHP outcome identification number(s): 133355104.3.22/ Pass 3
Performing Provider name/TPI: Harris Health System/133355104

Outcome Measure Description:

Process Milestones:

- DY2:
  - P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
  - P-2 Establish baseline rates of unduplicated patients with untreated dental cavities within the Harris Health System pediatric dental clinics

Improvement Milestones and Targets:

- DY4:
  - IT-7.2 Cavities: Percentage of children with untreated dental caries
    Target: 3% decrease of baseline
- DY5:
  - IT-7.2 Cavities: Percentage of children with untreated dental caries
    Target: 4% decrease of baseline

Rationale:

In DY2, we will focus on process milestone P-1 to allow Harris Health to plan for the implantation of pediatric dental clinics. In DY3, we will establish the baseline rate to be used for measuring and reporting purposes in DY4 and DY5. During DY4 and DY5, we will begin to measure improvement targets. Our goal is to decrease the percentage of children seen within our pediatric dental clinics with untreated dental caries by providing preventive dental treatments. We chose a low target because literature indicates that low-income children are less likely to receive preventative dental services.

Outcome Measure Valuation:

The goal is to increase the number of children accessing dental services. Currently, Harris Health System only offers adult oral health care at some of our centers. Oral health services are essential in preventing gum disease and cavities, which have been linked to other diseases such as diabetes and heart stroke. Access to oral health services is especially important for children and adolescents, since dental problems may affect quality of life and ability to succeed. Children from lower-income families often do not receive timely treatment for tooth decay, and they are more likely to suffer from chronic conditions (National Center for Chronic Disease Prevention and Health Promotion). Treating cavities and other oral health problems at an early age has potential cost savings by preventing other chronic diseases that may come later in life.

Title of Outcome Measure (Improvement Target): IT-7.4 Topical Fluoride application (Non-Standalone measure)

Unique RHP outcome identification number(s): 133355104.3.23/ Pass 3

Performing Provider name/TPI: Harris Health System/133355104

Outcome Measure Description:

Process Milestones:

- DY2:
  - P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
  - P-2 Establish baseline rates of children receiving fluoride application within the Harris Health System pediatric dental clinics

Improvement Milestones and Targets:

- DY4:
  - IT-7.4 Topical Fluoride application
    Target: 5% increase from baseline
- DY5:
  - IT-7.4 Topical Fluoride application
    Target: 10% increase from baseline

Rationale:

In DY2, we will focus on process milestone P-1 to allow Harris Health to plan for the implantation of pediatric dental clinics. In DY3, we will establish the baseline rate to be used for measuring and reporting purposes in DY4 and DY5. During DY4 and DY5, we will begin to measure improvement targets. Our goal is to increase the number of fluoride applications to prevent more costly adverse effects. We chose a low target because literature indicates that low-income children are less likely to receive preventative dental services.

Outcome Measure Valuation:

The goal is to increase the number of children accessing dental services. Currently, Harris Health System only offers adult oral health care at some of our centers. Oral health services are essential in preventing gum disease and cavities, which have been linked to other diseases such as diabetes and heart stroke. Access to oral health services is especially important for children and adolescents, since dental problems may affect quality of life and ability to succeed. Children from lower-income families often do not receive timely treatment for tooth decay, and they are more likely to suffer from chronic conditions (National Center for Chronic Disease Prevention and Health Promotion). Treating cavities and other oral health problems at an early age has potential cost savings by preventing other chronic diseases that may come later in life.

DRAFT

Title of Outcome Measure (Improvement Target): IT- 8.2 Percentage of Low Birth-Weight Births

Unique RHP outcome identification number(s): 133355104.3.24 / Pass 3

Outcome Measure Description:

IT- 8.2 will be defined as babies born weighing <2,500 grams at birth and will measure the percentage of low birth-weight births among those patients who have completed the OB Navigation program by the time of delivery at a Harris Health System hospital.

Harris County's low birth weight rate (8.8 %) for the same year is higher than the Healthy People 2020 goal of 7.8% and higher than the 2010 national average of 8.15%. Moreover, the percentage of low birth-weight births at the Harris Health System (LBJ General Hospital and Ben Taub General Hospital combined) for 2011 was 9.9%. Low birth-weight rate is also a Healthy People 2020 objective.

IT-8.2 will measure the percentage of low birth-weight births among those patients who have completed the OB Navigation program (received the intervention) by the time of delivery at a Harris Health System hospital. The definition of "program completion" will be determined during the DY2 planning period. While we know that the 2011 percentage was 9.9%, we will collect more recent baseline data during DY3 for the low birth-weight percentage. The DY3 baseline will be used for performance measurement.

Process Milestones:

- DY2: P-1; P-3; P-5
- DY3: P-2; P-3

Outcome Improvement Target(s) for each year:

- DY4:
  - IT- 8.2 Percentage of Low Birth-Weight Births
    - Of those patients who received the intervention, decrease the percentage of babies born weighing <2,500 grams at birth to less than DY2 baseline
- DY5:
  - IT- 8.2 Percentage of Low Birth-Weight Births
    - Of those patients who received the intervention, decrease the percentage of babies born weighing <2,500 grams at birth to a rate to be determined

Rationale:

Process milestones –P-1 through P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor timeliness of prenatal and postnatal care within the Harris Health System. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3. In DY3 we will establish baseline percentage with P-2. P-5 will be approached in DY2, after the initial gap analysis is completed. Lessons learned will be shared with the Region and stakeholders.

Improvement targets were placed in DY4 and 5 based on the timeframe allowed to put in place the proper resources and processes needed to collect data. The mprovement target goal will be to achieve a low birth-weight percentage below the baseline percentage to be determined in in DY3. The performance during DY4, whether high or low, will dictate an appropriate improvement target goal for DY5. It is also important to note that the outcome measure being addressed may be affected by social determinants other than prenatal encounters with navigators

and providers. For instance, psychosocial, mental health, demography trends, and behavioral issues will affect the incidence of low birth-weight births. In addition, the long timeframe needed to realize perinatal outcomes results for full-term pregnancies was considered when determined improvement targets. Patients in the project will be encountered at the beginning of pregnancy and will need to be followed over time.

Outcome Measure Valuation:

The goal of this project is to utilize community health workers, case managers, social workers, and nurses as a comprehensive patient navigation team that will provide enhanced care coordination, community outreach, social support and culturally competent care to high-risk obstetrics patients throughout their pregnancy. The estimated number of high risk cases at Harris Health on an annual basis is over 2,000. All of those cases will be targeted by this program, with a goal to decrease the percentage of low birth-weight births among patients who complete the program and deliver at Harris Health System. Of those patients who receive patient navigation services, he goal is to decrease the percentage of babies born weighing <2,500 grams at birth to less than DY2 baseline.

<u>Title of Outcome Measure (Improvement Target):</u> IT-1.20 Management of International Normalized Ratio (INR) for patients receiving anticoagulation monitoring

<u>Unique Project Identification number</u>: 133355104.3.25/ Pass 3

<u>Performing Provider Name/TPI#:</u> Harris Health System/133355104

Outcome Measure Description

IT-1.20 will measure the percentage of patients with at least 2 consecutive INRs within goal range (goal is specific for each patient). We will divide the number of patients with INR at goal for 2 consecutive visits by the total number of patients with monitored INR to establish the baseline percentages within the Harris Health System.

Process Milestones:

- DY2: P-2

Outcome Improvement Target(s) for each year:

- DY3:
  - IT-1.20 will measure the percentage of patients with at least 2 consecutive INRs within goal range (goal is specific for each patient).
    - 35% of all patients seen at Harris Health will have at least 2 consecutive INRs at goal by the end of DY3
- DY4:
  - IT-1.20 will measure the percentage of patients with at least 2 consecutive INRs within goal range (goal is specific for each patient).
    - 40% of all patients seen at Harris Health will have at least 2 consecutive INRs at goal by the end of DY3
- DY5:
  - IT-1.20 will measure the percentage of patients with at least 2 consecutive INRs within goal range (goal is specific for each patient).
    - 50% of all patients seen at Harris Health will have at least 2 consecutive INRs at goal by the end of DY3

<u>Rationale:</u>

Process milestone P-2 was chosen to determine the percentage of patients with at least 2 consecutive INRs within goal range (goal is specific for each patient). We will divide the number of patients with INRs at goal for 2 consecutive visits by the total number of patients being monitored to establish the baseline percentages within the Harris Health System. Reports run from EPIC® (our electronic medical record system) will allow us to capture the baseline data needed and this will be completed in DY2. Improvement targets were placed in DY3 thru DY5 and are on contingent on our ability to accurately establish the baseline rate in DY2. Improvement target goals will be determined after baseline percentage is set in DY2. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal.

DRAFT

Outcome Measure Valuation:

In recent years there has been an increasing shift in warfarin therapy management from standard care by a physician to dedicated anticoagulation clinic models. Pharmacist-managed anticoagulation clinics provide patients with expert care, frequent monitoring, and education to ensure optimal outcomes and increased patient safety. Education and patient involvement have been shown to increase compliance, leading to improved patient outcomes as a result of more frequent monitoring. This project significantly enhances our existing delivery system by increasing availability of persons qualified to manage acute and chronic care needs as related to anticoagulation management. This increase in availability not only allows for timely and more frequent patient follow up but also decreases the risk of potential complications which may require management in the acute care setting, resulting in a measurable reduction in the number of hospital admissions and emergency room visits secondary to the warfarin complications rate.

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1—Patient Satisfaction
(4) patient's involvement in shared decision making

Unique RHP outcome identification number(s) 133355104.3.27 / Pass 3

Outcome Measure Description:
IT-6.1 Percent Improvement over Baseline of Patient Satisfaction Scores related to involvement in shared decision making

Process Milestones:

- DY2:
  - P-7—Other activities not described: Determine baseline of Outpatient satisfaction scores related to shared decision making
  - P-4—Conduct Plan-Do-Study-Act cycles to improve data collection and intervention activities
- DY3:
  - P-4—Conduct Plan-Do-Study-Act cycles to improve data collection and intervention activities

Outcome Improvement Targets for each year:

- DY3:
  - IT-6.1: Percent Improvement over Baseline of Patient Satisfaction Scores—Increase patient satisfaction scores 5% over baseline for shared decision making
- DY4:
  - IT-6.1: Percent Improvement over Baseline of Patient Satisfaction Scores—Increase patient satisfaction scores 10% over baseline for shared decision making
- DY5:
  - IT-6.1: Percent Improvement over Baseline of Patient Satisfaction Scores—Increase patient satisfaction scores 15% over baseline for shared decision making

Rationale:
Process milestone P-7 was chosen to capture the degree to which providers and patients are engaged in the health promotion effort at baseline. Process milestone P-4 was chosen so that rapid ongoing improvements in the program's effectiveness and reach can be implemented and the outcome improvement targets can be reached throughout DY3-DY5.[18, 19]

The improvement target (IT-6.1) was chosen based on evidence that patient satisfaction surveys are an acceptable proxy of quality care provision in healthcare settings.[17] The improvement in patient satisfaction will compliment the Category 2 Improvement measure. It is believed the more patients who receive health promotion through their primary care provider and medical home, the more will view this aspect of care favorably and will express satisfaction in the shared decision making activities in which they engage with their providers around the issues of health promotion and healthy eating.

Outcome Measure Valuation:
The goal of the this project is to develop a program for promoting increased consumption of fruits and vegetables among primary care patients through an integrated approach that

includes multi-provider and multi-modal patient education and access to a clinic-based farmer's market. Providers in Harris Health System recognize the need to counsel patients on healthy lifestyle behavior, but are often hesitant because of the challenges patients face with compliance. This project will leverage the motivating power of the provider-patient relationship. It will equip providers with a tangible tool (prescription) to use in their counseling and will give patients a specific avenue for adoption of the recommended behavior. The goal will be to educate 1,000 patients monthly across 10 medical home sites on the health promoting benefits of fruit and vegetable intake. Evidence from studies like Dietary Approaches to Stop Hypertension have determined that diets high in fruits and vegetables can reduce blood pressure, stroke risk, and weight. It has also been shown to prevent some cancers, and diabetes. Given the high level of chronic disease in the Harris Health patient population, improved diet can have immediate positive impact on the health of our patients, and result in long-term savings in emergency and acute care costs.

DRAFT

<u>Title of Outcome Measure (Improvement Target):</u> IT-13.1 Pain assessment (NQF-1637)

<u>Unique RHP outcome identification number</u>: 133355104.3.28/ Pass 3

<u>Outcome Measure Description:</u>

IT-13.1 Pain assessment (NQF-1637) *(Non-standalone measure)*
Increase the percentage of palliative care patients who screened positive for pain and who received a clinical assessment of pain within 24 hours of screening.
Exclusion: patients with length of stay < 1 day in palliative care or patients who were not screened for pain. Patients who screen negative for pain are excluded from the denominator.

Process Milestones:

- DY2: P- 1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3: P- 2 Establish baseline rates

Outcome Improvement Targets for each year:

- DY 4:
  Increase by 3% the percentage of palliative care patients who screened positive for pain and who received a clinical assessment of pain within 24 hours of screening. Exclusion: patients with length of stay < 1 day in palliative care or patients who were not screened for pain. Patients who screen negative for pain are excluded from the denominator.

- DY 5: Increase by 5% the percentage of palliative care patients who screened positive for pain and who received a clinical assessment of pain within 24 hours of screening. Exclusion: patients with length of stay < 1 day in palliative care or patients who were not screened for pain. Patients who screen negative for pain are excluded from the denominator.

<u>Rationale:</u>

Research on care of patients with serious incurable illness and those nearing the end of life shows they experience high rates of pain (40-70% prevalence) and other physical, emotional, and spiritual causes of distress. Pain is under-recognized by clinicians and undertreated, resulting in excess suffering from patients with serious illness. Pain screening and assessments are necessary in order to improve the patient centered outcome of pain, and its effects on global outcomes of function and quality of life.

<u>Outcome Measure Validation:</u>
The goal of this project is to expand our Palliative Care Program with an increase in mid-level practitioners, physicians and social workers to provide palliative care to patients who would otherwise not have access. This model has been shown to prevent emergency center visits, as well as hospital and ICU admissions. The cost of care for seriously ill and dying patients is frequently greater than the reimbursement for such care due to long length-of-stay and utilization of high-cost beds (ICU), drugs, and procedures, and the fixed payment design of reimbursement.

Currently we provide this type of care to less than 350 persons a year. We intend to increase the patient population served to a total of 2000 patients by the end of demonstration year (DY) 5. The research available regarding palliative care shows significant reductions in pharmacy, laboratory, and intensive care costs for care coordinated through a palliative program.

Title of Outcome Measure (Improvement Target): IT-13.3 Proportion with more than one emergency room visit in the last days of life (NQF 0211)

Unique RHP outcome identification number: 133355104.3.29/ Pass 3

Outcome Measure Description:

IT-13.3 Proportion with more than one emergency room visit in the last days of life (NQF 0211)- Decrease the percentage of patients who died from cancer or another life-limiting illness with more than one emergency room visit in the last days of life. *(Standalone measure)*

Process Milestones:

- DY2: P- 2 Establish baseline rates
- DY3: P- 4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities

Outcome Improvement Targets for each year:

- DY4: IT-13.3 Decrease the percentage of patients who died from cancer with more than one emergency room visit in the last days of life by 3%.
- DY5: IT-13.3 Decrease the percentage of patients who died from cancer with more than one emergency room visit in the last days of life by 5%.

Rationale:

Generally, emergency centers are not organized to provide comfort and palliative care. Although, when operationalized as a claims-based measure, this does not take patient preferences into account, the idea is for the measure to be seen as an overall indication of practice style and/or available palliative resources. An individual patient experiencing this process of care has not necessarily received poor quality care, but unless there is a reason to think that the patients in one setting have a significantly greater proportion with differing preferences, aggregate rates of the measure can justifiably be compared across settings. In this way it is a reflection of the quality of end-of life care.

Outcome Measure Valuation:

The goal of this project is to expand our Palliative Care Program with an increase in mid-level practitioners, physicians and social workers to provide palliative care to patients who would otherwise not have access. This model has been shown to prevent emergency center visits, as well as hospital and ICU admissions. The cost of care for seriously ill and dying patients is frequently greater than the reimbursement for such care due to long length-of-stay and utilization of high-cost beds (ICU), drugs, and procedures, and the fixed payment design of reimbursement. Currently we provide this type of care to less than 350 persons a year. We intend to increase the patient population served to a total of 2000 patients by the end of demonstration year (DY) 5. DRAFT

Title of Outcome Measure (Improvement Target): IT-13.4 Proportion admitted to the ICU in the last 30 days of life (NQF 0213)

Unique RHP outcome identification number: 133355104.3.30/ Pass 3
Outcome Measure Description:

IT-13.4 Proportion admitted to the ICU in the last 30 days of life (NQF 0213) - Percentage of patients who died from cancer admitted to the ICU in the last 30 days of life. *(Standalone measure)*

Process Milestones:

- DY2: P- 2 Establish baseline rates
- DY3: P- 4 Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities

Outcome Improvement Targets for each year:

- DY4: IT-13.4 Decrease the percentage of patients who died from cancer or other life-limiting illness admitted to the ICU in the last 30 days of life by 3%.
- DY5: IT-13.4 Decrease the percentage of patients who died from cancer or other life-limiting illness admitted to the ICU in the last 30 days of life by 5%.

Rationale:
Using patient satisfaction with end-of-life care as a desired outcome, patient survey data reflect patients' desires to die at home and to not be connected to machines at the end-of-life. ICU use near the end of life may indicate a lack of discussion about advance directives. ICU care is expensive and uncomfortable, and generally not appropriate for the dying patient.

Outcome Measure Validation:
The goal of this project is to expand our Palliative Care Program with an increase in mid-level practitioners, physicians and social workers to provide palliative care to patients who would otherwise not have access. This model has been shown to prevent emergency center visits, as well as hospital and ICU admissions. The cost of care for seriously ill and dying patients is frequently greater than the reimbursement for such care due to long length-of-stay and utilization of high-cost beds (ICU), drugs, and procedures, and the fixed payment design of reimbursement. Currently we provide this type of care to less than 350 persons a year. We intend to increase the patient population served to a total of 2000 patients by the end of demonstration year (DY) 5. The research available regarding palliative care shows significant reductions in pharmacy, laboratory, and intensive care costs for care coordinated through a palliative program.

Pass 1

DRAFT

Title of Outcome Measure (Improvement Target): IT-2.11 Ambulatory Care Sensitive Conditions Admissions Rate

Unique RHP outcome identification number(s): 130959304.3.1

Outcome Measure Description:
IT-2.11 will be defined as the number of acute care hospitalizations for ambulatory care sensitive conditions (grand mal status and other epileptic convulsions, chronic pulmonary diseases (COPD), asthma, heart failure and, pulmonary edema, hypertension, angina and diabetes) for patients in defined population 75 years of age and under.

Process Milestones:

- DY2: P-1; P-2; P-3
- DY3: P-2; P-3; P-4
- DY4: P-4; P-5
- DY5: P-4; P-5

Outcome Improvement Target(s) for each year:

- **DY4:**
  - IT-2.11 Ambulatory Care Sensitive Conditions Admissions Rate
    - Reduce admission rate for acute care hospitalizations for ambulatory care sensitive conditions for individuals under 75 years of age by 5% from DY2 base for those patients of the chronic disease specialty clinic.
- **DY5:**
  - IT-2.11 Ambulatory Care Sensitive Conditions Admissions Rate
    - Reduce admission rate for acute care hospitalizations for ambulatory care sensitive conditions for individuals under 75 years of age by 10% from DY2 base for those patients of the chronic clinic.

Rationale:

The analysis of admissions into the system for acute chronic conditions, the prevalence of chronic disease in the specified population, as well as the rate of uncontrolled chronic conditions is the baseline for the establishment of a chronic disease specialty clinic. To establish the chronic clinic we chose key process milestones of project planning, confirmation of disease rates, admission rates and subsequently the measurement of the performance of the chronic clinic will be accomplished. Process Milestones will all be completed in years 2 and 3. Beginning in year 3 and continuing through year 5, Plan Do Study Act (PDSA) cycles will be utilized for process improvement and refinement. The lessons learned and best practices will be shared across Region 3 as they are experienced to allow for improvement and/or intervention as needed.

Although slight improvement in controlling chronic diseases as well as reducing Ambulatory Care Sensitive Conditions Admissions is expected in Year 3, improvements in this health disparity is expected to be measurable in years 4 and 5. The original study documented a 30% reduction in admissions rate over a 6 year period[278] and supports the expectation of a 5% and 10% in DY4 and 5 respectively.

[278] http://www.qualitymeasures.ahrq.gov/content.aspx?id=27275

Outcome Measure Valuation:

The direct dollar association with achieving the outcomes of this project is mainly in the arena of cost avoidance. For each acute admission reduction for disease related issues, we estimate a savings of approximately $15,000 - $20,000 including the associated reduction in disease crises oriented emergency department visits. Therefore, by reducing 1 admission on 50% of the active clinic patients described as a process milestone, it is possible to avoid as much as $1,000,000 of unnecessary hospital related costs.

[282] http://www.medicaid.gov/Medicaid-CHIP-Program-Information/By-Topics/Quality-of-Care/CHIPRA-Initial-Core-Set-of-Childrens-Health-Care-Quality-Measures.html

- Reduce all ED visits (including ACSC)[283]
- Reduce pediatric Emergency Department visits (CHIPRA Core Measure)[284]
- Reduce Emergency Department visits for target conditions
    - Congestive Heart Failure
    - Diabetes
    - End Stage Renal Disease
    - Cardiovascular Disease /Hypertension
    - Behavioral Health/Substance Abuse
    - Chronic Obstructive Pulmonary Disease
    - Asthma

Rationale:

The analysis of visits to the hospital emergency department led to the rationale for establishing a patient care navigation program to reduce unnecessary utilization of one of the more expense pieces of the health care continuum. To establish the patient care navigation program we chose key process milestones of project planning, confirmation of utilization statistics, patient needs and available community resources. Process Milestones will all be completed in years 2 and 3. Beginning in year 3 and continuing through year 5, Plan Do Study Act (PDSA) cycles will be utilized for process improvement and refinement. The lessons learned and best practices will be shared across Region 3 as they are experienced to allow for improvement and/or intervention as needed.

Outcome Measure Valuation:

Matagorda Regional Medical Center has approximately 20,000 visits to the Emergency Department annually. Records reflect a potential of 40 – 50%[285] of the visits could have been treated in another venue. If the Patient Care Navigator Program is successful at reducing unnecessary ED visits by a conservative 10%, a savings of as much as $2,000,000[286] could be realized by the end of the project period (as compared to a standard physician office visit).

Matagorda Regional Medical Center

Pass 3

DRAFT

Title of Outcome Measure (Improvement Target): IT-9.2 ED appropriate utilization

Unique RHP outcome identification number(s): 130959304.3.3/Pass 3
Performing Provider Name/TPI: Matagorda Regional Medical Center/130959304

Outcome Measure Description:

- Reduce all ED visits (including ACSC)[291]
- Reduce pediatric Emergency Department visits (CHIPRA Core Measure)[292]
- Reduce Emergency Department visits for target conditions
  - Congestive Heart Failure
  - Diabetes
  - End Stage Renal Disease
  - Cardiovascular Disease /Hypertension
  - Behavioral Health/Substance Abuse
  - Chronic Obstructive Pulmonary Disease
  - Asthma

Process Milestones:

- DY2: P-1; P-2; P-3
- DY3: P-2; P-3; P-4
- DY4: P-4; P-5
- DY5: P-4; P-5

Outcome Improvement Target(s) for each year:

- **DY4: (quantified improvement target TBD)**
  - IT-9.2 ED appropriate utilization
    - Reduce all ED visits (including ACSC)[293]
    - Reduce pediatric Emergency Department visits (CHIPRA Core Measure)[294]
    - Reduce Emergency Department visits for target conditions
      - Congestive Heart Failure
      - Diabetes
      - End Stage Renal Disease
      - Cardiovascular Disease /Hypertension
      - Behavioral Health/Substance Abuse
      - Chronic Obstructive Pulmonary Disease
      - Asthma

- **DY5: (quantified improvement target TBD)**

DRAFT

- IT-9.2 ED appropriate utilization
  - Reduce all ED visits (including ACSC)[295]
  - Reduce pediatric Emergency Department visits (CHIPRA Core Measure)[296]
  - Reduce Emergency Department visits for target conditions
    - Congestive Heart Failure
    - Diabetes
    - End Stage Renal Disease
    - Cardiovascular Disease /Hypertension
    - Behavioral Health/Substance Abuse
    - Chronic Obstructive Pulmonary Disease
    - Asthma

Rationale:

The analysis of visits to the hospital emergency department indicates unnecessary utilization of one of the most expense pieces of the health care continuum, the ED. To provide an alternative to care at the right time and right setting urgent care services will be expanded to evenings and weekends. An urgent care medical advice call center manned with RN professionals trained in pediatric as well as adult triage will promote the use of the expanded urgent care services. Key process milestones of project planning, identification of capacity utilization statistics from inception to Year 3, identification of patient needs, matching patient needs to resources and testing data systems and processes will be evaluated and completed in years 2 and 3. Beginning in year 3 and continuing through year 5, Plan Do Study Act (PDSA) cycles will be utilized for process improvement and refinement. The lessons learned and best practices will be shared across Region 3 as they are experienced to allow for improvement and/or intervention as needed.

Outcome Measure Valuation:

Matagorda Regional Medical Center has approximately 20,000 visits to the Emergency Department annually. Records reflect a potential of 40 – 50%[297] of the visits could have been treated in another venue. If the Patient Care Navigator Program is successful at reducing unnecessary ED visits by a conservative 15%, a savings of as much as $3,000,000[298] could be realized by the end of the project period (as compared to a standard physician office visit).

Memorial Hermann Hospital

Pass 1

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1 Improvement in Patient Satisfaction

Unique RHP outcome identification number(s): 137805107.3.1

Outcome Measure Description:
To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY 2. In DY 3, Memorial Hermann will apply the planning developed in DY 2 in order to determine baseline rates for future DYs. In DY 4, Memorial Hermann intends to improve its patient satisfaction scores by at least 10% over the baseline recorded in DY 3 for patients' rating of whether patients are getting timely care, appointments, and information. In DY 5, Memorial Hermann intends to improve its patient satisfaction scores by at least 10% over the DY 4 measurement in the same area.

Process Milestones:
- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- DY3:
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:
- DY4:
  - IT-6.1: Percent improvement over baseline of patient satisfaction scores—5% improvement over baseline
- DY5:
  - IT-6.1: Percent improvement over baseline of patient satisfaction scores—10% improvement baseline

Rationale:
The greater Houston area faces several major healthcare challenges, including a lack of primary care capacity, which can result in negative utilization patterns such as ED overutilization. Improper utilization results in lower levels of patient satisfaction with the care received, since it is not the level of care or type of care most appropriate to the patient's condition. This challenge will be addressed by Memorial's Network Development project (137805107.1.1), and Memorial Hermann expects to see an improvement in patient satisfaction as a result of the associated Category 1 project—specifically, an improvement in patients' rating of whether patients are getting timely care, appointments, and information.

Outcome Measure Valuation:
The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

DRAFT

Title of Outcome Measure (Improvement Target): IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate

Unique RHP outcome identification number(s): 137805107.3.2

Outcome Measure Description:

To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY 2. In DY 3, Memorial Hermann will apply the planning developed in DY 2 in order to determine baseline rates for future DYs. In DY 4, Memorial Hermann intends to reduce its Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate by at least 5% over the baseline recorded in DY 3. In DY 5, Memorial Hermann intends to improve its BH/SA 30-day readmission rate by at least 5% over baseline measurement.

Process Milestones:

- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- DY3:
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:

- DY4:
  - IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate—5% reduction over DY3
- DY5:
  - IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate—10% reduction over baseline measurement

Rationale:

Mental health patients in the greater Houston area, particularly uninsured patients, face significant challenges in obtaining the mental health care services they need, which can result in negative utilization patterns including unnecessary inpatient admissions. These challenges will be addressed by Memorial Hermann's Health Crisis Clinic project (137805107.1.2), which will result in greater access to emergency mental health care appointments for these underserved patients. Memorial Hermann expects to see an improvement in the Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate as a result of the associated Category 1 project.

Outcome Measure Valuation:

The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

DRAFT

Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 137805107.3.3

Outcome Measure Description:
IT-1.1 Third next available appointment (Non- standalone measure)
Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam. The goals will be to decrease number of days to third next available appointment to zero days (same day) for Primary Care.

Process Milestones:

- DY2:
  - P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
  - P-2: Establish baseline rates
  - P-3: Develop and test data systems

Outcome Improvement Targets for each year:

- DY4:
  - IT-1.1:
    Reduce by 1 day the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam.
- DY5:
  - IT-1.1:
    Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam to zero (0) days.

Rationale:
Access to primary care services can have an impact on healthcare outcomes, by providing early screening and treatment and patients are more likely to get these services when they are able to get appointments when first needed that accommodate their schedule. Since the goal of the project is to increase access to care and the third next available appointment is the healthcare industry's standard measure of access to care, we have chosen this outcome measure.

Outcome Measure Valuation:
The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

DRAFT

Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 137805107.3.4
Outcome Measure Description:
IT-1.19 Antidepressant Medication Management - NQF 0105 (Standalone measure)

This measure has two components that assess the management of antidepressant medication in children ages 6 and over: A) the acute phase treatment period consisting at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive), and B) the continuation phase treatment period consisting of at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive). For the acute phase, continuous treatment allows gaps in medication treatment up to a total of 30 days during the 114-day period. Gaps can include either washout period gaps to change medication or treatment gaps to refill the same medication. Regardless of the number of gaps, there may be no more than 30 gap days. Any combination of gaps (e.g., two washout gaps of 15 days each, or two washout gaps of 10 days each and one treatment gap of 10 days) will be counted. For the continuation phase, continuous treatment allows gaps in medication treatment up to a total of 51 days during the 231-day period. Gaps can include either washout period gaps to change medication or treatment gaps to refill the same medication. Regardless of the number of gaps, gap days may total no more than 51. Any combination of gaps (e.g., two washout gaps, each 25 days or two washout gaps of 10 days each and one treatment gap of 10 days) will be counted.

The denominator for this measures is based on discharges (of members 6 years and older as of the date of discharge who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis on or between January 1 and December 1 of the measurement year. All discharges for members who have more than one discharge on or between January 1 and December 1 of the measurement year will be included. If the discharge is followed by readmission or direct transfer to an acute facility for a mental health principal diagnosis (within the 30-day follow-up period), only the readmission discharge or the discharge from the facility to which the member was transferred will be counted. Although rehospitalization might not be for a selected mental health disorder, it is probably for a related condition.

Process Milestones:

- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans.
- DY3:
  - P-2: Establish baseline rates
  - P-3: Develop and test data systems

DRAFT

Outcome Improvement Targets for each year:

- DY4:

  IT-1.19 Increase by **3%** the percentage of discharges (of members 6 years and older as of the date of discharge who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis on or between January 1 and December 1 of the measurement year who receive at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive) and at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive).
- DY5:

  IT-1.19 Increase by **5%** the percentage of discharges (of members 6 years and older as of the date of discharge who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis on or between January 1 and December 1 of the measurement year who receive at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive) and at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive).

Rationale:

This outcome measure will be a direct reflection on whether the pediatric population in this service area is receiving appropriate management of anti-depressant medications . Greater access to primary care services can help ensure that pediatric patients receive appropriate medication management, reducing the need for additional acute care services and improving health outcomes.

Outcome Measure Valuation:

The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

DRAFT

Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 137805107.3.5

Outcome Measure Description:
IT-1.1 Third next available appointment (Non- standalone measure)
Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam. The goals will be to decrease number of days to third next available appointment to zero days (same day) for Primary Care.

Process Milestones:

- DY2:
  - P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
  - P-2: Establish baseline rates
  - P-3: Develop and test data systems

Outcome Improvement Targets for each year:

- DY4:
  - IT-1.1:
    Reduce by 1 day the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam.
- DY5:
  - IT-1.1:
    Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam to zero (0) days.

Rationale:
Access to primary care services can have an impact on healthcare outcomes, by providing early screening and treatment and patients are more likely to get these services when they are able to get appointments when first needed that accommodate their schedule. Since the goal of the project is to increase access to care and the third next available appointment is the healthcare industry's standard measure of access to care, we have chosen this outcome measure.

Outcome Measure Valuation:
The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

DRAFT

Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 137805107.3.6

Outcome Measure Description:
IT-1.19 Antidepressant Medication Management - NQF 0105 (Standalone measure)

This measure has two components that assess the management of antidepressant medication in children ages 6 and over: A) the acute phase treatment period consisting at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive), and B) the continuation phase treatment period consisting of at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive). For the acute phase, continuous treatment allows gaps in medication treatment up to a total of 30 days during the 114-day period. Gaps can include either washout period gaps to change medication or treatment gaps to refill the same medication. Regardless of the number of gaps, there may be no more than 30 gap days. Any combination of gaps (e.g., two washout gaps of 15 days each, or two washout gaps of 10 days each and one treatment gap of 10 days) will be counted. For the continuation phase, continuous treatment allows gaps in medication treatment up to a total of 51 days during the 231-day period. Gaps can include either washout period gaps to change medication or treatment gaps to refill the same medication. Regardless of the number of gaps, gap days may total no more than 51. Any combination of gaps (e.g., two washout gaps, each 25 days or two washout gaps of 10 days each and one treatment gap of 10 days) will be counted.

The denominator for this measures is based on discharges (of members 6 years and older as of the date of discharge who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis on or between January 1 and December 1 of the measurement year. All discharges for members who have more than one discharge on or between January 1 and December 1 of the measurement year will be included. If the discharge is followed by readmission or direct transfer to an acute facility for a mental health principal diagnosis (within the 30-day follow-up period), only the readmission discharge or the discharge from the facility to which the member was transferred will be counted. Although rehospitalization might not be for a selected mental health disorder, it is probably for a related condition.

Process Milestones:

- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans.
- DY3:
  - P-2: Establish baseline rates
  - P-3: Develop and test data systems

DRAFT

Outcome Improvement Targets for each year:

- DY4:

  IT-1.19 Increase by **3%** the percentage of discharges (of members 6 years and older as of the date of discharge who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis on or between January 1 and December 1 of the measurement year who receive at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive) and at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive).
- DY5:

  IT-1.19 Increase by **5%** the percentage of discharges (of members 6 years and older as of the date of discharge who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis on or between January 1 and December 1 of the measurement year who receive at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive) and at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive).

Rationale:

This outcome measure will be a direct reflection on whether the pediatric population in this service area is receiving appropriate management of anti-depressant medications . Greater access to primary care services can help ensure that pediatric patients receive appropriate medication management, reducing the need for additional acute care services and improving health outcomes.

Outcome Measure Valuation:

The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

DRAFT

Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 137805107.3.8

Outcome Measure Description:
IT-1.19 Antidepressant Medication Management - NQF 0105 (Standalone measure)

This measure has two components that assess the management of antidepressant medication in children ages 6 and over: A) the acute phase treatment period consisting at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive), and B) the continuation phase treatment period consisting of at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive). For the acute phase, continuous treatment allows gaps in medication treatment up to a total of 30 days during the 114-day period. Gaps can include either washout period gaps to change medication or treatment gaps to refill the same medication. Regardless of the number of gaps, there may be no more than 30 gap days. Any combination of gaps (e.g., two washout gaps of 15 days each, or two washout gaps of 10 days each and one treatment gap of 10 days) will be counted. For the continuation phase, continuous treatment allows gaps in medication treatment up to a total of 51 days during the 231-day period. Gaps can include either washout period gaps to change medication or treatment gaps to refill the same medication. Regardless of the number of gaps, gap days may total no more than 51. Any combination of gaps (e.g., two washout gaps, each 25 days or two washout gaps of 10 days each and one treatment gap of 10 days) will be counted.

The denominator for this measures is based on discharges (of members 6 years and older as of the date of discharge who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis on or between January 1 and December 1 of the measurement year. All discharges for members who have more than one discharge on or between January 1 and December 1 of the measurement year will be included. If the discharge is followed by readmission or direct transfer to an acute facility for a mental health principal diagnosis (within the 30-day follow-up period), only the readmission discharge or the discharge from the facility to which the member was transferred will be counted. Although rehospitalization might not be for a selected mental health disorder, it is probably for a related condition.

Process Milestones:

- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans.
- DY3:
  - P-2: Establish baseline rates
  - P-3: Develop and test data systems

DRAFT

Outcome Improvement Targets for each year:

- DY4:

  IT-1.19 Increase by **3%** the percentage of discharges (of members 6 years and older as of the date of discharge who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis on or between January 1 and December 1 of the measurement year who receive at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive) and at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive).

- DY5:

  IT-1.19 Increase by **5%** the percentage of discharges (of members 6 years and older as of the date of discharge who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis on or between January 1 and December 1 of the measurement year who receive at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive) and at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive).

Rationale:

This outcome measure will be a direct reflection on whether the pediatric population in this service area is receiving appropriate management of anti-depressant medications . Greater access to primary care services can help ensure that pediatric patients receive appropriate medication management, reducing the need for additional acute care services and improving health outcomes.

Outcome Measure Valuation:

The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

Title of Outcome Measure (Improvement Target): IT-9.4: Other Outcome Improvement Target

Unique RHP outcome identification number(s): 137805107.3.9

Outcome Measure Description:
To achieve improvement under this metric, Memorial will engage in project planning during DY2. In DY3, Memorial Hermann will apply the planning developed in DY2 to determine baseline rates for future DYs. In DY4, Memorial Hermann intends to decrease the ED utilization rate described below by at least 5% under the baseline recorded in DY3. In DY5, Memorial Hermann intends to improve the rate by at least 10% under the baseline recorded in DY3.

Memorial will collect ED utilization data for patients enrolled in the patient navigation program which will be established by the Category 2 project associated with this Category 3 outcome. Memorial Hermann will collect this data by comparing the number of Memorial Hermann ER visits in the six months prior to an individual's enrollment in the patient navigation program with the number of Memorial Hermann ER visits in the six months following the same individual's enrollment.

Process Milestones:

- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans.
- DY3:
  - P-2: Establish baseline rates.

Outcome Improvement Targets for each year:

- DY4:
  - IT-9.4: Other Outcome Improvement Target—reduce Memorial Hermann ED visits in 6 months after enrollment in patient navigation program by 5% under DY3 baseline.
- DY5:
  - IT-9.4: Other Outcome Improvement Target—reduce Memorial Hermann ED visits in 6 months after enrollment in patient navigation program by 10% under DY3 baseline.

Rationale:
The greater Houston area faces several major healthcare challenges, including a lack of primary care capacity, which can result in negative utilization patterns such as ED overutilization. Memorial Hermann's COPE/ED Navigation project (137805107.2.2) will provide patient navigation and offer alternatives to ED utilization for patients who may not be truly emergent. Memorial Hermann expects to see an improvement in ED utilization as a result of the associated Category 2 project.

DRAFT

Outcome Measure Valuation:

The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

DRAFT

Title of Outcome Measure (Improvement Target): IT-13.3: Proportion with More Than One Emergency Room Visit in the Last Days of Life

Unique RHP outcome identification number(s): 137805107.3.10

Outcome Measure Description:
To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY 2. In DY 3, Memorial Hermann will apply the planning developed in DY 2 in order to determine baseline rates for future DYs. In DY 4, Memorial Hermann intends to improve its proportion of patients who died from cancer with more than one emergency room visit in the last days of life by at least 10% over the baseline recorded in DY 3. In DY 5, Memorial Hermann intends to improve the measure by at least 10% over DY 4.

Process Milestones:
- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- DY3:
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:
- DY4:
  - IT-13.3: Proportion with more than one emergency room visit in the last days of life—5% improvement over baseline
- DY5:
  - IT-13.3: Proportion with more than one emergency room visit in the last days of life—10% improvement over baseline

Rationale:
Due to a lack of access to hospice and palliative care, many patients have no choice but to receive end-of-life care which focuses on cure at any cost, rather than on the relief and prevention of suffering. In the last days of life, these patients often receive emergency treatment that is inconsistent with palliative care principles and without proper regard for the patient's quality of life. Memorial Hermann's Palliative Clinical Care Program project (137805107.2.2) will accelerate the growth and increase availability of palliative care in the greater Houston area, providing an alternative to ED utilization for patients in the last days of life. Memorial Hermann therefore expects to see an improvement in this Category 3 outcome as a result of the successful implementation of the associated Category 1 project.

Outcome Measure Valuation:
The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

DRAFT

Memorial Hermann Northwest Hospital

Pass 1

DRAFT

Title of Outcome Measure (Improvement Target): IT-7.2 Cavities: Percentage of children with untreated dental caries (Healthy People 2020)

Unique RHP outcome identification number(s): 020834001.3.1

Outcome Measure Description:
To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY 2. In DY 3, Memorial Hermann will apply the planning developed in DY 2 in order to determine baseline rates for future DYs. In DY 4, Memorial Hermann intends to improve the untreated dental caries measurement defined below by at least 25% over the baseline recorded in DY 3 for that measurement. In DY 5, Memorial Hermann intends to improve the same measurement by at least 15% over baseline.

Process Milestones:
- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- DY3:
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:
- DY4:
  - IT-7.2 Cavities: Percentage of children with untreated dental caries (Healthy People 2020)—25% decrease over DY3 in recall patients
    - Numerator: Number of children with untreated dental caries seen by the mobile dental van program within the measurement period
    - Denominator: Total number of children that have been seen by the mobile dental van program within the measurement period
- DY5:
  - IT-7.2 Cavities: Percentage of children with untreated dental caries (Healthy People 2020—15% decrease over baseline
    - Numerator: Number of children with untreated dental caries seen by the mobile dental van program within the measurement period
    - Denominator: Total number of children that have been seen by the mobile dental van program within the measurement period

Rationale:
The greater Houston area faces several major healthcare challenges, including a lack of primary care capacity, which can result in care completely foregone until medical and dental issues escalate leading to negative utilization patterns such as ED overutilization. Memorial Hermann's School-Based Health project (020834001.1.1) will provide alternatives to improper ED utilization and provide the right care in the right setting through consistent delivery preventive care. Therefore, Memorial Hermann expects to see an improvement in the defined outcome improvement target as a result of the successful implementation of the associated Category 1

project. This specific improvement target has been chosen, in part, because it exemplifies the benefits to be derived from an accessible medical and dental home.

Outcome Measure Valuation:
The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

DRAFT

Title of Outcome Measure (Improvement Target): IT-9.4: Other Outcome Improvement Target

Unique RHP outcome identification number(s): 020834001.3.2

Outcome Measure Description:
To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY 2. In DY 3, Memorial Hermann will apply the planning developed in DY 2 in order to determine baseline rates for future DYs. In DY 4, Memorial Hermann intends to improve the Right Care, Right Setting measurement defined below by at least 10% over the baseline recorded in DY 3 for that measurement. In DY 5, Memorial Hermann intends to improve the same measurement by at least 15% over baseline.

Process Milestones:

- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- DY3:
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:

- DY4:
  - IT-9.4: Other Outcome Improvement Target – 10% improvement over DY3
    - Numerator:
      - Number of Nurse Triage Calls resulting in ED avoidance over a 12 month period
    - Denominator:
      - Number of Nurse Triage Calls received in a 12 month period.
- DY5:
  - IT-9.4: Other Outcome Improvement Target – 15% improvement over DY3
    - Numerator:
      - Number of Nurse Triage Calls resulting in ED avoidance over a 12 month period
    - Denominator:
      - Number of Nurse Triage Calls received in a 12 month period.

Rationale:
The greater Houston area faces several major healthcare challenges, including a lack of primary care capacity, which can result in negative utilization patterns such as ED overutilization. Memorial Hermann's 24-Hour Nurse Triage Line project (020834001.1.2) will provide an alternative to ED utilization for patients who may not be truly emergent; therefore, Memorial Hermann expects to see an improvement in ED utilization as a result of the associated Category 1 project. Percentage improvement is based on volume of calls which are anticipated to increase in the fourth year (from baseline) and the fifth year of the project.

Outcome Measure Valuation:
The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

DRAFT

Title of Outcome Measure (Improvement Target): IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate

Unique RHP outcome identification number(s): 020834001.3.3

Outcome Measure Description:
To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY 2. In DY 3, Memorial Hermann will apply the planning developed in DY 2 in order to determine baseline rates for future DYs. In DY 4, Memorial Hermann intends to reduce its Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate by at least 5% over the baseline recorded in DY 3. In DY 5, Memorial Hermann intends to improve its BH/SA 30-day readmission rate by at least 5% over the DY 4 measurement.

Process Milestones:

- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- DY3:
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:

- DY4:
  - IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate—5% reduction over DY3
- DY5:
  - IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate—10% reduction over the baseline measures in DY3

Rationale:
Behavioral health patients in the greater Houston area, particularly uninsured patients, face significant challenges in obtaining the behavioral health care services they need, which can result in negative utilization patterns including unnecessary inpatient admissions. These challenges will be addressed by Memorial Hermann's Psych Response Team—Case Management project (020834001.2.1), which will result in more intensive case management of post-discharge behavioral health patients and more appropriate follow-up and utilization of care by these patients. That care will be provided in a community setting, in part, through Memorial Hermann's efforts to implement a Home Health Psych Services project (020834001.1.3). Therefore, Memorial Hermann expects to see an improvement in the Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate as a result of the associated Category 1 and 2 projects.

Project Valuation:
The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1: Percent Improvement Over Baseline of Patient Satisfaction Scores

Unique RHP outcome identification number(s): 020834001.3.4

Outcome Measure Description:
To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY 2. In DY 3, Memorial Hermann will apply the planning developed in DY 2 in order to determine baseline rates for future DYs. In DY 4, Memorial Hermann intends to improve its patient satisfaction scores by at least 10% over the baseline recorded in DY 3 for patients' rating of whether patients are getting timely care, appointments, and information. In DY 5, Memorial Hermann intends to improve its patient satisfaction scores by at least 10% over the DY 4 measurement in the same area.

Process Milestones:
- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- DY3:
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:
- DY4:
  - IT-6.1: Percent improvement over baseline of patient satisfaction scores—10% improvement over DY3 for patients' rating of whether patients are getting timely care, appointments, and information
- DY5:
  - IT-6.1: Percent improvement over baseline of patient satisfaction scores—15% improvement over baseline for patients' rating of whether patients are getting timely care, appointments, and information

Rationale:
The greater Houston area faces several major healthcare challenges, including a lack of primary care capacity, which can result in negative utilization patterns such as ED overutilization. Improper utilization results in lower levels of patient satisfaction with the care received, since it is not the level of care or type of care most appropriate to the patient's condition. Additionally, patients are often unaware of the utilization options that are available to them, or otherwise not properly equipped to choose the best utilization options. These challenges will be addressed by Memorial Hermann's Convenient Care Centers project (020834001.1.2) and MHMD Care Management project (020834001.2.2), and Memorial Hermann expects to see an improvement in patient satisfaction as a result of the associated Category 1 and 2 projects—specifically, an improvement in patients' rating of whether patients are getting timely care, appointments, and information.

Outcome Measure Valuation:
The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of

DRAFT

patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

DRAFT

Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 020834001.3.5

Outcome Measure Description:

IT-1.1 Third next available appointment (Non- standalone measure)
Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam. The goals will be to decrease number of days to third next available appointment to zero days (same day) for Primary Care.

Process Milestones:

- DY2:
  - P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
  - P-2: Establish baseline rates
  - P-3: Develop and test data systems

Outcome Improvement Targets for each year:

- DY4:
  - IT-1.1:
    Reduce by 1 day the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam.
- DY5:
  - IT-1.1:
    Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam to zero (0) days.

Rationale:

Access to primary care services can have an impact on healthcare outcomes, by providing early screening and treatment and patients are more likely to get these services when they are able to get appointments when first needed that accommodate their schedule. Since the goal of the project is to increase access to care and the third next available appointment is the healthcare industry's standard measure of access to care, we have chosen this outcome measure.

Outcome Measure Valuation:

The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 020834001.3.6

Outcome Measure Description:
IT-1.19 Antidepressant Medication Management - NQF 0105 (Standalone measure)

This measure has two components that assess the management of antidepressant medication in children ages 6 and over: A) the acute phase treatment period consisting at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive), and B) the continuation phase treatment period consisting of at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive). For the acute phase, continuous treatment allows gaps in medication treatment up to a total of 30 days during the 114-day period. Gaps can include either washout period gaps to change medication or treatment gaps to refill the same medication. Regardless of the number of gaps, there may be no more than 30 gap days. Any combination of gaps (e.g., two washout gaps of 15 days each, or two washout gaps of 10 days each and one treatment gap of 10 days) will be counted. For the continuation phase, continuous treatment allows gaps in medication treatment up to a total of 51 days during the 231-day period. Gaps can include either washout period gaps to change medication or treatment gaps to refill the same medication. Regardless of the number of gaps, gap days may total no more than 51. Any combination of gaps (e.g., two washout gaps, each 25 days or two washout gaps of 10 days each and one treatment gap of 10 days) will be counted.

The denominator for this measures is based on discharges (of members 6 years and older as of the date of discharge who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis on or between January 1 and December 1 of the measurement year. All discharges for members who have more than one discharge on or between January 1 and December 1 of the measurement year will be included. If the discharge is followed by readmission or direct transfer to an acute facility for a mental health principal diagnosis (within the 30-day follow-up period), only the readmission discharge or the discharge from the facility to which the member was transferred will be counted. Although rehospitalization might not be for a selected mental health disorder, it is probably for a related condition.

Process Milestones:

- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans.
- DY3:
  - P-2: Establish baseline rates
  - P-3: Develop and test data systems

DRAFT

Outcome Improvement Targets for each year:

- DY4:

  IT-1.19 Increase by **3%** the percentage of discharges (of members 6 years and older as of the date of discharge who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis on or between January 1 and December 1 of the measurement year who receive at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive) and at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive).
- DY5:

  IT-1.19 Increase by **5%** the percentage of discharges (of members 6 years and older as of the date of discharge who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis on or between January 1 and December 1 of the measurement year who receive at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive) and at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive).

Rationale:

This outcome measure will be a direct reflection on whether the pediatric population in this service area is receiving appropriate management of anti-depressant medications . Greater access to primary care services can help ensure that pediatric patients receive appropriate medication management, reducing the need for additional acute care services and improving health outcomes.

Outcome Measure Valuation:

The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

DRAFT

Title of Outcome Measure (Improvement Target): IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate

Unique RHP outcome identification number(s): 020834001.3.7

Outcome Measure Description:
To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY2. In DY3, Memorial Hermann will apply the planning developed in DY2 in order to determine baseline rates for future DYs. In DY4, Memorial Hermann intends to reduce its Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate by at least 5% over the baseline recorded in DY3. In DY5, Memorial Hermann intends to improve its BH/SA 30-day readmission rate by at least 5% over the DY4 measurement.

Process Milestones:

- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans
- DY3:
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:

- DY4:
  - IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate—5% reduction over DY3
- DY5:
  - IT-3.8: Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate—10% reduction over baseline

Rationale:
Behavioral health patients in the greater Houston area, particularly uninsured patients, face significant challenges in obtaining the behavioral health care services they need, which can result in negative utilization patterns including unnecessary inpatient admissions. These challenges will be addressed by Memorial Hermann's Psych Response Team—Case Management project (020834001.2.1), which will result in more intensive case management of post-discharge behavioral health patients and more appropriate follow-up and utilization of care by these patients. That care will be provided in a community setting, in part, through Memorial Hermann's efforts to implement a Home Health Psych Services project (020834001.1.1). Therefore, Memorial Hermann expects to see an improvement in the Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate as a result of the associated Category 1 and 2 projects.

Outcome Measure Valuation:
The valuation of each Memorial Hermann project takes into account the transformational impact, the population served (both number of people and complexity of patient needs), the alignment with community needs, the magnitude of costs avoided or reduced, the degree of collaboration involved, and the sustainability of the project.

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1: Percent Improvement Over Baseline of Patient Satisfaction Scores

Unique RHP outcome identification number(s): 020834001.3.8

Outcome Measure Description:
To achieve improvement under this metric, Memorial Hermann will engage in project planning during DY2. In DY3, Memorial Hermann will apply the planning developed in DY2 to determine baseline rates for future DYs. In DY4, Memorial Hermann intends to improve its patient satisfaction scores over the baseline recorded in DY3 by using patients' rating of whether they are getting timely care, appointments, and information. Targets for patient satisfaction scores will be gauged against emerging best practice standards and industry comparatives.

Process Milestones:

- DY2:
  - P-1: Project planning—engage stakeholders, identify current capacity and needed resources, determine timelines, and document implementation plans.
- DY3:
  - P-2: Establish baseline rates.

Outcome Improvement Targets for each year:

- DY4:
  - IT-6.1: Percent improvement over baseline of patient satisfaction scores—improvement over DY3 for patients' rating of whether patients are getting timely care, appointments, and information.
- DY5:
  - IT-6.1: Percent improvement over baseline of patient satisfaction scores—improvement over baseline for patients' rating of whether patients are getting timely care, appointments, and information.

Rationale:
The greater Houston area faces several major healthcare challenges, including a lack of primary care capacity, which can result in negative utilization patterns such as ED overutilization. Improper utilization results in lower levels of patient satisfaction, since it is not the level or type of care most appropriate to the patient's condition. Additionally, patients are often unaware of the utilization options that are available to them, or are otherwise not properly equipped to choose the best utilization options. These challenges will be addressed by Memorial Hermann's Convenient Care Centers project and MHMD Care Management project, and Memorial Hermann expects to see an improvement in patient satisfaction as a result of the associated Category 1 and 2 projects—specifically, an improvement in patients' rating of whether they are getting timely care, appointments, and information.

Outcome Measure Valuation:
The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

Memorial Medical Center

Pass 1

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1 Patient Satisfaction

Unique RHP outcome identification number: 137909111.3.1

Project Description:

To increase the ability of Memorial Medical Center (MMC) to provide the "right care at the right time in the right setting," patient satisfaction with primary and specialty care services through the establishment of a hospital-based clinic shall be essential. This "expanding access to care" initiative will provide critically needed services to a medically underserved area of rural Texas as identified in our Region's community needs assessment. However, ensuring patients have access to services at times that are convenient for them, are able to secure appointments with appropriate providers, (therefore reducing the inappropriate use of the hospital emergency department for non-urgent and primary care service) are critical elements to producing life saving, as well as, cost saving measures.

Outcome Measure Description:

To progressively measure and implement appropriate changes, specific steps and milestones are integrated into Memorial Medical's Center Access to Care four year plan. Following is synopsis of the selected milestones and associated metrics.

During DY2, when the infrastructure for a Hospital Based Clinic is under development, MMC shall assemble a team with Quality Assurance Council to review CG-CAHPS required data on patient experience. After review, the team shall meet with a vendor to develop a customized survey tool to measure and monitor patient outcomes. Open ended questions shall be developed on the survey to all patients to elaborate on their experiences and give insight on how those experiences may be improved. This process milestone is valued at $62,718 for staffing, design development, implementation and monitoring.

For demonstration year 3, we will establish the baseline rates for CG-CAHPS focused areas including timely care, appointments and information. Milestone 2 includes collecting the data from CG-CAHPS surveys and aligning our baseline of achievements or shortcomings to the national average, as well as, personal standards for MMC. We value milestone two at $22,698 for staffing, analysis, and monitoring. Milestone 3 launches a critical step to any successful program, disseminate findings and establish lessons learned and best practices with stakeholders. Utilizing our RHP resources, Quality Assurance Council and other identified stakeholder (i.e. office staff, Physicians, IT, etc.) scores will be aligned with procedures and protocols to develop best practices for positive patient outcomes. Data and feedback are ineffective unless studied, analyzed developed into strategic plans. Because of the importance of this milestone, we value this component at $50,000 for staffing, analysis, oversight and plan development.

In DY4, MMC shall incorporate the milestones in DY3 to produce targeted improvement outcomes in this project year. Target outcome one encompasses a 5% improvement over baseline patient satisfaction scores established in DY3. Focus areas include timely care, appointments and information where goals in patient experiences fell below acceptable standards. Based upon survey results, employee training shall be developed integrating patient experience into the curriculum. Stakeholders and RHP collaborations shall be encouraged to utilize successful models. Further, a case manager/educator shall be placed to assist in information and education for patients. We value this milestone at $116,655 including staffing, analyzing, customized curriculum, supplies, training, and monitoring.

Finally, in DY5, patient experience at the Hospital Based Clinic shall have improved in deficient areas of timely care, appointments and information by 10% by the end of the waiver. Further, 80% of staff in areas identified with deficiencies in patient satisfaction shall be trained using customized models for positive patient outcomes. Patient education and case management shall extend based upon customer needs. We value this DSRIP milestone at $278,957 including staffing, analyzing, customized curriculum, supplies, training, public awareness and monitoring.

Rationale:

We intend to use the CG-CAHPS survey to improve our performance as measured by whether patients are (1) getting timely care, appointments and information. Obtaining patient feedback on our ability to provide the right care at the right time is critical to the success of this project and the internal operations of the clinic. This data will provide us with meaningful and objective information that will be used to determine whether our clinic has met patient expectations related to obtaining timely care and information, and will identify areas where we need to improve. Because the community we serve has an insufficient number of providers and patients are often unable to obtain appointments in a timely manner, the priority goal for this project is ensuring patients receive care when they need it and without significant delays, which will result in improved health outcomes and patient satisfaction. The CG-CAHPS survey is an effective tool for measuring our progress and will provide valuable information and feedback on our performance and areas where improvement is needed.

Because more than 60% of our community out-migrates for healthcare needs, it is important that patient satisfaction and access to care needs are met locally.[299] Measuring that we are meeting the needs of the patients we intend to serve, represents the best outcome for our project. Through survey results and our participation in a collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Outcome Measure Valuation:

When valuing the expansion of access to both primary and specialty care in Calhoun County, we looked at the project three-fold. We found such a project had significant economic, quality of life and cost savings value.

First, we surmised the economic value to the County as a whole, the patient, and industry. Roughly 70% of Calhoun County out-migrates for healthcare needs[12]. With that migration to other communities travels revenue from sales tax for meals, gas, shopping and a half day of work. If 10% of the community (2145 citizens) were to utilize healthcare services locally $100,035 in gas and meals alone would remain in the community. Over 20 years, $2,000,700 would be generated from travel. Further, we calculated the revenue lost by patients leaving their jobs for a half day to travel outside the community for healthcare. If 10,000 workers with the average salary of $40,000 took a half day of personal time for doctors appointments outside the area, their absence would generate a loss to industry in the amount of $76,923 in one year and $1,538,461 over 20 years. Further, the revenue generated by local healthcare services would have a significant economic impact on tax valuation. With positive tax revenue, tax rates could be lowered resulting in incentives for business and industry to develop in the area. Job creation,

[299] BR Healthcare Services, Inc., Memorial Medical Center Market & Service Area Development Report, October, 2010.

housing expansion and development of amenities add to the quality of life for Calhoun County residents.

In July 2012, Formosa Plastics Corporation and Calhoun County agreed to a $2 million tax abatement for future plant expansions. Recognizing the need for access to healthcare, Formosa Plastics designated the funds be used for construction of a Hospital Based Clinic. To industry, the need for access to healthcare locally is valued more than $2 million.

Secondly, we subjectively valued the quality of life associated with the convenience of local healthcare. In determining the value, we took into consideration the value of a coordinated home health model for patient outcomes[300], and the value of support groups to patient recovery. Redford Williams, Director, Behavioral Medicine Research Center at Duke noted, "Back in 1992 we published a paper in JAMA that clearly documented this (importance of support), showing that heart patients with a spouse, a confidant or both had a 5-year mortality rate of only 18 percent, compared to only 50 percent in those with neither spouse nor confidant." Having access to care at home, lends to a "social recovery model" with the convenience of family and friends assisting in the support group towards recovery. We estimate the value of a coordinated care model with the added convenience of a "social recovery model" as $25,000 per person. We attribute the value to wages earned by patient, supporting members and shorter recovery periods. If 100 patients experienced the benefits of quality of life per year, the value would be $2,500,000. Over 20 years, the quality of life would be valued at $50,000,000.

In a recent assessment conducted by iVantage, they concluded that Medicare costs per capita dollar by Physician service type were $531 more expensive in urban areas than rural[301]. In one year, if 2154 (10% of the County) Medicare patients from Calhoun County received their Physician services locally rather than urban areas, Medicare would save $1,139,207. Over the course of twenty years, Medicare would save $22,784,148 in Physician services.

In closing, the access to primary and specialty healthcare through a hospital based clinic is valued at $5,816,165 for year one of the Waiver. For the lifetime of the Waiver 1115, the value of these projects to rural Calhoun County, Texas is valued at $17,264,660.

DRAFT

Title of Outcome Measure (Improvement Target): IT-5.1- Improved cost savings: Demonstrate cost savings in care delivery

Unique RHP outcome identification number: 137909111.3.2

Project Description:
OD-5 Cost of Care – IT-5.1 Improved cost savings: Demonstrate cost savings in care delivery
A Medication Dispensing System will decrease costs through efficiencies gained with automation (labeling, dispensing, tracking, etc.) thus decreasing labor costs. Therefore, we will measure the decreasing average labor cost per prescription as the percentage of total prescriptions processed through automation increases.

a) We will implement cost accounting systems to measure intervention impacts by monitoring average labor cost per prescription.
b) We will establish a method to measure cost containment by using the total salaries and benefits (as the numerator) and total number of automated prescriptions filled (as the denominator) as stated on the monthly operating statements.
c) We will use the current state from the month preceding implementation as our baseline for cost. We currently have no automation.
d) We will measure cost containment by comparing the project's average labor cost per prescription and the percentage of automated prescriptions filled to the baseline at yearly intervals.

This cost savings is based on the current volume of 120,000 prescriptions per year**.**

Outcome Measure Description:
Process Milestones:
DY2: P-2 Establish a baseline rate

Improvement Milestones:
DY3-DY5: IT-5.1 Improved cost savings: Demonstrate cost savings in care delivery (stand-alone)

Outcome Improvement Targets:
DY3: Cost savings: 7% decrease in average labor cost per prescription when processing 20% of the total automated prescription volume by the end of the year.

DY4: Cost savings: 19% decrease in average labor cost per prescription over established baseline by processing 90% of the total automated prescription volume.

DY5: Cost savings: 31% decrease in average labor cost per prescription over established baseline by continuing to process 90% of the total automated prescription volume.

Rationale:
Our process milestone P-2 is to establish a baseline cost based on current state before implementation of automated medication dispensing.

Outcome Improvements will be analyzed by the Cost Benefit Analysis comparing the average labor cost per prescription at the goal percentage rates compared to baseline average labor cost

per prescription. Considering that there is no current automation at Memorial Medical Center's Pharmacy for prescription processing, the baseline rate will be the average labor cost per prescription when 0% of prescriptions are filled with the help of automation. The data source will be the monthly operating statement from the month prior to go-live.

In DY3 cost savings result from a 7% decrease the average labor cost per prescription using the total salaries and benefits/total number of MMC automated prescriptions as found on the monthly operating statement compared to baseline. The cost savings are a result of automation efficiencies.

In DY4, cost savings result from a 19% decrease from baseline in the average labor cost per prescription using the total salaries and benefits/total number of MMC automated prescriptions as found on the monthly operating statement compared to baseline. The cost savings are a result of automation efficiencies.

In DY5, cost savings result from a 31% decrease from baseline in the average labor cost per prescription using the total salaries and benefits/total number of MMC automated prescriptions as found on the monthly operating statement compared to baseline. The cost savings are a result of automation efficiencies.

Outcome Measure Valuation: This project is a supporting pillar for one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in Calhoun County. The value of the project is based on cost avoidance, projecting savings associated with reducing the costs incurred in filling 120,000 current patient prescriptions on an annual basis. Based on the increase in primary care volumes addressed in another Memorial Medical Center Waiver project, further growth in volume is projected. Despite this increase in prescription volume, processing costs are projected to decrease in total with the addition of a medication dispensing system. The prompt availability of needed prescriptions for our underserved patients, particularly those with chronic disease that can be managed effectively with appropriate pharmaceuticals, will result in fewer emergency room visits, and will also help to prevent future downstream inpatient admissions.

Memorial Medical Center

Pass 3

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1 Patient Satisfaction
Unique RHP outcome identification number: 137909111.3.3/Pass 3

Outcome Measure Description:
Since this is a new project for Memorial Medical Center, we will use DY 2 & DY 3 to plan the project and establish baseline rates. In DY 4 & DY 5, we will measure IT-6.1 Percent improvement over baseline of patient satisfaction scores specifically related to the measure IT-6.1.1 Patients are getting timely care, appointments, and information. Currently, a structured patient satisfaction survey does not exist to capture this measure at Memorial Medical Center. Therefore, the baseline will be set at 0. However, we expect to improve this measure by 5% by the end of the waiver.

Rationale:
Memorial Medical Center has selected the process milestones and outcome improvement targets because we are certain if the patient receives timely healthcare and education, they are more likely to continue leading healthy lives and obtaining preventive healthcare on a regular basis which ultimately leads to reduced healthcare costs.

Outcome Measure Valuation:
We considered both the costs and benefits to our organization and community in order to value the Outcome Measure – IT-6.1 Percent improvement over baseline of patient satisfaction scores. We believe it will take DY2 and DY3 to effectively develop and plan the Outcome Improvement Targets in DY4 and DY5. We do not currently perform or contract with a company to perform surveys for outpatient services, but we intend to select a vendor in DY 2. We believe with the improvement in patient satisfaction scores specifically the improvement target of patients getting timely care, appointments and information, this will decrease unnecessary Emergency Room visits, hospital stays, etc. because patients will be receiving the care and attention they need on a consistent and dependable basis. This Outcome Measure will serve the total outpatient service population of Memorial Medical Center, and it will ultimately assist Port Lavaca and the surrounding communities to live healthier lives and be healthier communities.

Mental Health and Mental Retardation Authority of Harris County

Pass 1

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Unique RHP outcome identification numbers: 113180703.3.1
Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/ 113180703

Outcome Measure Description:
IT-6.1: Percent improvement over baseline of patient satisfaction scores

- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5 % over baseline scores for one domain of patient satisfaction
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10 % over baseline scores for one domain of patient satisfaction

Rationale:

Measurement of patient satisfaction is a key indicator of patient-centered care and has been targeted as a quality indicator by national organizations dedicated to improvement in patient outcomes, e.g. the National Council for Quality Assurance. The Consumer Assessment of Healthcare providers and Systems(CAHPS) Survey, for instance, is one of the few indicators from among the set of 2013 HEDIS measures applicable to mental health treatment programs.

Patient satisfaction measures offer advantages associated with sound psychometrics including reliability as measurement tools, and sensitivity to change. Published scales are

DRAFT

available in multiple languages (an essential feature in Harris County's multi-cultural environment) and have established validity as reflected in documented relationships between satisfaction scale scores and aspects of both clinical process and outcome measures (e.g. adherence to treatment recommendations, retention in treatment, improvement in symptom and functional status). Finally, external norms and benchmarks are available for comparative purposes, reducing the uncertainty sometimes associated with program evaluations.

The Process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. As part of DY 2 process goals, the Outcome Management department will complete literature reviews to identify relevant, empirically validated, and empirically based, measures for the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in DY 3. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a baseline for one or more of the following categories of patient satisfaction by DY 2:

1. Are getting timely care, appointments, and information
2. How well their doctors communicate
3. Patient's rating of doctor access to specialist
4. Patient's involvement in shared decision making
5. Patient's overall health status/functional status

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Outcome Measure Valuation:

Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care. Since patient satisfaction is proposed as a "stand-alone" measure, it is, by definition, valued at 100% of the Category 3 allocation for this proposed program

environment) and have established validity as reflected in documented relationships between satisfaction scale scores and aspects of both clinical process and outcome measures (e.g adherence to treatment recommendations, retention in treatment, improvement in symptom and functional status). Finally, external norms and benchmarks are available for comparative purposes, reducing the uncertainty sometimes associated with program evaluations.

The Process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. As part of DY 2 process goals, the Outcome Management department will complete literature reviews to identify relevant, empirically validated, and empirically based, measures for the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in DY 3. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a baseline for one or more of the following categories of patient satisfaction by DY 2:

6. Are getting timely care, appointments, and information
7. How well their doctors communicate
8. Patient's rating of doctor access to specialist
9. Patient's involvement in shared decision making
10. Patient's overall health status/functional status

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Outcome Measure Valuation:

Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care. Since patient satisfaction is proposed as a "stand-alone" measure, it is, by definition, valued at 100% of the Category 3 allocation for this proposed program.

DRAFT

<u>Title of Outcome Measure (Improvement Target):</u> IT-6.1: Percent improvement over baseline of patient satisfaction scores

<u>Unique RHP outcome identification numbers:</u> 113180703.3.3
<u>Performing Provider/TPI:</u> Mental Health and Mental Retardation Authority of Harris County/ 113180703

Outcome Measure Description: IT-6.1: Percent improvement over baseline of patient satisfaction scores

- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5 % over baseline scores for one domain of patient satisfaction
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10 % over baseline scores for one domain of patient satisfaction

<u>Rationale</u>:

Measurement of patient satisfaction is a key indicator of patient-centered care and has been targeted as a quality indicator by national organizations dedicated to improvement in patient outcomes, e.g. the National Council for Quality Assurance. The Consumer Assessment of Healthcare providers and Systems(CAHPS) Survey, for instance, is one of the few indicators from among the set of 2013 HEDIS measures applicable to mental health treatment programs.

Patient satisfaction measures offer advantages associated with sound psychometrics including reliability as measurement tools, and sensitivity to change. Published scales are

DRAFT

available in multiple languages (an essential feature in Harris County's multi-cultural environment) and have established validity as reflected in documented relationships between satisfaction scale scores and aspects of both clinical process and outcome measures (e.g. adherence to treatment recommendations, retention in treatment, improvement in symptom and functional status). Finally, external norms and benchmarks are available for comparative purposes, reducing the uncertainty sometimes associated with program evaluations.

The Process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. As part of DY 2 process goals, the Outcome Management department will complete literature reviews to identify relevant, empirically validated, and empirically based, measures for the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in DY 3. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a baseline for one or more of the following categories of patient satisfaction by DY 2:

11. Are getting timely care, appointments, and information
12. How well their doctors communicate
13. Patient's rating of doctor access to specialist
14. Patient's involvement in shared decision making
15. Patient's overall health status/functional status

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Outcome Measure Valuation:

Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care. Since patient satisfaction is proposed as a "stand-alone" measure, it is, by definition, valued at 100% of the Category 3 allocation for this proposed program.

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Unique RHP outcome identification numbers: 113180703.3.5
Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/ 113180703

Outcome Measure Description: IT-6.1: Percent improvement over baseline of patient satisfaction scores

- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5 % over baseline scores for one domain of patient satisfaction
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10 % over baseline scores for one domain of patient satisfaction

Rationale:

The Process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. Although MHMRA has attempted to measure patient satisfaction in the past, the instruments may not have been the most valid, empirically supported or may not have had national benchmarks for comparison. As part of DY 2 process goals, the Outcome Management department will complete

DRAFT

literature reviews to identify relevant, empirically validated, and empirically based, measures for the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in DY 3. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a baseline for one or more of the following categories of patient satisfaction by DY 2:

1. Are getting timely care, appointments, and information
2. How well their doctors communicate
3. Patient's rating of doctor access to specialist
4. Patient's involvement in shared decision making
5. Patient's overall health status/functional status

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Outcome Measure Valuation:

Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Unique RHP outcome identification numbers: 113180703.3.6
Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/ 113180703

Outcome Measure Description: IT-6.1: Percent improvement over baseline of patient satisfaction scores

- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5 % over baseline scores for one domain of patient satisfaction
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10 % over baseline scores for one domain of patient satisfaction

Rationale:

The Process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. Although MHMRA has attempted to measure patient satisfaction in the past, the instruments may not have

been the most valid, empirically supported or may not have had national benchmarks for comparison. As part of DY 2 process goals, the Outcome Management department will complete literature reviews to identify relevant, empirically validated, and empirically based, measures for the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in DY 3. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a baseline for one or more of the following categories of patient satisfaction by DY 2:

6. Are getting timely care, appointments, and information
7. How well their doctors communicate
8. Patient's rating of doctor access to specialist
9. Patient's involvement in shared decision making
10. Patient's overall health status/functional status

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

<u>Outcome Measure Valuation</u>:
Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores
Unique RHP outcome identification numbers: 113180703.3.7
Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/ 113180703

Outcome Measure Description: IT-6.1: Percent improvement over baseline of patient satisfaction scores

- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5 % over baseline scores for one domain of patient satisfaction
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10 % over baseline scores for one domain of patient satisfaction

<u>**Rationale**</u>:

The Process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. Although MHMRA has attempted to measure patient satisfaction in the past, the instruments may not have been the most valid, empirically supported or may not have had national benchmarks for comparison. As part of DY 2 process goals, the Outcome Management department will complete literature reviews to identify relevant, empirically validated, and empirically based, measures for

the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in DY 3. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a baseline for one or more of the following categories of patient satisfaction by DY 2:

11. Are getting timely care, appointments, and information
12. How well their doctors communicate
13. Patient's rating of doctor access to specialist
14. Patient's involvement in shared decision making
15. Patient's overall health status/functional status

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

<u>Outcome Measure Valuation</u>:

Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores
Unique RHP outcome identification numbers: 113180703.3.9
Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/ 113180703

Outcome Measure Description: IT-6.1: Percent improvement over baseline of patient satisfaction scores

- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5 % over baseline scores for one domain of patient satisfaction
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10 % over baseline scores for one domain of patient satisfaction

Rationale:

The Process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. Although MHMRA has attempted to measure patient satisfaction in the past, the instruments may not have been the most valid, empirically supported or may not have had national benchmarks for comparison. As part of DY 2 process goals, the Outcome Management department will complete literature reviews to identify relevant, empirically validated, and empirically based, measures for

DRAFT

the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in DY 3. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a baseline for one or more of the following categories of patient satisfaction by DY 2:

21. Are getting timely care, appointments, and information
22. How well their doctors communicate
23. Patient's rating of doctor access to specialist
24. Patient's involvement in shared decision making
25. Patient's overall health status/functional status

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Outcome Measure Valuation:

Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Unique RHP outcome identification numbers: 113180703.3.10

Outcome Measure Description:

IT-6.1: Percent improvement over baseline of patient satisfaction scores

- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5 % over baseline scores for one domain of patient satisfaction
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10 % over baseline scores for one domain of patient satisfaction

Rationale:

The Process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department

DRAFT

and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. Although MHMRA has attempted to measure patient satisfaction in the past, the instruments may not have been the most valid, empirically supported or may not have had national benchmarks for comparison. As part of DY 2 process goals, the Outcome Management department will complete literature reviews to identify relevant, empirically validated, and empirically based, measures for the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in DY 3. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a baseline for one or more of the following categories of patient satisfaction by DY 2:

26. Are getting timely care, appointments, and information
27. How well their doctors communicate
28. Patient's rating of doctor access to specialist
29. Patient's involvement in shared decision making
30. Patient's overall health status/functional status

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Outcome Measure Valuation:

Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Unique RHP outcome identification numbers: 113180703.3.12

Outcome Measure Description:

IT-6.1: Percent improvement over baseline of patient satisfaction scores

- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5 % over baseline scores for one domain of patient satisfaction
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10 % over baseline scores for one domain of patient satisfaction

Rationale:

The Process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department

DRAFT

and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. Although MHMRA has attempted to measure patient satisfaction in the past, the instruments may not have been the most valid, empirically supported or may not have had national benchmarks for comparison. As part of DY 2 process goals, the Outcome Management department will complete literature reviews to identify relevant, empirically validated, and empirically based, measures for the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in DY 3. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a baseline for one or more of the following categories of patient satisfaction by DY 2:

36. Are getting timely care, appointments, and information
37. How well their doctors communicate
38. Patient's rating of doctor access to specialist
39. Patient's involvement in shared decision making
40. Patient's overall health status/functional status

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Outcome Measure Valuation:

Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Unique RHP outcome identification numbers: 113180703.3.13

Outcome Measure Description:

IT-6.1: Percent improvement over baseline of patient satisfaction scores

- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5 % over baseline scores for one domain of patient satisfaction
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10 % over baseline scores for one domain of patient satisfaction

Rationale:

The Process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. Although MHMRA has attempted to measure patient satisfaction in the past, the instruments may not have been the most valid, empirically supported or may not have had national benchmarks for comparison. As part of DY 2 process goals, the Outcome Management department will complete literature reviews to identify relevant, empirically validated, and

DRAFT

empirically based, measures for the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in DY 3. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a baseline for one or more of the following categories of patient satisfaction by DY 2:

41. Are getting timely care, appointments, and information
42. How well their doctors communicate
43. Patient's rating of doctor access to specialist
44. Patient's involvement in shared decision making
45. Patient's overall health status/functional status

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Outcome Measure Valuation:

Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care.

Title of Outcome Measure (Improvement Target): IT-9.1 Decrease in mental health admissions and readmissions to criminal justice settings

Unique RHP outcome identification numbers: 113180703.3.14

Outcome Measure Description:

IT-9.1 Decrease in mental health admissions and readmissions to criminal justice settings

- The number of individuals receiving CIRT intervention who had a potentially preventable admission/readmission to a criminal justice setting during the demonstration years

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baselines for patients served
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT-9.1: Decrease in the number of individuals receiving CIRT intervention who had a potentially preventable admission/readmission to a criminal justice setting during the demonstration years by 5% from baseline
- DY 5:
  - IT-9.1: Decrease in the number of individuals receiving CIRT intervention who had a potentially preventable admission/readmission to a criminal justice setting during the demonstration years by 10% from baseline

Rationale:

The Process milestones were chosen as stated above in order to develop a strong collaborative team approach between the clinical staff, administrators, stake-holders, law-enforcement officers, Quality Improvement Department and the newly formed Outcome

Management Department of MHMRA. The first steps in DY 2 will be project planning (P-1) then establishment of baselines (P-2) for the number of CIRT interventions and the number of arrests. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). In DY 3 a similar process will provide for accurate measurement of baselines from which to measure the success of the CIRT intervention. In particular, we chose to add Process milestone P-3 Develop and test data systems in order to determine any new systemic changes in data collection that the collaborations may have allowed for that may not have been available in DY2.

We hope that the ratio of arrests to intervention will decrease as CIRT teams and officers have more experience working collaboratively. At this time, we are not selecting a specific metric or percent of expected change. The rationale for determining this rate at a later time is that the base rate of arrests is expected to be low and the percent of change will need to appropriately reflect meaningful changes in arrests. CIRT administrators and stakeholders will work in conjunction with the MHMRA Outcomes Department and the MHMRA Quality Improvement Department to determine an appropriate rate of change.

Once initial rates of change in DY 4 have been determined another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in reducing preventable mental health admissions and readmissions to criminal justice settings. This information can then be provided to clinic staff in order to produce the needed improvements.

Outcome Measure Valuation:

We have selected preventable mental health admissions/readmissions to criminal justice setting as a measure because many of the recipients of CIRT have a history of arrests and emergency calls to law enforcement. Without CIRT, these calls would traditionally result in the dispatch of a law enforcement officer with limited mental health training/experience. Research has indicated non-trained officers may be more likely to arrest mentally ill patients, or interpret their behaviors as threatening, compared to trained officers. Therefore, we believe that the CIRT expansion will result in better assessment and management of these individuals, which would result in fewer and more appropriate arrests. In recent surveys it has been noted that 25% of the inmates in Harris County Jail are receiving psychotropic medications. Further, more than 16% have histories of treatment within the public mental health system. In many instances, it appear likely that individuals with mental disorders are arrested and jailed at significant public expense when appropriate crisis-oriented mental health care could potentially avert criminalization of episodes of untreated mental disorder. It is also important to note that all patients have a right to be treated in the least-restrictive environment possible; ending interventions without detention ensure patients' rights are respected and community treatment is more likely.

Pass 2

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Unique RHP outcome identification number: 113180703.3.15 / Pass 2

Outcome Measure Description: IT-6.1: Percent improvement over baseline of patient satisfaction scores

- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5 % over baseline scores for one domain of patient satisfaction
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10 % over baseline scores for one domain of patient satisfaction

Rationale: Measurement of patient satisfaction is a key indicator of patient-centered care and has been targeted as a quality indicator by national organizations dedicated to improvement in patient outcomes, e.g. the National Council for Quality Assurance. The Consumer Assessment

DRAFT

of Healthcare providers and Systems(CAHPS) Survey, for instance, is one of the few indicators from among the set of 2013 HEDIS measures applicable to mental health treatment programs.

Patient satisfaction measures offer advantages associated with sound psychometrics including reliability as measurement tools, and sensitivity to change. Published scales are available in multiple languages (an essential feature in Harris County's multi-cultural environment) and have established validity as reflected in documented relationships between satisfaction scale scores and aspects of both clinical process and outcome measures (e.g adherence to treatment recommendations, retention in treatment, improvement in symptom and functional status). Finally, external norms and benchmarks are available for comparative purposes, reducing the uncertainty sometimes associated with program evaluations.

The process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. As part of DY 2 process goals, the Outcome Management department will complete literature reviews to identify relevant, empirically validated, and empirically based, measures for the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in DY 3. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a baseline for one or more of the following categories of patient satisfaction by DY 2:

46. Are getting timely care, appointments, and information
47. How well their doctors communicate
48. Patient's rating of doctor access to specialist
49. Patient's involvement in shared decision making
50. Patient's overall health status/functional status

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Outcome Measure Valuation: Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality

improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care. Since patient satisfaction is proposed as a "stand-alone" measure, it is, by definition, valued at 100% of the Category 3 allocation for this proposed program.

Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores
Unique RHP outcome identification numbers: 113180703.16 / Pass 2
Outcome Measure Description:

IT-6.1: Percent improvement over baseline of patient satisfaction scores

- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5 % over baseline scores for one domain of patient satisfaction
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10 % over baseline scores for one domain of patient satisfaction

Rationale:

Measurement of patient satisfaction is a key indicator of patient-centered care and has been targeted as a quality indicator by national organizations dedicated to improvement in patient outcomes, e.g. the National Council for Quality Assurance. The Consumer Assessment of Healthcare providers and Systems(CAHPS) Survey, for instance, is one of the few indicators from among the set of 2013 HEDIS measures applicable to mental health treatment programs.

Patient satisfaction measures offer advantages associated with sound psychometrics including reliability as measurement tools, and sensitivity to change. Published scales are available in multiple languages (an essential feature in Harris County's multi-cultural environment) and have

DRAFT

established validity as reflected in documented relationships between satisfaction scale scores and aspects of both clinical process and outcome measures (e.g adherence to treatment recommendations, retention in treatment, improvement in symptom and functional status). Finally, external norms and benchmarks are available for comparative purposes, reducing the uncertainty sometimes associated with program evaluations.

The Process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. As part of DY 2 process goals, the Outcome Management department will complete literature reviews to identify relevant, empirically validated, and empirically based, measures for the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in DY 3. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a baseline for one or more of the following categories of patient satisfaction by DY 2:

51. Are getting timely care, appointments, and information
52. How well their doctors communicate
53. Patient’s rating of doctor access to specialist
54. Patient’s involvement in shared decision making
55. Patient’s overall health status/functional status

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Outcome Measure Valuation: Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care. Since patient satisfaction is proposed as a “stand-alone” measure, it is, by definition, valued at 100% of the Category 3 allocation for this proposed program.

Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores
Unique RHP outcome identification number: 113180703.3.17 / Pass 2
Outcome Measure Description:
IT-6.1: Percent improvement over baseline of patient satisfaction scores

- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for patients served
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5 % over baseline scores for one domain of patient satisfaction
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10 % over baseline scores for one domain of patient satisfaction

Rationale: Measurement of patient satisfaction is a key indicator of patient-centered care and has been targeted as a quality indicator by national organizations dedicated to improvement in patient outcomes, e.g. the National Council for Quality Assurance. The Consumer Assessment of Healthcare providers and Systems(CAHPS) Survey, for instance, is one of the few indicators from among the set of 2013 HEDIS measures applicable to mental health treatment programs.

Patient satisfaction measures offer advantages associated with sound psychometrics including reliability as measurement tools, and sensitivity to change. Published scales are available in multiple languages (an essential feature in Harris County's multi-cultural environment) and have established validity as reflected in documented relationships between satisfaction scale scores

DRAFT

and aspects of both clinical process and outcome measures (e.g adherence to treatment recommendations, retention in treatment, improvement in symptom and functional status). Finally, external norms and benchmarks are available for comparative purposes, reducing the uncertainty sometimes associated with program evaluations.

The Process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. As part of DY 2 process goals, the Outcome Management department will complete literature reviews to identify relevant, empirically validated, and empirically based, measures for the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in DY 3. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a baseline for one or more of the following categories of patient satisfaction by DY 2:

56. Getting timely care, appointments, and information
57. How well their doctors communicate
58. Patient's rating of doctor access to specialist
59. Patient's involvement in shared decision making
60. Patient's overall health status/functional status

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Outcome Measure Valuation: Our local region has identified general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care. Since patient satisfaction is proposed as a "stand-alone" measure, it is, by definition, valued at 100% of the Category 3 allocation for this proposed program.

Title of Outcome Measure (Improvement Target): IT-9.1 Decrease in mental health admissions and readmissions to criminal justice settings

Unique RHP outcome identification numbers: 113180703.3.18

Outcome Measure Description:

IT-9.1 Decrease in mental health admissions and readmissions to criminal justice settings

- The number of permanent members who had a potentially preventable admission/readmission to a criminal justice setting during the demonstration years

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baselines for patients served
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders

Outcome Improvement Targets for each year:

- DY 4:
  - IT-9.1: Decrease in the number of permanent members who had a potentially preventable admission/readmission to a criminal justice setting during the demonstration year by 5% from baseline
- DY 5:
  - IT-9.1: Decrease in the number permanent members who had a potentially preventable admission/readmission to a criminal justice setting during the demonstration years by 10% from baseline

Rationale:

The Process milestones were chosen as stated above in order to develop a strong collaborative team approach between the clinical staff, administrators, stake-holders, law-

enforcement officers, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. The first steps in DY 2 will be project planning (P-1) then establishment of baselines (P-2) for the number of permanent members and the number of arrests. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). In DY 3 a similar process will provide for accurate measurement of baselines from which to measure the success of the psychosocial rehab intervention. In particular, we chose to add Process milestone P-3 Develop and test data systems in order to determine any new systemic changes in data collection that the collaborations may have allowed for that may not have been available in DY2.

We hope that the ratio of arrests to intervention will decrease as the enhancement and development of the St. Joseph House take place. At this time, we are not selecting a specific metric or percent of expected change. The rationale for determining this rate at a later time is that the base rate of arrests is expected to be low and the percent of change will need to appropriately reflect meaningful changes in arrests. St. Joseph House administrators and stakeholders will work in conjunction with the MHMRA Outcomes Department and the MHMRA Quality Improvement Department to determine an appropriate rate of change.

Once initial rates of change in DY 4 have been determined another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in reducing preventable mental health admissions and readmissions to criminal justice settings. This information can then be provided to clinic staff in order to produce the needed improvements.

Outcome Measure Valuation:

We have selected preventable mental health admissions/readmissions to criminal justice setting as a measure because many of the individuals in the St. Joseph's House have a history of arrests. In recent surveys it has been noted that 25% of the inmates in Harris County Jail are receiving psychotropic medications. Further, more than 16% have histories of treatment within the public mental health system. In many instances, it appear likely that individuals with mental disorders are arrested and jailed at significant public expense when appropriate mental health care could potentially avert criminalization of episodes of untreated mental disorder. It is also important to note that all patients have a right to be treated in the least-restrictive environment possible; therefore, St. Joseph's House is an intervention that would ensure patients' rights are respected and community treatment is more likely.

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1: Percent improvement over baseline of patient satisfaction scores

Unique RHP outcome identification numbers: 113180703.3.19

Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/ 113180703

Outcome Measure Description: IT-6.1: Percent improvement over baseline of patient satisfaction scores

- Numerator: Percent improvement in targeted patient satisfaction domain
- Denominator: Number of patients who were administered the survey

Process Milestones:

- DY 2:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
- DY 3:
  - P-1- Project planning- engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-2- Establish baseline for numerator and denominator
  - P-3: Develop and test data systems
  - P-4: Conduct Plan Do Study Act (PDSA) cycles to improve data collection and intervention activities
  - P-5 Disseminate findings, including lessons learned and best practices, to stakeholders
  -

Outcome Improvement Targets for each year:

- DY 4:
  - IT 6.1: Rate 1: Improve patient satisfaction by 5 % over baseline scores for one domain of patient satisfaction
- DY 5:
  - IT 6.1: Rate 1: Improve patient satisfaction by 10 % over baseline scores for one domain of patient satisfaction

Rationale: Measurement of patient satisfaction is a key indicator of patient-centered care and has been targeted as a quality indicator by national organizations dedicated to improvement in patient outcomes, e.g. the National Council for Quality Assurance. The Consumer Assessment of Healthcare providers and Systems(CAHPS) Survey, for instance, is one of the few indicators from among the set of 2013 HEDIS measures applicable to mental health treatment programs.

Patient satisfaction measures offer advantages associated with sound psychometrics including reliability as measurement tools, and sensitivity to change. Published scales are available in multiple languages (an essential feature in Harris County's multi-cultural environment) and have established validity as reflected in documented relationships between satisfaction scale scores and aspects of both clinical process and outcome measures (e.g. adherence to treatment recommendations, retention in treatment, improvement in symptom and functional status). Finally, external norms and benchmarks are available for comparative purposes, reducing the uncertainty sometimes associated with program evaluations.

The process milestones were chosen in order to develop a strong collaborative team approach between the clinical staff, administrators, physicians, Quality Improvement Department and the newly formed Outcome Management Department of MHMRA. By working through these process goals in order to develop and test a patient satisfaction measure suited for the particular program population, we will be more accurate in our assessment of the target outcome. As part of DY 2 process goals, the Outcome Management department will complete literature reviews to identify relevant, empirically validated, and empirically based, measures for the identified outcomes and the targeted population (P-2 and P-3). With this information, the team will be able to select a measure to be piloted in DY 3. The procedures for testing data collection will be evaluated using the Plan Do Study Act (PDSA) cycles (P-4). The proposed timeline for the outcome measure of patient satisfaction includes determining a baseline for one or more of the following categories of patient satisfaction by DY 2:

61. Are getting timely care, appointments, and information
62. How well their provider communicates
63. Patient's rating of doctor access to specialist
64. Patient's involvement in shared decision making
65. Patient's overall health status/functional status

From this baseline, the goals for improvement have been set at 5% and 10% in DY 4 and 5, respectively. After the results of DY 4 have been determined then another cycle of Plan Do Study Act (PDSA) can also be executed to determine the successes and the need for improvements in addressing patient satisfaction. This information can then be provided to clinic staff in order to produce the needed improvements.

Outcome Measure Valuation: Our local region has identified a general objective and specific community needs that are related to transforming the current health care delivery system. The transformed system is proposed to be a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes. Based on this objective, the proposed program has identified OD-6, Patient Satisfaction, as a targeted outcome for quality improvement goal. It is hypothesized that patients will be better served when they can be offered a full array of services, i.e. when the menu of service options is not sharply curtailed by agency resource limitations. This better fit between patient needs and available services is likely to be reflected in more positive rapport and better perceived communication with treatment providers. Specifically, we believe patient satisfaction that addresses involvement in shared decision making, access to providers, and communication with providers, will reduce chronic over-use of

DRAFT

psychiatric emergency services. If patients are dissatisfied with services or the process, they may continue to over-utilize emergency services rather than engaging in preventative care. Since patient satisfaction is proposed as a "stand-alone" measure, it is, by definition, valued at 100% of the Category 3 allocation for this proposed program.

DRAFT

Methodist Willowbrook Hospital

Pass 1

DRAFT

Title of Outcome Measure (Improvement Target): IT 1.18 - *Follow up after Hospitalization for Mental Illness*

Unique RHP outcome identification number(s): 140713201.3.1

Outcome Measure Description:

IT-1.18 Follow-Up After Hospitalization for Mental Illness- NQF 0576236 (Standalone measure)

Rate 1: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 30 days after discharge. Include outpatient visits, intensive outpatient encounters or partial hospitalizations that occur on the date of discharge.

Our goal is that by year four we will have 60% with follow up within 30 days, and by year 5 we will have 80%.

Rate 2: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 7 days after discharge. Include outpatient visits, intensive outpatient encounters or partial hospitalizations that occur on the date of discharge.

As it is difficult to arrange appointments so close to discharge because of patient and physician factors, our goal is that by the fourth year we will have 40% follow up within seven days and by the fifth year, 50%.

Process Milestones:

- DY2:
  - P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
- DY3:
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:

- DY4: IT-1.18 Follow-Up After Hospitalization for Mental Illness- NQF 0576236 (Standalone measure)
  - Improvement Target: 60% above baseline
- DY5: IT 1.18 Follow-Up After Hospitalization for Mental Illness- NQF 0576236 (Standalone measure)
  - Improvement Target: 80% above baseline

Rationale:

Process milestones in DY 2 are focused on training, education and partnership development. These efforts are largely external efforts focused on our medical staff, collaborating healthcare providers and community partners.

DRAFT

Process milestones in DY 3 are focused on establishing our baseline, factors that are driving utilization and establishing a process to follow up with patients post-discharge. These are largely internal efforts with our hospital based work teams.

Outcome Measure Valuation:

We have selected IT 1.18 as our quality outcome metric as we feel this is most important quality outcome to determine the success or impact of our project. Through a focused effort to follow up and coordinate the post discharge care needs of our targeted population we will demonstrate true value to the community. Meaning, our targeted population will receive higher quality care in the correct care setting, all at a lower cost.

OakBend Medical Center

Pass 1

DRAFT

Title of Outcome Measure (Improvement Target): IT-3.2 Congestive Heart Failure 30-Day Readmission Rate

Unique RHP Outcome Identification Number(s): 127303903.3.1

Performing Provider Name/TPI: OakBend Medical Center (OBMC) / 127303903

Outcome Measure Description:

This outcome will measure the number of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index HF admission. Given data limitations, only readmissions to the same facility will be included as part of each hospital's rates.

Rationale:

The relationship between hospital readmission rates and quality of care is well-documented, and is driven by a general consensus that readmissions may result from circumstances surrounding the initial hospital stay. If the project is successful, then it will result in more effective management of chronic conditions, which in turn will result in the reduction of unnecessary readmissions. Congestive heart failure is an exemplar diagnosis for which effective disease management has been shown to reduce unnecessary hospital admissions. Therefore, the reduction in CHF admissions will be a reasonable metric by which to judge the effectiveness of this project.

Outcome Measure Valuation:

OBMC values each Category 3 outcome measure based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, and the time, effort, and clinical resources necessary to affect each outcome.

In valuing this outcome measure, OBMC took into account the extent to which the reduction of potentially preventable CHF readmissions would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to achieve a reduction in CHF readmission rates.

DRAFT

Title of Outcome Measure (Improvement Target): IT-2.1 Congestive Heart Failure Admission Rate (CHF)

Unique RHP Outcome Identification Number(s): *127303903.3.2*
Performing Provider Name/TPI: OakBend Medical Center (OBMC) / 127303903

Outcome Measure Description:

The outcome for this measure is the reduction of preventable readmissions for all non-maternal discharges of age 18 years and older with a principal diagnosis code for congestive heart failure. All readmissions are counted as outcomes except those that are considered planned.

Rationale:

The increase in access to primary care physician services will decrease the number of admissions for diseases that can be adequately managed like CHF.

Outcome Measure Valuation:

OBMC values each Category 3 outcome measure based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, and the time, effort, and clinical resources necessary to affect each outcome.

In valuing this outcome measure, OBMC took into account the extent to which the reduction in readmissions for CHF would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to achieve this outcome.

DRAFT

Title of Outcome Measure (Improvement Target: IT-3.1 All Cause 30-Day Readmission Rate

Unique RHP Outcome Identification Number(s): 127303903.3.3
Performing Provider/TPI: OakBend Medical Center (OBMC) / 127303903

Outcome Measure Description:

The outcome for this measure is unplanned all cause 30-day readmission, IT-3.1. Readmission is defined as an inpatient admission to any acute care facility which occurs within 30 days of the discharge date of an eligible index admission. All readmissions are counted as outcomes except those that are considered planned.

Process Milestones:

- DY2: P-1; P-2
- DY3: IT-3.1

Outcome Improvement Target(s) for each year:

- DY4: IT-3.1
- DY5: IT-3.1

Rationale:

The expansion of specialty care capacity will promote and encourage patients to access care which will lead to better clinical outcomes for the community. OBMC took these potential effects into account when considering the appropriate incentive payment value for this project.

Outcome Measure Valuation:

OBMC values each Category 3 outcome measure based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, and the time, effort, and clinical resources necessary to effect each outcome.

In valuing this outcome measure, OBMC took into account the extent to which the reduction in all cause readmissions would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to achieve decrease in all cause readmissions.

DRAFT

<u>Title of Outcome Measure (Improvement Target)</u>: IT-6.1 Percent Improvement Over Baseline of Patient Satisfaction Scores

<u>Unique RHP Outcome Identification Number</u>(s):127303903.3.4

<u>Outcome Measure Description</u>:

OD-6 Percent improvement over baseline of patient satisfaction scores for one or more of the patient satisfaction domains that the provider targets for improvement in a specific tool. Certain supplemental modules for the adult CG-CAHPS survey may be used to establish: (1) if patients are getting timely care, appointments, and information; (2) how well their doctors communicate; (3) patient rating of doctor access to specialist; (4) patient involvement in shared decision-making, and (5) patient overall health status/functional status.

Process Milestones:

- DY2: P-2
- DY3: IT-6.1

Outcome Improvement Target(s) for each year:

- DY4: IT-6.1
- DY5: IT-6.1

<u>Rationale:</u>

This outcome measure is explicitly related to the improvement of patient satisfaction, which is also the express purpose of this project.

<u>Outcome Measure Valuation</u>:

OBMC values each Category 3 outcome measure based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, and the time, effort, and clinical resources necessary to effect each outcome.

In valuing this outcome measure, OBMC took into account the extent to which the improvement of patient satisfaction would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to achieve an increase in patient satisfaction.

Title of Outcome Measure (Improvement Target): IT-9.2 ED Appropriate Utilization (Standalone Measure)

Unique RHP Outcome Identification Number(s): 127303903.3.5
Performing Provider Name/TPI: OakBend Medical Center (OBMC) / 127303903

Outcome Measure Description:

This outcome will focus on reducing ED admissions for patients with targeted conditions.

Process Milestones:

- DY 2: P-1;P-2
- DY3: P-2

Outcome Improvement Targets for each year:

- DY-4: IT-9.2 ED appropriate utilization
- DY-5: IT-9.2 ED appropriate utilization

Rationale:

If the project is successful, then it will result in improved access to care for patients with targeted conditions. By improving access to care and ensuring that patients receive the right care in the right setting, this project will reduce the inappropriate use of the Emergency Department to deliver the same care.

Outcome Measure Valuation:

OBMC values each Category 3 outcome measure based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, and the time, effort, and clinical resources necessary to effect each outcome.

In valuing this outcome measure, OBMC took into account the extent to which the reduction of ED utilization would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to achieve a reduction in ED utilization.

DRAFT

Title of Outcome Measure (Improvement Target): IT-8.1 Timeliness of Prenatal/Postnatal Care

Unique RHP Outcome Identification Number(s): 127303903.3.6 / Pass 2

Outcome Measure Description:

The outcome for this measure is the percentage of deliveries of live births for which women receive certain key facets of prenatal and postpartum care.

Rationale:

This project is explicitly tied to postnatal care.

Outcome Measure Valuation:

OBMC values each Category 3 outcome measure based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, the time, effort, and clinical resources necessary to affect each outcome. The project will also strive to continuously provide quality service to the population.

In valuing this outcome measure, OBMC took into account the extent to which increases in key areas of prenatal and postnatal care would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to achieve this outcome.

Pass 3

DRAFT

Title of Outcome Measure (Improvement Target): IT-3.4 Renal Disease 30-Day Readmission Rate

Unique RHP Outcome Identification Number(s): 127303903.3.7 / Pass 2

Outcome Measure Description:

The outcome for this measure is readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index renal disease, COPD, Congestive Heart Failure and Diabetes admissions.

Rationale:

OBMC has a relatively large population with the above diseases and part of the wellness program will be specifically targeted to these patients.. In 2011, OBMC had 1,545 patients admitted with one of the above as their primary admitting diagnosis. There are more than triple that number who are admitted with these as a diagnosis secondary. Therefore, measuring the readmission rate for these disease specific illnesses will be a reasonable measure of this project's success.

Outcome Measure Valuation:

OBMC values each Category 3 outcome measure based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, and the time, effort, and clinical resources necessary to effect each outcome.

In valuing this outcome measure, OBMC took into account the extent to which the reduction in readmissions for these diagnoses would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to achieve this outcome.

DRAFT

Rice Medical Center

Pass 1

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1.1 Percent improvement over baseline of patient satisfaction scores establishing patients are getting timely care, appointments and information

Unique RHP outcome identification number: 212060201.3.1

Outcome Measure Description:

Rice will measure patient satisfaction for the patients served in the East Bernard clinic, who will have increased access to an FP/OB under Project 1.1.2. Rice will use the CAHPS survey to establish if patients who use the clinic feel they are receiving timely appointments, care, and information.

Process Milestones

- DY 2: P-1; P-1.1
- DY 3: P-5; P-5.1
- DY 4: P-4; P-4.1
- DY5: I-12.1; I-12.2

Outcome Improvement Target for each year:

- DY4: IT-6.1
- DY5: IT-6.1

Rationale:

The low-income community members residing in East Bernard and the boundaries of the Rice Hospital District are presently underserved by physicians providing primary care and OB services, as is reflected by Colorado County's designation as a HPSA. In seeking to improve access to care, it is important to measure the patients' perspective on how effective efforts toward obtaining that goal have been. If they have been successful, the patient survey scores will apprise Rice of best practices (i.e. using after-hours, having primary care providers who also specialize in a particular type of care). If patient satisfaction with access to timely care, appointments, and information does not increase, then Rice will have learned the lesson that perhaps the infrastructure or administration of the clinic need to change.

Outcome Measure Valuation:

The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. This is Rice's most valuable Category 3 project because Rice seeks to improve patient access to primary care through participating in DSRIP, and this outcome will measure how successful Rice's efforts have been. Patient satisfaction leads to increased and earlier use of the health care delivery system, and better overall patient outcomes and quality of life. For these reasons, this outcome is of high value to the community.

DRAFT

Title of Outcome Measure (Improvement Target): IT 6.1(1) – Percent improvement over baseline of patient satisfaction scores - timeliness of appointments, care, and information

Unique RHP outcome identification number: 212060201.3.2

Outcome Measure Description:
Rice will engage in CAHPS patient surveys to measure the satisfaction of patients who have been entered into the ImmTrack system. Through expanding its use of Immunization Tracking, Rice will be able to communicate with patients about their immunization due dates and options. Additionally, Rice can use the data it collects to assure that patients do not receive duplicative immunization shots. This service will remove some of the burden on Rice's hospital and clinic patients to remember when their immunizations are due, and if they have already updated them. Additionally, Rice can target populations that are especially at risk for flu and assure that they are seen early in the flu season (i.e. elderly, children, individuals with weak immune systems), which will improve these patients' overall quality of life and satisfaction with the health care and information they receive from their provider. These improvements are intended to improve patients' satisfaction with the timeliness of their appointments, care, and information from their provider.

Starting Point/Baseline:
Rice does not currently measure patient satisfaction scores in the domain of timeliness of appointments, care and information.

Rationale:
Colorado County has a high rate of preventable hospital stays (higher than Texas and Harris County), a high rate children living in poverty (higher than Texas and Harris County) and a high rate of poor physical health days (higher than Texas and Harris County). Children, the elderly, and those in poor health are especially at risk for being admitted to the hospital for the flu, so tracking who has been immunized in the community may help Rice reach out to those most at risk to assure that they receive their flu shot. According to the Planning Protocol, "Public reporting will serve to enhance public accountability in health care by increasing the transparency of the quality of institutional care provided in return for the public investment."

Project Valuation:
The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. This outcome's value is based upon the importance of obtaining patients' perspective on their health care provision and outcomes in our effort to transform the delivery system. Additionally, this project will touch the vast majority of Rice's patients.

DRAFT

Title of Outcome Measure (Improvement Target): IT-10.1 Quality of Life

Unique RHP Outcome identification number: 212060201.3.3

Outcome Measure Description:

The outcome of the Chronic Disease Outreach project will be to accomplish improvement in quality of life scores over the life of the Waiver for Rice community members identified as at-risk or suffering from chronic conditions such as diabetes, high blood pressure, and COPD. Expected challenges in attaining this outcome include recruiting staff for the clinic, negotiating space for the clinic, reaching out to traditionally underserved communities, engaging in effective patient education, and doing so with limited resources.

Process Milestones:

- P-1 Project Planning; P-2 Establish baseline

Outcome Improvement Targets for each year:

IT-10.1 Quality of Life - demonstrating annual increase

Rationale:

Colorado County has a high rate of morbidity and mortality (both higher than Harris County), poor physical health days (higher than Texas and Harris County), and premature death (higher than Texas and Harris County). Colorado County residents will benefit from increased quality and quantity of interventions for their chronic diseases. Improved management of these conditions will lead to improved quality of life (as measured by an evidence based and validated assessment tool) for the patients.

Outcome Measure Valuation:

The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. This project is valued to reflect the importance of maintaining quality of life for patients suffering from chronic disease, which has a ripple effect of improving their family and friends' quality of life.

DRAFT

Title of Outcome Measure (Improvement Target): IT-1.10 Diabetes Care: HbA1c poor control (>9.0%)

Unique RHP Outcome Identification number: 212060201.3.4

Outcome Measure Description:
Rice will implement a Certified Diabetes Teaching Center for patients in Colorado County.

Through implementing a Certified Diabetes Teaching Center, Rice aims to improve the percentage of patients in Colorado County with uncontrolled blood sugar (IT1.10). The Center will accomplish this by educating the diabetic community on diabetes medication and diet management tactics, leading to better control of blood sugar. Patient education, follow-up, and management will result in better overall health outcomes for the targeted population, including increased quality of life, reduced use of acute care, and slower progression of this chronic disease. Achieving this outcome will require Rice to not only communicate with the target population, but to affect their lifestyle choices. Patients will need to reduce poor eating habits, increase physical activity, and manage their medications (when applicable), which Rice cannot force patients to do on a regular basis.

Rice intends to reach out to the community through innovative methods (including social media, creating coalitions, and other methods of community outreach) to create support networks and community engagement in accomplishing this outcome, which is meant to benefit individuals at-risk and the community as a whole.

Process Milestones:

- DY2: P-1; P-1.1
- DY3: P-3; P-3.1

Outcome Improvement Targets for each year:

- DY4: I-6; I-6.1
- DY5: I-8; I-8.1

Rationale:

Colorado County has a high rate of preventable hospital stays (higher than Texas and Harris County) and at least 15% of the county's community does not receive any diabetes screening. Coupled with the high rate of obesity and inactivity in Colorado County (equal to and higher than Texas, respectively), there is good reason to believe that uncontrolled blood sugar for diabetics is a cause of the County's high rate of potentially preventable admissions. Achieving this outcome domain will have positive effects on the health outcomes for patients and the cost of delivering health care for Rice Medical Center.

Outcome Measure Valuation:
The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. This particular project is valued as Rice's second highest value outcome due to the importance of controlling blood sugar and preventing hospital admissions for diabetics

DRAFT

with uncontrolled blood sugar. Hospital admissions reduce a patient’s quality of life, functionality, morale, and short- and long-term health outcomes. Additionally, they create an increased cost burden on the health care delivery system, which affects the entire community. Achieving this outcome will take considerable and concerted effort and investment in infrastructure, but the outcome will justify the expense.

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1 Percent improvement over baseline of patient satisfaction scores: (3) patient's rating of doctor access to specialist.

Unique RHP Outcome ID: 212060201.3.5 / Pass 3

Outcome Measure Description:

By implementing telemedicine in its hospital, Rice will increase its patients' satisfaction with their and their doctors' access to specialists. Rice will measure the satisfaction of all its patients in this domain, with the expected outcome of an increase in satisfaction as the telemedicine program expands.

Starting Point/Baseline:

Rice currently only measures patient satisfaction based on whether the hospital meets all of a patient's healthcare needs.

Rationale:

Colorado County is a rural community. It can be very difficult for patients to access specialists, often having to travel long distances. Likewise, it is difficult for patient's primary care physicians to coordinate with specialists for consultation and referral from a rural community. Patient satisfaction will increase when patients have closer and more immediate access to specialty care for consultations and referrals, especially as this is expected to result in improved patient outcomes.

Project Valuation:

The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. The value of this project is based on Rice's belief that patient satisfaction leads to increased and earlier use of the health care delivery system, and better overall patient outcomes and quality of life. The capability to engage in telehealth and telemedicine will allow Rice to provide a broader range of treatment and diagnostic services to its patients, removing the need for those patients to travel to urban areas to access care and allowing for quicker access to often crucial health information. The telemedicine program can continually be expanding as Rice is able to identify additional specialist providers to participate in the program; thus, the potential impact for the satisfaction with their access to information, care, and appointments for patients in Rice's community will only grow over time. For these reasons, this outcome is of high value to the community.

Title of Outcome Measure (Improvement Target): IT-6.1 Percent improvement over baseline of patient satisfaction scores: (5) patient's overall health status/functional status.

Unique RHP Outcome ID: 212060201.3.6 / Pass 3

Outcome Measure Description:
By establishing a new primary care clinic in Walls, Texas, Rice will increase the overall health and well-being of patient populations in this community. Rice will measure the satisfaction of all its patients in this domain, with the expected outcome of an increase in satisfaction as the primary care clinic is expanded and/or implemented.

Starting Point/Baseline:

Rice is not currently measuring patients' satisfaction with their overall health.

Rationale:

Wallis, Texas is a rural community. It can be very difficult for patients to access primary care, and they often must travel long distances to obtain simple services. Patient satisfaction and overall health will increase when patients have closer and more immediate access to primary care, especially as this is expected to result in improved patient outcomes. Patient satisfaction is important because satisfied patients are more likely to keep regular appointments with their PCPs and heed their providers' advice.

Project Valuation:

The valuation of each Rice project takes into account the degree to which the project accomplishes the triple aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. The value of this project is based on Rice's belief that patient satisfaction leads to increased and earlier use of the health care delivery system, and better overall patient outcomes and quality of life. Improved patient outcomes are linked to decreased costs of providing care over the long term, and the savings can be redirected into improving the overall quality and quantity of services in the local community. For these reasons, this outcome is of high value to the community.

DRAFT

Title of Outcome Measure (Improvement Target): IT-9.2: ED Appropriate Utilization

Unique RHP Outcome ID: 212060201.3.7 / Pass 3

Outcome Measure Description:

By establishing an urgent care clinic in its hospital facility at which non-emergent patients can seek time-sensitive care, Rice will reduce inappropriate utilization of its Emergency Department.

Starting Point/Baseline: Approximately 60% of patients presenting for care at Rice's Emergency Department are not truly emergent.

Rationale:

Rice currently experiences serious overutilization of its Emergency Department. This is due in large part to the lack of alternatives for urgent patients who need time-sensitive care, but not the same level of care provided by the Emergency Department. By providing a clearly superior alternative to the Emergency Department, this urgent care clinic project will reduce improper utilization of Rice's Emergency Department. Providing care in the ED is more expensive than in primary care clinics or urgent care clinics, and with over 1 in 5 patients Rice treats annually being Medicaid-eligible or uninsured, the local and regional cost of delivering care will benefit from a reduction in inappropriate ED usage.

Project Valuation:

The valuation of each Rice project takes into account the degree to which the project accomplishes the triple aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. The value of this project is based on Rice's belief that appropriate utilization of emergent care will result in better overall patient outcomes and quality of life. Many of the patients Rice treats each year either do not have access to clinic services in the community (due to a provider shortage, an inconvenient work schedule, or inability to travel, for example) or feel that they cannot access affordable care. These patients are often inclined to wait until their conditions worsen to the point of being emergent before seeking care, which is detrimental to their overall health, quality of life, and the systemic cost of delivering. Rice wishes to implement innovative solutions to the problems facing rural, indigent patients, and this urgent care clinic (located conveniently nearby the ED) is one way to provide patients an alternative to accessing care in the ED. For these reasons, this outcome is of high value to the community.

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.1 Percent improvement over baseline of patient satisfaction scores: (3) patient's rating of doctor access to specialist.

Unique RHP Outcome ID: 212060201.3.8 / Pass 3

Outcome Measure Description:
By adding new specialists in its hospital clinic, Rice will increase its patients' satisfaction with their and their doctors' access to specialists. Rice will measure the satisfaction of all its patients in this domain, with the expected outcome of an increase in satisfaction as the specialty services expand.

Starting Point/Baseline:

Rice is not currently measuring patients' satisfaction with their or their doctors' access to specialists.

Rationale:

Colorado County is a rural community. It can be very difficult for patients to access specialists, often having to travel long distances. Likewise, it is difficult for patient's primary care physicians to coordinate with specialists for consultation and referral from a rural community. Patient satisfaction will increase when patients have closer and more immediate access to specialty care for consultations and referrals, especially as this is expected to result in improved patient outcomes.

Project Valuation:

The valuation of each Rice project takes into account the degree to which the project accomplishes the triple aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. The value of this project is based on Rice's belief that patient satisfaction leads to increased and earlier use of the health care delivery system, and better overall patient outcomes and quality of life. The ENT is a physician able to treat a myriad of conditions and can examine and refer patients to other providers as needed. An orthopedic specialist is likewise able to diagnose and treat a myriad of conditions, ranging from chronic conditions to severe injuries. Many of the people Rice treats each year through its hospital and/or clinics will benefit from the weekly availability of these providers. For these reasons, this outcome is of high value to the community.

Title of Outcome Measure (Improvement Target): IT-6.1 Percent improvement over baseline of patient satisfaction scores: (1) patients are getting timely care, appointments, and information.

Unique RHP Outcome ID: 212060201.3.9 / Pass 3

Outcome Measure Description:
The outcome of Expanding the East Bernard Clinic will to improve patient satisfaction scores in the domain of timeliness of appointments, care, and information. Rice will measure patient satisfaction of the clinic's patients using the CAHPS survey.

Starting Point/Baseline: Rice is not currently measuring patient satisfaction for the East Bernard Clinic.

Rationale: According to the Planning Protocol, "Public reporting will serve to enhance public accountability in health care by increasing the transparency of the quality of institutional care provided in return for the public investment." Rice intends to improve patient access and patients' perception of their access in East Bernard, which Rice expects will result in improved health outcomes (as patients will engage in preventative care more readily if they feel they have adequate access).

Project Valuation: The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. This project is valued to reflect the importance of maintaining patient satisfaction with the provision of primary healthcare so that patients will continue to participate in the system.

DRAFT

Title of Outcome Measure (Improvement Target): OD-6 Patient Satisfaction
IT-6.1 (1) Percent improvement over baseline of patient satisfaction scores-Patients are getting timely care, appointments, and information

Unique RHP Project identification number: 096166602.3.1
Outcome Measure Description:

For demonstration years 3-5, Spindletop has selected improvement outcome measure IT-6.1 (1), percent improvement over baseline of patient satisfaction scores, patients are getting timely care, appointments, and information.

The process milestone selected for demonstration year 2 to prepare for the outcomes is P-2, establish baseline rates. This will involve developing a patient satisfaction survey for the new service to be provided and establishing the satisfaction baseline in year 2.

Rationale:

Since the goal of this project is to provide expanded primary care for our behavioral health clients, measuring the availability and timeliness of physical health care and appointments that meet clients' needs is important. If clients are satisfied with the service, they will be more likely to access primary care that will lead to improved physical health.

Outcome Measure Valuation:
Spindletop considered several factors in valuing this project including reductions in costs associated with emergency room visits and hospitalizations for diseases and illnesses. Improving the physical health of behavioral health clients should reduce the number of ED visits and the occurrences of hospitalizations.

Another valuation factor used for this project is the monetary value for a collaborative primary/behavioral health intervention as measured by quality adjusted life-years multiplied by a life year value. This valuation methodology uses health economic studies to assign a life year value associated with the health intervention.

Pass 2

DRAFT

Title of Outcome Measure (Improvement Target): IT-6.2 Other: Percent improvement over baseline of patient satisfaction scores-Patients getting timely healthcare information

Unique RHP outcome identification number(s): 096166602.3.2 / Pass 2
RHP Performing Provider / TPI: Spindletop Center / 096166602

Outcome Measure Description:

The process milestone selected for demonstration year 3 to prepare for the outcomes is P-1, project planning. The process milestone selected for demonstration year 3 is P-2, establish baseline rates. This will involve developing a patient satisfaction survey for the new service to be provided and establishing the satisfaction baseline in year 3.

For demonstration years 4-5, Spindletop has selected improvement outcome measure IT-6.2, percent improvement over baseline of patient satisfaction scores-patients getting timely healthcare information.

Rationale:

Spindletop has selected improvement outcome measure IT-6.2, percent improvement over baseline of patient satisfaction scores, patients getting timely health information. One of the purposes of this project is for clients to have access to their healthcare information and learn skills that allow them to become more self-sufficient and have more control over their physical and behavioral health. The survey will be designed to produce comparable data on the patient's perspective on care that will allow objective and meaningful assessment of the program in meeting the needs of the clients. Public reporting of survey results will serve to enhance accountability in health care by increasing the transparency of the quality of care provided in return for the public investment.

Outcome Measure Valuation:

Spindletop considered several factors in valuing this project including reductions in costs associated with hospitalizations for behavioral and developmental disorders and emergency room visits. Another valuation factor used for this project is the monetary value for a collaborative primary/behavioral health intervention as measured by quality adjusted life-years multiplied by a life year value. This valuation methodology uses health economic studies to assign a life year value associated with the health intervention. Since behavioral health clients have a high incidence of severe illnesses that shorten their life spans by 25 years compared to the general public, any programs that improve their mental and physical health should increase both the length and quality of their lives.

DRAFT

St. Joseph Medical Center

Pass 1

DRAFT

Title of Outcome Measure (Improvement Target): IT-1.18 Follow-Up after Hospitalization for Mental Illness – NQF 0576

Unique RHP outcome identification number(s): 181706601.3.1

Outcome Measure Description:

This measure assesses the percentage of discharges for members 6 years of age and older who were hospitalized for treatment of selected mental health disorders and who had an outpatient visit, an intensive outpatient encounter or partial hospitalization with a mental health practitioner. Rate reported will be those patients with follow up visits within 30 days of discharge.

Tracking of recidivism of these patients to either the St. Joseph Behavioral inpatient or PHP program will indicate if the patient has maintained their treatment recommendations subsequent to discharge.

An indicator of patient compliance and treatment adherence is the "no show" rate. We will track the no show rate; along with a number of variables to determine success.

Process Milestones:

- DY2: P-1
- DY3: P-2

Outcome Improvement Targets for each year:

- DY4:
  - IT-1.18 - Rate 1: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 30 days after discharge. Include outpatient visits, intensive outpatient encounters or partial hospitalizations that occur on the date of discharge.
    - 25% increase in patients receiving after hospitalization follow-up care based on current discharge data for most common diagnoses
- DY 5:
  - IT-1.18 - Rate 1: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 30 days after discharge. Include outpatient visits, intensive outpatient encounters or partial hospitalizations that occur on the date of discharge.
    - 25% increase in patients receiving after hospitalization follow-up care based on DY4 discharge data for most common diagnoses identified above

Rationale:

Improvement Target 1 and Improvement Target 2 were chosen because: we initially need some time to pull together the community information and collect data from the community. Subsequent to that this is considered standard data for most providers and an industry standard to review regarding patient follow up visits and compliance.

Outcome Measure Valuation:

Extensive analysis was performed to value this outcome measure at $1,742,432 over the four years, beginning DY2 – 5. Decrease on recidivism and the cost associated with such things as medication follow-up alone will provide enough value to the community to justify the valuation.

DRAFT

Title of outcome measure (improvement target): IT-9.2 ED appropriate utilization

Unique RHP outcome identification number(s): 181706601.3.2

Performing Provider name/TPI: St. Joseph Medical Center (SJMC)/181706601

Outcome Measure Description:

IT-9.2 ED appropriate utilization will measure reduced Emergency Department visits for Behavioral Health/Substance Abuse target conditions at St. Joseph Medical Center.

This measure will help to identify best practices, integrate those best practices into this setting and ensure that St. Joseph's works collaboratively with other providers in the RHP to share data and best practices to enhance the overall service delivery and outcomes within the community.

Process Milestones:

- DY2: P-1
- DY3: P-2

Outcome Improvement Target(s) for each year:

- DY4: IT-9.2 Reduce ED visits for behavioral health or substance abuse (TBD)
- DY5: IT-9.2 Reduce ED visits for behavioral health or substance abuse (TBD)

Rationale:

Process measure P-1 and P-2 were selected to allow for time to ensure that time was allotted to prepare and develop a plan for this program. The other areas were selected to ensure that the program works collaboratively with the other RHP providers to share best practices and enhance outcomes.

Outcome Measure Valuation:

Extensive analysis was performed to value this outcome measure at $1,727,432 over the four years, beginning with DY2 – DY5. Benefits to the community include the increase in available beds in the community to which patients with dual diagnoses (behavioral and medical) can be admitted. This coordinated care in the right setting will reduce readmissions, medical complication rates and overall length of stay, saving the unnecessary burdens of treating these patients.

St. Luke's Episcopal Hospital

Pass 1

DRAFT

Title of Outcome Measure (Improvement Target): IT-3.2 Potentially Preventable Re-Admissions – 30-day Readmission Rates (PPRs)/Congestive Heart Failure 30-day Readmission Rate

Unique RHP outcome identification number: 127300503.3.1

Outcome Measure Description:

The goal of this project is to reduce by 30% the rate of 30-day potentially preventable re-admissions for chronic heart failure (CHF) patients according to the Hospital Compare publically reported data. Currently, St. Luke's experiences a 24.8% re-admission rate for the CHF patients, according to publicly reported data accessed at Hospital Compare. By creating a Transitional Care Clinic for the at-risk, underserved populations, these patients will gain access to timely essential care on a consistent basis. In addition, St. Luke's will work with the St. Luke's Episcopal Health Charities Project Safety Net to identify primary care providers within the patient's local community. The combination of these two services will create a partnership with the patients and provide an opportunity for the patients to discuss health and social concerns. Additionally, patients will have concerns addressed on a timely basis by a care-team provider. This, in turn, will reduce the need for more costly acute, inpatient care.

Over the course of the project, the readmission rate will be reduced by 30%.

Process Milestones:

- DY 2: P-1, P-3
- DY 3: P-2

Outcome Improvement Target for each year:

- DY 4: IT-3.2 Potentially Preventable Readmission Rates - CHF
- DY 5: IT-3.2 Potentially Preventable Readmission Rates - CHF

Rationale:

The process milestones and outcome improvement target of reducing the 30-day potentially preventable re-admission rate was selected because of its impact on the overall health-status of at-risk CHF patients. The creation of a Transitional Care Clinic will provide access to consistent care for at-risk, and underserved patient populations. In addition, St. Luke's will utilize the St. Luke's Episcopal Health Charities Project Safety Net Portal to identify primary care providers within the patient's local community that can serve as an additional health resource. By improving access these patients will receive high-quality care on a consistent basis, which should lead to an improved health status of each of these patients. In addition, the patients will need fewer acute, inpatient admissions and emergency department visits, which will benefit not only the patient but the community at-large by improving efficient utilization of scarce healthcare resources and reducing the overall cost of healthcare.

The data collected through more consistent visits with the at-risk and underserved populations will also lead to identification of health trends within communities and allow for better prioritization of community-health needs. This will allow for more targeted, effective interventions to be created that will improve the overall health status of the community-at-large and reduce regional health-care expenditures.

DRAFT

Outcome Measure Valuation:

The project scope includes all patients with an index admission of congestive heart failure at St. Luke's Episcopal Hospital. This is anticipated to be approximately 6,000 patients. The intervention begins with education upon admission. The care team will also provide information about the services of the Transitional Care Clinic. Prior to discharge, a follow-up appointment will be scheduled within seven days for each patient. In addition, the care team providers will identify if the patient currently has consistent primary care support. If none is identified, the team will assist the patient in finding stable primary care.

All patients identified with CHF will be supported with this intervention; however, specific-focus will be given to those most at-risk, including the underserved and uninsured.

This addresses a high-priority community need due to the incidence of heart disease. The overall community will benefit by savings achieved by reducing the unnecessary and costly use of acute hospital services.

DRAFT

Title of Outcome Measure (Improvement Target): OD-10 Quality of Life/Functional Status

Unique RHP Outcome Identification Number: 127300503.3.2

Outcome Measure Description:

Quality of life (QOL) is a broad multidimensional concept that usually includes subjective evaluations of the patient's perceptions of mental and physical indicators. Quality of life is a challenging measure in that it is subjective and dependent upon the client's perceptions of each domain. Further, the term "quality of life" has meaning for nearly everyone and every academic discipline, individuals and groups can define it differently.

Process Milestones:

- DY 2: P-1, P-3
- DY 3: P-2

Outcome Improvement Target for each year:

- DY 4: IT-10.1 Quality of Life
- DY 5: IT-10.1 Quality of Life

Rationale:

Chronically ill patients QOL is a major driver to both the pursuit of medical care and adherence to medical therapy. Therefore, we find QOL is a significant indicator of the success of any disease management program.

Outcome Measure Valuation:

In our program we will use CDC HRQOL scores to measure our social and clinical interventions. Through repeated measures of CDC HRQOL we will monitor the patient's experience. Additionally, aggregation of CDC HRQOL data will provide an assessment of efficacy.

The evaluation of CDC HRQOL combined with the readmission rate provides a balanced set of measures to assess effectiveness of our intervention.

DRAFT

St. Luke's Episcopal Hospital

Pass 2

DRAFT

Title of Outcome Measure (Improvement Target): IT-4.1 Improvement in risk adjusted Potentially Preventable Complication rates

Unique RHP Outcome ID: 127300503.3.3 / Pass 2

Outcome Measure Description:
Potentially preventable complications of Hepatitis C include the development of cirrhosis, progressive liver failure and death. Based on estimates of prevalence within the population and the know efficacy of current therapies achieving a 60% cure rate, we plan to prevent progression to active Hepatitis C in at least 444 patients through active screening and effective intervention.

Process Milestones:
- DY2: P-1
- DY3: P-2

Outcome Improvement Target(s) for each year:
- DY3:
  - IT-4.1 Improvement in risk adjusted Potentially Preventable Complication rates
  - Baseline/Goal: 5%
- DY4:
  - IT-4.1 Improvement in risk adjusted Potentially Preventable Complication rates
  - Improve over baseline 10%
- DY5:
  - IT-4.1 Improvement in risk adjusted Potentially Preventable Complication rates
  - Improve over baseline 30%

Rationale:
Outcome improvement targets will determined in DY2.

Outcome Measure Valuation:

In Year 2 as partnerships are developed beyond current relationships, 2000 individuals will be screened. In Years 3 (3500) and 4 (5000) the volume of screening would increase incrementally with the expected volume of screening in Year 5 reaching 8000. As a result of the increased screenings, we would expect to identify additional individuals in the at-risk group. The expected outcome is projected as follows;
- Year 2 – 160
- Year 3 – 280
- Year 4 – 400
- Year 5 - 640

1. Total number of individuals identified with disease over project equals 1480. If approximately 50% of 1480 new patients will be engaged in active community based treatment, we would expect 60% cure rate equaling 444 patients. The lifetime cost of Hepatitis C in the absence of liver transplant is $100,000. With liver transplant, the cost rises to $280,000. Within 5 years of diagnosis, 15-20% of patients with chronic Hepatitis

C develop cirrhosis. Consequently, diagnosis, treatment and cure dramatically lower costs for treatment of a chronic disease. If the epidemiologic estimates are much more modest, assuming cure in only 10% of the potential, the likely cost savings will easily exceed $4.4 million (lifetime cost for one patient with Hepatitis C is $100,000, with liver transplant cost rises to $280,000).

DRAFT

Texana Center

Pass 1

DRAFT

Title of Outcome Measure: IT-10.1 Quality of Care/Functional Status

Unique RHP outcome identification number: 081522701.3.1

Outcome Measure Description:

This Category 3 Outcome Measure, *Quality of Care,* OD 10, IT-10.1 assesses the effectiveness of the Texana Center Category 1 Project, Option 1.12.2, to enhance service availability of appropriate levels of behavioral health care (applied behavior analysis and speech-language pathology for children diagnosed with autism spectrum disorders) to expand the number of community based settings where behavioral health services may be delivered in underserved areas. The desired outcome of the Category 1.12.2 Project is to increase utilization of community behavioral healthcare (i.e., ABA and SLP services for autism) by adding an additional setting. Expanding the availability of behavioral health services is consistent with the Category 3 Outcome Measure, *Quality of Care.*

Process Milestones:

The following Category 3 Process Measures will define the activities undertaken by Texana Center to prepare for measuring and reporting the improvement targets in DY 4 and DY 5:

1 DY 2 - P-1: Completion of project planning to prepare for reporting
2 DY 2 and 3 - P-2: Establishment of a baseline for measuring and reporting progress
3 DY 3 - P-3: Preparation of data systems
4 DY 3 - P-4: Implementation of continuous quality improvement (CQI) processes for data and reporting (Conduct Plan, Do, Study, Act (PDSA) cycles)

Outcome Improvement Target(s) for each year:

The following Category 3 Improvement Target, IT-10.1, was selected to measure the success of Texana Center's Category 1 Project, Option 1.12.2 during DY 4 and DY 5:

1 Demonstrate improvement in quality of life scores as measured by evidence-based and validated assessment tool(s), for children diagnosed with Autism (standalone measure)

Rationale:

Although much of behavioral healthcare is focused on reducing psychiatric symptoms, this intensive ABA and SLP treatment is specifically designed to improve symptoms and functions, 2 essential components of quality of life. Research indicates that approximately 50% of children that receive 1:1 intensive ABA before the age of 4 for 25-40 hours a week for at least 2 years will no longer meet the diagnostic criteria for an ASD diagnosis (Howard, et al. 2005). Recent research, including the National Standards Project, emphasizes the importance of empirically based Speech Language Pathology (SLP) intervention in addition to the primary mode of intervention of ABA. Effective quality improvement requires relentless focus on patient outcomes. Early intensive ABA treatment results in increased language and communication skills, improved social skills, achievement in pre-academic and academic areas, and decreased problem behaviors (Howard et al. 2005). Early intensive behavior intervention can be costly, exceeding $50,000 per year. This project will improve access to needed behavioral health services for low income families.

Baseline data will be collected during years 2 and 3 using a variety of the below and related assessment tools. One or a combination of 2 or 3 of these tools will be utilized to demonstrate progress during years 3-5 based on baseline data collected during years 2 and 3.

DRAFT

1 Demonstrated improvement in quality of life scores on evidence-based, validated standardized assessment tools for the target population. Previous instruments used in the Children's Center for Autism include the Pervasive Developmental Disorders Behavior Inventory (PDDBI) and Psychoeducational Profile-3 (PEP-3). Other recommended instruments include the Developmental Profile-Third Edition (DP-3), Peabody Picture Vocabulary Test-Fourth Edition (PPVT-4), Expressive Vocabulary Test-Second Edition (EVT-2), Bayley Scales of Infant Development-Revised (BSID-R), Wechsler Primary Preschool Scales of Intelligence-Revised (WPPSI-R), Differential Abilities Scale (DAS), Developmental Assessment of Young Children (DAYC), Vineland Adaptive Behavior Scales (VABS), Reynell Developmental Language Scales, and the Merrill-Palmer Scale of Mental Tests (Howard, et al. 2005).
2 Demonstrated improvement in quality of life on the Assessment of Basic Language and Learning Skills (ABLLS), Verbal Behavior Milestones Assessment and Placement Program (VB-MAPP), and/or the Assessment of Functional Living Skills (AFLS). Progress can be measured by examining changes in the student's scores from one administration to the next (e.g., Goin-Kochel, Myers, Hendricks, Carr, & Wiley, 2007; Sullivan & Perry, 2006). The ABLLS-R was selected because it is now commonly used by educators, school personnel, and psychologists to assess and monitor skills of children with autism who are receiving behavior therapy (e.g., Bradley-Johnson, Johnson, &Vladescu, 2008; Goin-Kochel et al., 2007; Schwartz, Boulware, McBride, &Sandall, 2001) and, according to Aman et al. (2004), has been selected as an outcome measure by the National Institute of Mental Health Research Units in Pediatric Psychopharmacology and Psychological Intervention Autism Network.

Outcome Measure Valuation:

The Category 3 Outcome Measure, *Quality of Life*, is valued as a subset to the valuation for the Texana Center Category 1.12.2 to enhance service availability of appropriate levels of behavioral health care (applied behavior analysis and speech-language pathology for children diagnosed with autism spectrum disorders) to expand the number of community based settings where behavioral health services may be delivered in underserved areas. The Category 1.12.2 Project, and supporting Category 3 Outcome Measures, addresses a priority need for the population of children diagnosed with autism.

This project addresses a priority need for the autism population to receive intensive ABA services in the community. One of the goals of this project is to avert outcomes such as potentially avoidable inpatient admissions and readmissions in settings including general acute and psychiatric hospitals, state supported living centers, and self-contained special education classrooms; to promote wellness and adherence to treatment; to promote independence in the community/functional status; and to improve quality of life. The vision will be realized throughout the child's lifetime, however, the reduction in the need for self-contained special education classrooms and in some cases the elimination of the need for special education for children served in this project would be realized during the 4 year DSRIP project.

By providing ABA services to children with autism, it allows for cost avoidance. The current project proposes to serve 39 children in years 2-5. In 2007, Chasson et al. results indicated that the state of Texas will save $208,500 *per child across eighteen years of education* with early intensive ABA.

Based on the figures derived from this study, the state of Texas could save $8,131,500 across 18 years of education by providing ABA treatment to these 39 children. In 1998, Jacobson et al. found that cost savings following intensive ABA are estimated to be from $2,439,710 to

DRAFT

$2,816,535 with inflation to *age 55 per child* served (Jacobson, Mulik, & Green, 1998). Therefore, based on the figures derived from this study, the state of Texas could save $95,148,690 through age 55 for these 39 children by providing early intensive ABA treatment.

Total Five Year Valuation: $1,094,789

Resources:

DRAFT

Title of the Outcome Measure (Improvement Target): TBD
Unique RHP Project Identification Number: 081522701.3.2

Outcome Measure Description: TBD

Rationale:

Currently, the Category 3 Outcome Measure to be chosen falls within OD-2-Potentially Preventable Admissions and/or OD-3 Potentially Preventable Re-Admissions – 30 day Readmission Rates (PPRs). Texana Center needs to identify data sources (hospitals) and processes to obtain the data in order to make a data-driven decision for a specific outcome measure. By focusing on these outcome measures, low income populations with no funding source for these services will have a place to go in the local community which will allow them to remain close to natural supports and other outpatient services which will help prevent admissions and readmissions into psychiatric hospitals.

Within OD-2 – Potentially Preventable Admissions, we are trying to identify data sources and baselines for IT-2.4 Behavioral Health/Substance Abuse (BH/SA) Admission Rate and within OD-3 Potentially Preventable Re-Admissions – 30 day Readmission Rates (PPRs), we are trying to identify data sources and baselines as well. Since both of these are stand-alone measures, we will be choosing the measure with the greater need for improvement.

Outcome Measure Valuation:

This project addresses a major need in the community---a "place" for individuals to go other than the hospital emergency rooms and jails and to avoid inpatient stays in psychiatric hospitals. This project was valued using a medical economists' analysis to determine average savings per acute per year care episode for individuals treated in a residential setting as opposed to a hospital. The study was completed by the UT Houston School of Public Health and the UT Austin Center for Social Work Research. Based on this analysis, the value of the program, per acute care episode is $17,504 or $1,750,392 per 100 persons served. The study also indicates that additional cost savings may be expected. Based on this and the projected volume over three years of 1,800 persons served, the valuation for this project is $31,507,056 which is significantly more than twice the value placed on this project.

Since a final decision has not been made on the outcome measure to be used, Texana Center valued this category based on the overall valuation for the project and the percentage requirements of the overall valuation for this category.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

DRAFT

Title of Outcome Measure (Improvement Target): 3.IT 9.4- Other Outcome Improvement Target- Mental health (IDD/SPMI or Challenging Behaviors) admissions and readmissions to state institutions (state mental hospitals and State Supported Living Centers)

Unique RHP outcome identification number: 081522701.3.3

Outcome Measure Description:

This Category 3 Outcome Measure, *Right Care, Right Setting*, assesses the effectiveness of the Texana Center Category 2 Project, Option 2.13.1, for the implementation of a crisis stabilization intervention for the dually diagnosed population (i.e., persons with intellectual and developmental disabilities (IDD) with a co-occurring serious and persistent mental illness (SPMI) and/or serious behavioral challenges). The desired outcome of the Category 2.13.1 Project is to prevent, for this dually diagnosed population, unnecessary use of services in criminal justice settings, emergency rooms, and state institutions (i.e., mental hospitals and State Supported Living Centers). Prevention of services in these more restrictive settings is consistent with the Category 3 Outcome Measure, *Right Care, Right Setting*.

As a solution to the cyclic pattern of long term support and acute crisis intervention for the dually diagnosed IDD/SPMI population, the Texana Center Category 2.13.1 Project proposes the development of a crisis behavioral healthcare team, expanded out-of-home respite care to respond to acute behavior crisis events, and on-going supports to avert crisis and establish stable living environments. The selection of this Outcome, *Right Care, Right Setting*, is consistent with community needs assessment (RHP 3: CN2), which identified insufficient access to behavioral health care services resulting in delivery of inappropriate care (e.g., emergency departments or state institutional care) and increased demand on the criminal justice system.

Process Milestones:

The following Category 3 Process Measures will define the activities undertaken by Texana Center to prepare for measuring and reporting the improvement targets in DY 4 and DY 5:

- DY 2 - P-1: Completion of project planning to prepare for reporting
- DY 2 - P-2: Establishment of a baseline for measuring and reporting progress
- DY 3 - P-3: Preparation of data systems
- DY 3 - P-4: Implementation of continuous quality improvement processes for data and reporting

Outcome Improvement Target(s) for each year:

The following Category 3 Improvement Target is selected to measure the success of Texana Center's crisis stabilization interventions for the dually diagnosed IDD/SPMI population (Category 2 Project, Option 2.13.1) during DY 4 and DY 5:

- Decrease in admissions and readmissions to state facilities (state hospitals and State Supported Living Centers) for the dually diagnosed IDD/SPMI population

Rationale:

Currently, data for tracking individuals with IDD/SPMI seeking crisis interventions is across multiple agencies, multiple data systems and varied reporting requirements. The data is present, but not in an easily accessed and meaningful reporting format. The Category 3 process milestones will allow for planning and the development of systems for identifying, accessing, analyzing and disseminating data that will be used to report progress for the above improvement

DRAFT

targets in DY 4 and DY 5. Additionally, once the data sources are in place, a baseline will be determined in order to measure improvement from the project's starting point. Consistent with the regional goal for developing a culture of ongoing transformation and innovation, a continuous quality improvement milestone is included in the Category 3 process measures.

When responding to individuals with IDD/SPMI or challenging behaviors in crisis, Texana Center, as the Local ID Authority, may assist the individual with limited emergency respite, admission to a state facility, admission to an ICF/ID facility, or admission to a State Supported Living Center. These options are further limited by resources (funding) and bed availability. When the crisis is one of pending criminal charges, Texana Center is challenged to help the individual avoid further involvement in the criminal justice system. The intent of the Category 2 Project is to provide the option of emergency behavior supports and out of home respite as 'right care, right setting' alternative. Consider the following reasons for Texana Center selecting these Category 3 Improvement Targets to support the crisis stabilization interventions for this targeted population:

- Decrease in admissions and readmissions to state facilities (state hospitals and State Supported Living Centers) for the dually diagnosed IDD/SPMI population
  - Current state and federal initiatives, including community living options supported by the *1999 Olmstead*decision, are based on evidence that patient-centered care in the most cost-effective manner is in non-institutional settings.

Outcome Measure Valuation:

The Category 3 Outcome Measure, *Right Care, Right Setting*, is valued as a subset to the valuation for the Texana Center Category2.13.1Project for the implementation of a crisis stabilization intervention for the dually diagnosed population (i.e., persons with intellectual and developmental disabilities (IDD) with a co-occurring serious and persistent mental illness (SPMI) and/or serious behavioral challenges). The Category2.13.1Project, and supporting Category 3 Outcome Measures, addresses a priority need for the IDD/SPMI population to receive the *right care* (intensive crisis stabilization services) in the *right setting* (their home and community). By doing so, it also allows for cost avoidance, supporting individuals in the community at a lesser cost than institutional care in state hospitals and State Supported Living Centers, and avoiding costs in the criminal justice system and emergency rooms.

Category 2.13.1 Project, and supporting Category 3 Outcome Measures, was valued based on two studies completed by the UT Houston School of Public Health and the UT Austin Center for Social Work Research: "Valuing the Program to Create an Assertive Community Treatment (ACT) Team for People with Intellectual and Developmental Disabilities (IDD)" and "Valuing the Crisis Respite for Children Program". These studies were completed through a contract with Center for Health Care Services, and were based on cost-utility analysis measures and quality-adjusted life-years analysis.

For DY 2, the processes in Category 3 will be completed concurrently with those in Category 2, and the value for these activities is in Category 2 only. For DY 3, the processes in Category 3 were considered to be 10% of the value of the Category 2.13.1 Project. For DY 4, the Improvement Targets in Category 3 were considered to be 10% of the value of Category 2.13.1 Project. For DY 5, the Improvement Targets in Category 3 were considered to be 20% of the value of Category 2.13.1

Texana Center

Pass 2

DRAFT

Title of Outcome Measure (Improvement Target): IT-2.13 Other: Potentially Preventable Admissions

Unique RHP Outcome ID: 081522701.3.4 / Pass 2

Performing Provider / TPI: Texana Center / 081522701

Outcome Measure Description:

This Category 3 Outcome Measure, Potentially Preventable Admissions, OD 2, IT-2.13 assesses the effectiveness of the Texana Center Category 1 Project, Option 1.9.2, to establish or expand initiatives to increase the availability of targeted specialty care providers for infants and toddlers 0-3 years old who exhibit mild developmental delays or have a recognized risk factor that puts them at risk of developmental delay. The desired outcome of the Category 1.9.2 project is to minimize the impact of established risk factors on developmental progress and/or to enable children with developmental delays achieve a functional status at, or near, age appropriate levels, decreasing or eliminating potential eligibility for IDEA Part B special education services. Expanding access to specialty care (OT, PT, ST, behavior analysis/therp;y) is consistent with the Category 3 Outcome Measure, Potentially Preventable Admission.

The following Category 3 Process Measures will define the activities undertaken by Texana Center to prepare for measuring and reporting the improvement targets in DY 3,4,and 5:

- DY 2 - P-1: Completion of project planning to prepare for reporting
- DY 2 and 3 - P-2: Establishment of a baseline for measuring and reporting progress
- DY 3 - P-3: Preparation of data systems
- DY 3 - P-4: Implementation of continuous quality improvement (CQI) processes for data and reporting (Conduct Plan, Do, Study, Act (PDSA) cycles)

The following Category 3 Improvement Target, IT-2.13, was selected to measure the success of Texana Center's Category 1 Project, Option 1.9.2 during DY 4 and 5.

- Demonstrate developmental functioning at, or approaching, age expectations as evidenced by scores on a standardized, evidence-based and validated assessment tool.

Rationale:

In 2010–11, children with delays or disabilities who received (therapeutic) services…showed greater than expected developmental progress. Many children exited the program functioning within age expectations, and almost all made progress.[302] Comparison of entry and exit scores will evaluate the effectiveness of therapeutic interventions for each individual child.

School districts administer standardized tests to determine eligibility for special education services for children not having other eligibility determinations.[303] Examination of exit scores will provide a reliable indicator of potential eligibility for special education services and measure

[302] Early Childhood Outcomes Center, July 2012

[303] It's a New Idea, the manual for parents and students about special education services in Texas. The ARC of Texas; Advocacy, Incorporated. 2007.

progress toward the project goal of increasing school readiness and decreasing the need for special education services at age 3.

Data collected in DY 2 and 3 on entry and exit test scores will establish a baseline on which to base improvement targets to be implemented in DY 4.

- This project proposes to use the Battelle Developmental Inventory 2nd Edition (BDI-2) to establish eligibility for enrollment and an individual baseline score on each child on entry into services. The developmental test will be administered a second time prior to exiting services. The BDI-2 provides a measure of progress during the preschool years and has been designed to help assess the effects of various intervention strategies for individual children and for groups of children.[304]
- Data collected will be categorized using criteria established by the Early Childhood Outcomes Center to measure progress toward established goals:
  - Maintained typical development
  - Achieved typical development
  - Made sufficient progress to move closer to typical development but did not achieve it
  - Made progress but did not move closer to typical development
  - Did not make progress[305]

Outcome Measure Valuation:

The Category 3 Outcome Measure, Potentially Preventable Admissions, is valued as a subset to the valuation for the Texana Center Category 1.9.2 to expand access to specialty care (OT, PT, ST) to infants and toddlers. The Category 1.9.2 Project, and supporting Category 3 Outcome Measures, address a priority need for the population of children with mild to moderate developmental delay or with established risk factors for delay.

One of the goals of this project is to avert outcomes such as potentially avoidable special education services and to promote independence in the community. The vision will be realized throughout the child's lifetime, however, the reduction in the need for special education for children served in this project would be realized during the 4 year DSRIP project.

Pass 3

DRAFT

<u>Title of Outcome Measure:</u> IT-10.1 Quality of Care/Functional Status

<u>Unique RHP outcome identification number</u>: 081522701.3.5 / Pass 3

<u>Outcome Measure Description:</u>

This Category 3 Outcome Measure, *Quality of Care,* OD 10, IT-10.1 assesses the effectiveness of the Texana Center Category 1 Project, Option 1.12.2, to enhance service availability of appropriate levels of behavioral health care (applied behavior analysis and speech-language pathology for children diagnosed with autism spectrum disorders) to expand the number of community based settings where behavioral health services may be delivered in underserved areas. The desired outcome of the Category 1.12.2 Project is to increase utilization of community behavioral healthcare (i.e., ABA and SLP services for autism) by adding one additional setting (a third setting to the original setting and Waiver pass 1 proposed setting). Expanding the availability of behavioral health services is consistent with the Category 3 Outcome Measure, *Quality of Care.*

Process Milestones:

The following Category 3 Process Measures will define the activities undertaken by Texana Center to prepare for measuring and reporting the improvement targets in DY 4 and DY 5:

- DY 2 and DY 3 - P-1: Completion of project planning to prepare for reporting
- DY 3 and 4 - P-2: Establishment of a baseline for measuring and reporting progress
- DY 3 and 4 - P-3: Preparation of data systems
- DY 3 - P-4: Implementation of continuous quality improvement (CQI) processes for data and reporting (Conduct Plan, Do, Study, Act (PDSA) cycles)

Outcome Improvement Target(s) for each year:

The following Category 3 Improvement Target, IT-10.1, was selected to measure the success of Texana Center's Category 1 Project, Option 1.12.2 during DY 4 and DY 5:

- Demonstrate improvement in quality of life scores as measured by evidence-based and validated assessment tool(s), for children diagnosed with Autism (standalone measure).

<u>Rationale:</u>

Although much of behavioral healthcare is focused on reducing psychiatric symptoms, this intensive ABA and SLP treatment is specifically designed to improve symptoms and functions, 2 essential components of quality of life. Research indicates that approximately 50% of children that receive 1:1 intensive ABA before the age of 4 for 25-40 hours a week for at least 2 years will no longer meet the diagnostic criteria for an ASD diagnosis (Howard, et al. 2005). Recent research, including the National Standards Project, emphasizes the importance of empirically based Speech Language Pathology (SLP) intervention in addition to the primary mode of intervention of ABA. Effective quality improvement requires relentless focus on patient outcomes. Early intensive ABA treatment results in increased language and communication skills, improved social skills, achievement in pre-academic and academic areas, and decreased problem behaviors (Howard et al. 2005). Early intensive behavior intervention can be costly, exceeding $50,000 per year per child. This project will improve access to needed behavioral health services for low income families.

Baseline data will be collected during years 2 and 3 using a variety of the below and related assessment tools. One or a combination of 2 or 3 of these tools will be utilized to demonstrate progress during years 4-5 based on baseline data collected during years 3 and 4.

- Demonstrated improvement in quality of life scores on evidence-based, validated standardized assessment tools for the target population. Previous instruments used in the Children's Center for Autism include the Pervasive Developmental Disorders Behavior Inventory (PDDBI) and Psychoeducational Profile-3 (PEP-3). Other recommended instruments include the Developmental Profile-Third Edition (DP-3), Peabody Picture Vocabulary Test-Fourth Edition (PPVT-4), Expressive Vocabulary Test-Second Edition (EVT-2), Bayley Scales of Infant Development-Revised (BSID-R), Wechsler Primary Preschool Scales of Intelligence-Revised (WPPSI-R), Differential Abilities Scale (DAS), Developmental Assessment of Young Children (DAYC), Vineland Adaptive Behavior Scales (VABS), Reynell Developmental Language Scales, and the Merrill-Palmer Scale of Mental Tests (Howard, et al. 2005).
- Demonstrated improvement in quality of life on the Assessment of Basic Language and Learning Skills (ABLLS), Verbal Behavior Milestones Assessment and Placement Program (VB-MAPP), and/or the Assessment of Functional Living Skills (AFLS). Progress can be measured by examining changes in the student's scores from one administration to the next (e.g., Goin-Kochel, Myers, Hendricks, Carr, & Wiley, 2007; Sullivan & Perry, 2006). The ABLLS-R was selected because it is now commonly used by educators, school personnel, and psychologists to assess and monitor skills of children with autism who are receiving behavior therapy (e.g., Bradley-Johnson, Johnson, &Vladescu, 2008; Goin-Kochel et al., 2007; Schwartz, Boulware, McBride, &Sandall, 2001) and, according to Aman et al. (2004), has been selected as an outcome measure by the National Institute of Mental Health Research Units in Pediatric Psychopharmacology and Psychological Intervention Autism Network.

Outcome Measure Valuation:

The Category 3 Outcome Measure, *Quality of Life*, is valued as a subset to the valuation for the Texana Center Category 1.12.2 to enhance service availability of appropriate levels of behavioral health care (applied behavior analysis and speech-language pathology for children diagnosed with autism spectrum disorders) to expand the number of community based settings where behavioral health services may be delivered in underserved areas. The Category 1.12.2 Project, and supporting Category 3 Outcome Measures, addresses a priority need for the population of children diagnosed with autism.

This project addresses a priority need for the autism population to receive intensive ABA services in the community. One of the goals of this project is to avert outcomes such as potentially avoidable inpatient admissions and readmissions in settings including general acute and psychiatric hospitals, state supported living centers, and self-contained special education classrooms; to promote wellness and adherence to treatment; to promote independence in the community/functional status; and to improve quality of life. The vision will be realized throughout the child's lifetime, however, the reduction in the need for self-contained special education classrooms and in some cases the elimination of the need for special education for children served in this project would be realized during the 4 year DSRIP project.

By providing ABA services to children with autism, it allows for cost avoidance. The current project proposes to serve 20 children in years 3-5. In 2007, results of a study by Chasson et al. indicated that the state of Texas will save $208,500 *per child across eighteen years of*

DRAFT

education with early intensive ABA. Based on the figures derived from this study, the state of Texas could save $4,170,000 across 18 years of education by providing ABA treatment to these 20 children. In 1998, Jacobson et al. found that cost savings following intensive ABA are estimated to be from $2,439,710 to $2,816,535 with inflation to *age 55 per child* served (Jacobson, Mulik, & Green, 1998). Therefore, based on the figures derived from this study, the state of Texas could save $48,794,200 through age 55 for these 20 children by providing early intensive ABA treatment.

Total Five Year Valuation: $541,379

Pass 1

DRAFT

Title of Outcome Measure (Improvement Target): OD-5: Cost of Care

Unique RHP outcome identification number: 139135109.3.1

Outcome Measure Description:

OD-5: Cost of Care

IT-5.1 Improved cost savings

Process milestone:

DY 2 P-1; P-3

DY3 P-4; P-5

Outcome Improvement Targets for each year:

DY 4 IT-5.1;

DY 5 IT-5.1

Rationale:

Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders. Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal.

Outcome Measure Valuation:

All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[306] Our valuation includes an increase in the patient's quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[307] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.[3]

DRAFT

Title of Outcome Measure (Improvement Target): OD-5: Cost of Care

Unique RHP outcome identification number: 139135109.3.7

Outcome Measure Description:
OD-5: Cost of Care
IT-5.1 Improved cost savings

Process milestone:
DY 2 P-1; P-3
DY3 P-4; P-5

Outcome Improvement Targets for each year:
DY 4 IT-5.1;
DY 5 IT-5.1

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders. Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal. The overall success of this project is dependent upon the compliance rate of ours patients and primary care takers arriving for their appointments. If the compliance rate is poor, it will be a challenge to realize a reduction in the cost of care.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[318] Our valuation includes an increase in the patient's quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[319] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Lessons learned will be shared with the region and all stakeholders. Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal. The overall success of this project is dependent upon the compliance rate of ours patients and primary care takers arriving for their appointments. If the compliance rate is poor, it will be a challenge to realize a reduction in the cost of care. We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[330] Our valuation includes an increase in the patient's quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[331] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Title of Outcome Measure (Improvement Target): Cost of Care

Unique RHP outcome identification number: 139135109.3.19

Outcome Measure Description: OD-5: Cost of Care
IT-5.1 Improved cost savings

Process milestone:
DY 2 P-1; P-3
DY3 P-4; P-5

Outcome Improvement Targets for each year:
DY 4 IT-5.1;
DY 5 IT-5.1

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders. Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal. The overall success of this project is dependent upon the compliance rate of ours patients and primary care takers arriving for their appointments. If the compliance rate is poor, it will be a challenge to realize a reduction in the cost of care.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[342] Our valuation includes an increase in the patient's quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[343] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.[3]

Title of Outcome Measure (Improvement Target): Cost of Care

Unique RHP outcome identification number: 139135109.3.20

Outcome Measure Description: OD-5: Cost of Care
IT-5.2 Per episode of care

Process milestone:
DY 2 P-1; P-3
DY3 P-4; P-5

Outcome Improvement Targets for each year:
DY 4 IT5.2
DY 5 IT-5.2

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders. Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal. The overall success of this project is dependent upon the compliance rate of ours patients and primary care takers arriving for their appointments. If the compliance rate is poor, it will be a challenge to realize a reduction in the cost of care.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[344] Our valuation includes an increase in the patient's quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[345] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.[3]

DRAFT

Title of Outcome Measure (Improvement Target): OD- 10 Quality Of Life/ Functional Status IT-10.1 Quality of Life

Unique RHP outcome identification number: 139135109.3.25

Outcome Measure Description:
OD- 10 Quality Of Life/ Functional Status
IT-10.1 Quality of Life

Process milestone:

DY 2 P-1; P-3
DY3 P-4; P-5

Outcome Improvement Targets for each year:

DY 4 IT- Increase patient visits by 5% from baseline
DY 5 IT- Increase patient visits by 10% from baseline

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor patient access for the specific population within Texas Children's Hospital system. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.
Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal. Given the national shortage of Developmental Pediatricians, loss of providers could prevent TCH from reaching target as replacement providers often take multiple years to recruit.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[354] Our valuation includes an increase in the patient's quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[355] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.[3]

DRAFT

Title of Outcome Measure (Improvement Target): OD- 10 Quality of Life/ Functional Status

Unique RHP outcome identification number: 139135109.3.26

Outcome Measure Description:
OD- 10 Quality of Life/ Functional Status
IT-10.1 Quality of Life

Process milestone:
DY 2 P-1; P-3
DY3 P-4; P-5

Outcome Improvement Targets for each year:
DY 4 IT-10.1
DY 5 IT- 10.1

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the quality of life for the specific population of Developmental Pediatrics within Texas Children's Hospital system. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.

Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal. Given the national shortage of Developmental Pediatricians, loss of providers could prevent TCH from reaching target as replacement providers often take multiple years to recruit.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[356] Our valuation includes an increase in the patient's quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[357] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

<u>Title of Outcome Measure (Improvement Target):</u> OD-5: Cost of Care

<u>Unique RHP outcome identification number</u>: 139135109.3.27

<u>Outcome Measure Description:</u>
OD-5: Cost of Care
IT-5.1 Improved cost savings

Process milestone:
DY 2 P-1; P-3
DY3 P-4; P-5

Outcome Improvement Targets for each year:
DY 4 IT-5.1;
DY 5 IT-5.1

<u>Rationale</u>: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders. Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal. The overall success of this project is dependent upon the compliance rate of ours patients and primary care takers arriving for their appointments. If the compliance rate is poor, it will be a challenge to realize a reduction in the cost of care.

<u>Outcome Measure Valuation:</u> All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[358] Our valuation includes an increase in the patient's quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[359] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Title of Outcome Measure (Improvement Target): OD-5: Cost of Care

Unique RHP outcome identification number: 139135109.3.30

Outcome Measure Description:
OD-5: Cost of Care
IT-5.1 Improved cost savings:

Process milestone:
DY 2 P-1; P-3
DY3 P-4; P-5

Outcome Improvement Targets for each year:
DY 4 IT-5.1
DY 5 IT-5.1

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.
Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal. We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[364] Our valuation includes an increase in the patient's quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[365] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD *(add outcome amounts over DYs 2-5)***:** $318,341			

<u>Title of Outcome Measure (Improvement Target):</u> OD-5: Cost of Care

<u>Unique RHP outcome identification number:</u> 139135109.3.32

<u>Outcome Measure Description</u>:
OD-5: Cost of Care
IT-5.3 Length of Stay

Process milestone:
DY 2 P-1; P-3
DY3 P-4; P-5

Outcome Improvement Targets for each year:
DY 4 IT-5.3
DY 5 IT-5.3

<u>Rationale</u>: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.
Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal. We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

<u>Outcome Measure Valuation</u>: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[368] Our valuation includes an increase in the patient's quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[369] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Title of Outcome Measure (Improvement Target): OD5-Cost of Care

Unique RHP outcome identification number: 139135109.3.38

Outcome Measure Description: Cost of Care
IT-5.3 Length of Stay:
Process milestone:
DY 2 P-1; P-3
DY3 P-4; P-5

Outcome Improvement Targets for each year:
DY 4 IT-5.3;
DY 5 IT-5.3

Rationale: Process milestones P-1, P-3, and P-4 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the cost of care for this population. P-1 and P-3 must be approached in DY 2 and DY3. In DY 3 we will establish a baseline percentage. P-5 will be approached in DY 3 after the initial gap assessment is completed. Lessons learned will be shared with the region and all stakeholders.
Improvement targets were placed in DY4 and DY 5 based on the timeline allowed to put in place the proper resources and processes needed to collect data. Improvement target goals will be determined after baseline percentage is set in DY3. The baseline percentage, whether high or low, will dictate an appropriate improvement target goal. We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

Outcome Measure Valuation: All projects are valued for cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[380] Our valuation includes an increase in the patient's quality of life. We used a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[381] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

The Methodist Hospital

Pass 1

Title of Outcome Measure (Improvement Target): IT 1.18 - *Follow up after Hospitalization for Mental Illness*

Unique RHP outcome identification number(s): 137949705.3.1

Outcome Measure Description:

IT-1.18 Follow-Up After Hospitalization for Mental Illness- NQF 0576236 (Standalone measure)

Rate 1: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 30 days after discharge. Include outpatient visits, intensive outpatient encounters or partial hospitalizations that occur on the date of discharge.

Our goal is that by year four we will have 60% with follow up within 30 days, and by year 5 we will have 80%.

Rate 2: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 7 days after discharge. Include outpatient visits, intensive outpatient encounters or partial hospitalizations that occur on the date of discharge.

As it is difficult to arrange appointments so close to discharge because of patient and physician factors, our goal is that by the fourth year we will have 40% follow up within seven days and by the fifth year, 50%.

Process Milestones:

- DY2:
  - P-1: Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

- DY3:
  - P-2: Establish baseline rates

Outcome Improvement Targets for each year:

- DY4: IT-1.18 Follow-Up After Hospitalization for Mental Illness- NQF 0576236 (Standalone measure)
  - Improvement Target: 60% above baseline
- DY5: IT 1.18 Follow-Up After Hospitalization for Mental Illness- NQF 0576236 (Standalone measure)
  - Improvement Target: 80% above baseline

Rationale:

Process milestones in DY 2 are focused on training, education and partnership development. These efforts are largely external efforts focused on our medical staff, collaborating healthcare providers and community partners.

Process milestones in DY 3 are focused on establishing our baseline, factors that are driving utilization and establishing a process to follow up with patients post-discharge. These are largely internal efforts with our hospital based work teams.

Outcome Measure Valuation:

We have selected IT 1.18 as our quality outcome metric as we feel this is most important quality outcome to determine the success or impact of our project. Through a focused effort to follow up and coordinate the post discharge care needs of our targeted population we will demonstrate true value to the community. Meaning, our targeted population will receive higher quality care in the correct care setting, all at a lower cost.

The University of Texas Health Science Center - Houston

Pass 1

Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 111810101.3.1
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-1.1 Third next available appointment (Non- standalone measure)

Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam. The goals will be to decrease number of days to third next available appointment to zero days (same day) for Primary Care.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:

- DY4:
  - IT-1.1 Reduce by 1 day the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam.
- DY5:
  - IT-1.1 Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam to zero (0) days.

Rationale:

Access to primary care services can have an impact on healthcare outcomes, by providing early screening and treatment and patients are more likely to get these services when they are able to get appointments when first needed that accomodate their schedule. Since the goal of the project is to increase access to care and the third next available appointment is the healthcare industry's standard measure of access to care, we have chosen this outcome measure.

Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Title of Outcome Measure (Improvement Target): OD-12 Primary Care and Primary Prevention

Unique RHP outcome identification number(s): 111810101.3.2

Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:

IT-12.1 Breast Cancer Screening (HEDIS 2012) (Non-standalone measure)

Numerator: Number of women aged 40 to 69 that have received an annual mammogram during the reporting period. Denominator: Number of women aged 40 to 69 in the patient or target population. Women who have had a bilateral mastectomy are excluded.

Process Milestones:

- DY2:
  - P-1 Project planning - engage stakeholders, identify current capacity and needed resources,
  - determine timelines and document implementation plans
- DY3:
  - P-3 Develop and test data systems
  - P-2 Establish baseline rates

Outcome Improvement Targets for each year:

DY4:

IT-12.1 Increase by 3% the percentage of women patients of UT Physicians aged 40 to 69 that have received an annual mammogram during the reporting period. Women who have had a bilateral mastectomy are excluded.

DY5:

IT-12.1 Increase by 5% the percentage of women patients of UT Physicians aged 40 to 69 that have received an annual mammogram during the reporting period. Women who have had a bilateral mastectomy are excluded.

Rationale:

By increasing primary care capacity, preventative care and recommended screenings to detect cancer early would be available to more people in the community. By screening for early stages of disease before symptoms occur, patients testing positive can receive appropriate follow-up diagnostic tests, treatment, and follow-up. Early detection may reduce the impact of cancer when treatment may be easier and more effective than for an advanced cancer diagnosis in terms of the disease burden, harm and cost. Along with additional physicians to see patients for primary care, the extended hours would make it more convenient for patients to get these early screening tests.

Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Title of Outcome Measure (Improvement Target): OD-12 Primary Care and Primary Prevention

Unique RHP outcome identification number(s): 111810101.3.3

Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:

IT-12.3 Colorectal Cancer Screening (HEDIS 2012) (Non-standalone measure)

Numerator: Number of adults aged 50 to 75 that have received one of the following screenings. Fecal occult blood test yearly, Flexible sigmoidoscopy every five years, Colonoscopy every 10 years

Denominator: Number of adults aged 50 to 75 in the patient or target population. Adults with colorectal cancer or total colectomy are excluded.

Process Milestones:

- DY2:
  - P-1 Project planning - engage stakeholders, identify current capacity and needed resources,
  - determine timelines and document implementation plans
- DY3:
  - P-3 Develop and test data systems
  - P-2 Establish baseline rates

Outcome Improvement Targets for each year:

DY4:

IT-12.3 Increase by 3% the percentage of adult patients of UT Physicians (established and new patients) aged 50 to 75 that have received one of the following screenings: Fecal occult blood test yearly, Flexible sigmoidoscopy every five years, Colonoscopy every 10 years. Adults with colorectal cancer or total colectomy are excluded.

DY5:

IT-12.3 Increase by 5% the percentage of adult patients of UT Physicians (established and new patients) aged 50 to 75 that have received one of the following screenings: Fecal occult blood test yearly, Flexible sigmoidoscopy every five years, Colonoscopy every 10 years. <u>Title of Outcome Measure (Improvement Target)</u>: OD-14 Workforce Development

<u>Unique RHP outcome identification number(s)</u>: 111810101.3.4
<u>Performing Provider Name/TPI:</u> UTHealth, UTPhysicians/111810101

<u>Outcome Measure Description:</u>
IT – 14.6 Percent of trainees who have spent at least 5 years living in a health professional shortage area (HPSA) or medically underserved area (MUA)

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4: Increase by 3% over baseline the percent of trainees who have spent at least 5 years living in a health professional shortage area (HPSA) or medically underserved area (MUA)
DY5: Increase by 5% over baseline the percent of trainees who have spent at least 5 years living in a health professional shortage area (HPSA) or medically underserved area (MUA)

Rationale:
In order to move closer to a well-functioning health care delivery system, providers must have training that prepares them for the coordinated, outcomes- and evidence-based health care systems they will be entering. A recent nation-wide study conducted with medical students found that students felt their training was appropriate in terms of clinical decision making and clinical care, but felt that their training had not prepared them appropriately for practicing medicine (Patel MS, Davis MM, Lypson ML. Medical Student Perceptions of Education in Health Care Systems. September, 2009. Academic Medicine, 84(9):1301-6).
By training residents in the new primary care in continuity care clinics located in HPSAs or MUAs, it is expected that more of them will continue to practice in these areas.

Outcome Measure Valuation:
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Title of Outcome Measure (Improvement Target): OD-11 Addressing Health Disparities in Minority Populations

Unique RHP outcome identification number(s): 111810101.3.7
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-11.5 (IT-2.10) Select any other Category 3 outcome (PPAs, PPRs, or ED utilization) or a combination of non-standalone measures and target a specific minority population with a demonstrated disparity in the particular measure (Standalone measure) (IT-2.10 Flu and pneumonia Admission Rate)
For the Hispanic population:
Numerator: All discharges of age 18 years and older with a principal diagnosis code of flu or pneumonia.
Denominator: Population in Metro Area or county, age 18 years and older.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-11.5 (IT-2.10) Reduce by 3% the percentage of all discharges of Hispanics age 18 years and older with a principal diagnosis code of flu or pneumonia, who are patients of UT Physicians.
DY5:
IT-11.5 (IT-2.10) Reduce by 5% the percentage of all discharges of Hispanics age 18 years and older with a principal diagnosis code of flu or pneumonia, who are patients of UT Physicians.

Rationale:
Hispanics have a high rate of death from influenza and pneumonia (2009 CDC, Minority Health. http://www.cdc.gov/minorityhealth/populations/REMP/hispanic.html#10). Harris County and the UT Physician service areas have considerably more Hispanics (Harris County-40.8%; Bayshore-49.2%; Bellair-46%; Cinco Ranch-26.2%; Sienna Village-23.5%) than the national average (16.3%). (Population race/ethnicity statistics are from the U.S. Census Bureau, 2010 Census Summary File 1, Tables P8, PCT4, PCT5, and PCT8. Note: Derived from 2010 Census Summary File 1 data by the Texas State Data Center.) The delivery of culturally sensitive care is more likely to increase the adoption of preventive services such as influenza vaccinations among Hispanics. CHWs have been proven to be effective in serving as linkages between patients and the health system, helping patients to navigate the daunting challenges posed by the fragmented nature of health care delivery on the US. Most CHWs come from the local population, are in touch with the community, hence they are able to aid the health system to deliver culturally sensitive care, and by so doing will help address health disparities in minority populations.

Therefore, a reduction in admissions for flu and pneumonia for the Hispanic population served UT Physicians would be an appropriate measure for the success of this program.

Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

<u>Title of Outcome Measure (Improvement Target)</u>: OD-1 Primary Care and Chronic Disease Management
<u>Unique RHP outcome identification number(s)</u>: 111810101.3.6
<u>Performing Provider Name/TPI:</u> UTHealth, UTPhysicians/111810101

<u>Outcome Measure Description:</u>
IT-1.7 Controlling high blood pressure (NCQA-HEDIS 2012, NQF 0018)12 (Stand-alone measure)

Improve the number of patients 18 to 85 years of age with a diagnosis of hypertension,whose most recent blood pressure (BP) is adequately controlled (BP less than 140/90 mm Hg) during the measurement year.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-1.7 Improve by 3% the percentage of UT Physician's patients (ages 18 to 85 years) with a diagnosis of hypertension, whose most recent blood pressure (BP) is adequately controlled (BP less than 140/90 mm Hg) during the measurement year.
DY5:
IT-1.7 Improve by 5% the percentage of UT Physician's patients (ages 18 to 85 years) with a diagnosis of hypertension, whose most recent blood pressure (BP) is adequately controlled (BP less than 140/90 mm Hg) during the measurement year.

<u>Rationale:</u>
Effective control of blood pressure significantly decreases the risk of coronary artery disease, congestive heart failure, and stroke in hypertensive pateints. For instance a 12-point to 13-point reduction in blood pressure can lower the risk of heart attack by 21%, stroke by 37%, and total cardiovascular deaths by 25% (Rein DB, Constantine RT, Orenstein D, Chen H, Jones P, Brownstein JN, et al. A cost evaluation of the Georgia Stroke and Heart Attack Prevention Program. Prev Chronic Dis [serial online] 2006). Use of the chronic disease registry will enable care teams to more closely monitor patients with hypertension and enable them to provide better care, which is expected to leading to better blood pressure control among our hypertensive patients.

<u>Outcome Measure Valuation:</u>

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Title of Outcome Measure (Improvement Target): OD-2 Potentially Preventable Admissions

Unique RHP outcome identification number(s): 111810101.3.9
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-2.11 Ambulatory Care Sensitive Conditions Admissions Rate: (Standalone measure)
Numerator: Total number of acute care hospitalizations for ambulatory care sensitive conditions under age 75 years (including any one most responsible diagnosis code of: Grand mal status and other epileptic convulsions, Chronic obstructive pulmonary diseases, Asthma, Heart failure and pulmonary edema, Hypertension, Angina, and Diabetes). Exclusions: Individuals 75 years of age and older, or death before discharge.
Denominator: Total mid-year population under age 75

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-2.11 Reduce by 3% the percentage of acute care hospitalizations for ambulatory care sensitive conditions (including any one most responsible diagnosis code of: Grand mal status and other epileptic convulsions, Chronic obstructive pulmonary diseases, Asthma, Heart failure and pulmonary edema, Hypertension, Angina, and Diabetes) for persons under the age 75 years. Exclusions: Individuals 75 years of age and older, or death before discharge.
DY5:
IT-2.11 Reduce by 5% the percentage of acute care hospitalizations for ambulatory care sensitive conditions (including any one most responsible diagnosis code of: Grand mal status and other epileptic convulsions, Chronic obstructive pulmonary diseases, Asthma, Heart failure and pulmonary edema, Hypertension, Angina, and Diabetes) for persons under the age 75 years. Exclusions: Individuals 75 years of age and older, or death before discharge.

Rationale:
We expect the use of the Nurse-line medical triage call center to reduce hospitalizations for ambulatory care sensitive conditions (ACSC), which is an indicator of access to appropriate primary health care. The Nurse-line will facilitate access to appropriate primary care, thereby reducing hospitalizations for ambulatory care sensitive conditions. Appropriate primary care has the potential to prevent the onset of these types of illnesses, control acute episodes, or manage a chronic disease.

Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Title of Outcome Measure (Improvement Target): OD-6 Patient Satisfaction

Unique RHP outcome identification number(s): 111810101.3.10
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-6.1 (3) Percent improvement over baseline of patient satisfaction scores: (3) patient's rating of doctor access to specialist; (Stand-alone measure)
Percent improvement over baseline of patient satisfaction scores for one or more of the patient satisfaction domains that the provider targets for improvement in a specific tool. Certain supplemental modules for the adult CG-CAHPS survey may be used to establish if patients: (3) patient's rating of doctor access to specialist; (patients of other primary care practices that accessed the specialty care services via Telemedicine program)

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-6.1 (3) Increase by 3% the improvement over baseline (for patients of non-UT Physician primary care practices that accessed the specialty care services via Telemedicine program) of patient satisfaction scores for patient's rating of doctor access to specialist using the adult CG-CAHPS survey module.
DY5:
IT-6.1 (3) Increase by 5% the improvement over baseline (for patients of non-UT Physician primary care practices that accessed the specialty care services via Telemedicine program) of patient satisfaction scores for patient's rating of doctor access to specialist using the adult CG-CAHPS survey module.

Rationale:
Telemedicine offers an innovative solution to the problem of poor access to specialist care. The telemedicine project will thus make it easier for patients and their primary care providers to get specialist consults in a timely manner and more convenient manner. Therefore, it is expected that patients' assessments of doctor access to specialists on the CG-CAHPS survey will be a good measure of this new telemedicine program.

Outcome Measure Valuation:
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 111810101.3.11
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-1.1 Third next available appointment (Non- standalone measure)
Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient, or return visit/exam. The goals will be to decrease number of days to third next available appointment to two days for Specialty Care.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-1.1 Reduce by 1 day over baseline the average length of time in days between the day a patient makes a request for an appointment with a physician and the third next available appointment for a new patient, or return visit/exam. The goal will be to decrease number of days to third next available appointment to two days for Specialty Care.
DY5:
IT-1.1 Reduce by 2 day over baseline the average length of time in days between the day a patient makes a request for an appointment with a physician and the third next available appointment for a new patient, or return visit/exam. The goal will be to decrease number of days to third next available appointment to two days for Specialty Care.

Rationale:
Access to care services can have an impact on healthcare outcomes, by providing early screening and treatment and patients are more likely to get these services when they are able to get appointments when first needed that accomodate their schedule. Since the goal of the project is to increase access to care and the third next available appointment is the healthcare industry's standard measure of access to care, we have chosen this outcome measure.

Outcome Measure Valuation:
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD: $ 1,283,429			

Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 111810101.3.12

Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:

IT-1.6 Cholesterol management for patients with cardiovascular conditions (NCQA-HEDIS 2012) (Standalone measure)

Increase the number of patients who had each of the following during the reporting period:

Low-density Lipoprotein Cholesterol (LDL-C) Screening: An LDL-C test performed during the measurement year.

LDL-C Level Less Than 100 mg/dL: The most recent LDL-C level during the measurement year is less than 100 mg/dL.

Process Milestones:

- DY2:
  - P-1 Project planning - engage stakeholders, identify current capacity and needed resources,
  - determine timelines and document implementation plans
- DY3:
  - P-3 Develop and test data systems
  - P-2 Establish baseline rates

Outcome Improvement Targets for each year:

DY4:

Increase by 3% the percentage of patients who had each of the following during the reporting period:

Low-density Lipoprotein Cholesterol (LDL-C) Screening (performed during the measurement year) and LDL-C Level <100 mg/dL (the most recent during the measurement year)

DY5:

Increase by 5% the percentage of patients who had each of the following during the reporting period:

Low-density Lipoprotein Cholesterol (LDL-C) Screening (performed during the measurement year) and LDL-C Level <100 mg/dL (the most recent during the measurement year)

Rationale:

By increasing access to specialty care, such as the expansion of cardiology care to UT Physicians primary care clinics, we expect that patients at risk for coronary artery disease (CAD) and coronary heart disease (CHD), heart attack, and stroke, are more likely to get the cholesterol screening that would facilitate appropriate care. Working together with patients with known heart disease to reduce cholesterol has the potential to reduce morbidity (heart attack and stroke) and mortality. Using established guidelines (National Cholesterol Education Program) for managing cholesterol levels in patients with heart disease, we would aim to see a reduction in LDL-C of less than or equal to 100 mg/dL.

Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Title of Outcome Measure (Improvement Target): OD-4 Potentially Preventable Complications and Healthcare Acquired Conditions

Unique RHP outcome identification number(s): 111810101.3.13
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-4.8 Sepsis mortality (Standalone measure)
Reduce the percentage of patients expiring during current month hospitalization with sepsis, severe sepsis or septic shock and/or an infection and organ dysfunction.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-4.8 Reduce by 3% the percentage of patients expiring during current month hospitalization with sepsis, severe sepsis, or septic shock and/or an infection and organ dysfunction.
DY5:
IT-4.8 Reduce by 5% the percentage of patients expiring during current month hospitalization with sepsis, severe sepsis, or septic shock and/or an infection and organ dysfunction.

Rationale:
Sepsis is one of the leading causes of death in the intensive care unit (ICU) (Bone RC, Balk RA, Cerra FB, Dellinger RP, Fein AM, Knaus WA, et al. Definitions for sepsis and organ failure and guidelines for the use of innovative therapies in sepsis. Chest 1992; 101:1644-55). The number of severe sepsis cases is set to grow at a rate of 1.5% per annum, adding an additional 1 million cases per year in the USA by 2020 (Angus DC, Linde-Zwirble WT, Lidicker J, Clermont G, Carcillo J, Pinsky MR. Epidemiology of severe sepsis in the United States: analysis of incidence, outcome, and associated costs of care. Crit Care Med. 2001 Jul;29(7):1303-10), mainly due to the growing use of invasive procedures and increasing numbers of elderly and high-risk individuals, such as cancer and HIV patients. Sepsis from invaisve procedures can be highly reduced by greater adherence to guidelines and by addressing systemic factors that lead to breach of aseptic standards. By improving health care quality, this project will lead to reduction in hospital acquired conditions such as sepsis.

Outcome Measure Valuation:
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD: $ 1,071,875			

Title of Outcome Measure (Improvement Target): OD-6 Patient Satisfaction

Unique RHP outcome identification number(s): 111810101.3.14
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-6.1 (1) Percent improvement over baseline of patient satisfaction scores (1) are getting timely care, appointments, and information (stand alone measure)
Percent improvement over baseline of patient satisfaction scores (all questions within a survey need to be answered to be a stand-alone measure). Percent improvement over baseline of patient satisfaction scores for one or more of the patient satisfaction domains that the provider targets for improvement in a specific tool. Certain supplemental modules for the adult CG-CAHPS survey may be used to establish if patients: (1) are getting timely care, appointments, and information (already established patients at UTP Clinics, who are not cancer surgery patients and who were assigned to a medical home)

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-6.1 (1) Improve by 3% the percent improvement over baseline of patient satisfaction scores for getting timely care, appointments, and information (using the supplemental module for the adult CG-CAHPS survey) for patients of UT Physician Clinics, who are not cancer surgery patients and who were assigned to a medical home.
DY5:
IT-6.1 (1) Improve by 5% the percent improvement over baseline of patient satisfaction scores for getting timely care, appointments, and information (using the supplemental module for the adult CG-CAHPS survey) for patients of UT Physician Clinics, who are not cancer surgery patients and who were assigned to a medical home.

Rationale:
The medical home project will provide a primary care "home base" for patients, and they will be assigned a health care team that will effectively coordinate their care across inpatient and outpatient settings, and proactively provide preventive, primary, routine and chronic care to them. This would translate to increased likelihood of getting timely care, ease of setting up appointments and receiving helpful care information. Thus assessing patient satisfaction (for patients of UT Physician clinics, who are not cancer surgery patients and have been assigned to a medical home) in these domains of their care experience, as measured using the adult CG-CAHPS survey for the domain of getting timely care, appointments, and information, will be a good measure of the outcome of this project.

Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD: $ 1,861,678			

Title of Outcome Measure (Improvement Target): OD-9 Right Care, Right Setting

Unique RHP outcome identification number(s): 111810101.3.15
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-9.2 ED appropriate utilization (Stand-alone measure)
Reduce Emergency Department visits for
o Asthma
o COPD
o CHF
o Diabetes
o Hypertension

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-9.2 Reduce by 3% the percentage of Emergency Department visits for asthma, COPD, CHF, Diabetes, and Hypertension.
DY5:
IT-9.2 Reduce by 5% the percentage of Emergency Department visits for asthma, COPD, CHF, Diabetes, and Hypertension.

Rationale:
This project aims to develop and implement evidence based chronic disease management interventions (Coleman et al. Evidence on the Chronic Care Model in the New Millennium. Health Affairs 28, no. 1 (2009): 75–85) that will ultimately improve patient clinical indicators, health outcomes, and reduce unnecessary acute and emergency care utilization for patients with chronic diseases. Thus measuring ED visits for the targeted chronic diseases will be a good way of assessing its impact.

Outcome Measure Valuation:
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Title of Outcome Measure (Improvement Target): OD-3 Potentially Preventable Re-Admissions- 30 day Readmission Rates (PPRs)

Unique RHP outcome identification number(s): 111810101.3.16
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-3.9 Chronic Obstructive Pulmonary Disease 30 day readmission rate (Standalone measure)
Numerator: The number of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index COPD admission. If an index admission has more than 1 readmission, only first is counted as a readmission.
Denominator: The number of admissions (for patients 18 years and older), for patients discharged from the hospital with a principal diagnosis of COPD and with a complete claims history for the 12 months prior to admission.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-3.9 Reduce by 3% the percentage of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index COPD admission. If an index admission has more than 1 readmission, only first is counted as a readmission.
DY5:
IT-3.9 Reduce by 5% the percentage of readmissions (for patients 18 years and older), for any cause, within 30 days of discharge from the index COPD admission. If an index admission has more than 1 readmission, only first is counted as a readmission.

Rationale:
When a patient is discharged without optimal follow-up, it could have terrible consequences such as hospital readmission and possibly death Without sufficient information and an understanding of their diagnoses, medication, and self-care needs, patients cannot fully participate in their care during and after hospital stays.

Outcome Measure Valuation:
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Title of Outcome Measure (Improvement Target): OD-13 Palliative Care

Unique RHP outcome identification number(s): 111810101.3.17
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-13.1 Pain assessment (NQF-1637) (Non-standalone measure)
Increase the number of patients enrolled in hospice OR receiving palliative care who received a comprehensive clinical assessment to determine the severity, etiology and impact of their pain within 24 hours of screening positive for pain on the admission evaluation / initial encounter.
Exclusion: patients with length of stay < 1 day in palliative care or <7 days in hospice, patients who were not screened for pain. Patients who screen negative for pain are excluded from the denominator.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-13.1 Increase by 3% the percentage of patients enrolled in hospice OR receiving palliative care who received a comprehensive clinical assessment to determine the severity, etiology and impact of their pain within 24 hours of screening positive for pain on the admission evaluation / initial encounter.
Exclusion: patients with length of stay < 1 day in palliative care or <7 days in hospice, patients who were not screened for pain. Patients who screen negative for pain are excluded from the denominator.
DY5:
IT-13.1 Increase by 5% the percentage of patients enrolled in hospice OR receiving palliative care who received a comprehensive clinical assessment to determine the severity, etiology and impact of their pain within 24 hours of screening positive for pain on the admission evaluation / initial encounter.
Exclusion: patients with length of stay < 1 day in palliative care or <7 days in hospice, patients who were not screened for pain. Patients who screen negative for pain are excluded from the denominator.

Rationale:

Reasearch shows that the prevalence of pain among patients with incurable illness and at the end of life is as high as 40 – 70% (Gade G, Venohr I, Conner D, et al. Impact of an inpatient palliative care team: a randomized control trial. J Palliat Med. 2008;11(2):180–190), and pain is under-recognized by clinicians and undertreated, resulting in excess suffering among these

patients. Pain screening and assessments will thus be a good measure of the quality of palliative care services provided to patients.

Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

111810101.3.17	*3.IT-13.1*	*Pain assessment (NQF-1637) (Non-standalone measure)*

Title of Outcome Measure (Improvement Target): OD-13 Palliative Care

Unique RHP outcome identification number(s): 111810101.3.18

Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:

IT-13.2 Treatment Preferences (NQF 1641) (Non-standalone measure)

Percentage of seriously ill patients enrolled in hospice OR receiving specialty palliative care in an acute hospital setting with chart documentation of preferences for life sustaining treatments.

Exclusions: patients with length of stay < 1 day in palliative care or <7 days in hospice.

Process Milestones:

- DY2:
  - P-1 Project planning - engage stakeholders, identify current capacity and needed resources,
  - determine timelines and document implementation plans
- DY3:
  - P-3 Develop and test data systems
  - P-2 Establish baseline rates

Outcome Improvement Targets for each year:

DY4:

Increase by 3% the percentage of seriously ill patients enrolled in hospice OR receiving specialty palliative care in an acute hospital setting with chart documentation of preferences for life sustaining treatments.

Exclusions: patients with length of stay < 1 day in palliative care or <7 days in hospice.

DY5:

Increase by 5% the percentage of seriously ill patients enrolled in hospice OR receiving specialty palliative care in an acute hospital setting with chart documentation of preferences for life sustaining treatments.

Exclusions: patients with length of stay < 1 day in palliative care or <7 days in hospice.

Rationale:

In the absence of a clear guideline for end-of-life care, care decisions are often taken by the physician/care team and this tends to be in favor of life sustaining treatments. As a result of

these aggressive treatments, lots of expensive interventions are given to patients in the last few months of life with poor and questionable outcomes. Site of death accounts for significant variation in end-of-life costs; for example costs for Medicare beneficiaries who died in a hospital inpatient setting have been found to be twice those for beneficiaries who died in other settings such as their homes (Carol Raphael, Joann Ahrens, & Nicole Fowler. Financing end-of-life care in the USA. J R Soc Med. 2001 September; 94(9): 458–461). Palliative care aims to address these imbalances and it is necessary to measure the success of the project by assessing how much patient preferences are being respected.

Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Title of Outcome Measure (Improvement Target): OD-13 Palliative Care

Unique RHP outcome identification number(s): 111810101.3.19

Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:

IT-13.5 Percentage of patients receiving hospice or palliative care services with documentation in the clinical record of a discussion of spiritual/religions concerns or documentation that the patient/caregiver did not want to discuss. (NQF 1647 modified) (Non-st

Increase the number of patients discharged from hospice or palliative care with clinical record documentation of spiritual/religious concerns

or documentation that the patient/family did not want to discuss during the reporting period.

Process Milestones:

- DY2:
  - P-1 Project planning - engage stakeholders, identify current capacity and needed resources,
  - determine timelines and document implementation plans
- DY3:
  - P-3 Develop and test data systems
  - P-2 Establish baseline rates

Outcome Improvement Targets for each year:

DY4:

Increase by 3% the percentage of patients discharged from hospice or palliative care with clinical record documentation of discussion of spiritual/religious concerns

or documentation that the patient/family did not want to discuss during the reporting period.

DY5:

Increase by 5% the percentage of patients discharged from hospice or palliative care with clinical record documentation of discussion of spiritual/religious concerns

or documentation that the patient/family did not want to discuss during the reporting period.

Rationale:

A comprehensive interdisciplinary approach is one of the hallmarks of pallaitive care, and this entails caring for the physical, psychosocial, and spiritual needs of patients and their families. An essential step to providing for the needs of patients is initiating discussions about

their spiritual concerns. This measure will thus be an important indicator of the quality of palliative care provided throught this project.

Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Title of Outcome Measure (Improvement Target): OD-1 Primary Care and Chronic Disease Management

Unique RHP outcome identification number(s): 111810101.3.25

Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:

IT-1.9 Depression management: Depression Remission at Twelve Months (NQF# 0710)

(Standalone measure)

Numerator: Adults age 18 and older with a diagnosis of major depression or dysthymia and an initial PHQ-9 score greater than nine who achieve remission at twelve months as demonstrated by a twelve month (+/- 30 days) PHQ-9 score of less than five.

Denominator: Adults age 18 and older with a diagnosis of major depression or dysthymia and an initial PHQ-9 score greater than nine.

Exclusions: Patients who die, are a permanent resident of a nursing home or are enrolled in hospice are excluded from this measure. Additionally, patients who have a diagnosis (in any position) of bipolar or personality disorder are excluded.

Process Milestones:

- DY2:
  - P-1 Project planning - engage stakeholders, identify current capacity and needed resources,
  - determine timelines and document implementation plans
- DY3:
  - P-3 Develop and test data systems
  - P-2 Establish baseline rates

Outcome Improvement Targets for each year:

DY4:

Increase by 3% the percentage of adults age 18 and older with a diagnosis of major depression or dysthymia and an initial PHQ-9 score greater than nine who achieve remission at twelve months as demonstrated by a twelve month (+/- 30 days) PHQ-9 score of less than five.

DY5:

Increase by 5% the percentage of adults age 18 and older with a diagnosis of major depression or dysthymia and an initial PHQ-9 score greater than nine who achieve remission at twelve months as demonstrated by a twelve month (+/- 30 days) PHQ-9 score of less than five.

Rationale:

The Patient Health Questionnaire (PHQ-9) tool is a widely accepted and standardized tool that is utilized by providers to monitor treatment progress. There is evidence that integrated behavioral health services enhance access to mental health care services, improve quality of life, reduce the incidence of depression and utilization of emergency department services, and overall health care costs (AHRQ. Service Delivery Innovation Profile: Integrated Behavioral Health Reduces Depression and Anxiety in Primary Care Patients, Improving Quality of Life and Reducing Costs. http://www.innovations.ahrq.gov/content.aspx?id=2951). Assessment of depression remission will thus be suitable to assess the success of this integrated care project.

Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Pass 2

Title of Outcome Measure (Improvement Target): IT- 1.1 Third next available appointment

Unique RHP outcome identification number(s): 111810101.3.24 / Pass 2
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-1.1 Third next available appointment (Non- standalone measure)

Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam. The goals will be to decrease number of days to third next available appointment to zero days (same day) for Primary Care.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:

- DY4:
  - IT-1.1 Reduce by 1 day the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam.
- DY5:
  - IT-1.1 Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam to zero (0) days.

Rationale:

Access to primary care services can have an impact on healthcare outcomes, by providing early screening and treatment and patients are more likely to get these services when they are able to get appointments when first needed that accomodate their schedule. Since the goal of the project is to increase access to care and the third next available appointment is the healthcare industry's standard measure of access to care, we have chosen this outcome measure.

Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Title of Outcome Measure (Improvement Target): IT-12.1 Breast Cancer Screening (HEDIS 2012) (Non-standalone measure)

Unique RHP outcome identification number(s): 111810101.3.25 / Pass 2

Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:

IT-12.1 Breast Cancer Screening (HEDIS 2012) (Non-standalone measure)

Numerator: Number of women aged 40 to 69 that have received an annual mammogram during the reporting period. Denominator: Number of women aged 40 to 69 in the patient or target population. Women who have had a bilateral mastectomy are excluded.

Process Milestones:

DY2:

P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

DY3:

P-3 Develop and test data systems

P-2 Establish baseline rates

Outcome Improvement Targets for each year:

DY4:

IT-12.1 Increase by 3% the percentage of women patients of UT Physicians aged 40 to 69 that have received an annual mammogram during the reporting period. Women who have had a bilateral mastectomy are excluded.

DY5:

IT-12.1 Increase by 5% the percentage of women patients of UT Physicians aged 40 to 69 that have received an annual mammogram during the reporting period. Women who have had a bilateral mastectomy are excluded.

Rationale:

By increasing primary care capacity, preventative care and recommended screenings to detect cancer early would be available to more people in the community. By screening for early stages of disease before symptoms occur, patients testing positive can receive appropriate

follow-up diagnostic tests, treatment, and follow-up. Early detection may reduce the impact of cancer when treatment may be easier and more effective than for an advanced cancer diagnosis in terms of the disease burden, harm and cost. Along with additional physicians to see patients for primary care, the extended hours would make it more convenient for patients to get these early screening tests.

Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Title of Outcome Measure (Improvement Target): IT-12.3 Colorectal Cancer Screening

Unique RHP outcome identification number(s): 111810101.3.26 / Pass 2

Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:

IT-12.3 Colorectal Cancer Screening (HEDIS 2012) (Non-standalone measure)

Numerator: Number of adults aged 50 to 75 that have received one of the following screenings. Fecal occult blood test yearly, Flexible sigmoidoscopy every five years, Colonoscopy every 10 years

Denominator: Number of adults aged 50 to 75 in the patient or target population. Adults with colorectal cancer or total colectomy are excluded.

Process Milestones:

DY2:

P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

DY3:

P-3 Develop and test data systems

P-2 Establish baseline rates

Outcome Improvement Targets for each year:

DY4:

IT-12.3 Increase by 3% the percentage of adult patients of UT Physicians (established and new patients) aged 50 to 75 that have received one of the following screenings: Fecal occult blood test yearly, Flexible sigmoidoscopy every five years, Colonoscopy every 10 years. Adults with colorectal cancer or total colectomy are excluded.

DY5:

IT-12.3 Increase by 5% the percentage of adult patients of UT Physicians (established and new patients) aged 50 to 75 that have received one of the following screenings: Fecal occult blood test yearly, Flexible sigmoidoscopy every five years, Colonoscopy every 10 years. Adults with colorectal cancer or total colectomy are excluded.

Rationale:

Title of Outcome Measure (Improvement Target): IT-1.1 Third next available appointment

Unique RHP outcome identification number(s): 111810101.3.27 / Pass 2
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:
IT-1.1 Third next available appointment (Non- standalone measure)
Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient, or return visit/exam. The goals will be to decrease number of days to third next available appointment to two days for Specialty Care.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-1.1 Reduce by 1 day over baseline the average length of time in days between the day a patient makes a request for an appointment with a physician and the third next available appointment for a new patient, or return visit/exam. The goal will be to decrease number of days to third next available appointment to two days for Specialty Care.
DY5:
IT-1.1 Reduce by 2 day over baseline the average length of time in days between the day a patient makes a request for an appointment with a physician and the third next available appointment for a new patient, or return visit/exam. The goal will be to decrease number of days to third next available appointment to two days for Specialty Care.

Rationale:

Access to care services can have an impact on healthcare outcomes, by providing early screening and treatment and patients are more likely to get these services when they are able to get appointments when first needed that accomodate their schedule. Since the goal of the project is to increase access to care and the third next available appointment is the healthcare industry's standard measure of access to care, we have chosen this outcome measure.

Title of Outcome Measure (Improvement Target): IT-1.6 Cholesterol management for patients with cardiovascular conditions

Unique RHP outcome identification number(s): 111810101.3.28 / Pass 2

Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Outcome Measure Description:

IT-1.6 Cholesterol management for patients with cardiovascular conditions (NCQA-HEDIS 2012) (Standalone measure)

Increase the number of patients who had each of the following during the reporting period:

Low-density Lipoprotein Cholesterol (LDL-C) Screening: An LDL-C test performed during the measurement year.

LDL-C Level Less Than 100 mg/dL: The most recent LDL-C level during the measurement year is less than 100 mg/dL.

Process Milestones:

DY2:

P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans

DY3:

P-3 Develop and test data systems

P-2 Establish baseline rates

Outcome Improvement Targets for each year:

DY4:

Increase by 3% the percentage of patients who had each of the following during the reporting period:

Low-density Lipoprotein Cholesterol (LDL-C) Screening (performed during the measurement year) and LDL-C Level <100 mg/dL (the most recent during the measurement year)

DY5:

Increase by 5% the percentage of patients who had each of the following during the reporting period:

Low-density Lipoprotein Cholesterol (LDL-C) Screening (performed during the measurement year) and LDL-C Level <100 mg/dL (the most recent during the measurement year)

Rationale:

By increasing access to specialty care, such as the expansion of cardiology care to UT Physicians primary care clinics, we expect that patients at risk for coronary artery disease (CAD) and coronary heart disease (CHD), heart attack, and stroke, are more likely to get the cholesterol screening that would facilitate appropriate care. Working together with patients with known heart disease to reduce cholesterol has the potential to reduce morbidity (heart attack and stroke) and mortality. Using established guidelines (National Cholesterol Education Program) for managing cholesterol levels in patients with heart disease, we would aim to see a reduction in LDL-C of less than or equal to 100 mg/dL.

Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

The University of Texas Health Science Center - Houston

Pass 3

<u>Title of Outcome Measure (Improvement Target)</u>: IT-1.1 Third next available appointment (Non- standalone measure)

<u>Unique RHP outcome identification number(s)</u>: 111810101.3.31
<u>Performing Provider Name/TPI:</u> UTHealth, UTPhysicians/111810101

<u>Outcome Measure Description:</u>
IT-1.1 Third next available appointment (Non- standalone measure)
Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient, or return visit/exam. The goals will be to decrease number of days to third next available appointment to two days for Specialty Care.

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-1.1 Reduce by 1 day over baseline the average length of time in days between the day a patient makes a request for an appointment with a physician and the third next available appointment for a new patient, or return visit/exam. The goal will be to decrease number of days to third next available appointment to two days for Specialty Care.
DY5:
IT-1.1 Reduce by 2 day over baseline the average length of time in days between the day a patient makes a request for an appointment with a physician and the third next available appointment for a new patient, or return visit/exam. The goal will be to decrease number of days to third next available appointment to two days for Specialty Care.

<u>Rationale:</u>
Access to care services can have an impact on healthcare outcomes, by providing early screening and treatment, patients are more likely to get these services when they are able to get appointments when first needed that accomodate their schedule. Since the goal of the project is to increase access to care and the third next available appointment is the healthcare industry's standard measure of access to care, we have chosen this outcome measure.

<u>Outcome Measure Valuation:</u>
Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Title of Outcome Measure (Improvement Target): IT-1.19 Antidepressant Medication Management
Unique RHP outcome identification number(s): 111810101.3.32
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101
Outcome Measure Description:
IT-1.19 Antidepressant Medication Management - NQF 0105 (Standalone measure)
The management of antidepressant medication in children ages 6-18 (who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis: A) the acute phase treatment period consisting at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive), and B) the continuation phase treatment period consisting of at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive).

Process Milestones:
DY2:
P-1 Project planning - engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
DY3:
P-3 Develop and test data systems
P-2 Establish baseline rates

Outcome Improvement Targets for each year:
DY4:
IT-1.19 Increase by 3% the number of patients ages 6-18 who complete at least 84 days of continuous treatment with an antidpressant medication during the 114-day acute phase treatment period folloing the IPSD and who complete at least 180 days of continuoust treatment with antidepressant medication during the 231-day continuation phase following the IPSD.
DY5:
IT-1.19 Increase by 5% the number of patients ages 6-18 who complete at least 84 days of continuous treatment with an antidpressant medication during the 114-day acute phase treatment period folloing the IPSD and who complete at least 180 days of continuoust treatment with antidepressant medication during the 231-day continuation phase following the IPSD.

Rationale:

According to the American Psychiatric Association, "as many as one in ten children between ages six and twelve experience persistent feelings of sadness . . . . Treatment is essential for children struggling with depression so that they can be free to develop necessary academic and social skills. Treatment involves psychotherapy either alone or in combination with medication." (http://www.psychiatry.org/mental-health/people/children)

Outcome Measure Valuation:

Using the same project valuation scores assigned to the projects, the dollars allotted for each year were distributed across the projects' related Category 3 measures. For demonstration year 2 the amount was 5%, and for DYs 3, 4, and 5, the proportion of the funds allotted were 10%, 10%, and 20%, respectively.

Tomball Regional Hospital

Pass 1

Title of Outcome Measure (Improvement Target): OD-2- Potentially Preventable Admissions

Title of Outcome Measure (Improvement Target): IT-2.5 Chronic Obstructive Pulmonary Disease (COPD) Admission Rate- 241PQI 5 *(Stand alone measure)*

a. Numerator: All non-maternal discharges of age 18 years and older with a principal diagnosis code for COPD.

b. Denominator: Population in Metro Area or county, age 18 years and older.

c. Data Source: EHR, Claims

d. Rationale/Evidence: COPD with MCC is the fourth largest admission category for the target population in Tomball. Combined with all COPD cases in this population group the diagnosis creates four admissions per month. Please see footnote for specific diagnosis codes to be included as well as criteria for case exclusion.

Title of Outcome Measure (Improvement Target): IT-2.10 Flu and pneumonia Admission Rate *(Stand alone measure)*

a. Numerator: All discharges of age 18 years and older with a principal diagnosis code of flu or pneumonia.

b. Denominator: Population in Metro Area or county, age 18 years and older.

c. Data Source: EHR, Claims

d. Rationale/Evidence: Hospitalizations for the Bacterial Pneumonia are considered "potentially preventable," because if the individual had access to and cooperated with appropriate outpatient healthcare, the hospitalization would likely not have occurred. The methodology used to identify "potentially preventable hospitalizations" was developed by the Agency for Healthcare Research and Quality (AHRQ). AHRQ is the lead federal agency responsible for research on healthcare quality costs, outcomes and patient safety.

The above targets were chose due to the fact that these diagnoses represent the two largest groups of preventable admissions in Tomball. By providing access to care, patients can receive treatment in a timely fashion and therefore prevent the escalation of illness to the point of requiring hospital services. The targeted reduction of five percent of these admissions would reduce state payments for hospital services and uncompensated care by $265,000 annually for each Improvement Target.

To achieve these targets, a planning group will be formed to include Pulmonologists, ED providers, Family Practice Physician, the clinic Mid-Level provider and representatives of the Clinic and Hospital Administrative teams. This group will be tasked to identify proper clinical

protocols, patient education material, other needed resources and to document implementation plans.

Valuation is based on the potential savings of admissions and the providers' time to develop the program.

Title of Outcome Measure (Improvement Target): OD-3 Potentially Preventable Re-Admissions - 30-day Readmission Rates (PPRs)

Outcome Measure Description:

The relationship between hospital readmission rates and quality of care is well-documented, and is driven by a general consensus that readmissions may result from circumstances surrounding the initial hospital stay. Given data limitations, only readmissions to the same facility will be included as part of each hospital's rates.

Readmission rates are calculated for the following individual medical conditions: Congestive heart failure, diabetes, chronic obstructive pulmonary disease, stroke, and asthma. Readmissions create excessive healthcare cost to providers and payers. In addition, the extended recovery period places that patient at undue risk and reduces the quality of life.

With the increased access to primary care, patients will receive post hospital follow-up and educations. Recovery and progress will be monitored and treatment plans can be amended to fit the patient's condition.

Title of Outcome Measure (Improvement Target): IT-3.1 All cause 30-day readmission rate-NQF 1789250 *(Stand alone measure)*

a. Numerator: The outcome for this measure is unplanned all-cause 30-day readmission. Readmission is defined as an inpatient admission to any acute care facility which occurs within 30 days of the discharge date of an eligible index admission. All readmissions are counted as outcomes except those that are considered planned.

b. Denominator: Admissions to acute care facilities for patients aged 18 years or older.

c. Data Source: EHR, Claims

A planning group will also be convened to develop the plans and monitor the progress of this initiative. For this project data will have to be defined, baselines determined and goals established. Target improvement by year 5 is a 5% reduction in the defined diagnostic groups. Estimated savings to patients and payers is projected to reach $265,000 by DY 5.

Title of Outcome Measure (Improvement Target): OD-9 Right Care, Right Setting

Title of Outcome Measure (Improvement Target): IT-9.2 ED appropriate utilization *(Standalone measure)*

- Reduce pediatric Emergency Department visits (CHIPRA Core Measure)272
- Reduce Emergency Department visits for target conditions
  - o Congestive Heart Failure
  - o Diabetes
  - o End Stage Renal Disease
  - o Cardiovascular Disease /Hypertension
  - o Behavioral Health/Substance Abuse
  - o Chronic Obstructive Pulmonary Disease
  - o Asthma

This outcome measure is chosen because it reflects all of the above indicators. By increasing access to primary care, after-hours services, access to vaccinations and post hospital follow-up care patients will receive the right care in the right setting. This will result in conditions not escalating to the point that they require emergency and hospital services and thereby, improve the overall health of the patient population.

During 2012, Tomball Regional Medical Center has experienced a 10.4% growth in ED visits. Visits by uninsured patients have increased by 19.2%. A five percent reduction in visits from indigent and uninsured will reduce payments by payers and uncompensated care by $527,431.

Pass 1

Title of Outcome Measure (Improvement Target): IT-11.1 – Improvement in Clinical Indicator in identified disparity group

Unique RHP outcome identification number(s): 112672402.3.1

Outcome Measure Description:

IT-11.1 Improvement in Clinical Indicator in identified disparity group (Improvement in rates of CRC screening among African American and Hispanic clinic population)

- Numerator: TBD by performing provider

Process Milestones:

- DY2:
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-3 – Develop and test data systems
- DY3:
  - P-3 – Develop and test data systems

Outcome Improvement Targets for each year:

- DY4: IT – 11.1 Numerator: Number of African American and Hispanic patients given FIT CRC screening – Improvement percent TBD
- DY5: IT – 11.1 Number of African American and Hispanic patients given FIT CRC screening – Improvement percent TBD

Rationale:

Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the provision of CRC screening services. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.

Improvement target percentages will be based on the timeframe in which the intervention will occur and expectations based on research of similar interventions for what is achievable during the start-up period of a CRC screening program.

Outcome Measure Valuation:

We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY (10%, 10%, 15%, and 33%). Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.

DRAFT

Title of Outcome Measure (Improvement Target): IT-11.6 – Other Outcome Improvement Target (Quit Attempts)

Unique RHP outcome identification number(s): 112672402.3.3

Outcome Measure Description:

IT-11.6 – Other Outcome Improvement Target (Quit Attempts)

- Numerator: Number of HIV+ smokers that make a quit attempt

Process Milestones:

- DY2:
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-3 – Develop and test data systems
- DY3:
  - P-3 – Develop and test data systems

Outcome Improvement Targets for each year:

- DY4: IT – 11.6 Numerator: Number of HIV+ smokers that make a quit attempt – 45% of enrollees will make a successful quit attempt
- DY5: IT – 11.6 Numerator: Number of HIV+ smokers that make a quit attempt – 45% of the remaining enrollees will make a successful quit attempt

Rationale:

Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the provision of smoking cessation services provided to HIV+ smokers. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.

Improvement target percentages will be based on the timeframe in which the intervention will occur and expectations based on research of similar interventions for what is achievable during the start-up period of a smoking cessation program for HIV+ smokers.

Outcome Measure Valuation:

We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY (10%, 10%, 15%, and 33%). Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.

DRAFT

Title of Outcome Measure (Improvement Target): IT-12.1 – Breast Cancer Screening (HEDIS 2012)

Unique RHP outcome identification number(s): 112672402.3.7

Outcome Measure Description:

IT-12.1 Breast Cancer Screening (HEDIS 2012)

- Numerator: Number of women aged 40 to 69 that have received an annual mammogram during the reporting period.

Process Milestones:

- DY2:
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans
  - P-3 – Develop and test data systems
- DY3:
  - P-3 – Develop and test data systems

Outcome Improvement Targets for each year:

- DY4: IT – 12.1 Numerator: Number of women aged 40 to 69 that have received an annual mammogram during the reporting period – Improvement percent TBD
- DY5: IT – 12.1 Number of women aged 40 to 69 that have received an annual mammogram during the reporting period.) – Improvement percent TBD

Rationale:

Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the provision of breast cancer screening services. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.

Improvement target percentages will be based on the timeframe in which the intervention will occur and expectations based on research of similar interventions for what is achievable during the start-up period of a breast cancer screening program.

Outcome Measure Valuation:

We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY (10%, 10%, 15%, and 33%). Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.

University of Texas M.D. Anderson Cancer Center

Pass 2

<u>Title of Outcome Measure (Improvement Target)</u>: IT-11.1 – Improvement in Clinical Indicator in identified disparity group (Smoking Cessation – Staying Quite)

<u>Unique RHP outcome identification number(s)</u>: 112672402.3.8 / Pass 2

<u>Outcome Measure Description</u>:

IT-11.1 – Improvement in Clinical Indicator in identified disparity group (Smoking Cessation – Staying Quit)

- Numerator: Number of smokers enrolled in Quitline treatment that will be abstinent at the time of follow-up

Process Milestones:

- DY2:
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans (protocol)
  - P-3 – Develop and test data systems
- DY3:
  - P-3 – Develop and test data systems

Outcome Improvement Targets for each year:

- DY4: IT – 11.1
  - Numerator: Number of smokers enrolled in treatment that will be abstinent at the time of follow-up – Improvement percent: 28%
  - Denominator: Number of smokers enrolled in treatment
  - Data Source: Data from EHR, Alere reports, expired CO and self-report data collected from participants and stored in program databases.

- DY5: IT – 11.1
  - Numerator: Number of smokers enrolled in treatment that will be abstinent at the time of follow-up – Improvement percent: TBD based on baseline and DY4
  - Denominator: Number of smokers enrolled in treatment
  - Data Source: Data from EHR, Alere reports, and project data bases

<u>Rationale</u>:

The selected Category 3 Outcome Improvement Target is smokers enrolled in Quitline cessation treatment that will be abstinent at time of follow-up. At 6-months post completion of the cessation treatment, patients will be contacted by phone to assess smoking status. The SRNT Smoking Abstinence Questionnaire will be used. To confirm cessation, participants will be mailed a carbon monoxide test with a self-addressed envelope. Based on Quitline data and the literature, 28% of smokers enrolled in Quitline treatment are abstinent at 6-month follow-up.

Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the provision of smoking cessation services provided to smokers in FQHCs. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.

This outcome measure corresponds to the overarching goal of the proposed project, to deliver evidence-based smoking cessation treatment to smokers seeking care in FQHCs and to ultimately reduce tobacco-related morbidity and mortality, particularly among individuals who are disproportionately burdened with the disease.

Outcome Measure Valuation:

We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY (10%, 10%, 15%, and 33%). Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.

Title of Outcome Measure (Improvement Target):

IT-11.6 - Other Outcome Improvement Target (Smoking Cessation – Quit Attempts)

Unique RHP outcome identification number(s): 112672402.3.9 / Pass 2

Outcome Measure Description:

IT-11.6 - Other Outcome Improvement Target (Smoking Cessation – Quit Attempts)

- Numerator: Number of smokers enrolled in Quitline treatment that make a quit attempt

Process Milestones:

- DY2:
  - P-1 – Project planning – engage stakeholders, identify current capacity and needed resources, determine timelines and document implementation plans (protocol)
  - P-3 – Develop and test data systems
- DY3:
  - P-3 – Develop and test data systems

Outcome Improvement Targets for each year:

- DY4: IT – 11.6
  - Numerator: Number of smokers enrolled in treatment that make a quit attempt – Improvement percent: 50%
  - Denominator: Number of smokers enrolled in treatment
  - Data Source: Data from EHR, Alere reports, expired CO and self-report data collected from participants and stored in program databases.

- DY5: IT – 11.6
  - Numerator: Number of smokers enrolled in treatment that make a quit attempt – Improvement percent: TBD based on baseline and DY4
  - Denominator: Number of smokers enrolled in treatment
  - Data Source: Data from EHR, Alere reports, expired CO and self-report data collected from participants and stored in program databases.

Rationale:

The selected Category 3 Outcome Improvement Target is smokers enrolled in Quitline cessation treatment that make a quit attempt. At 6-months post completion of the cessation treatment, patients will be contacted by phone to assess smoking status. The SRNT Smoking Abstinence Questionnaire will be used. To confirm cessation, participants will be mailed a carbon monoxide test with a self-addressed envelope. Based on our previous experience with AAC, at least 50% of smokers enrolled in Quitline treatment will make a quit attempt.

Process milestones P-1 and P-3 were chosen due to the lack of accurate reports and resources currently available to measure and monitor the provision of smoking cessation services provided to smokers in FQHCs. In order to report accurate data and establish baselines, P-1 and P-3 must be approached in DY2-DY3.

This outcome measure corresponds to the overarching goal of the proposed project, to deliver evidence-based smoking cessation treatment to smokers seeking care in FQHCs and to ultimately reduce tobacco-related morbidity and mortality, particularly among individuals who are disproportionately burdened with the disease.

Outcome Measure Valuation:

We valued our Outcome Measures equally within each DY based on our percent allocation for Category 3 per DY (10%, 10%, 15%, and 33%). Within each Outcome Measure, milestones and improvement targets received equal estimated incentive payments based on the total number of milestones and improvement targets within that DY.

West Houston Medical Center

Pass 1

Title of Outcome Measure (Improvement Target):
OD-3: IT 3.3.1: Potentially Preventable Readmissions

Unique RHP outcome identification number(s): 094187402.3.1

Outcome Measure Description:

HCA chose this outcome to accompany its project to create a Senior Care Coordinator position in its West Houston facility, who will engage in senior patient navigation of the healthcare continuum. HCA believes one result of that project will be a reduction in potentially preventable readmissions (PPRs) for patients enrolled in the navigator program. HCA expects this result because improved access to primary and preventative care, support, and education are evidence-based methods for reducing deterioration of patients' conditions upon discharge from an inpatient stay. Too often seniors do not have access to these services, and as a result their health outcomes are negatively impacted and the systemic cost of treating these patients in increased.

Process Milestones:

HCA chose its DY2 and DY3 process milestones in order to develop a system for measuring improvement and to establish a baseline by which to measure improvement in DYs 4-5.

Outcome Improvement Targets for each year:

HCA chose its improvement targets in order to measure the reduction in PPRs once the Senior Care Coordination program has gone into effect. The amount of improvement is TBD until DY3, when HCA will have established a baseline, and can determine a reasonable yet meaningful target for improvement.

Rationale:

HCA selected this outcome measure and improvement target because HCA has identified geriatric patients as one population with a high rate of PPRs. As of the second quarter of 2012, West Houston Medical Center had a 14.3% readmission rate for all cause readmissions within 30 days for the Medicare population for the previous twelve months. This rate represents a performance that is lower than the average for Medicare patients. HCA believes that improving the rate of PPRs will improve patient outcomes, and will reduce the cost of providing care to geriatric patients. The goals of the Waiver are to make healthcare more patient-centered, less episodic and more consistent, and to reduce the cost of care in order to provide services to the ever increasing population of Medicaid and uninsured patients requiring services. This outcome reflects each of these Waiver goals.

Outcome Measure Valuation:

The valuation of each Spohn Category 3 outcome takes into account the degree to which the project accomplishes the triple-aims of the Waiver, addresses community needs, benefits the population served by the project, and the investment required to implement the project. Spohn determined the value of this outcome by assessing the potential impact of increased availability of psychiatric nurse practitioners within the Region, though recognizing that even with an aggressive schedule the first matriculation would not occur until the last year of the Waiver.

D. Category 4 Narratives

El Campo Memorial Hospital

Category 4 Population-Focused Improvements - Narrative

Performing Provider Name: El Campo Memorial Hospital (ECMH)
Performing Provider TPI #: 131045004

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – The population at ECMH of the 8 measures listed under Doman 1 is not anticipated to be sufficiently large to produce statistically valid data. However, ECMH will report this information annually as required by HHSC since the definition of the terminology "sufficiently large" has not been defined at this time. ECMH expects that its implementation of the Patient Experience Training Program will have a positive impact on the number of potentially preventable admissions for patients by focusing on reducing patient anxiety and increasing patient compliance with discharge instructions and follow-up health care. It is expected that patients will become healthier which will minimize admissions.

- **Valuation Rationale/Justification** – The value ECMH placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Potentially preventable admissions negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing potentially preventable admissions at ECMH will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for potentially preventable admissions. ECMH values this reporting domain at $15,819 over DY 3-5, requiring local funding of $6,358.

Domain 2: 30-day readmissions (7 measures)

- **Description** – The population at ECMH of the 7 measures listed under Doman 2 is not anticipated to be sufficiently large to produce statistically valid data. However, ECMH will report this information annually as required by HHSC since the definition of the terminology "sufficiently large" has not been defined at this time. ECMH expects that its implementation of the Patient Experience Training Program will have a positive impact on the number of potentially preventable 30-day readmissions for patients by focusing on reducing patient anxiety and increasing patient compliance with discharge instructions and follow-up health care. If patients follow their recommended plan of care, it is expected that they are less likely to be readmitted within 30 days for the same condition.

- **Valuation Rationale/Justification** – The value ECMH placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Potentially preventable

30-day readmissions negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing 30-day admissions at ECMH will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for 30-day readmissions. ECMH values this reporting domain at $15,819 over DY 3-5, requiring local funding of $6,358.

Domain 3: Potentially Preventable Complications (64 measures)

- **Description** – The population at ECMH of the 64 measures listed under Doman 3 is not anticipated to be sufficiently large to produce statistically valid data. However, ECMH will report this information annually as required by HHSC since the definition of the terminology "sufficiently large" has not been defined at this time. ECMH suffers from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain. However, ECMH is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. Through the implementation of the Patient Experience Training Program, ECMH expects to reduce patient anxiety and increase patient compliance with discharge instructions and follow-up health care which is expected to improve patient satisfaction and ultimately health outcomes.

- **Valuation Rationale/Justification** – The value ECMH placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require ECMH to evaluate its own performance and will allow for organizational change that will be invaluable for ECMH's patients. The goals of the Waiver are to reduce the cost of providing care and to improve patient health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. ECMH values this reporting domain at $10,925 over DY 3-5, requiring local funding of $4,391.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – ECMH will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well ECMH is serving its patients. How a patient perceives his/her care often affects that patient's willingness to engage in follow-up, self-management and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. ECMH is committed to preventing this from happening. Additionally, medication management is a primary function that ECMH's providers need to engage in with patients to avoid readmissions, complications and to promote improved health outcomes outside of the hospital setting. ECMH expects that its implementation of the Patient Experience Training Program will have a positive impact on patient satisfaction and medication management by focusing on reducing patient anxiety which is expected to increase patient compliance with discharge instructions, follow-up health care and living a healthy lifestyle.

- **Valuation Rationale/Justification** – The value ECMH placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care

they receive from ECMH and how well ECMH performs its function of promoting medication management. The goals of the Waiver are to reduce the cost of providing care and to improve patient health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and improving patient satisfaction and medication management at ECMH will have a beneficial impact on individual patient outcomes and significantly reduce overall healthcare costs. ECMH values this reporting domain at $15,819 over DY 3-5, requiring local funding of $6,358.

Domain 5: Emergency Department (1 measure)

- **Description** – ECMH will measure the admit decision time to ED departure for admitted patients. ECMH expects that its implementation of the Patient Experience Training Program will have a positive impact on established patients by reducing their anxiety and in turn increasing their healthcare compliance such as seeking preventative health care and living healthy lifestyles. This is expected to reduce the number of visits to the ED by established patients in the ECMH system which would in turn reduce the number of admissions from the ED and ultimately reduce overall healthcare costs.

- **Valuation Rationale/Justification** – The value ECMH placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes and patient dissatisfaction. The goals of the Waiver are to reduce the cost of providing care and to improve patient health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. ECMH values this reporting domain at $15,820 over DY 3-5, requiring local funding of $6,360.

Gulf Coast Medical Center

Performing Provider Name: Gulf Coast Medical Center
Performing Provider TPI #: 178815001

Domain 1: Potentially Preventable Admissions

- **Description:**
  - This performing provider will report on the eight (8) potentially preventable admissions as defined in the Category 4 population –focused improvements.
  - Findings for this domain will begin being reported to HHSC in year 3.
  - **Domain Description**: Potentially Preventable Admissions relates to this performing provider's Category 1 Project (Establish Adult Inpatient Psychiatric Unit) in a variety of ways. Common diseases such as those included in this Domain affect individuals of all ages and are frequently a co morbidity of those individuals with mental illnesses. Congestive Heart Failure, Diabetes, Chronic Obstructive Pulmonary Disease and Hypertension are the diagnoses in this Domain that may have the greatest impact with regard to preventing admissions. Those patients with a mental disorder/s that are not under the care of a mental health practitioner and have medical co morbidities are at risk for non-compliance of their treatment plan which results in admission. With the availability of treatment for mental disorders through our project those patients with co morbidities are more likely to be compliant with treatment plans thus preventing an admission.
  - Expected improvement for DY2-DY5 is difficult to determine but it is anticipated to decrease the number of potentially preventable admissions of adult psychiatric patients that have received treatment and have additional medical co morbidities.
  - **Valuation:**

    The following valuation for this domain for DY3 through DY5 is as follows for a total of $79,500.
    DY 3 $24,500
    DY 4 $27,500
    DY 5 $27,500

    Areas considered when determining valuation for this domain have been addressed in the domain description.

Domain 2- RD-2 30 Day Readmissions

- This performing provider will report on the seven (7) focus areas for 30 day readmissions.
- Findings for this domain will begin being reported to HHSC in year 3.
- **Domain Description:** 30 Day Readmissions relates to this performing provider's Category 1 Project (Establish An Adult Inpatient Psychiatric Unit) similar to the relation outlined for potentially preventable admission. Individuals with mental health disorders that have not received treatment or are non-compliant with the treatment plan for the mental illness may also be non-complaint with the treatment plan for existing co morbidities thus resulting in readmission. It is anticipated that the 30 readmission measure –behavioral health and substance abuse- will show the highest impact with regard to readmissions as a result of this performing provider's Category 1 Project. This provider has selected the Category 3 Outcome Improvement IT-1.18 Follow up

after Hospitalization for Mental Illness as it relates to the Category 1 Project. A baseline will be established in year 3 with improvement targets established for year 4 and 5 utilizing baseline findings.

- Expected Improvement for Y2 to Y5 will be defined from baseline data for the target outcome specifically selected to measure outcomes for the providers Category 1 Project.
- **Domain Valuation:**

  The following valuation for this domain for DY3 through DY5 is as follows for a total of $79,500.

  DY 3 $24,500
  DY 4 $27,500
  DY 5 $27,500

  Areas considered when determining valuation for this domain have been addressed in the domain description.

Domain 3- RD-3 Potentially Preventable Complications

- A total of 64 potentially preventable complications will be reported by Gulf Coast Medical Center.
- Findings for this domain will begin being reported to HHSC in year 4.
- **Domain Description:** Potentially Preventable Complications relates to our chosen Category 1 Project involving the establishment of an adult inpatient psychiatric unit. All patients admitted to the proposed unit that have existing co morbidities which are left untreated could possibly have resulting complications. Individuals admitted to the proposed psychiatric unit with co morbidities will receive treatment for their additional medical diagnoses to prevent potential complications.
- Anticipated improvement in year Y3-Y5 is a decrease in the number of preventable complications.
- **Domain Valuation:**

  The following valuation for this domain for DY4 and DY5 is as follows for a total of $55,000.

  DY 4 $27,500
  DY 5 $27,500

Areas considered when determining valuation for this domain have been addressed in the domain description.

Domain 4- RD-4 Patient Centered Healthcare

- This performing provider will report on the two (2) patient-centered healthcare measures as defined in the Category 4 population –focused improvements..
  - **Domain Description:**
    - Patient Satisfaction: The following themes will be reported to include your care from doctors, your care from nurses, the hospital environment and when you left the hospital.
      - Reporting will begin DY 2 with baseline targets from the acute care settings for this performing provider. .

- Medication Management: All patients discharged from the inpatient setting will be included in reporting of data from this measure. Two measures will be reported by this performing provider to include medications to be taken by the patient and medications not to be taken by the patient.
  - Reporting will begin DY 2 with baseline targets from the acute care settings for this performing provider.

- **Domain Valuation:**
  The following valuation for this domain for DY3 through DY5 is as follows for a total of $79,500.
  DY 3 $24,500
  DY 4 $27,500
  DY 5 $27,500

Areas considered when determining valuation for this domain have been addressed in the domain description.

Domain 5 –RD-5 Emergency Department

- **Domain Description:** This performing provider will report on admit decision time to ED departure time for admitted patients (NQF 497).
  - Decision time to transfer an emergency patient to another facility ie, decision to make the first call from arrival in transferring ED until call initiatied.
  - Threshold of <1 hour for critical patients.
  - This domain does not relate to this performing provider Category 1 Project.

- **Domain Valuation:**
  The following valuation for this domain for DY3 through DY 5 is as follows for a total of $79,500.
  DY 3 $24,500
  DY 4 $27,500
  DY 5 $27,500

Areas considered when determining valuation for this domain have been addressed in the domain description.

Harris County Hospital District / Ben Taub Hospital

Performing Provider Name: **Harris Health System**
Performing Provider TPI #: **133355104**

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – Harris Health System will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. Harris Health System expects that expanding services into primary care clinics will reroute patients away from emergent and inpatient settings and allow for better optimization of care.

- **Valuation** – The Harris Health System placed an equal value on all domains reported based on the number of domains per distribution year. As the goal of the Waiver is to reduce cost, improve access, and improve quality outcomes, the Harris Health System will utilize the required Category 4 Population-Focused Improvements as an internal key indicator to drive strategy and review impact of all projects implemented. All initiatives submitted will have beneficial impacts on majority of the domains reported within an appropriate timeline identified.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – Harris Health System will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. Harris Health System expects that the assignment of clinical case managers upon discharge will increase patient access to follow-up care and support in the community, thereby preventing the likelihood of a preventable readmission.

- **Valuation** – The Harris Health System placed an equal value on all domains reported based on the number of domains per distribution year. As the goal of the Waiver is to reduce cost, improve access, and improve quality outcomes, the Harris Health System will utilize the required Category 4 Population-Focused Improvements as an internal key indicator to drive strategy and review impact of all projects implemented. All initiatives submitted will have beneficial impacts on majority of the domains reported within an appropriate timeline identified.

Domain 3: Potentially Preventable Complications (64 measures)

- **Description** – Harris Health System will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and Harris Health System is dedicated to assuring that it takes all

possible steps to improve its provision of healthcare where indicated. Harris Health System expects that its expansion of primary care and follow-up of chronic diseases in the primary care setting will reduce the volume of unnecessary utilization of hospital services which can be associated with an unnecessary complication.

- **Valuation** – The Harris Health System placed an equal value on all domains reported based on the number of domains per distribution year. As the goal of the Waiver is to reduce cost, improve access, and improve quality outcomes, the Harris Health System will utilize the required Category 4 Population-Focused Improvements as an internal key indicator to drive strategy and review impact of all projects implemented. All initiatives submitted will have beneficial impacts on majority of the domains reported within an appropriate timeline identified.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – Harris Health System will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient's willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. Harris Health System is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital's providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. Harris Health System expects improved patient satisfaction in the hospital setting and effective medication management protocols for patients to correlate with Harris Health System's projects oriented toward expansion of primary care and optimization of chronic disease management.

- **Valuation** – The Harris Health System placed an equal value on all domains reported based on the number of domains per distribution year. As the goal of the Waiver is to reduce cost, improve access, and improve quality outcomes, the Harris Health System will utilize the required Category 4 Population-Focused Improvements as an internal key indicator to drive strategy and review impact of all projects implemented. All initiatives submitted will have beneficial impacts on majority of the domains reported within an appropriate timeline identified.

Domain 5: Emergency Department (1 measure)

- **Description** – Harris Health System will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers, and the patients experience poor health outcomes as a result. Harris Health System will expand primary care to accommodate patients that utilize the emergency center for primary care. There will also be establishment of urgent care clinics for patients needing acute care after-hours.

- **Valuation** – The Harris Health System placed an equal value on all domains reported based on the number of domains per distribution year. As the goal of the Waiver is to reduce cost, improve access, and improve quality outcomes, the Harris Health System will utilize the required Category 4 Population-Focused Improvements as an internal key indicator to drive strategy and review impact of all projects implemented. All initiatives submitted will have beneficial impacts on majority of the domains reported within an appropriate timeline identified.

HCA Bayshore Hospital

Performing Provider Name: **HCA Bayshore Medical Center ("Bayshore")**
Performing Provider TPI #: **094187402**

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – Bayshore will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. Bayshore expects that its expansion of OB/Gyn services in its community clinics will have a positive impact on the number of PPAs for women with manageable obstetric/gynecological conditions that can be treated and/or managed outside of the hospital setting with proper access to primary care. Additionally, the physicians providing the OB/Gyn care can provide patients with detection and management of other conditions that lead to PPAs for clients who are otherwise unable to access primary care.

- **Valuation Rationale/Justification** – The value Bayshore placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs in at Bayshore will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPAs. Bayshore values this reporting domain at $663,020 over Demonstration Years 3-5, requiring local funding of $266,533.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – Bayshore will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. Bayshore expects that the use of telemedicine in HCA's local EDs could lead to a reduction in PPRs for BH/SA patients because the project aims to place BH/SA patients into the appropriate care setting as quickly and effectively as possible. If these patients receive the care they need during and after hospitalization, they are much less likely to be readmitted within 30 days for the same condition.

- **Valuation Rationale/Justification** - The value Bayshore placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a whole. The goals of the Waiver are to reduce the cost of providing

care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs for Bayshore patients will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs. Bayshore values this reporting domain at $663,020 over Demonstration Years 3-5, requiring local funding of $266,533.

Domain 3: Potentially Preventable Complications (64 measures)

- **Description** – Bayshore will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and Bayshore is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated.

- **Valuation Rationale/Justification** - The value Bayshore placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital's patients and the hospital's operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Bayshore values this reporting domain at $457,913 over Demonstration Years 3-5, requiring local funding of $184,080.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – Bayshore will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient's willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. Bayshore is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital's providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. Bayshore hopes that implementing the telepsychiatry into the local HCA facilities will improve satisfaction for BH/SA patients, who currently spend extended amounts of time in the ED when they seek services at the hospital.

- **Valuation Rationale/Justification** - The value Bayshore placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from Bayshore and how well Bayshore performs its function of promoting medication management. Bayshore is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making

progress. Prevalent chronic disease and lack of care coordination for traditionally underserved patients in Houston is costly to patients' health and to the delivery system, and Bayshore believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary care to have the maximum beneficial impact for the community. Bayshore values this reporting domain at $663,020 over Demonstration Years 3-5, requiring local funding of $266,533.

Domain 5: Emergency Department (1 measure)

- **Description** – Bayshore will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers, and the patients experience poor health outcomes as a result. Bayshore's telepsychiatry project in the local HCA EDs will seek to improve the admit decision time to ED departure time for BH/SA patients, who often wait days for appropriate placement due to a shortage of providers to perform assessments.

- **Valuation Rationale/Justification** - The value Bayshore placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Bayshore values this reporting domain at $663,018 over Demonstration Years 3-5, requiring local funding of $266,533.

HCA West Houston Medical Center

Performing Provider Name: **HCA West Houston Medical Center ("WHMC")**
Performing Provider TPI #: **094187402**

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – WHMC will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. WHMC expects that assigning care coordinators to seniors who visit WHMC through its Category 1 project will result in senior patients receiving expanded primary care services in the community, reducing the number of PPAs going forward for those patients. More specifically, WHMC hopes that senior patients with chronic diseases will be better able to engage in self-management goals and activities of daily living with the support, education, and services that primary care providers participating with WHMC in this project can offer to a currently underserved patient population.

- **Valuation Rationale/Justification** – The value WHMC placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs in at WHMC will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPAs. WHMC values this reporting domain at $284,151 over Demonstration Years 3-5, requiring local funding of $114,228.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – WHMC will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. WHMC expects that the assignment of senior hospital patients to Senior Care Coordinators upon discharge will increase their access to follow-up care and support in the community, thereby preventing the likelihood of a PPR. WHMC's Category 3 Outcome is based upon accomplishing a percentage reduction in the number of PPRs for geriatric patients by the end of DY5, by a percentage to be established in DY3.

- **Valuation Rationale/Justification** - The value WHMC placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a whole. The goals of the Waiver are to reduce the cost of providing

care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs for WHMC patients will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs. WHMC values this reporting domain at $284,151 over Demonstration Years 3-5, requiring local funding of $114,228.

Domain 3: Potentially Preventable Complications (64 measures)

- **Description** – WHMC will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and WHMC is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. WHMC expects that its Category 1 project to add a "Senior Care Entrance" to the hospital and provide special beds for geriatric patients will have a positive impact on the PPC rate for the geriatric population seen in the hospital.

- **Valuation Rationale/Justification** - The value WHMC placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital's patients and the hospital's operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. WHMC values this reporting domain at $196,248 over Demonstration Years 3-5, requiring local funding of $78,891.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – WHMC will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient's willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. WHMC is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital's providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. WHMC expects improved patient satisfaction in the hospital setting and effective medication management protocols for seniors to correlate with WHMC's Category 1 project to provide geriatric-oriented hospital accommodations and care coordination.

- **Valuation Rationale/Justification** - The value WHMC placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from WHMC and how well WHMC performs its function of promoting medication management. WHMC is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease and lack of care coordination for traditionally underserved patients (such as the elderly) in Houston is costly to patients' health and to the delivery system, and WHMC believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary care to have the maximum beneficial impact for the community. WHMC values this reporting domain at $284,151 over Demonstration Years 3-5, requiring local funding of $114,228.

Domain 5: Emergency Department (1 measure)

- **Description** – WHMC will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers, and the patients experience poor health outcomes as a result.

- **Valuation Rationale/Justification** - The value WHMC placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. WHMC values this reporting domain at $284,151 over Demonstration Years 3-5, requiring local funding of $114,228.

Memorial Hermann Hospital

Performing Provider Name: Memorial Hermann Hospital
Performing Provider TPI #: 137805107

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – Memorial Hermann Hospital ("Memorial") will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. Memorial plans to implement Category 1 DSRIP projects with the goal of addressing the root causes of potentially preventable admissions. Specifically, this project will expand regional primary care capacity by establishing primary care clinics. Memorial expects that this project will reduce potentially preventable admissions by making it easier for more patients to receive the primary care they need in appropriate outpatient settings rather than inpatient or emergent settings. Memorial also believes that the increased availability of primary care services in the community will allow potentially harmful and expensive health conditions to be detected and treated early and inexpensively.

- **Valuation Rationale/Justification** – The value Memorial has placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs at Memorial will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPAs. Memorial values this reporting domain at $2,497,998 over Demonstration Years 3-5.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – Memorial will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. Memorial expects that its improvement of access to primary care services through establishing additional primary care clinics will allow patients recently discharged from the hospital to access follow-up care and support, thereby preventing the likelihood of a PPR.

- **Valuation Rationale/Justification** - The value Memorial placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases (e.g., diabetes and congestive heart failure) and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a whole. The goals of the

Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs at Memorial will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs. Memorial values this reporting domain at $2,497,998 over Demonstration Years 3-5.

Domain 3: Potentially Preventable Complications (64 measures)

- **Description** – Memorial will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and Memorial is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. Memorial expects that its expanded provision of primary care and of follow-up care for chronic diseases will reduce the volume of unnecessary utilization of hospital services, thus alleviating one of the problems which can result in unnecessary complications for inpatients. The ongoing quality improvement activities which constitute an essential part of Memorial's Category 3 projects will also help to ensure that error rates and complications are reduced at all levels of care throughout Memorial.

- **Valuation Rationale/Justification** - The value Memorial placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital's patients and the hospital's operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Memorial values this reporting domain at $1,724,544 over Demonstration Years 3-5.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – Memorial will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient's willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. Memorial is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital's providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. Memorial expects improved patient satisfaction in the hospital setting and effective medication management protocols for inpatients to correlate with Memorial's projects to strengthen primary care access in the community and to promote and facilitate management of chronic conditions, because satisfied

patients recently discharged from the hospital will be more likely to seek and receive the support they need to maintain their health upon discharge (including medication management).

- **Valuation Rationale/Justification** - The value Memorial placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from Memorial and how well Memorial performs its primary care and post-discharge functions. Memorial is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease in our community is costly to patients' health and to the delivery system, and Memorial believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary care to have the maximum beneficial impact for the community. Memorial values this reporting domain at $2,497,998 over Demonstration Years 3-5.

Domain 5: Emergency Department (1 measure)

- **Description** – Memorial will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers, and the patients experience poor health outcomes as a result. This reporting domain ties in with one of the overall aims of the waiver: to reduce inappropriate use of the ED. One cause of extended ED departure times results from an overcrowded ED. Memorial intends to expand access to primary care for patients who currently are unable to access primary care due to factors such as the lack of primary care providers in the community, and to improve follow-up care for discharged patients diagnosed with chronic health conditions, which Memorial expects will reduce the number of inappropriate ED visits and therefore allow for better management of ED processes such as admit decisions.

- **Valuation Rationale/Justification** - The value Memorial placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Memorial values this reporting domain at $2,497,998 over Demonstration Years 3-5.

Memorial Hermann Hospital System

Performing Provider Name: **Memorial Hermann Hospital System**
Performing Provider TPI #: **020834001**

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – Memorial Hermann Hospital System ("Memorial") will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. Memorial plans to implement Category 1 DSRIP projects with the goal of addressing the root causes of potentially preventable admissions. Specifically, this project will expand regional primary care capacity by establishing primary care clinics. Memorial expects that this project will reduce potentially preventable admissions by making it easier for more patients to receive the primary care they need in appropriate outpatient settings rather than inpatient or emergent settings. Memorial also believes that the increased availability of primary care services in the community will allow potentially harmful and expensive health conditions to be detected and treated early and inexpensively.

- **Valuation Rationale/Justification** – The value Memorial has placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs at Memorial will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPAs. Memorial values this reporting domain at $2,446,921 over Demonstration Years 3-5.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – Memorial will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. Memorial expects that its improvement of access to primary care services through establishing additional primary care clinics will allow patients recently discharged from the hospital to access follow-up care and support, thereby preventing the likelihood of a PPR.

- **Valuation Rationale/Justification** - The value Memorial placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases (e.g., diabetes and congestive heart failure) and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a whole. The goals of the

Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs at Memorial will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs. Memorial values this reporting domain at $2,446,921 over Demonstration Years 3-5.

Domain 3: Potentially Preventable Complications (64 measures)

- **Description** – Memorial will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and Memorial is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. Memorial expects that its expanded provision of primary care and of follow-up care for chronic diseases will reduce the volume of unnecessary utilization of hospital services, thus alleviating one of the problems which can result in unnecessary complications for inpatients. The ongoing quality improvement activities which constitute an essential part of Memorial's Category 3 projects will also help to ensure that error rates and complications are reduced at all levels of care throughout Memorial.

- **Valuation Rationale/Justification** - The value Memorial placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital's patients and the hospital's operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Memorial values this reporting domain at $1,690,652 over Demonstration Years 3-5.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – Memorial will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient's willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. Memorial is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital's providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. Memorial expects improved patient satisfaction in the hospital setting and effective medication management protocols for inpatients to correlate with Memorial's projects to strengthen primary care access in the community and to promote and facilitate management of chronic conditions, because satisfied

patients recently discharged from the hospital will be more likely to seek and receive the support they need to maintain their health upon discharge (including medication management).

- **Valuation Rationale/Justification** - The value Memorial placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from Memorial and how well Memorial performs its primary care and post-discharge functions. Memorial is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease in our community is costly to patients' health and to the delivery system, and Memorial believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary care to have the maximum beneficial impact for the community. Memorial values this reporting domain at $2,446,921 over Demonstration Years 3-5.

Domain 5: Emergency Department (1 measure)

- **Description** – Memorial will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers, and the patients experience poor health outcomes as a result. This reporting domain ties in with one of the overall aims of the waiver: to reduce inappropriate use of the ED. One cause of extended ED departure times results from an overcrowded ED. Memorial intends to expand access to primary care for patients who currently are unable to access primary care due to factors such as the lack of primary care providers in the community, and to improve follow-up care for discharged patients diagnosed with chronic health conditions, which Memorial expects will reduce the number of inappropriate ED visits and therefore allow for better management of ED processes such as admit decisions.

- **Valuation Rationale/Justification** - The value Memorial placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Memorial values this reporting domain at $2,446,921 over Demonstration Years 3-5.

Matagorda Regional Medical Center

Performing Provider Name: **Matagorda Regional Medical Center (MRMC)**
Performing Provider TPI #: **1679678767**

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – MRMC will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. MRMC expects that its establishment of a Chronic Disease Specialty Clinic (CDSC) in its community will have a positive impact on the number of PPAs for patients with chronic disease conditions by focusing on providing access to specialty services and physicians that support care for a number of key chronic conditions. Through the establishment of the CDSC, patient compliance with specialty referral visits will improve and the ability to manage chronic disease conditions on an ambulatory basis will improve.

- **Valuation Rationale/Justification** – The value MRMC placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs at MRMC will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPAs. MRMC values this reporting domain at $92,230 over Demonstration Years 3-5, requiring local funding of $37,076.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – MRMC will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. MRMC expects that the establishment of the Chronic Disease Speciality Clinic (CDSC) will provide a centralized location for determining best practice management of patients with the targeted disease categories. By creating the clinic with the respective specialists, information systems and care coordination will allow patients and their primary care providers to have ready access to expertise that will reduce issues with noncompliance, reduce out of control health crises, and therefore reduce hospital readmissions and unnecessary visits to the emergency department. If these patients receive the care they need during and after hospitalization, they are much less likely to be readmitted within 30 days for the same condition.

- **Valuation Rationale/Justification** - The value MRMC placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards

prevalent chronic diseases and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a whole. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs for MRMC patients will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs. MRMC values this reporting domain at $92,231 over Demonstration Years 3-5, requiring local funding of $37,077.

Domain 3: Potentially Preventable Complications (64 measures)

- **Description** – MRMC will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and MRMC is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. MRMC through the Chronic Disease Speciality Clinic (CDSC) will strive to transform the health care delivery from a disease focused model of episodic care to a patient-centered coordinated delivery model that improves patient satisfaction and health outcomes.

- **Valuation Rationale/Justification** - The value MRMC placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital's patients and the hospital's operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. MRMC values this reporting domain at $63,699 over Demonstration Years 3-5, requiring local funding of $25,607.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – MRMC will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient's willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. MRMC is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital's providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. MRMC hopes that implementing the Chronic Disease Speciality Clinic will improve satisfaction for MRMC patients, by coordinating care with providing access and early intervention and preventing patients from getting "lost" in the health care system.

- **Valuation Rationale/Justification** - The value MRMC placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from MRMC and how well MRMC performs its function of promoting medication management. MRMC is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease and lack of care coordination for traditionally underserved patients in Matagorda County is costly to patients' health and to the delivery system, and MRMC believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary and specialty care to have the maximum beneficial impact for the community. MRMC values this reporting domain at $92,231 over Demonstration Years 3-5, requiring local funding of $37,077.

Domain 5: Emergency Department (1 measure)

- **Description** – MRMC will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers, and the patients experience poor health outcomes as a result. MRMC's Chronic Disease Speciality Clinic project will assist ED providers by decreasing the number of disease related crisis visits to the ED and transforming care for the targeted populations from one of fragmented resources to an organized system of followup for primary and specialty services. MRMC will seek to improve the admit decision time to ED departure time for MRMC patients, who often wait days for appropriate placement due to a shortage of providers to perform assessments.

- **Valuation Rationale/Justification** - The value MRMC placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. MRMC values this reporting domain at $92,231 over Demonstration Years 3-5, requiring local funding of $37,077.

OakBend Medical Center

Performing Provider Name: **OakBend Medical Center**
Performing Provider TPI #: **127303903**

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – OakBend Medical Center ("OakBend") will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. OakBend plans to implement a Category 2 DSRIP project with the goal of addressing the root causes of potentially preventable admissions. Specifically, this project will provide navigational services to targeted patients who are at high risk of disconnect from institutionalized healthcare. OakBend expects that this project will reduce potentially preventable admissions by making it easier for more patients to receive the primary care they need in appropriate outpatient settings rather than inpatient or emergent settings. OakBend also believes that this project will allow expensive health conditions to be detected and treated early and inexpensively.

- **Valuation Rationale/Justification** – The value OakBend has placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs at OakBend will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPAs. OakBend values this reporting domain at $484,722 over Demonstration Years 3-5.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – OakBend will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. OakBend expects that its improvement of access to primary care services through establishing additional primary care providers will allow patients recently discharged from the hospital to access follow-up care and support, thereby preventing the likelihood of a PPR.,

- **Valuation Rationale/Justification** - The value OakBend placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases (e.g., diabetes and congestive heart failure) and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a whole. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health

outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs at OakBend will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs. OakBend values this reporting domain at $484,722 over Demonstration Years 3-5.

Domain 3: Potentially Preventable Complications (64 measures)

- **Description** – OakBend will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and OakBend is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. OakBend expects that its expanded provision of primary care and of follow-up care for chronic diseases will reduce the volume of unnecessary utilization of hospital services, thus alleviating one of the problems which can result in unnecessary complications for inpatients. The ongoing quality improvement activities which constitute an essential part of OakBend's Category 3 projects will also help to ensure that error rates and complications are reduced at all levels of care throughout OakBend.

- **Valuation Rationale/Justification** - The value OakBend placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital's patients and the hospital's operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. OakBend values this reporting domain at $335,074 over Demonstration Years 3-5.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – OakBend will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient's willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. OakBend is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital's providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. OakBend expects improved patient satisfaction in the hospital setting and effective medication management protocols for inpatients to correlate with OakBend's projects to strengthen primary care access in the community and to promote and facilitate management of chronic conditions, because satisfied

patients recently discharged from the hospital will be more likely to seek and receive the support they need to maintain their health upon discharge (including medication management).

- **Valuation Rationale/Justification** - The value OakBend placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from OakBend and how well OakBend performs its primary care and post-discharge functions. OakBend is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease is costly to patients' health and to the delivery system, and OakBend believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary care to have the maximum beneficial impact for the community. OakBend values this reporting domain at $484,722 over Demonstration Years 3-5.

Domain 5: Emergency Department (1 measure)

- **Description** – OakBend will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers, and the patients experience poor health outcomes as a result. This reporting domain ties in with one of the overall aims of the waiver: to reduce inappropriate use of the ED. One cause of extended ED departure times results from an overcrowded ED. OakBend intends to expand access to primary care for patients who currently are unable to access primary care due to factors such as the lack of primary care providers in the community, and to improve follow-up care for discharged patients diagnosed with chronic health conditions, which OakBend expects will reduce the number of inappropriate ED visits and therefore allow for better management of ED processes such as admit decisions.

- **Valuation Rationale/Justification** - The value OakBend placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. OakBend values this reporting domain at $484,722 over Demonstration Years 3-5.

Rice Medical Center

Performing Provider Name: **Rice Medical Center ("Rice")**
Performing Provider TPI #: **212060201**

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – Rice will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. Rice expects that its provision of expanded primary and specialty care services through the Family Practice Obstetrician project, the establishment of the Wallis clinic, the use of telemedicine for specialty consults, the addition of ENT specialty services at Rice, and the expansion of the East Bernard Clinic will reduce the number of PPAs over the life of the Waiver. Additionally, Rice hopes that its project to conduct outreach to patients with chronic diseases and its project to create a Certified Diabetes Teaching Center will enable targeted patients to engage in self-management goals and activities of daily living that are essential to preventing PPAs. Finally, Rice intends for its ImmTrack project to reduce the number of PPAs related to flu and other illnesses that can be prevented through immunizations.

- **Valuation Rationale/Justification** – The value Rice placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs in Colorado and Wharton Counties will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPAs. Rice values this reporting domain at $236,577 over Demonstration Years 3-5, requiring local funding of $97,730.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – Rice will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. Rice expects that its outreach activities will allow chronically ill patients recently discharged from the hospital to access follow-up care and support, thereby preventing the likelihood of a PPR. With specific regard to diabetic patients, Rice expects its Certified Diabetes Teaching Center to assist diabetic patients in addressing the short- and long-term complications that led to their hospitalizations, and prevent subsequent relapses. Finally, the expanded number and size of clinics in the community will increase the resources available to patients upon discharge from an inpatient stay.

- **Valuation Rationale/Justification** - The value Rice placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a whole. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs in Colorado County will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPRs. Many hospitalizations at Rice can be linked to manageable chronic diseases that Rice intends to address with its project to expand access to primary care. Rice values this reporting domain at $236,577 over Demonstration Years 3-5, requiring local funding of $97,730.

Domain 3: Potentially Preventable Complications (64 measures)

- **Description** – Rice will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and Rice is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated. Rice expects that its Category 1 project to expand access to primary care will reduce the strain on Rice's hospital resources (including staff, space, and equipment). Rice also hopes that its ImmTrack project will have a positive impact on PPCs that can be related to duplicative or missed immunizations.

- **Valuation Rationale/Justification** - The value Rice placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital's patients and the hospital's operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Rice values this reporting domain at $158,067 over Demonstration Years 3-5, requiring local funding of $65,298.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – Rice will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient's willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. Rice is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital's providers need to engage in with patients to

avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. Rice expects improved patient satisfaction in the hospital setting and effective medication management protocols for inpatients to correlate with Rice's Category 1 project to expand primary care access, and its projects targeting chronic diseases, because satisfied patients recently discharged from the hospital will be more likely to seek and receive the support they need to maintain their health upon discharge (including medication management).

- **Valuation Rationale/Justification** - The value Rice placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from Rice and how well Rice performs its function of promoting medication management. Rice is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease in Colorado County is costly to patients' health and to the delivery system, and Rice believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary care to have the maximum beneficial impact for the community. Rice values this reporting domain at $236,577 over Demonstration Years 3-5, requiring local funding of $97,730.

Domain 5: Emergency Department (1 measure)

- **Description** – Rice will measure the admit decision time to ED departure time for admitted patients. This measure is important because patients often languish in hospital EDs due to lack of systemic cooperation between hospitals, their departments, and other types of providers, and the patients experience poor health outcomes as a result. This reporting domain ties in with Rice's Category 2 project to reduce inefficiencies the ED, because an effect of this project's successful implementation will be to reduce overall ED treatment, admit, and discharge times. One cause of extended ED departure times is an overcrowded ED, so Rice also intends to expand access to primary care in the community and to provide support to chronically ill patients, which Rice expects will reduce the number of inappropriate ED visits.

- **Valuation Rationale/Justification** - The value Rice placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Rice values this reporting domain at $236,577 over Demonstration Years 3-5, requiring local funding of $97,730.

St. Joseph's Medical Center

Performing Provider Name: St. Joseph's Medical Center
Performing Provider TPI #: 181706601

Domain 1 – Potentially Preventable Admissions (PPAs)

PROJECT RELATIONSHIPS TO DOMAIN		
Category 1	**Category 2**	**Category 3**
	2.17 – Care transitions from mental health/substance abuse (Partial Hospital Program) 2.15 – Integrate Primary & Behavioral Care Services (Medical-Psych Unit)	OD-1/IT-1.18 Follow up for Hospitalization for Mental Illness OD-9 – IT-9.4 Right care, right setting

- **Description:** Category 4 focuses on reporting six (6) key measure sets designed to gain information and understanding on the health needs of low-income, Medicaid or uninsured patients and their families. St. Joseph Medical Center has selected two Behavioral Health projects (Medical-Psychiatric Unit and Partial Hospitalization Program for Behavioral Health/Substance Abuse) which in turn will facilitate the reduction of unnecessary hospitalizations for those disease conditions which are prevalent in Harris County and the surrounding regions. In Texas, potentially preventable admissions have been linked to secondary diagnoses of mental illness/substance abuse or in the following medical conditions: Congestive Heart Failure (CHF), Diabetes , Chronic Obstructive Pulmonary Disease (COPD) – 44.4% of patients admitted to a hospital with this diagnosis had a secondary diagnosis of mental illness/substance abuse; Asthma – 37.0% of patients admitted to a hospital with this diagnosis had a secondary diagnosis of mental illness/substance abuse; Bacterial Pneumonia – 32.5% of patients admitted to a hospital with this diagnosis had a secondary diagnosis of mental illness/substance abuse (Texas Health and Human Services Commission, 2012), Influenza Immunization.

    - St. Joseph Medical Center recognizes that there is a high prevalence of co-occurring mental health and medical issues in the United States. Currently patients with medical illnesses develop depression 10-14% of the time. The rate increases as the severity of illness increases. In many cases, the diagnosis of depression is missed 50% of the time in primary care settings. Likewise, people with a mental illness experience greater distress, an increase in impaired functioning and less ability to follow medical regimens, thus hindering the treatment of any other medical conditions. Taking into account the lack of beds in Harris County and the surrounding areas, St. Joseph Medical Center has chosen to open new services designed to provide behavioral health patients with better wrap around services. The Medical-Psychiatric Unit will provide the right care in the

right setting. This unit will care for those patients who previously did not receive needed behavioral health care because their medical diagnosis became a priority. It can also care for patients who did not have their medical needs addressed due to their overriding psychiatric disease. The Partial Hospitalization Program will provide behavioral health and/or substance abuse patients with the support and skills to care for themselves in the residential setting.

- **Valuation:** The valuation of the Medical-Psychiatric Unit and the Partial Hospitalization Program takes into account the degree to which the projects accomplish community needs, the population served (both number of people served and complexity of patient needs), and investment required to implement the projects. The projects seek to reduce the cost of delivering inpatient care in the community by addressing quality of care in a cost efficient model and attempting to reduce unnecessary admissions through better health outcomes for patients. It is the expectation that the opening of a 12 bed Medical-Psychiatric Unit to treat patients with co-occurring medical and psychiatric needs and the Partial Hospitalization Program that will teach patients the skills to care for themselves in the residential setting and will decrease the number of admissions to the hospital.

- *St. Joseph Medical Center will not submit data related to Pediatric Asthma as we do not have a Pediatric Unit. Pediatric patients requiring admission are transferred to one of the Pediatric Hospitals located in the Houston area.

Domain 2 – Potentially Preventable Readmissions (PPRs)

PROJECT RELATIONSHIPS TO DOMAIN		
Category 1	**Category 2**	**Category 3**
	2.17 – Care transitions from mental health/substance abuse (Partial Hospital Program) 2.15 – Integrate Primary & Behavioral Care Services (Medical-Psych Unit)	OD-1/IT-1.18 Follow up for Hospitalization for Mental Illness OD-9 – IT-9.4 Right care, right setting

- **Description:** Currently, there are two medical-psychiatric units in Houston. There is the unit at Ben Taub and another unit at Memorial Southwest. According to statements both by their own staff and from referrers within the community, these units stay consistently full and it is virtually impossible to get a patient from another facility to either one of these units. St. Joseph Medical Center has selected two Behavioral Health projects (Medical-Psychiatric Unit and Partial Hospitalization Program for Behavioral Health/Substance Abuse) with the underserved population in mind. Both of these programs will facilitate the reduction of unplanned readmissions to the Hospital within 30 days of discharge for those disease conditions which are identified. In Texas, potentially preventable readmissions within 30 days have been linked to secondary

diagnoses of mental illness/substance abuse or in the following medical conditions: Congestive Heart Failure (CHF) , Diabetes , Chronic Obstructive Pulmonary Disease (COPD) – Patients with COPD have multiple readmissions to the hospital and many have a secondary diagnosis of mental illness/substance abuse, Stroke – 10-27% of stroke survivors develop depression that lasts about one year, All Cause readmissions within 30 days of discharge – Medical disorders may contribute biologically to depression and readmissions.

- St. Joseph Medical Center recognizes that there is a high prevalence of co-occurring mental health and medical issues in the United States. Currently patients with medical illnesses develop depression 10-14% of the time. The rate increases as the severity of illness increases. In many cases, the diagnosis of depression is missed 50% of the time in primary care settings. Likewise, people with a mental illness experience greater distress, an increase in impaired functioning and less ability to follow medical regimens, thus readmissions to the Hospital for reassessment of a continuing condition or for the treatment of other medical conditions occurs more frequently. Taking into account the lack of beds in Harris County and the surrounding areas, St. Joseph Medical Center has chosen to open new services designed to provide behavioral health patients with better wrap around services. The Medical-Psychiatric Unit will provide the right care in the right setting for the those patients who previously did not receive needed behavioral health care because their medical diagnosis became a priority. It also can care for those patients who did not have their medical needs addressed due to their overriding psychiatric disease. The Partial Hospitalization Program will provide behavioral health and/or substance abuse patients with the support and skills to care for themselves in the residential setting. The Program focuses on medication compliance, living situation stability, therapy and aftercare needs. It is expected that these two new programs working together will reduce the recidivism and/or readmissions to the Hospital.

- **Valuation:** The valuation of the Medical-Psychiatric Unit and the Partial Hospitalization Program takes into account the degree to which the projects accomplish community needs, the population served (both number of people served and complexity of patient needs), and investment required to implement the projects. The projects seek to reduce the cost of delivering inpatient care in the community by addressing quality of care in a cost efficient model and attempting to reduce unplanned readmissions through better health outcomes for patients. It is the expectation that the opening of a 12 bed Medical-Psychiatric Unit to treat patients with co-occurring medical and psychiatric needs and the Partial Hospitalization Program that will teach patients the skills to care for themselves in the residential setting will decrease the number of readmissions to the Hospital. It is foreseen that any reduction in readmissions in any population will result in cost savings and appropriate utilization of resources. The baseline goal will be determined by opportunity analysis and needs assessment results.

- *St. Joseph Medical Center will not submit data related to Pediatric Asthma as we do not have a Pediatric Unit. Pediatric patients requiring admission are transferred to one of the Pediatric Hospitals located in the Houston area.

Domain 3 – Potentially Preventable Complications (PPCs)

PROJECT RELATIONSHIPS TO DOMAIN		
Category 1	**Category 2**	**Category 3**
	2.17 – Care transitions from mental health/substance abuse (Partial Hospital Program) 2.15 – Integrate Primary & Behavioral Care Services (Medical-Psych Unit)	OD-1/IT-1.18 Follow up for Hospitalization for Mental Illness OD-9 – IT-9.4 Right care, right setting

- **Description:** Congestive heart failure, chronic obstructive pulmonary disease, diabetes, stroke, behavioral diseases, etc. are chronic diseases. Individuals must learn self-management skills and make lifestyle changes to effectively manage these illnesses to avoid or delay complications. For these reasons self-management education and medical management are the cornerstone of treatment for people with chronic diseases. Enhancing the chronic disease inpatient programs and developing new outpatient programs designed to help individuals manage their illness will result in improved patient outcomes for this population. In addition, the implementation of *Lean* methodology will be instrumental in the improvement of patient care and safety, the reduction of hospital-acquired conditions, and increased staff efficiency through the promotion of evidence based medical and nursing practice at the facility. Domain 3 focuses on multiple quality outcome measures and specifically on Sepsis Mortality (#35 on PPC list) as a potentially preventable condition / healthcare acquired condition. Research on sepsis reveals that there is a wide variation in healthcare practice in different geographical areas which have not kept in pace with the evolving science of healthcare to ensure evidence based practice. Treatment for sepsis is an example of how variation in healthcare can be reduced. This, in turn, will have an effect on mortality and the number of patients developing infections and/or potentially preventable complications. St. Joseph Medical Center aspires to reduce the sepsis mortality rate by utilizing the nationally recommended "Bundle" concept included in the Surviving Sepsis Campaign which is a global initiative.

- **Valuation:** Based on HealthGrades data regarding the average cost of treating a sepsis patient and the average length of stay for a sepsis patient at St. Joseph Medical Center, it is projected that reducing the number of complications in the aforementioned diagnoses will facilitate improvement and can potentially save $4,012,000 over a five (5) year period.

Domain 4 – Patient Centered Healthcare

PROJECT RELATIONSHIPS TO DOMAIN		
Category 1	**Category 2**	**Category 3**

	2.17 – Care transitions from mental health/substance abuse (Partial Hospital Program) 2.15 – Integrate Primary & Behavioral Care Services (Medical-Psych Unit)	OD-1/IT-1.18 Follow up for Hospitalization for Mental Illness OD-9 – IT-9.4 Right care, right setting

- **Description:** This project has been designed to improve patient care and patient satisfaction through the provision of adequate services, adequate hours, adequate resources, and optimal healthcare services reflective of evidence based practice standards. These factors will also have a positive impact when receiving the right care in the right setting. Through sustained utilization of the HCAHPS patient satisfaction tools and reports during this project's subsequent years, St. Joseph Medical Center will monitor the results and continue to identify opportunities for improvement. Appropriate corrective actions will be developed for the provision of appropriate patient centered care, whereby patient satisfaction will be maintained and improved. A secondary focus of this project is appropriate Medication Management. The *Lean* methodology will facilitate the redesign and implementation of an improved patient centered medication management program limited to the inpatient setting. This program will promote patient safety through the appropriate prescribing, dispensing, administering, and, in particular, using of prescribed medications upon discharge from the hospital.

- **Valuation:** Patient satisfaction is a major determinant of return "business" for a healthcare facility and is also a factor which influences reimbursement for services rendered. Applying the efficiency, effectiveness, and safety aspects of the *Lean* methodology to the medication management process will eliminate numerous non-value steps in the current process which in turn will promote cost savings.

Domain 5 – Emergency Department (ED)

PROJECT RELATIONSHIPS TO DOMAIN		
Category 1	**Category 2**	**Category 3**
	2.17 – Care transitions from mental health/substance abuse (Partial Hospital Program) 2.15 – Integrate Primary & Behavioral Care Services (Medical-Psych Unit)	OD-1/IT-1.18 Follow up for Hospitalization for Mental Illness OD-9 – IT-9.4 Right care, right setting

- **Description:** The purpose of expanding primary care services includes the goal of reducing the number of potentially avoidable visits to the St. Joseph Medical Center's Emergency Department and provide the right care in the right setting. People with depression or other behavioral disease experience greater distress, an increase in impaired functioning and less ability to follow medical regimens, thus hindering the treatment of any other medical conditions. In addition, depression occurs in 10 to 27 percent of stroke survivors and usually lasts about one year. It occurs in 40=65% of patients who have a heart attack and in 25% of cancer patients. People with bipolar disorder are also at higher risk for thyroid disease, migraine headaches, heart disease, diabetes, obesity, and other physical illnesses. Baseline data indicates that these diagnoses are among the most frequently recorded non-emergent ED visits which can actually be cared for in the primary care system. When these same patients arrive in our ED, they will be screened for a secondary diagnosis of mental health illness and, if this diagnosis is potentially present, the patient will be given diagnosis-specific education and then be directed to the most appropriate primary or inpatient care setting that provides mental health resources for follow up. This may be our Medical-Psychiatric Unit, our Partial Hospitalization Program for outpatient treatment or to Intake for inpatient behavioral health care. This realignment will result in better health outcomes, patient satisfaction, appropriate ED utilization, and reduced cost of services.

- **Valuation:** It is projected that the number of patients screened for mental health illness in the ED will increase by 2-3% over the baseline number. A primary goal is to measure the results of strategies identified. It is anticipated that education of the frequent ED patients will assist them in identifying and accessing those healthcare provider services most appropriate for their care in the future; this, in turn, will promote cost savings and proper provider utilization. In addition, it will promote more timely treatment of those patients presenting to the ED with more serious medical conditions.

Domain 6 – Children and Adult Core Measures (Optional)

PROJECT RELATIONSHIPS TO DOMAIN		
Category 1	**Category 2**	**Category 3**
	2.17 – Care transitions from mental health/substance abuse (Partial Hospital Program) 2.15 – Integrate Primary & Behavioral Care Services (Medical-Psych Unit)	OD-1/IT-1.18 Follow up for Hospitalization for Mental Illness OD-9 – IT-9.4 Right care, right setting

- **Description:** It is the intent of St. Joseph Medical Center to report on *RD-6. Optional Domain: Initial Core Set of Health Care Quality Measures* which will require the collection and submission of data on hospital services provided for children in the

Medicaid and CHIP programs, as well as Medicaid eligible adults. In addition, data analysis will be performed with resultant recommendations communicated for corrective actions to be taken related to those measures which indicate opportunities for improvement.

- **Valuation:** The significant values of this reporting domain will be healthcare cost savings, appropriate healthcare utilization, improved patient outcomes, and improved patient satisfaction.

- *St. Joseph Medical Center will not submit data related to Pediatric Intensive Care Unit as we do not have a Pediatric Care Unit. Pediatric patients requiring admission to an ICU are transferred to one of the Pediatric Hospitals located in the Houston area.

St. Luke's Episcopal Hospital

Performing Provider Name: **St. Luke's Episcopal Hospital**
Performing Provider TPI #: **127300503**

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** Most measures require the number of residents age 18 or older living in the RHP counties to determine the denominator. This data would need to be provided by the state. Behavioral health and substance abuse admission rate would not be measurable since our facility does not provide psychiatric or substance abuse services.
- **Valuation - $507,703**
- **Rationale/Justification -** One of the goals of the project, as well as the Region's goals, is to increase reliance on primary care settings. This project assists patients in finding a medical home for CHF patients. The valuation was divided equally between the reporting years.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** We will be able to report data for all areas in this domain with the exception of behavioral health and substance abuse admission 30-day readmission rate. Since we do not provide psychiatric or substance abuse services, we would not be able to report this data.
- **Valuation – $507,703**
- **Rationale/Justification -** The impact of the project can be tracked through readmissions. The goal would be to reduce readmissions. The valuation was divided equally between the reporting years.

Domain 3: Potentially Preventable Complications (64 measures)

- **Description** We will be able to report data for all areas in this domain.
- **Valuation - $351,064**
- **Rationale/Justification** – The value placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Understanding the starting point and tracking improvements is essential to making progress. The valuation was divided equally between the reporting years.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** We will be able to report data for all areas in this domain.
- **Valuation - $507,703**
- **Rationale/Justification -** The value placed on this domain is based upon the value the hospital attributes to understanding how well is it serving its patients and the health/financial impacts of patient satisfaction in improving self-management, patient follow up and perceived quality of life and care. Understanding the starting point and tracking improvements is essential to making progress. The valuation was divided equally between the reporting years.

Domain 5: Emergency Department (1 measure)

- **Description** We will be able to report data for all areas in this domain.
- **Valuation - $507,706**
- **Rationale/Justification -** The value placed on this domain is based upon the value the hospital attributes to understanding how well the emergency department is functioning and how efficiently patients are being triaged and appropriately routed. Understanding the starting point and tracking improvements is essential to making progress. The valuation was divided equally between the reporting years.

Optional Domain 6: Children and Adult Core Measures (8 measures) N/A

- **Description** We have opted out of reporting for this domain.
- **Valuation**
- **Rationale/Justification**

Texas Children's Hospital

Performing Provider Name: **Texas Children's Hospital**
Performing Provider TPI #: **139135109**

Domain 1: Potentially Preventable Admissions: RD1

- Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.
    - **RD1.1, 1.2, 1.4, 1.5 and 1.7 are not applicable to the patient population we serve. When using the denominator of Patients over age 18 years old acute care facilities you will get the sickest patients of our pediatric group who are still cared for under our system in that mix (cardiac, CF, Neuro). Other acute care hospital over the age of 18 are generally a healthier population.**

    - RD1.3 Behavior Health and Substance Abuse Admission Rate- As a core pediatric principle in preventative medicine and for any patient accessing care through the Pavilion for Women early recognition of abuse patterns is critical for better health outcomes. The expansion of access allowed for through our Category 1 and 2 projects provides us with the opportunity to diagnose our patient population earlier to mitigate behavioral or substance abuse issues.

    - RD1.6 Pediatric Asthma- Transitions of care for any chronic disease population such as those we are working to expand access for in our Category 1 and 2 projects, would benefit from a measure such as emergency center utilization for asthma care. Our anticipated result is that we will see a decrease in this utilization as we increase correct asthma plan implementation.

    - RD1.8 Influenza Immunization- Texas Children's has a process in place to remind all patients the need to get an influenza immunization. Additionally, we provide free vaccines to all parents of in our inpatient population. We will continue to monitor influenza vaccinations to ensure our high risk populations are protected.

- **Domain Valuation:** All of our project's values are based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient

hospital visits.[392] Studies show the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.[3]Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[393] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. 5-10% of the total valuation for each project we allocated as the value of reporting the category 4 quality metrics.

Domain 2: Potentially Preventable Readmissions:

o Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

- RD2.1, 2.2, 2.3, 2.4 and 2.5 are not applicable to the patient population we serve. When using the denominator of Patients over age 18 years old acute care facilities you will get the sickest patients of our pediatric group who are still cared for under our system in that mix (cardiac, Cystic Fibrosis, Neuro). Other acute care hospital over the age of 18 are generally a healthier population.
- RD2.6 Pediatric Asthma is a high priority of Texas Children's because we see such a large high risk population of children. We expect to have a reduction in our 30 day readmission rate specifically those seen in our Category 1 and 2 expansion projects (e.g. pulmonology, allergy and immunology). Our expansion to subspecialty care will help drive patients to the right level of care.
- RD2.7- When using the denominator of Patients over age 18 years old acute care facilities you will get the sickest patients of our pediatric group who are still cared for under our system in that mix (cardiac, CF, Neuro). Other acute care hospital over the age of 18 are generally a healthier population.

- **Domain Valuation:** All of our project's values are based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example,

increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[394] Studies show the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.[3]Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[395] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. 5-10% of the total valuation for each project we allocated as the value of reporting the category 4 quality metrics.

Domain 3: Potentially Preventable Complications:

- **Description**: Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally. Currently we are taking our clinical process models to our Enterprise Data Warehouse (EDW) to better understand and identify gaps in care. We expect that increasing the number of people who have correct access to care will improve the qualtiy of care provided. Our clinical system integration allows us to perform rapid cycle process improvement specific to our high risk patients. These PDSAs allow us to more efficiently and effectively improve care delivery and ultimately outcomes.

- **Domain Valuation:** All of our project's values are based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[396] Studies show the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.[3]Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life

[395]Brannon, Ike. "Risk - What Is a Life Worth? Despite Its Prima Facie Callousness, Determining the Value of a Human Life Is Necessary for Good Public Policy." *Regulation*. 27.4 (2004): 60-63.

[396]Smith, John T, Price, Christopher, Stevens Peter M., Masters, Kevin S., and Young, Mark. "Selected Topics - Does Pediatric Orthopedic Subspecialization Affect Hospital Utilization and Charges?" *Journal of Pediatric Orthopedics*. 19.4 (1999): 553-555.

Year ("QALY") per year and a percentage of that QALY for the pediatric population.[397] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. 5-10% of the total valuation for each project we allocated as the value of reporting the category 4 quality metrics.

Domain 4: Patient Satisfaction

- **Description:** Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally. RD4.1 HCAHPS does not apply to our pediatric population. RD4.2 Medication Management- This is a specific target of our process improvement initiative using our electronic medical record to identify medications for all inpatient populations that we serve including all subspecialty populations needing to be transferred.

- **Domain Valuation:** All of our project's values are based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[398] Studies show the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.[3]Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[399] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. 5-10% of the total valuation for each project we allocated as the value of reporting the category 4 quality metrics.

Domain 5: Emergency Department

---

[397]Brannon, Ike. "Risk - What Is a Life Worth? Despite Its Prima Facie Callousness, Determining the Value of a Human Life Is Necessary for Good Public Policy." *Regulation*. 27.4 (2004): 60-63.

[398]Smith, John T, Price, Christopher, Stevens Peter M., Masters, Kevin S., and Young, Mark. "Selected Topics - Does Pediatric Orthopedic Subspecialization Affect Hospital Utilization and Charges?" *Journal of Pediatric Orthopedics*. 19.4 (1999): 553-555.

[399]Brannon, Ike. "Risk - What Is a Life Worth? Despite Its Prima Facie Callousness, Determining the Value of a Human Life Is Necessary for Good Public Policy." *Regulation*. 27.4 (2004): 60-63.

- **Description:** Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally. We are currently initiating this process. We hope to demonstrate stronger links between data management centers and call centers to improve better transfers of patients. It is our hope this will lead to a reduction in time wasted when a patient is transferred in or out of our facility.

- **Domain Valuation:** All of our project's values are based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[400] Studies show the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.[3]Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[401] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. 5-10% of the total valuation for each project we allocated as the value of reporting the category 4 quality metrics.

[400]Smith, John T, Price, Christopher, Stevens Peter M., Masters, Kevin S., and Young, Mark. "Selected Topics - Does Pediatric Orthopedic Subspecialization Affect Hospital Utilization and Charges?" *Journal of Pediatric Orthopedics*. 19.4 (1999): 553-555.

[401]Brannon, Ike. "Risk - What Is a Life Worth? Despite Its Prima Facie Callousness, Determining the Value of a Human Life Is Necessary for Good Public Policy." *Regulation*. 27.4 (2004): 60-63.

The Methodist Hospital

Performing Provider Name: **The Methodist Hospital**
Performing Provider TPI #: **137949705**

Patient Data and Quality Reporting: Domains 1 - 5
The Methodist Hospital System (Methodist) has been proactive with regard to federal quality and data reporting requirements. Methodist also currently submits administrative, coded, de-identified data to Texas Health Care Information Collection (THCIC). Once HHSC determines the nature of the data to be reported and the technical specification for reporting, Methodist will develop the appropriate data reporting for Category 4 Domains 1 through 5 and respective measures.
Domain 1, 2, and 3 are based on 3M's APR-DRGs. Methodist is in the process of implementing MIDAS, a software system that is a 3M partner and utilizes its reporting methodology. MIDAS is a staged implementation which is expected to be in place in 2Q 2013. The system covers Inpatient, Outpatient and Emergency Department patient visit details which are chained encounters.
Domain 4 contains two components: a) Patient-centered health care or patient satisfaction data and b) Medicaid Management. These are currently addressed by two separate reporting systems. Patient satisfaction measures are managed by Press Ganey, which utilizes a survey tool that includes the HCAHPS standard questions. The data is reported to CMS for use in Hospital Compare. Medication management is a functionality of MethOD, our electronic medical record (EMR). The EMR contains the following: home medication list, inpatient medication orders, home to inpatient reconciliation, patient transfer medication reconciliation, medication administration, patient refusal of medication administration, and discharge medication documentation. HHSC currently receives reports from providers in XML formats. Methodist has the capability to provide reports in XML. Once HHSC determines the specific data to be collected and reported, Methodist will evaluate the data capture reporting capability.
Domain 5 relates to Emergency Department admit to departure length of time. HHSC will need to determine whether the approach to this is a core measure approach or a patient management approach. In the event that HHSC seeks to capture core measurement information the MIDAS system discussed above would be expected to capture that information. If the data sought is strictly patient management aimed at arrival date/time and date/time of patient disposition then an ED management system, MedHost, could be utilized for the data collection and reporting.

Category 4 Valuation: Methodist will utilize the 10% valuation for Domains 1 – 5 with an equal spread between domains and measures.

Domain Descriptions: A description of how Category 4 measures relate to the project/outcomes. Because the DSRP project submitted relates to Care Coordination for Behavioral Medicine patients seen in the Emergency Department, the following Category 4 Domains are specific to the project which Methodist will design and implement. Data will be collected, analyzed and interventions developed for care coordination to reduce admissions, readmissions, patient satisfaction, medication management, complications, and emergency department patient management.

RD-1. Potentially Preventable Admissions

3. Behavioral Health and Substance Abuse Admission rate (based on other selected PPA primary diagnoses)

RD-2. 30-day Readmissions

3. Behavioral health & Substance Abuse: 30-Day Readmissions

RD-3. Potentially Preventable Complications (PPCs)

Hospital performing providers subject to required Category 4 reporting must report on the 64 PPC
measures listed below in DY 4-5: #36 Acute Mental Health Changes

RD-4. Patient-centered Healthcare

1. Patient Satisfaction
2. Medication

management

RD-5. Emergency Department

Admit decision time to ED departure time for admitted patients (NQF 0497)

a. Decision Time to transfer an emergency patient to another facility (not Transport Time), i.e. decision to make the first call from arrival in transferring ED until call initiated. Recommend threshold of < 1 hour for critical patient.

The Methodist Hospital Willowbrook

Performing Provider Name: **Methodist Willowbrook Hospita**
Performing Provider TPI #: **140713201**

Patient Data and Quality Reporting: Domains 1 - 5
The Methodist Hospital System (Methodist) has been proactive with regard to federal quality and data reporting requirements. Methodist also currently submits administrative, coded, de-identified data to Texas Health Care Information Collection (THCIC). Once HHSC determines the nature of the data to be reported and the technical specification for reporting, Methodist will develop the appropriate data reporting for Category 4 Domains 1 through 5 and respective measures.
Domain 1, 2, and 3 are based on 3M's APR-DRGs. Methodist is in the process of implementing MIDAS, a software system that is a 3M partner and utilizes its reporting methodology. MIDAS is a staged implementation which is expected to be in place in 2Q 2013. The system covers Inpatient, Outpatient and Emergency Department patient visit details which are chained encounters.
Domain 4 contains two components: a) Patient-centered health care or patient satisfaction data and b) Medicaid Management. These are currently addressed by two separate reporting systems. Patient satisfaction measures are managed by Press Ganey, which utilizes a survey tool that includes the HCAHPS standard questions. The data is reported to CMS for use in Hospital Compare. Medication management is a functionality of MethOD, our electronic medical record (EMR). The EMR contains the following: home medication list, inpatient medication orders, home to inpatient reconciliation, patient transfer medication reconciliation, medication administration, patient refusal of medication administration, and discharge medication documentation. HHSC currently receives reports from providers in XML formats. Methodist has the capability to provide reports in XML. Once HHSC determines the specific data to be collected and reported, Methodist will evaluate the data capture reporting capability.
Domain 5 relates to Emergency Department admit to departure length of time. HHSC will need to determine whether the approach to this is a core measure approach or a patient management approach. In the event that HHSC seeks to capture core measurement information the MIDAS system discussed above would be expected to capture that information. If the data sought is strictly patient management aimed at arrival date/time and date/time of patient disposition then an ED management system, MedHost, could be utilized for the data collection and reporting.

Category 4 Valuation: Methodist will utilize the 10% valuation for Domains 1 – 5 with an equal spread between domains and measures.

Domain Descriptions: A description of how Category 4 measures relate to the project/outcomes. Because the DSRP project submitted relates to Care Coordination for Behavioral Medicine patients seen in the Emergency Department, the following Category 4 Domains are specific to the project which Methodist will design and implement. Data will be collected, analyzed and interventions developed for care coordination to reduce admissions, readmissions, patient

satisfaction, medication management, complications, and emergency department patient management.

RD-1. Potentially Preventable Admissions

3. Behavioral Health and Substance Abuse Admission rate (based on other selected PPA primary diagnoses)

RD-2. 30-day Readmissions

3. Behavioral health & Substance Abuse: 30-Day Readmissions

RD-3. Potentially Preventable Complications (PPCs)

Hospital performing providers subject to required Category 4 reporting must report on the 64 PPC measures listed below in DY 4-5: #36 Acute Mental Health Changes

RD-4. Patient-centered Healthcare

1. Patient Satisfaction
2. Medication Management

RD-5. Emergency Department

Admit decision time to ED departure time for admitted patients (NQF 0497)

a. Decision Time to transfer an emergency patient to another facility (not Transport Time), i.e. decision to make the first call from arrival in transferring ED until call initiated. Recommend threshold of < 1 hour for critical patient.

The Methodist Hospital Willowbrook

Performing Provider Name: **The University of Texas MD Anderson Cancer Center**
Performing Provider TPI #: **112672402**

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description:** The four DSRIP projects that we are submitting will all be implemented in a community setting. The outcomes of those projects will have no impact on any of the Potentially Preventable Admissions in Reporting Domain 1 (RD-1). We could (with proper documentation) provide the admission rates for the shown items. However it should be noted that we would be creating reports for types of admissions not typically seen in our hospital. We don't have behavioral health admits and other types of admits.
  Reported: Calendar Year
  Source: Texas Health and Human Services Commission

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- The University of Texas MD Anderson Cancer Center is a PPS-exempt cancer hospital and does not have to report on Potentially Preventable Readmissions.

Domain 3: Potentially Preventable Complications (64 measures)

- The four DSRIP projects that we are submitting will all be implemented in a community setting. The outcomes of those projects will have no impact on the 64 measures listed in Potentially Preventable Complications/Reporting Domain 3 (RD-3).
  Reported: Calendar Year
  Source: Texas Health and Human Services Commission

Domain 4: Patient-Centered Healthcare (2 measures)

- Patient satisfaction scores and Medication Management figures are monitored and are reported monthly as a deliverable on the Dash Board in Static.
  Reported: Rolling 24 month cycle
  Source: The University of Texas MD Anderson Cancer Center

Domain 5: Emergency Department (1 measure)

- The number of patients who come to The University of Texas MD Anderson Cancer Center's emergency room that require transfer to another institution is negligible and not large enough to produce statistically valid data.
  Reported: Rolling 24 month cycle
  Source: The University of Texas MD Anderson Cancer Center

Domain Valuation:

The percent allocation for Category 4 was distributed evenly across the all of the reporting measures for each DY. Whereas, the University of Texas MD Anderson Cancer Center is exempt from Domain 2, the percent allocation for each DY has been distributed evenly among the remaining four Domains and their corresponding Milestones and Reporting Domains as applicable.

Tomball Regional Hospital

Performing Provider Name: Tomball Regional Medical Center ("Hospital")
Performing Provider TPI #: 288523801

Domain 1: Potentially Preventable Admissions (8 measures)

- **Description** – Hospital will report on the 8 measures in this domain in an effort to gain information on and understanding of the health status of its patients with regard to potentially preventable admissions, which are often linked with poor chronic disease management and lack of access to appropriate outpatient healthcare. By increasing access to primary care for the indigent and uninsured, this project will improve the quality of health for this population by managing chronic conditions and preventing the cases from escalating to the point of requiring hospital services.

- **Valuation Rationale/Justification** – The value Hospital placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable admissions. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. PPAs negatively impact patient outcomes (including overall health, satisfaction, and quality of life), which can have short- and long-term consequences for the cost of delivering care to patients. The potential result of tracking and reducing PPAs in at Hospital will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for PPAs. Hospital values this reporting domain at $1,229,452 over Demonstration Years 3-5, requiring local funding of $494,351.

Domain 2: Potentially Preventable Readmissions – 30 days (7 measures)

- **Description** – Hospital will report on the 7 measures in this domain in an effort to gain information on and understanding of the health status of patients it has treated, discharged, and then readmitted for the same principal diagnosis. Too many patients are released from the hospital into the community with no follow-up or support, and end up back in the hospital inpatient setting soon thereafter. Hospital will work with the Indigent Clinic and provide access to medical specialists in order to establish follow-up protocols for the maintenance of chronic conditions, and thereby reduce the readmission rates for these services.

- **Valuation Rationale/Justification** - The value Hospital placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of 30-day readmissions. Specifically, the measures are targeted towards prevalent chronic diseases and then allow for a broad measure of readmissions, which will allow the hospital to gauge the potential causes of these rates in conjunction with each other and as a whole. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. The potential result of tracking and reducing PPRs for Hospital patients will have a beneficial impact on individual patient outcomes and significantly reduce the financial burden of paying for

PPRs. Hospital values this reporting domain at $1,229,452 over Demonstration Years 3-5, requiring local funding of $494,351.

Domain 3: Potentially Preventable Complications (64 measures)

- **Description** – Hospital will report on the 64 measures in this domain in an effort to understand the most prevalent causes of PPCs and to use the information to make institutional reforms toward reducing the rates. Hospitals suffer from shortages of space, staffing, equipment, and protocols for preventing complications like the measures in this domain, and Hospital is dedicated to assuring that it takes all possible steps to improve its provision of healthcare where indicated.

- **Valuation Rationale/Justification** - The value Hospital placed on this domain is based upon the value the hospital attributes to understanding the causes of and health/financial impacts of potentially preventable complications. Reporting on this domain will require the hospital to evaluate its own performance, and will allow for institutional change that will be invaluable for the hospital's patients and the hospital's operating costs. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Hospital values this reporting domain at $1,229,452 over Demonstration Years 3-5, requiring local funding of $494,351.

Domain 4: Patient-Centered Healthcare (2 measures)

- **Description** – Hospital will report on Patient Satisfaction and Medication Management under this domain in an effort to gauge how well the hospital is serving its patients. How a patient perceives his/her care often affects that patient's willingness to engage in follow-up, self-management, and honest interactions with practitioners. As a consequence of patient dissatisfaction, patients may experience negative health outcomes and become even more disillusioned with the healthcare delivery system. Hospital is committed to preventing this from happening. Additionally, medication management is a primary function that the hospital's providers need to engage in with patients to avoid readmissions, complications, and to promote improved health outcomes outside of the hospital setting. Hospital believes that with clinical protocols and discharge education, patients will receive proper follow-up care to improve their overall health and outcomes.

- **Valuation Rationale/Justification** - The value Hospital placed on this domain is based upon the value the hospital attributes to understanding how patients perceive the care they receive from Hospital and how well Hospital performs its function of promoting medication management. Hospital is committed to improving patient outcomes, and therefore places a high value on these measures. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Prevalent chronic disease and lack of care coordination for traditionally underserved patients in Houston is costly to patients' health and to the delivery system, and Hospital believes that its hospital services must leave these patients satisfied and confident in the healthcare delivery system, in order for the expansion of primary care to

have the maximum beneficial impact for the community. Hospital values this reporting domain at $1,229,452 over Demonstration Years 3-5, requiring local funding of $494,351.

Domain 5: Emergency Department (1 measure)

- **Description** – Hospital will measure the ED visits quantities for the level I and II evaluation and management services for the defined patient population. This measure is important because patients often languish in hospital EDs due to lack of access to primary care in an outpatient setting. Reducing the unnecessary ED visits will reduce to wait times for more critical patients and thereby improve the health of the community served within the ED.

- **Valuation Rationale/Justification** - The value Hospital placed on this domain is based upon the value the hospital attributes to knowing how well it is currently performing in the ED and to making goals for self-improvement. Long ED wait times can lead to complications, poor outcomes, and patient dissatisfaction with their care. The goals of the Waiver are to reduce the cost of providing care and to improve patient access and health outcomes. Understanding our starting point and tracking our improvement is essential to making progress. Hospital values this reporting domain at $1,229,452 over Demonstration Years 3-5, requiring local funding of $494,351.

Category 4 Tables
