Section I. RHP Organization

Section I. RHP Organization

Please list the participants in your RHP by type of participant: Anchor, IGT Entity, Performing Provider, Uncompensated Care (UC)-only hospital, and other stakeholder, including the name of the organization, lead representative, and the contact information for the lead representative (address, email, phone number). The lead representative is HHSC's single point of contact regarding the entity's participation in the plan. Providers that will not be receiving direct DSRIP payments do not need to be listed under "Performing Providers" and may instead be listed under "Other Stakeholders". Please provide accurate information, particularly TPI, TIN, and ownership type, otherwise there may be delays in your payments. Refer to the Companion Document for definitions of ownership type. Add additional rows as needed.

Note: HHSC does not request a description of the RHP governance structure as part of this section.

RHP Participant Type	**Texas Provider Identifier** (TPI)	**Texas Identification Number** (TIN)	**Ownership Type** (state owned, non-state public, private)	**Organization Name**	**Lead Representative**	**Lead Representative Contact Information** (address, email, phone number)

Section II. Executive Overview of RHP Plan

Section II. Executive Overview of RHP Plan

As the largest Regional Healthcare Partnership (RHP) in Texas, our RHP plan is by necessity an ambitious, comprehensive effort to improve health care services for more than five million people within the nine counties. Through a coordinated strategy that began nearly a year ago, our Plan partners and stakeholders have contributed thousands of hours to develop a community-wide strategic plan for transforming our health care delivery system. Due to our large population and the extensive health care needs of our community, the DSRIP program is a welcome opportunity to expand and transform our health care system.

As with any large area that includes both urban and rural populations, the Region's residents are an extremely diverse, heterogeneous group that varies widely in their need for health care services. According to the Census Bureau's American Community Survey (ACS), the Houston Metropolitan Statistical Area includes more than 1.3 million residents born outside the United States.

While each of our Region's nine counties has widely varying populations with diverse ethnic and cultural backgrounds, the needs of our communities and the people we serve are strikingly similar. Based on input from hundreds of stakeholders and a review of more than 75 studies of our community needs, the Region identified an extensive list of critical health care needs and challenges. The priority challenges that must be addressed to successfully transform our health care system are the focus of many of our projects and are summarized as follows:

- Inadequate primary care and specialty care capacity to meet the demands of a large and continually growing population. Every county in the region is designated a Health Professional Shortage Area for primary care, behavioral health care and dental care. Patients experience long waits for appointments and often turn to emergency rooms for primary care and non-urgent health care services that do not require emergency services.
- High prevalence of chronic disease, including diabetes, obesity, cancer, asthma and heart disease;
- High prevalence of unhealthy lifestyle behaviors, including smoking, substance abuse, lack of exercise, and poor nutritional habits;
- A diverse population that includes a large number of immigrants that speak more than a dozen different languages requiring language interpretation services and culturally-appropriate care;
- Insufficient transportation services that delay patients' access to care and encourages inappropriate utilization of emergency services;
- High utilization of emergency services for non-urgent, episodic care;
- Lack of coordination among primary and specialty care providers, and fragmentation of inpatient, outpatient and ancillary services.
- Lack of patient training and education programs that encourage and enable consumers to take charge of their health, and
- Absence of a regional plan for facilitating shared-training and learning programs among providers, with a focus on sharing best-practices and lessons learned.

The need for services and the health care challenges we face as a community are admirably addressed by the existing health care providers, but the sheer volume of need is overwhelming and often frustrating for the dedicated professionals who work in our Region. Health care services are provided by more than 12,250 physicians representing more than 200 specialties, and 85 acute care hospitals.[1] With a total of more than 13,000 inpatient beds, hospital services provided in 2010 included more than 1.6 million emergency room visits, 8.3 million outpatient visits, and more than 522,000 inpatient admissions.[2] Our health care system includes the Texas Medical Center (TMC), an organization of 52 renowned medical research and academic institutions that provide cutting edge research and services. In 2010, these facilities collectively were responsible for 7.1 million patient visits, including 16,000 visits from international patients who travel from all over the world for life-saving treatment.

But despite this impressive health care infrastructure, access to care is still a challenge for many people living in the region. Like other regions of the state, we have a high uninsured rate that varies from a low of 17.2% in Calhoun County to a high of 27.4% in Harris County.[3] The U.S. Census Bureau estimates 1.2 million people living in the Region have no insurance, many of whom rely on an extensive safety net system that struggles to keep up with the high demand for health care services. Additionally, the region includes a large population that lives in underserved areas where basic health care services are at a premium. Approximately 850,000 people live below 100% of the federal poverty level, including more than 505,000 adults and 344,600 children. The combination of low incomes, a lack of insurance, and an insufficient number of health care providers creates significant barriers for these individuals, who are a priority population in many of our regional health plan initiatives.

While the Region has many specific objectives and improvement targets based on stakeholder input and community needs assessments, the over-arching goals that have guided many of our decisions include the following:

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
- Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system, and
- Develop a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes.

[1] Texas Medical Board, Physician Demographics by County and Specialty, January 2012.
[2] 2010 Cooperative Department of State Health Services/American Hospital Association/Texas Hospital Association Annual Survey of Hospitals and Hospitals Tracking Data Base.
[3] U.S. Census Bureau, 2008-2010 American Community Survey 3 Year Estimates.

These goals provided the underlying principles that guided our discussions during the thousands of hours spent deliberating and developing our RHP projects. The inclusion of stakeholders in all stages of our work ensures that the project decisions are aimed at addressing the needs of our community and are informed by the first-hand knowledge of the providers, advocates, caregivers, and consumers who helped design our Plan. Because of their participation, we are confident that our projects will be successful in achieving our community goals. As a review of our projects and our community needs assessment will demonstrate, we have included projects specifically designed to improve access to all types of care, with a significant focus on expanding primary and behavioral health care services. Other Plan initiatives are targeted at improving the treatment of chronic disease; creation of medical homes and care coordination programs; integration of physical and behavioral health care services to treat the whole patient; consumer training and education programs that empower patients to take control of their own health; workforce recruitment and training programs that will expand the number of providers serving our region and maximize their ability to provide the most effective and cost-efficient care possible; and programs for expanding and enhancing the availability of services that meet the cultural diversity of our population. Initiatives are tailored to meet the unique needs of specific populations identified and will be specifically designed by local providers using best practices and proven strategies for improved patient outcomes. Our region will provide coordinated and ongoing training and support for all participants, with regular opportunities for stakeholder input to assess our progress.

Most importantly, our plan is a community-wide effort that includes partners who have a successful history of working together to improve the health of our population. The breadth and range of our projects will touch virtually every person accessing the health care system and will benefit patients for years to come. Improved access to care, increased patient satisfaction, reduction in costs, and better health care outcomes will affect not just the patients receiving care, but the entire community – employers who pay for health care, taxpayers who fund government health plans and purchase individual health coverage, and family members who serve as care givers are all participating beneficiaries who will work together to ensure the successful implementation of our Plan.

Summary of Categories 1-2 Projects

Project Title (include unique RHP project ID number for each project.)	Brief Project Description	Related Category 3 Outcome Measure(s) (include unique Category 3 Improvement Target (IT) Identifier specific to RHP and outcome title)	Estimated Incentive Amount (DSRIP) for DYs 2-5 (Category 1 & 2 values)
Category 1: Infrastructure Development			
082006001.1.1 1.1.1- Establish more primary care clinics: New Baylor Teen Health Clinic at the Tejano Center for Community Concerns Baylor College of Medicine 082006001	The BTHC will establish a clinic at the Tejano Center for Community Concerns (TCCC) in the southeast part of the county to serve as the medical home for adolescents and young adults. By addressing the age-specific needs of the patient population, the BTHC will provide targeted, age-appropriate family planning and STI counseling and treatment in order to lower STI and teen birth rates.	082006001.3.1 IT-1.20 Reduction of STI Rate among Adolescents and Young Adults 082006001.3.2 IT-1.20 Reduction of Pregnancy Rate among Adolescents and Young Adults	$ 2,334,000
0937740-08.1.1 1.8.9 - Expansion of school-based sealant and/or fluoride varnish Oral Health Services Expansion City of Houston Department of Health and Human Services 0937740-08	These clinics would create same day clinics that offer same day episodic primary and specialty care during extended hours to meet demand that saturated Harris Health Community Health Centers cannot meet.	0937740-08.3.2 IT-7.1 Dental Sealant 0937740-08.3.1 IT-7.2: Cavities	$10,542,601
0937740-08.1.2 1.7.7 - Implement remote patient monitoring programs for diagnosis and/or management of care for EMS services: Emergency Tele Health and Navigation (ETHAN) City of Houston Department of Health and Human Services 0937740-08	The City of Houston proposes to make use of telecommunications technologies and connectivity to triage patients with non-life threatening, mild or moderate illnesses via telemedicine with an emergency physician at the City of Houston EMS base station. The physician will then determine the most appropriate next step for the patient.	0937740-08,-03,-07.3.3 IT-9.4. ED appropriate utilization	$ 10,475,399
135033204.1.1 1.7.1 Implement Telemedicine Program to Provide or Expand Specialist Referral Services in an Area Identified as Needed Columbus Community Hospital 135033204	We will be adding an offsite pharmacist capability via telemedicine for the weekends starting with four hours per day and expanding to eight hours per day.	135033204.3.1 IT-3.1 All cause 30 day readmission rate- NQF 1789250	$ 449,950.00
2967606-01 1.1 1.13.1 Develop behavioral health crisis stabilization services as alternatives to	Fort Bend County (FBC) proposes to develop a crisis system that better identifies people with behavioral health needs, responds to those needs and links persons with their most	2967606-01 3.1 IT-9-2 ED Appropriate Utilization	$ 8,889,967

Project Title (include unique RHP project ID number for each project.)	Brief Project Description	Related Category 3 Outcome Measure(s) (include unique Category 3 Improvement Target (IT) Identifier specific to RHP and outcome title)	Estimated Incentive Amount (DSRIP) for DYs 2-5 (Category 1 & 2 values)
hospitalization: Fort Bend County Behavioral Health Crisis Response and Intervention Fort Bend County 2967606-01	appropriate level of care.		
178815001.1.1 1.9.2- Expand high impact specialty care capacity in most impacted medical specialties: Establish Adult Inpatient Psychiatric Unit Gulf Coast Medical Center 178815001	Proposes a project (1.9 Expand Specialty Care Capacity) which would allow access to inpatient level of treatment for adults with psychiatric disorders.	178815001.3.1 IT-1.18 Follow up after Hospitalization for Mental Illness 178815001.3.2 IT-1.20 Timeliness of Inpatient Admission for Mental Illness (referral/admission to Unit)	$ 3,823,217
133355104.1.2 1.1.1-Establish more primary care clinics: People's Area Same Day Access Clinic Harris Health System / 133355104	These clinics would create same day clinics that offer same day episodic primary and specialty care during extended hours to meet demand that saturated Harris Health Community Health Centers cannot meet.	133355104.3.2 IT- 6.1 Percent improvement over baseline of patient satisfaction scores	$29,164,032
133355104.1.3 1.1.2-Expand existing primary care capacity: Expand Capacity of existing Health Centers Harris Health System / 133355104	Expansion of 10 existing Health Centers: Acres, Aldine, Baytown, EFL, Gulfgate, NW, People's, Settegast, Squatty, Strawberry through additional providers at each location.	133355104.3.3 IT-6.1 Percent improvement over baseline of patient satisfaction scores	$57,930,332
133355104.1.8 1.1.2-Expand Existing Primary Care Capacity: Referrals to FQHCs Harris Health System / 133355104	Harris Health System proposes to expand the capacity of primary care by adding additional primary care providers and staff to local Federally Qualified Health Centers in order to meet the demand that saturated existing Harris Health System health centers cannot meet.	133355104.3.10 IT- 6.1 Percent improvement over baseline of patient satisfaction scores	$20,008,333
133355104.1.10 1.12.4-Enhance service availability of appropriate levels of behavioral health care- Expansion of Ambulatory Mental Health Services Harris Health System / 133355104	Harris Health System proposes to enhance service availability of appropriate levels of behavioral health care by expanding mental health services in the ambulatory care setting.	133355104.3.12 IT-1.9 Depression management: Depression Remission at Twelve Months	$21,641,667

Project Title (include unique RHP project ID number for each project.)	Brief Project Description	Related Category 3 Outcome Measure(s) (include unique Category 3 Improvement Target (IT) Identifier specific to RHP and outcome title)	Estimated Incentive Amount (DSRIP) for DYs 2-5 (Category 1 & 2 values)
133355104.1.11 1.3.1- Implement/Enhance and Use Chronic Disease Management Registry Functionalities: Implement a Chronic Disease Management Registry Harris Health System / 133355104	This would utilize electronic software to identify populations at risk and improve provider and patient management of chronic disease.	133355104.3.13 IT-3.2 Congestive Heart Failure 30-day readmission rate	$19,730,667
133355104.1.9 1.12.2-Expand the number of community based settings where behavioral health services may be delivered in underserved areas: Expansion of Pediatric Behavioral Health Services Harris Health System/ 133355104	Harris Health System will address Project Option 1.12.2 related to the shortage of pediatric and adolescent behavioral health services by implementing and expanding these services across eight facilities within the system.	133355104.3.11 IT- 6.1 (1) Percent improvement over baseline of patient satisfaction scores Improve utilization rates of clinical preventive services (testing, preventive services, treatment) in target population with identified disparity	$18,446,459
133355104.1.1 1.1.1-Establish more primary care clinics: Gulfgate Area Same Day Access Clinic Harris Health System / 133355104	These clinics would offer same day episodic primary and specialty care during extended hours to meet demand that saturated Harris Health Community Health Centers cannot meet.	133355104.3.1 IT- 6.1 Percent improvement over baseline of patient satisfaction scores	$29,164,032
133355104.1.4 1.1.1- Establish a primary care clinic: West and Northwest 1 Area Health Centers Harris Health System / 133355104	This clinic would create same day clinics that offer same day episodic primary and specialty care during extended hours to meet demand that saturated Harris Health Community Health Centers cannot meet.	133355104.3.4 IT-1.10. Diabetes care: HbA1c poor control (>9.0%)	$28,754,915
133355104.1.5 1.1.1- Establish more primary care clinics: Northwest 2 and Northwest 3 Area Health Centers Harris Health System / 133355104	Harris Health System proposes to expand the capacity of primary care by adding the Northwest 2 and Northwest 3 Area Health Centers to the compliment of existing health centers to establish Medical Homes primarily for the adult population.	133355104.3.5 IT-1.10. Diabetes care: HbA1c poor control (>9.0%)	$34,226,582
133355104.1.6 1.1.1- Establish more primary care clinics: Southwest, Medical Center, and Northeast	These clinics would expand existing primary care capacity by offering same day service at a strategically located clinic, specifically designed for the treatment of primary care treatable	133355104.3.6 IT-6. Percent improvement over baseline of patient satisfaction scores	$57,954,751

Project Title (include unique RHP project ID number for each project.)	Brief Project Description	Related Category 3 Outcome Measure(s) (include unique Category 3 Improvement Target (IT) Identifier specific to RHP and outcome title)	Estimated Incentive Amount (DSRIP) for DYs 2-5 (Category 1 & 2 values)
Same Day Access Clinics Harris Health System / 133355104	conditions with two located conveniently to LBJ and BTGH.		
133355104.1.7 1.9.3-Implement other evidence-based project to expand specialty care capacity in an innovative manner not described in the project options above: Pre-consult evaluations to facilitate efficient specialty care. Harris Health System / 133355104	Harris Health System proposes a project that will address the opportunity for increased efficiency in the referral processes to specialty clinics. This project will focus on developing algorithms to address diabetes mellitus and rheumatology clinic.	133355104.3.7 IT-1.1 Third Next Available Appointment (non-standalone) 133355104.3.8 IT-1.14 Diabetes care: Microalbumin/Nephropathy-NQF 0062(non-standalone) 133355104.3.9 IT-6.1(3) Percent improvement over baseline of patient satisfaction scores: patient's rating of doctor access to specialist (stand-alone	$ 25,383,532
133355104.1.12 1.10.4-Innovation Center for Quality Harris Health System / 133355104	Harris Health System proposes to establish a Center of Innovation to expand quality improvement capacity through people, processes and technology so that the resources are in place to conduct, report, drive and measure quality improvement.	133355104.3.14 IT-4.2 Central line-associated bloodstream infections (CLABSI) rates	$ 36,566,250
130959304.1.1 1.9.2 - Improve access to specialty care: Establish a Chronic Disease Clinic to Expand Access to Specialty Care Matagorda Regional Medical Center 130959304	Matagorda Regional Medical Center proposed to expand specialty care for targeted populations with chronic diseases.	130959304.3.1 IT-2.11 Ambulatory Care Sensitive Conditions Admissions Rate	$ 4,277,533
137909111.1.1 Hospital Based Clinic Improving Access to Care Memorial Medical Center 137909111	Expand access to primary and specialty care services through the establishment of a hospital-based clinic. The clinic will offer extended and non-traditional hours of care.	137909111.3.1 IT-6.1.1 Patient Satisfaction	$ 2,446,150
113180703.1.1 1.12 Enhance service availability of appropriate levels of behavioral health	The Mental Health and Mental Retardation Authority (MHMRA) of Harris County proposes to enhance service availability of appropriate levels of behavioral health care and	113180703.3.1 IT-6.1. Percent improvement over baseline of patient satisfaction scores	$ 13,168,403.42

Project Title (include unique RHP project ID number for each project.) dental clinics, or the expansion of dental clinic hours: Increase, Expand, and Enhance Oral Health Services: Expansion of Adult Dental Services Harris County Hospital District 133355104			
1352544-07.2.1 2.15.1-Integrate Primary and Behavioral Health Care Services: Person-Centered Behavioral Health Medical Home Gulfbend 1352544-07	The goal of this project is to develop and implement a Person-Centered Behavioral Health Medical Home, targeting at risk populations with co-morbid diseases of mental illness and chronic disease who currently go untreated or under treated and who routinely access more intensive and costly services, such as emergency departments or jails	1352544-07.2.1 IT-2.4 Behavioral Health/Substance Abuse Decrease admissions due to behavioral health/substance abuse	$3,550,000
137909111.2.1 2.5.4- "Other" project option: Implement other evidence-based project that will impact cost efficiency in an innovative manner: Medication Dispensing Safety and Efficiency Memorial Medical Center 137909111	Currently, Memorial Medical Center has no automated prescription counting technology. Annually, 120,000 prescriptions are counted manually, using only a counting tray and spatula. According to HealthMEDX, on average, 74% of a typical nurse's workday is spent outside of the patient room on non-value added activity. Currently, our nursing staff spends 1.5 to 2 hours per patient ordering, receiving and administering medication. With a dispensing system in place, 95% of the medications administered in a care area would be stored for ready access. This method allows for "now orders" on medication which in return leads to better patient services by keeping the patient more comfortable. To avoid errors during the administration of medications, we would implement bedside bar-code scanning utilizing Computers on Wheels (COWS). Further, by using a dispensing system with COWS, nursing staff will have more time to spend with the patients assisting with their recovery process resulting in decreased length of stay and cost savings.	137909111.2.1 IT-5.1 Improved Cost Savings; demonstrate cost savings in care delivery	$387,300
2967606-01 2.2 2.13 - Provide an intervention for a targeted behavioral health population to prevent	– Design, implement and evaluate research supported and evidence based interventions tailored towards individuals in the target population:	2967606.2.2 IT-9.1 Decrease in mental health admissions and readmissions to criminal justice	$661,274

Section III. Community Needs Assessment

Section III. Community Needs Assessment

REGION OVERVIEW

The Southeast Texas Regional Healthcare Partnership is the largest Regional Health Partnership (RHP) in Texas and includes more than 4.8 million people who receive healthcare through one of the most comprehensive healthcare systems in the world. While each county has a distinctive population and health care infrastructure designed to serve the local community, patterns of health care utilization and physician referrals commonly cross county lines, providing access to an extended network of providers and organizations positioned to serve the diverse population of this region.

Following is a brief overview of the nine counties participating in RHP Region 3.

Austin County: Austin County is located in the Northwest area of Region 3 and includes a population of approximately 28,417 residents. The county is 663 square miles in size and is primarily a rural population. It includes six incorporated (Bellville, Brazos Country, Industry, San Felipe, Sealy and Wallis) and 18 unincorporated communities, and three school districts. The community's median household income is $51,418 with 25 percent of households earning less than $25,000 annually and 20.5 percent earning $100,000 or more.[4] The county's only hospital is the Bellville General Hospital, a 32-bed full-service acute care facility. In 2010, the hospital reported more than 5,000 emergency room visits, nearly 64,000 outpatient visits, and 620 inpatient admissions. Behavioral health care services are available through Texana Mental Health and Mental Retardation Center, Youth and Family Services, and Austin County Outreach. Texana is the largest facility, but serve multiple counties and provides limited services to eligible populations. The County has no psychiatrists, so patients needing psychiatric services must often travel significant distances to obtain care. The county is a federally-designated Health Professional Shortage Area (HPSA) for primary care, dental and mental health services.[5] Health-related challenges facing the community include: inadequate safety net services for low income/uninsured population; behavioral healthcare services; insufficient long-term care services for mentally ill; lack of transportation for residents needing medical and social services.[6] The county's overall health ranking is number 104 out of 221 Texas counties with contributing factors including; a high teen birth rate (47 per 1,000 female teens); a high reported rate of poor mental health days (4.7 days per 30 day period); high adult obesity rate (30%); high rate of sexually transmitted infections; a shortage of primary care physicians; and a high rate of premature death.[7]

Calhoun County: Calhoun County is the southernmost county within the region and includes more than 1,000 square miles almost evenly divided between land and water. With a population of 21,381, that is primarily White (46%) and Hispanic (46%), the county includes the cities of Port Lavaca, Point Comfort, Seadrift, and the unincorporated Community of Port O'Connor.

[6] Austin County Community Plan.

[7] County Health Rankings and Roadmaps, County Health Rankings 2012.

The community is served by a single acute care hospital, Memorial Medical Center located in Port Lavaca. This public hospital provided more than 10,000 emergency room visits and 26,000 outpatient visits in 2010, and more than 1,300 inpatient admissions.[8] The county is a designated MUA and has applied to be a HPSA for primary care, dental and mental health services, and has no practicing psychiatrists.[9] Behavioral health services are provided primarily by Gulf Bend MHMR Center, which serves residents from seven counties, the majority of which (62%) live in Victoria county and have an annual income of $11,000[10]. With a median household income of $42,745, Calhoun County has the highest percentage of children living in poverty (30.7%) of all counties in the Region. Due to its proximity about halfway between Houston and Corpus Christi, Calhoun County residents often must travel between 80 and 150 miles to these larger communities for specialty care. The county's overall health ranking is number 49 out of 221 Texas counties[11] with contributing factors of high adult obesity rate (30%); high teen birth rate (81 per 1,000 female teens); a high number rate of sexually transmitted infections; and a high uninsured population (28%).[12]

Chambers County: Nearly 36,000 residents live in Chambers County, a coastal county that includes 872 square miles, of which approximately one third is water. The county includes the cities of Anahuac, Baytown (part of which lies in Harris County), Beach City, Cove, Monbelvieu, Old River-Winfree, and parts of Shoreacres, Seabrook, and Texas City, as well as numerous unincorporated areas. The median income is $69,491. Two acute care hospitals are located in the county. Bayside Community Hospital is a public hospital located in Anahuac, with 2,769 emergency room visits, more than 30,000 outpatient visits, and nearly 250 admissions in 2010. Winnie Community Hospital is a private, for-profit facility that reported more than 2,500 emergency room visits, 14,854 outpatient visits, and 556 inpatient admissions in 2010.[13] Behavioral health services are available through the Spindletop Mental Health and Mental Retardation Center, which serves four counties with no clinic presence in Chambers County. The county is a federally designated Primary Care Health Professional Shortage Area and has no practicing psychiatrists.[14] The county received a health care ranking of number 74 out of 221 counties with contributing factors of insufficient access to care; a high teen birth rate (40 per 1,000 female teens); a high number of poor mental health days (3.7 per 30 days); a high adult obesity rate (29%); a high rate of preventable hospital stays for Medicare patients;[15] and a low rate of prenatal care within the first trimester.[16]

Colorado County: Colorado County is a rural community with slightly more than 20,000 residents, the smallest population in Region 3. The county is 949 square miles in size and

includes three small incorporated communities (Columbus, Eagle Lake, and Weimar) with approximately 9,588 residents, and 18 rural, unincorporated communities with a total of approximately 11,213 residents.[17] The county has a median household income of $40,930. An estimated 22% of the population has no health insurance. The area is served by three acute care hospitals, Colorado-Fayette Medical Center, Columbus Community Hospital and Rice Medical Center. Together these facilities accounted for 10,241 emergency room visits, 101,821 outpatient visits, and 9,012 inpatient admissions, and provided more than $5 million in uncompensated care in 2010. [18] Behavioral health and intellectual disability services are available to eligible residents through Texana Center. The county is a designated HPSA for primary care, dental and mental health services. The county's health care ranking is 132 of 221 counties[19] with contributing factors of insufficient access to care; high adult obesity rates (29%); a high number of poor physical (5.6 per 30 days) and mental (4.6 per 30 days) health days reported by residents; a high rate of sexually transmitted infections; and a high uninsured rate.

Fort Bend County: Fort Bend County is the second largest county in RHP Region 3 and the 10th largest county in the state with a population of nearly 600,000. The county is 875 square miles in size and includes 17 towns ranging in size from 200 to 75,000 and a rural population of 83,000 (14%). At $76,758, the county has the highest median household income in the region as well as the lowest percentage of children living in poverty (12.5%), and the highest high school and college graduation rates in the region (88.6% and 40.5%, respectively).[20] The county is served by 10 acute care hospitals. Behavioral health services are provided by Texana Center, the local mental health authority for Fort Bend and five other counties. The county received the highest health ranking of all counties within Region 3, rated at number 9 of 221 Texas counties. However, despite these positive indicators of financial stability and health status, nearly 100,000 residents (17.4%) are uninsured and face the same health care challenges as residents throughout the region. The county is a designated HPSA for primary care, dental and mental health care and struggles to provide sufficient access to care.[21] The county's 10 hospitals provided more than $116 million in uncompensated care in 2010. [22] An estimated 16% of the county's population is considered to be in poor or fair health; 8.3% of babies are born with a low birth weight and nearly 40% of pregnant mothers receive no prenatal care in the first trimester.[23]

Harris County: Harris County is the third largest county in the United States and includes the country's fourth largest city, Houston, as well as 30 other municipalities. The county is home to more than 4 million people, including a rural population of approximately 62,000 residents and more than 8,000 homeless individuals.[24] In 2010, 41 percent of residents were Hispanic, followed by 34 percent who reported themselves as Anglo/white. [25] Approximately 25% of Harris County residents are foreign-born with 71% reporting Latin America as their birthplace

and 21% born in Asia.[26] Median household income is the third highest in the region at $50,437. County residents are served by 67 acute care hospitals which collectively provided more than $3.3 billion in uncompensated care in 2010 and reported more than 7.6 million outpatient visits, 476,000 inpatient stays, and 1.44 million emergency room visits.[27] Behavioral health care services are available through the county's community mental health center, the Mental Health and Mental Retardation Authority of Harris County as well as other healthcare providers. Harris County is also the location of The Texas Medical Center, the largest medical complex in the world with a total annual budget of $14 billion for the 52 not-for-profit member institutions. But despite its large health care infrastructure, the county is a designated HPSA for primary, dental and mental health care and struggles to meet the complex needs of a diverse population that is constantly growing. Based on health factors, the county is ranked 160 of 221 counties, due in part to insufficient access to care; high rates of adult obesity (29%), sexually transmitted infections, tuberculosis, and excessive drinking (17%). The county also has a high rate of teen births and low birth weight babies, and low rate of prenatal care in the first trimester (51%).[28] Other health care challenges include a high prevalence of behavioral health issues and needs, an inadequate number of primary care and specialty service providers to meet significant demands, and development of a comprehensive region-wide care coordination system that manages patient needs in the most appropriate setting.

Matagorda County: Located on the Gulf Coast, Matagorda County includes the towns of Bay City and Palacios, as well as 15 smaller communities spread throughout the county of more than 1,000 square miles. More than 36,000 people live within the county which has a median household income of $39,874. Nearly 20% of the population lives below the poverty level, and the county has the second highest rate of children living in poverty at 28.4%. While the median age is 38, more than 20 percent of the county residents are over the age of 60.[29] More than 26 percent of the population is uninsured. The county is served by two acute care hospitals, Matagorda Regional Medical Center and Palacios Community Medical Center. In 2010, the facilities reported 40,480 outpatient visits, 19,368 emergency visits, and 3,156 inpatient admissions. The hospitals provided more than $16 million in uncompensated care, which accounted for 14.9% of total patient revenue, the second highest percentage in the region.[30] The county is ranked 130 of 221 Texas counties; 25% of residents reported they are in poor or fair health, significantly higher than the Texas average of 19%.[31] Specific health care challenges include: high rates of smoking and excessive drinking among adults; high rate of adult obesity; high rate of teen births; poor access to primary care; and a high rate of sexually transmitted infections. The county is also a designated HPSA for primary, dental and mental health care providers.

Waller County: With just over 518 square miles, Waller County is home to slightly more than 47,000 residents. The county includes 6 towns, including Brookshire, Hempstead, Katy, Pine Island, Prairie View and Waller as well as several small unincorporated communities. The

county has a median household income of $46,313 and the highest percentage of residents living in poverty (20.4%) among all counties in within the region. The county also reflects a younger population, with a median age of 31.7 years, Residents needing hospital services obtains care in surrounding counties; there are no acute care hospitals within the county.[32] Behavioral health and intellectual disability services are available to qualified residents through the Texana Center. The county is a designated HPSA for primary, dental and mental health care. In the County Health Rankings, Waller County is number 112 of 221 counties with contributing factors of a high proportion of poor mental health days (5.5 per 30 day period); a high level of adult obesity (32%), high rate of sexually transmitted infections; high teen birth rate; poor access to primary care; high rate of uninsured.[33]

Wharton County: Wharton County is a rural agriculture area of slightly less than 1100 square miles. More than half of the population of 44,780 resides in the towns of East Bernard, El Campo, and Wharton, with the remaining 18,600 spread across 14 unincorporated communities. With a median household income of $36,097, a fact that is reflected in the high rate of poverty for both adults (19.1%) and children (26.6% live in poverty). The counties two hospitals, El Campo Memorial Hospital and Gulf Coast Medical Center, provided more than $17 million in uncompensated care in 2010, and reported 15,530 emergency room visits, 73,438 outpatient visits, and 2,695 inpatient admissions.[34] Behavioral health and intellectual disability services are available to eligible residents through Texana Center. Wharton is a designated HPSA for primary care, dental and mental health services.[35] While it has a total of 49 practicing physicians, no psychiatrists are located within the county.[36] The county is ranked number 61 of 221 Texas counties, in part due to the following: high rate of poor physical health days (4.3 per 30 day period); high rate of low birth weight babies (8.5%); high rate of adult obesity (31%); excessive drinking (17%); high rate of sexually transmitted infections; high uninsured rate, poor access to primary care, and a rate of preventable hospital stays among Medicare enrollees.[37]

Region Demographics and Insurance Coverage

The population of Region 3 includes nearly 5 million individuals that reflect a diverse race and ethnic distribution.

Table 1: 2010 Population - Race/Ethnicity Distribution

Income

The average Median Household Income varies significantly within the region and Census data shows that 16.8% of county residents had incomes below the federal poverty level; among children under 18, the rate was even higher at 24.5 percent.

Table 3: Income and Poverty Status by County – 2010

Education

For residents age 18-24, the high school graduation rate varies from 73.8 percent in Colorado County to 91.7 in Waller County. As expected, college graduation rates were significantly higher for ages 25 and over, with the highest percentage in Fort Bend at 40.5 percent, followed by Harris County with a graduation rate of 27.5 percent.

Employment

As the largest urban area in the state and the fifth largest Metropolitan Statistical Area (MSA) in the country, the Houston MSA provides a diverse choice of employment opportunities and ranks third among areas serving as Fortune 500 headquarters.[39] The 10 county MSA has reported steady job growth for more than two years, and added more than 207,400 jobs since January 2010.[40] Table 5 confirms that employment across the region has historically been generally high, with unemployment rates for most counties falling between 6 and 7.5 %. Two counties, Calhoun and Matagorda, reported significantly higher unemployment rates of 11.3% and 13.2%.

As of November 2010, the Houston MSA recorded more than 2.54 million jobs, more than the total count of 31 states. The region offers a diverse mix of employment opportunities that include major manufacturing companies, oil and gas industries, research and technology firms, aerospace engineering companies, agriculture, an extensive retail and service industry, and numerous healthcare professions. Over the next thirty years, the region is predicted to lead the state in job growth, growing from 2.7 million jobs in 2011 to 4.3 million jobs in 2040 and accounting for almost one-fourth of the state's job growth.

Approximately 850,000 residents of Region 7 live below the federal poverty level, many of whom work at low paying jobs that often do not provide insurance benefits. These people are part of the 1.2 million uninsured who rely on the safety net for critical health care services

[39] Greater Houston Partnership, Economic Development Facts and Figures.

Health Insurance Status

For more than 15 years, the state of Texas has experienced the highest uninsured rate in the country. The most recent census data available estimates 1,091,525 citizens have no insurance, which is larger than the statewide uninsured population in 38 states and represents 27.6 percent of the region's total population. Of those with insurance, 77 percent were insured under private plans and 33 percent received coverage through a public program.

Insurance status also varies significantly among the various racial and ethnic groups residing in the region. The Behavioral Risk Factor Surveillance System (BRFSS) survey found that of the uninsured residing in the Houston-Baytown-Sugar Land MSA in 2010, White residents reported an uninsured rate of 11.0% compared to 54.8% of Hispanics and 26.7% of Blacks. Individuals without insurance report problems obtaining needed medical care, including not having a usual source of care, postponing care or going without care or necessary prescriptions drugs due to cost.[41] In 2009, a study of emergency department utilization in 29 Houston hospitals found that 41% of Emergency department visits by Harris County residents were Primary Care Related visits that were for non-emergency services that could have been treated in a primary care setting. [42] One-third of the visits were attributed to the uninsured and 26.8% were attributed to individuals covered by Medicaid. These data are significant to the Region's Plan to expand access to services that provide the most appropriate care in the most cost effective setting, improve patient care and satisfaction, and lead to a healthier population.

Description of Regional Health System and Challenges

As evidenced by the diverse population and economic dynamics of the communities participating in Region 3, by necessity the healthcare system serving this region is significant in size and complexity. The city of Houston is home to the world-renowned Texas Medical Center, which includes 49 of the most advanced medical research and academic institutions in the world, including three medical schools, six nursing schools, two schools of pharmacy, and schools of dentistry, public health, and virtually all health-related careers. [43] The region includes a total of 86 acute care hospitals with more than 13,000 inpatient beds (Table 7), providing a wide range of specialty services. In 2010, these facilities provided services for more than 1.6 million emergency room visits, 8.3 million outpatient visits, and more than 522,000 inpatient admissions.[44] The hospitals collected a total of nearly $41.8 billion in patient revenue and provided $3.48 billion in uncompensated care (8.3% of patient revenue).

Table 7: Hospital Utilization and Financial Experience – 2010

County	# of Hospitals	# of Beds	ER Visits	Outpatient Visits	Inpatient Admissions	Total Uncompensated Care	Total Patient Revenue	Uncomp. Care as % of Total Patient Revenue

Source: Texas Department of State Health Services, 2010 Cooperative DSHS/AHA/THA Annual Survey of Hospitals and Hospitals Tracking Database

Serving the patients of Region 3 are more than 12,280 physicians from more than 200 specialties (Table 8).[45] These physicians are highly concentrated in Harris County, with 92.9% of physicians, followed by Fort Bend County with 5.7% of physicians. The remaining 7 counties in Region 3 account for only 2.4% of the region's physicians. It is important to note that six of the nine counties have no practicing psychiatrists, underscoring the challenges faced by the region in meeting the behavioral health needs of the population.

Providers and community partners throughout the region have worked strategically to develop an extensive safety net system that includes more than 100 public and private organizations, most of which operate private non-profit, federally funded or public clinics that provide services for the uninsured. These organizations annually provide more than $1 billion in uncompensated care and are funded by a variety of sources, including patient fees, state and federal grants, state and local taxes, Medicaid and CHIP, and philanthropic donations. For the most part, these organizations are operated by clinical and administrative staff who works on a voluntary or low-cost basis.[46] Behavioral health services for the safety net population are provided by multiple organizations including the Mental Health and Mental Retardation Authority of Harris County (MHMRA), Texana Center, Gulf Bend Center, Spindletop Center, the University of Texas Harris County Psychiatric Center, the Harris County Hospital District, the Michael E. DeBakey Veteran's Affairs Medical Center of Houston, and a variety of mental health services delivered through public school programs. Inpatient psychiatric care is provided primarily by seven private, free-standing psychiatric hospitals.[47] Despite the range of services available, these options fail to meet the demand for care by more than 665,300 Houstonians with mental illness, including more than 181,500 who have a serious mental illness.[48] With only 23 total inpatient beds including 7 public beds per 100,000 people, the Harris county region falls well below the recommended standard of a total of 70 inpatient beds and a minimum of 50 public beds per 100,000.[49]

Serving as the focal point of the safety net is the publicly-funded Harris County Hospital District (HCHD) which operates three public hospitals, twelve community health clinics, eight school-

based clinics, one dental center, a health care program for the homeless, a specialty center for people with HIV/AIDS, and five mobile health facilities. Staff for the District hospitals and clinics is provided through a contractual arrangement with the Baylor College of Medicine and the University of Texas at Houston School of Medicine.

To meet the unique challenges of serving the population of more than 10,000 homeless people, the region created Healthcare for the Homeless-Houston. Designated a Federally Qualified Health Center (FQHC) in 2002, the program operates three integrated health clinics that provide comprehensive health services, with a specific focus on integrated primary and mental health care.[50] In 2010, health and support services were provided to more than 10,000 adults and children, including medical visits, medical case management, and a transportation services. Among nearly 900 homeless persons surveyed in 2010, 39% reported mental health disorders; 12% reported problems with alcoholism; and 55% reported they had a chronic health condition.[51]

However, despite the significant health care infrastructure, due to the volume of need, growing population and limited resources, the region continually struggles to keep up with the increasing demands for care. Access to care is clearly a critical issue for the Region that presents multiple challenges. With more than 1.2 million uninsured residents in the region, many people struggle to obtain even basic health care services. As reported by the Texas Primary Care Coalition, these patients rarely receive preventive, primary or continuous care and commonly have chronic conditions such as hypertension and diabetes that go unmanaged and untreated until the individual had an emergency condition that sends them to the emergency room. They often receive no care management and see multiple physicians and health care providers, resulting in duplicative and unnecessary diagnostic tests, lab work and screenings, contributing to unnecessary health care costs.[52]

According to the U.S. Department of Health and Human Services, every county in the region has been designated in part or in full a Medically Underserved Area/Population (MUA) and a Health Professional Shortage Area (HPSA).[53] Resolving this issue is not simple and requires long-term planning and infrastructure development necessary for the education and training of new physicians. This shortage of providers is particularly critical due to the growing population of Region 3 and the increased demand for services that is anticipated beginning in 2014 with implementation of health insurance tax credits for low income families. Preparing for these changes will require a comprehensive strategy and significant financial investment to ensure patients have timely access to the appropriate health care provider in the most cost-effective setting possible. Individuals without access to a medical home or primary care provider are more likely to seek care in an emergency room setting, resulting in significant increases in health care costs. A study of 2009 hospital emergency department visits in Houston found that primary-care

related emergency department visits that could have been treated in a primary care setting resulted in costs of more than $214 million, up from $187 million in 2007.[54] Accessing inappropriate care through the emergency room not only is inefficient and costly, but it delays services for more critical patients who need services immediately, and potentially contributes to poorer health outcomes for these patients. Many of these costs and delays could have been avoided if patients had access to the services they needed through lower cost clinics and physician offices with extended hours that enable them to obtain non-urgent services at non-traditional times, and at facilities that are accessible. Improving access to these critically needed services is an important component of our Regional Plan and long-term strategy for ensuring patients have access to the most appropriate care at the right time and in the right place.

Key Challenges

As with any large urban community, our Region faces significant challenges in meeting the health care needs of our population. With nearly five million residents living within the Region and thousands more traveling to the region for health care services, our health care providers continually strive to provide the best patient care possible. However, to continue our efforts to become more efficient and more effective in the services we provide, we face significant challenges that will require a concerted effort to overcome. Following is a very brief summary of some of the key challenges we have identified and addressed in our plans for transforming the local health care system.

- **Inadequate number of primary and specialty care providers.** As discussed throughout this background overview, the region faces a significant shortage of primary and specialty care providers. Patients are unable to obtain to locate a provider willing to serve them, face extended waits for appointments, or are unable to locate a provider with extended hours in order to accommodate work schedules. Addressing this problem requires a long-term solution that includes development of the educational infrastructure as well as programs for attracting and retaining qualified providers.
- **High prevalence of chronic disease, including diabetes, heart disease, asthma, cardiovascular disease and cancer.** The region has high rates of chronic disease, which account for a significant portion of health care spending, are a leading cause of disabilities, and are factors in a majority of deaths. Many of these problems may be alleviated through a coordinated care system that includes improved access to care, patient education, and care management to ensure patients receive the right care at the right time in the right setting.
- **Diverse patient population speaking multiple languages, and with varying cultural backgrounds.** Improving the health care services for a diverse population requires a variety of approaches that are uniquely suited for each population. Without effective patient education and communication programs that address language and cultural barriers, patients will not receive the services they need for the best possible health outcomes and may delay seeking appropriate and preventive care.
- **High number of uninsured patients.** With more than one million uninsured patients, the region struggles to keep up with the demand for services. Patients do not receive basic health

[54] Houston Hospitals Emergency Department Use Study.

care services, delay treatment, and often seek primary care services through the emergency rooms, resulting in hundreds of millions of dollars in unnecessary spending.

- **High prevalence of behavioral health conditions and lack of an integrated care solution.** The region lacks both the providers and facilities to adequately meet the demand for behavioral health care, and is often unable to provide an integrated approach that meets both the physical and mental health care needs of the patient. Many individuals may receive either physical treatment or behavioral health care, but not both, or they receive no care at all. The current system is fragmented and difficult to navigate, and challenging for both patients and providers. These problems can be addressed by creating a health service system that is fully coordinated and integrated with behavioral health and primary health care, as well as services provided through school programs, criminal justice systems, and social service providers.
- **Fragmentation of patient services throughout a large, uncoordinated health care system.** Regardless of insurance status, many patients receive fragmented health care that is both inefficient and ineffective. Patients may receive duplicative and unnecessary services, which could be avoided through a regional integrated care system that maximizes the use of electronic health records and health information exchange. While implementation of coordinated care systems involves planning, training and communication strategies that maximize the use of technology and is both challenging and costly, the long-term benefits will be significant in terms of reductions in unnecessary services and costs, and improved patient care and outcomes.
- **Limited access to public transportation and emergency medical services.** Many patients live in areas that provide little or no options for public transportation to obtain medical care, and have very limited options for emergency transportation. Services vary greatly throughout the region, and are especially limited for those living in rural communities that have limited resources and large territories to cover. The absence of these services results in patients delaying necessary care until it becomes a critical health care condition, and relying on emergency transportation for services could have been provided in a primary care setting, or avoided entirely.
- **An aging population and increased need for high-cost services, including behavioral health care.** Although this problem is certainly not unique to Region 3, the large number of individuals that will require increased services (many of whom are already in poor health) poses significant problems. Dealing with these problems will require a coordinated delivery system approach that takes into account the unique physical and behavioral health needs and limitations of the elderly population and a community-wide effort to develop cost effective, long term solutions. Increasing the number of specialty providers, and providing additional training for primary care providers treating older patients are critical challenges that must be met to ensure these patients receive appropriate care and services to ensure the best healthcare outcome possible.
- **Inadequate IT infrastructure necessary for improved care coordination.** Though the region has made progress on the implementation of EHR, extensive expansion and implementation is necessary to meet the future needs of this community. Improvements in health care delivery as well as the monitoring and tracking of progress and outcomes are dependent on an effective program through which providers can track and share patient information and services.

Summary of Community Needs

ID #	Brief Description of Community Needs Addressed through RHP Plan	Data Source for Identified Need
CN.1	Inadequate access to primary care	1,2,5,8,12,13,15,16,17,19,20,21,30,32, 33,34,35,36,39,42,48
CN.2	Inadequate access to specialty care	1,2,12,13,15,16,17,19,25,30,32,33,34, 35,36,42, 48
CN.3	Inadequate access to behavioral health care	1,2,7,11,12,13,15, 16,17,20,21,27,28,48 29,30,33,34,35,36, 42
CN.4	Inadequate access to dental care	1,2,12,35
CN.5	Inadequate access to care for veterans and active military, particularly mental health and substance abuse services	1,7,29
CN.6	Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children, elderly	1,2,5,11,12,14,15, 16,17,31,32,34,37
CN.7	Insufficient access to care coordination practice management and integrated care treatment programs	1,2,6,8
CN.8	High rates of inappropriate emergency department utilization	1,2,38
CN.9	High rates of preventable hospital readmissions	1,2,4,18,38
CN.10	High rates of preventable hospital admissions	1,2,4,38
CN.11	High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease, including • Cancer • Diabetes • Obesity • Cardiovascular disease • Asthma • AIDS/HIV	1,2,4,13,15,16,17, 24,25,26,32,34,40
CN.12	High rates of tobacco use and excessive alcohol use	1,2,3,9,34
CN.13	High teen birth rates	1,2,3
CN.14	High rates of poor birth outcomes and low birth-weight babies	1,2,3,41
CN.15	Insufficient access to services for pregnant women, particularly low income women	1,2,16,17,22,30,34,41
CN.16	Shortage of primary and specialty care physicians	1,8,34,35,36,39,42
CN.17	High rate of sexually transmitted diseases	1,2,3,9,25,26
CN.18	Insufficient access to integrated care programs for behavioral health and physical health conditions	1,6,7

CN.19	Lack of immunization compliance, resulting in rising incidence of preventable illnesses such as • Mumps • Measles • Pertussis • Tuberculosis	1,2,32
CN.20	Lack of access to programs providing health promotion education, training and support, including screenings, nutrition counseling, patient education programs	1,2,10,13,25
CN.21	Inadequate transportation options for individuals in rural areas and for indigent/low income populations	1,2,12,13,42
CN.22	Insufficient access to services that are specifically designed to address racial, ethnic and cultural health care disparities	1,2,8,13,23,34
CN.23	Lack of patient navigation, patient and family education and information programs.	1,2,13
CN. 24	Lack of care coordination and unnecessary duplication of services due to insufficient implementation and use of electronic health records	1,2,8
CN.25	Graduate medical education (residency training) in health care systems, team-based practice, quality improvement, and cost control	43, 44, 45, 46, 47

Section IV. Stakeholder Engagement

Section IV. Stakeholder Engagement

Development of a comprehensive and inclusive process for ensuring stakeholder participation has been a high priority since the beginning of RHP 3 planning efforts. As the anchor entity, the Harris Health System (HHS, previously known as the Harris County Hospital District, or HCHD) identified initial strategies for reaching out to the community to provide information on the waiver opportunity and invite public participation in the planning process. To begin the outreach activities, HHS publicized and hosted an initial planning meeting that was widely attended and served as the "kick-off" forum for the RHP activities. Local media were invited to attend, and several published news stories reached a circulation of readers that exceeds more than one million area residents.

As described at the initial meeting, a key goal of the RHP is to ensure active stakeholder participation from a broad cross section of community members representing every aspect of the health care delivery system. The Region includes a diverse mix of stakeholders from very different backgrounds and with varying levels of interest and expertise. Participation of representatives from a broad cross section of providers, consumers, health care advocates and community officials is critical to the success of this initiative and a key goal of the outreach and communication activities. To achieve this, several fundamental principles have informed and influenced our outreach plan:

- Provide participants with comprehensive and detailed information at all times;
- Communicate frequently and effectively, with an emphasis on transparency and the sharing of information;
- Provide an open, inclusive environment that welcomes and encourages participation at all levels; and
- Ensure stakeholders actively participate in all RHP activities and remain engaged at all times.

A. RHP Participants Engagement

Soon after the Harris Health System was identified as the anchor for Region 3, officials identified a comprehensive list of potential Performing Providers that included hospitals, Academic Health Science Centers, Community Mental Health Centers, local county governments and public health agencies throughout the Region. Within each organization, initial contacts were identified and were invited to begin working with HHS to participate in the process of developing a regional plan.

All of these entities, as well as other stakeholders, were invited to participate in the initial kick-off meeting held February 8, 2012. Among the well-attended meeting were hospital representatives from all facilities that were eligible for Medicaid Uncompensated Care (UC) payments. The meeting included an overview of the waiver activities and requirements, and a summary of the tentative timeline. Speakers included Texas State Representative Garnet Coleman, a local Member of the Texas House of Representatives who was instrumental in developing the legislation that authorized the waiver activities.

In March, key stakeholders were invited to attend the first meeting of the Regional Advisory Committee (RAC). The RAC was created to serve as an oversight entity that provides leadership and guidance for the Region. The RAC includes more than 40 members, including representatives of the hospital and non-hospital performing providers. All meetings are open to the public, but are primarily attended by RAC members.

In addition to providing another opportunity for communication and updates, the RAC meetings facilitate more technical discussions among the Performing Providers. Four RAC meetings have been held during the past 8 months. Throughout the duration of the waiver, meetings will be held on a quarterly basis, or more frequently if necessary. These meetings will provide an opportunity to discuss progress, share experiences and challenges, review reporting requirements, and discuss other issues relevant to the waiver.

As described in Section B. below, Performing Providers also participated in large numbers in stakeholder meetings and in the activities of nine workgroups created to discuss specific community needs and care transformation options. Performing Providers also participated in a Public Summit to discuss project options and identify potential partnerships among providers within the Region, and to encourage all hospitals to participate in DSRIP projects. Providers also attended Public Hearings held throughout the region to present the RHP plan and solicit comments from the general public. In addition to the RAC meetings, more than 40 additional meetings have been held throughout the region to discuss regional health care needs, ideas for improvement, and specific projects for consideration by the Performing Providers. Performing Providers were involved at all levels of these discussions and provided significant input into the identification and development of specific project initiatives. Performing Providers will continue to participate in stakeholder meetings held on a regular basis throughout the life of the waiver.

B. Public Engagement

One of the first steps towards engaging stakeholder participation was creation of a website devoted entirely to providing information on activities related to the Southeast Texas Regional Healthcare Plan (see http://www.setexasrhp.com/go/doc/4807/1326403/). The website is an effective tool for communicating information and updates, and for inviting stakeholders to participate in the planning process. The anchor administrators developed an extensive distribution list and encouraged recipients to forward information to others who would be interested in participating in the planning process. A link to the RHP 3 website was also provided on the Harris Health System website. Individuals who visited the website were invited to provide contact information so they could receive regular updates.

Information on the website was widely distributed through the hospital district's communication channels. Other partners, including Performing Providers, were enlisted to also distribute DSRIP planning information and inform individuals of the Region 3 website link. Throughout the planning activities, the Region used the website to post updates from the Health and Human Services Commission; announce meeting dates and locations; provide draft planning documents and project initiatives; and invite comments and feedback from stakeholders. More than 675 people enrolled to receive regular updates through the email distribution list, and that number continues to grow as new people become engaged in this ongoing process.

Prior to the first stakeholder meeting, Performing Providers and other stakeholders were encouraged to submit community needs assessments to HHS. More than 75 documents were submitted covering the entire region and virtually every aspect of the health care system. A detailed review of those documents resulted in the identification of nine general categories of primary needs. Based on this analysis, the following nine workgroups were created:

- Access to Care
- Disease Management
- Health Promotion
- Hospital Utilization
- Information Technology
- Behavioral Health/Substance Abuse
- Pediatrics
- Women's Health/Birth Outcomes
- Workforce

Stakeholders and Performing Providers from throughout the Region were invited to attend meetings of each of the nine workgroups. Over five months, each workgroup met four times for a total of 36 meetings. Where facilities could accommodate it, stakeholders were able to participate via phone conference. Hundreds of individuals attended the meetings, during which participants identified specific community needs and health care improvements related to each of the topics. In subsequent meetings, stakeholders drafted specific projects and identified key priorities. This information was distributed to all Performing Providers, who used the recommendations in selecting the project initiatives included in the Regional Plan.

Numerous meetings were also held throughout the counties participating in the Region. Meetings were open to the public and were attended by varying numbers of stakeholders. Below is a summary of the schedule of meetings held to date:

March:
• 9 Stakeholder Meetings over a 3 day period
• Regional Advisory Committee
April:
• 9 Stakeholder Meetings over a 3 day period
• Regional Advisory Committee
• Commissioner's Court presentations
• County Judge and Commissioners meeting
May:
• 9 Stakeholder Meetings over a 3 day period
• Regional Advisory Committee
• Behavioral Health Collaborative
• 3 County Judge and Commissioners meetings
• 2 Fort Bend County Workgroup meetings
• 2 Chambers County Workgroup meetings
• Calhoun County Workgroup meeting
• Matagorda County Workgroup meeting

June:
• 2 Calhoun County meetings
• 2 Chamber County meetings
• 1 Fort Bend County meeting
• 2 Matagorda County meetings
• 1 Waller County workgroup meeting
• 1 Waller County Commissioner's Court meeting
• 1 Wharton County meeting
July:
• 9 Stakeholder Meetings over a 2 day period
• Regional Advisory Committee
• 2 IGT Performing Providers Collaboration meetings
• Austin County Workgroup meeting
• 2 Colorado County meetings
• 2 Fort Bend County meetings
• 2 Matagorda County meetings
• 2 Wharton County meetings
August:
• Behavioral Health Collaboration meeting
• 1 Chambers County meeting
• 2 Pre and Post Summit Reviews
• 3 IGT Collaboration meetings
September:
• Regional Planning Summit
• 3 IGT Collaboration meetings
• Public Meeting to Present Plan
October:
• 3 IGT Collaborations
• Regional Advisory Committee meeting
November:
• Public Hearing # 2 – November 20, 2012

Organizations and individuals that participated during the planning and development of our Plan included:

- Consumers
- Patient advocacy representatives
- Public and private hospitals
- Academic Health Centers
- Primary care providers, behavioral health providers, and specialty care providers representing an extensive list of health care practice areas
- Local medical and hospital societies
- Ancillary providers
- Local government officials
- Community planners and administrators
- FQHC administrators and service providers
- Community care clinics
- MHMR Community Centers

- Safety net providers;
- Representatives of religious organizations

Representatives of the local county medical society were also heavily involved in all meetings, and have provided significant input into the planning process. They have been instrumental in communicating information to providers in the Region, and have been a supportive partner in our activities. A letter indicating their participation and support is included in the Addendum, as well as letters of support from other stakeholders.

As the waiver planning and implementation process continues during the coming months and years, we are committed to continuing and improving our communication and outreach strategy, and will ensure stakeholders remain engaged and informed about the implementation, evaluation and review process. Regular community updates will be provided through the website, public meetings, and other communications. We will work with our Performing Providers to provide periodic project updates through various venues, including websites, newsletters and other communication media used by the providers. At least annually, a summary report will be published on the RHP website.

Section V. DSRIP Projects

A. Category I

Baylor College of Medicine

Pass 1

Project Option 1.1.1- Establish more primary care clinics: New Baylor Teen Health Clinic at the Tejano Center for Community Concerns

Unique RHP Project ID: 082006001.1.1
Performing Provider Name/TPI: Baylor College of Medicine/082006001

Summary:
Provider: The Baylor Teen Health Clinic (BTHC) operates seven clinic sites in medically underserved areas throughout Houston and sees all patients who seek care, regardless of ability to pay.
Intervention: This project will expand the BTHC service area by opening a new clinic at the Tejano Center for Community Concerns, which provides transitional housing services for the Houston community.
Need for Project: The TCCC is located in a medically underserved area. The population is predominantly non-white, and there are few clinics specifically targeting at-risk youth.
Target Population: The target population includes females ages 13-23 and males ages 13-25. Approximately 50% of patients qualify for the Women's Health Program, 15% qualify for Medicaid, and 45% do not have health insurance.
Category 1 Expected Benefits: The clinic will provide access to age-appropriate, comprehensive primary care services for 4,000 patients by DY5.
Category 3 Expected Benefits:

- Reduce STI rates by 5% compared to baseline by DY5.
- Reduce teen pregnancy rates by 2% compared to baseline by DY5.

Project Option 1.1.1- Establish more primary care clinics: New Baylor Teen Health Clinic at the Tejano Center for Community Concerns

Unique RHP Project ID: 082006001.1.1

Performing Provider Name/TPI: Baylor College of Medicine/082006001

Project Description:

Texas has the nation's 4th highest teen pregnancy rate (88 per 1000 Texas girls vs. 70 per 1000 US girls)[55], is third in the nation for teen birth rates (60.7 per 1000 Texas girls vs. 39.1 per 1000 US girls)[56], and is number one in the nation for repeat teen births (23% in Texas vs. 19% in the US)[1]. Harris County birth rates nearly mirror Texas rates at 63 births per 1000 females aged 15-19[57]. Unintended pregnancy is particularly prevalent among African-Americans and Hispanics. Rates of sexually transmitted infections (STI) in Harris County are also much higher than those seen in the nation. For example, Harris County rates of gonorrhea are 916.2 per 100,000 population ages 15-19 vs. 520.9 in the United States.

The Baylor Teen Health Clinic (BTHC) at seven sites in inner city Houston offers accessible, age-appropriate, comprehensive primary care services to adolescents and young adults living in inner-city Houston, where the economic and health disparities are the greatest. Its services include family planning, screening and treatment for STI and HIV, mental health screening, immunization administration, health risk reduction education, prenatal care, sports physicals, wellness exams, nutrition services, counseling and case management. In addition to providing primary care services, the BTHC works with community partners to connect patients to medical specialists as well as dental, mental health and adoption services. The clinic sites currently serve the Greater Third Ward, Greater Fifth Ward, Kashmere Gardens and Acres Home neighborhoods. In 2011, the BTHC had a total of 9,895 unduplicated client visits at the seven sites. During 2011, there were 2,165 chlamydia cases, 671 gonorrhea cases, 22 syphilis cases and 22 HIV cases. A total of 876 teens between the ages 13-22 tested positive for a pregnancy.

Goal(s) and Relationship to Regional Goal(s):

The BTHC will establish a clinic at the Tejano Center for Community Concerns (TCCC) in the southeast part of the county to serve as the medical home for adolescents and young adults. By addressing the age-specific needs of the patient population, the BTHC will provide targeted, age-appropriate family planning and STI counseling and treatment in order to lower STI and teen birth rates. These goals are aligned with the regional goals of expanding access to primary care in order to deliver the right care at the right time, reducing teen birth and STI rates. The BTHC increases access to primary care in medically underserved areas and treats all patients who request care, regardless of ability to pay.

[55] University of Wisconsin Population Health Institute, Robert Wood Johnson Foundation. County Health Rankings and Roadmaps, Harris County. (2012). County Health Rankings. http://www.countyhealthrankings.org/#app/texas/2012/harris/county/1/overall.

[57] County Health Rankings & Roadmaps. 2012 Harris, Texas, Teen Birth Rate. http://www.countyhealthrankings.org/node/2758/14. Accessed October 1, 2012.

Challenges:
As indicated previously, Harris County teen birth and STI rates are much higher than the national rates. The BTHC will provide access to family planning services and contraception to reduce the number of unplanned teen births. It will also provide sexual health counseling and STI treatment to decrease the STI rate in the adolescent and young adult populations.

5-Year Expected Outcome for Provider and Patients:
Access to primary care will be increased for 1,500 unique patients by DY 5, with at least 10,000 cumulative patient visits anticipated in the first three years. STI rates will be reduced by 5% compared to the patient population's baseline through counseling and treatment. Teen birth rates will be decreased by 2% compared to the baseline.

Baseline:
Baseline data (teen birth and STI rates) for the specific patient population will be established during the first year of the clinic's opening.

Rationale:
The purpose of BTHC is to provide an affordable medical home for underserved adolescents and young adults. Established in 1971, the BTHC has a track record of engaging and empowering teens and young adults. Its care team, which includes physicians, nurse practitioners, social workers and pharmacists, provides both comprehensive and holistic care to its patients.

The clinic at the TCCC is proximal to several medically underserved areas in Houston[58,59,6] and will provide access to care for the predominantly Hispanic and Latino population[60]. The metrics selected reflect salient health needs of the adolescent and young adult population, including access to education, counseling and care for STIs and teen pregnancy. Reproductive and sexual health is one of the seven priorities identified in the National Prevention Strategy published by the National Prevention Counsel and the Office of the Surgeon General[61]. The BTHC provides services that address each of the four specific recommendations put forth in the strategy: access to preconception and prenatal care; reproductive and supportive services for sexually active teens, pregnant and parenting women; sexual health education, particularly for adolescents; and early detection and treatment of STIs.

Project Components:
Not Applicable / The project option 1.1.1 does not have components

Milestones & (Metrics):
Process Milestones and Metrics: P-2 (P-2.1); P-5 (P-5.1)

Improvement Milestones and Metrics: I-12 (I-12.1); I-X (I-X.1, I-X.2, I-X.3)

The BTHC proposes increases in STI counseling, STI treatment and family planning services as improvement measures for the target population, which lacks access to these and is at particular risk. Nearly 50% of newly diagnosed STIs occur among young adults aged 15-24 years[62]. According to the CDC, 40% of sexually active teens did not use a condom the last time they had sex[63]. The counseling services at the BTHC focus on reduction of risk behaviors, and success will be measured through the proposed Category 3 measures below.

Increased access to family planning and contraception services is another proposed improvement measure. High rates of teen birth in the county (63 per 1,000 females aged 15 to 19) and high rates of repeat teen births (23%) [64] make preventing teen pregnancy a cost effective and healthy strategy.

The mission of the BTHC is to provide access to affordable care for at-risk, underserved teens in the community. By reducing health-risk behaviors through counseling and preventive care, the BTHC will help provide tools for its young patients to make responsible decisions and become contributing members of society.

Unique community needs identification number:

This project addresses the following community needs according to the community needs assessment:

- CN1 – Access to primary care
- CN13 – Reduction in teen birth rates
- CN17 – Reduction of high rates of sexually transmitted infections

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

This project significantly enhances the existing delivery system as the expansion to the TCCC will improve primary care access for adolescents and young adults in an area that is medically underserved.

Related Category 3 Outcome Measures:

OD- 1 Primary Care and Chronic Disease Management

- IT-1.20 Other Outcome Improvement Target: Reduction of STI Rate among Adolescents and Young Adults
- IT-1.20 Other Outcome Improvement Target: Reduction of Pregnancy Rate among Adolescents and Young Adults

Reasons/Rationale:

Because the BTHC focuses on prevention, the proposed Category 3 milestones and metrics are reduced STI and teen pregnancy rates. The chronic illness milestones identified on the Category 3 do not address the salient health issues faced by adolescents and young adults.

---

[64] Child Trends. Percentage of All Teen Births That Are Repeat Births, and Number of Births to Mothers Under 20, in Large Cities, 2008. http://www.childtrends.org/Files/Child_Trends_2011_04_14_FG_RepeatBirths2011.pdf. Accessed October 1, 2012.

Because STIs disproportionately affect this population, it is a more appropriate metric that clearly measures the success of the STI counseling proposed in the Category 1 improvement measures.

Similarly, teen pregnancy reduction is an appropriate measure for this population. The milestones identified in Category 3 pertain to improvements in low birth weight, infant mortality, etc., which do not apply if pregnancy is avoided altogether. Decreasing teen pregnancies and births will indicate that the BTHC succeeds in providing access to family planning and contraception services.

Relationship to Other Projects:

Like the Fifth Ward Clinic (project 082006001.2.1), the BTHC will provide primary care services in a medically underserved area. However, the BTHC is situated in a different geographic area and targets a specific age cohort.

Relationship to Other Performing Providers' Projects in the RHP:

Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative:

We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

The value of this project was determined by an econometrics assessment of access to primary care; STI counseling, screening and treatment; and teen pregnancy prevention. The value assigned to primary care is based on cost avoidance of emergency room visits. The difference between the cost of an emergency room visit and the cost of a primary care visit for primary-care-treatable conditions per visit was calculated for the age groups in question[65]. Historical data were reviewed to determine the percentage of preventive and acute care visits. Rather than assume that all acute care visits could result in an emergency room visit, the project value conservatively estimates that a fraction of acute care visits results in an avoided emergency room visit.

[65] School of Public Health, *Houston Hospitals Emergency Department Use Study: January 1, 2010 through December 31, 2010,* Houston, Texas: University of Texas Health Science Center at Houston, 2012.

Researchers at the CDC have evaluated the cost effectiveness of STI treatment[66] and developed formulae to assess the direct and indirect cost savings of education, screening and treatment. The formula developed for HIV costs averted by HIV counseling and testing was used to calculate the estimated bundle amount for STI counseling, as HIV counseling is included in all STI education, and screening is available to all patients. The estimated bundle amount for STI treatment was based on the pro rata sequelae costs averted for the treatment of gonorrhea, which is a more conservative estimate than that for treatment of chlamydia or syphilis. Historical data were reviewed to determine the percentage of men vs. women treated. The value for decreases in STI rates is based on treatment and pro rata sequelae costs averted because of reductions in the infections in the population, assuming the reductions occur in a patient population of 1,000 patients.

The National Campaign (to Prevent Teen and Unplanned Pregnancy) determined that the cost to Texas taxpayers for teen births in the state between 1991 and 2004 was $15.1 billion[67]. This cost includes medical expenses, welfare services and productivity loss. The costs averted were broken further into episodic costs that include the cost of delivery and healthcare for mother and child the first year after birth. The remainder was prorated for the life of the Waiver. The expected success of family planning was based on the average teen birth rate for Harris County and the weighted average effectiveness for different types of contraception[68] based on the historical administration rates. Teen pregnancy rates in the neighborhoods currently serviced by the Teen Clinic are higher than the Harris County average. By reducing the pregnancy rate, we will achieve additional savings in healthcare costs and taxpayer burden that are not duplicated in the estimated bundle for the rendering of contraception management services.

The total value for the project was combined and distributed across measures to ensure category 3 outcome measurements comprised 5%, 10%, 15% and 20% of the project value in DY2-5. Distribution among the components was based on the weighted value of the measure.

Bayshore Medical Center

Pass 1

Project Option: 1.1.2 Expand Primary Care Capacity: Expand Obstetrical and Gynecological Care Capacity in East Houston
Performing Provider: HCA Bayshore Medical Center/020817501
Unique Project ID: 020817501.1.1

- Provider: Bayshore Medical Center is a 476-bed facility with its main campus situated in Pasadena, Texas, with an additional campus called East Houston Regional Medical Center located in Houston, Texas. The facility is located in the Houston-Sugarland-Baytown MSA, which serves a population of approximately 6,000,000 people.
- Intervention(s): HCA intends to expand OB/Gyn care capacity in the existing community clinics by recruiting two (2) new OB/Gyns to the area and by hiring additional support staff. HCA also intends to expand the service hours and days in existing clinics. Finally, HCA will relocate a Pasadena clinic in order to allow for better care coordination and access.
- Need for the project: HCA chose this project because Harris County has a higher rate of low-birth weight than the statewide rate, a lower rate of mammography screening than the statewide rate, and a rate of sexually transmitted infections equal to the statewide rate. These specific problems, along with myriad of others particular to women of a reproductive age, can be treated and often prevented when women have regular access to an OB/Gyn, thus making it imperative for Harris County to increase the availability of these providers in the community.
- Target population: The target population of this project is women of reproductive age seeking OB/Gyn services through HCA's OB clinics in East Houston. The three clinics currently provide 3500-4500 patient encounters. Of these patients, 93-100 % are Medicaid-eligible or uninsured. The project is intended to improve access for the clinics' existing patients and to allow the clinics to treat a greater volume of Medicaid and uninsured patients in the future.
- Category 1 or 2 expected patient benefits: HCA expects that, by recruiting additional OB/GYNs to the East Houston community to maintain and expand obstetrical and gynecological care access for the East Houston patient population, patient satisfaction and health outcomes will improve. HCA expects a 5% increase in volume of clinic patients from DY3 to DY4, and a 5% increase in volume of clinic patients from DY4 to DY5. In DY3, HCA will recruit and retain two additional OB/Gyns, and will expand its hours at the main clinic to include one additional weekday per week and one weekend per month. Finally, in DY4, HCA will relocate its Pasadena clinic into a larger site that is more convenient to access via public transportation.
- Category 3 outcomes: IT 8.2 – Bayshore intends to reduce the number of low-weight births to its clinic clients by reducing the number of unhealthy pregnancies and early deliveries through regular access to OB/Gyn care. Those reductions should increase the infants' short- and long-term health outcomes, and reduces the cost of providing care to the mothers and infants. The percentage reduction will be determined in DY3.

Project Option 1.1.2 Expand Primary Care Capacity: Expand Obstetrical and Gynecological Care Capacity in East Houston

Unique RHP Project ID: 020817501.1.1
Performing Provider Name/TPI: HCA Bayshore Medical Center/020817501

Project Description:
HCA will expand the availability of obstetrical services through existing OB Clinics located in the service areas of Bayshore Medical Center and East Houston Regional Medical Center. HCA will do this by recruiting new OB/GYNs to the East Houston area to help with a growing community need. East Houston is an area projected to grow by 8.6% over the next five years and has a current deficit of 20.6 OB/GYNs according to a needs assessment completed in October of 2011.

Goal(s) and Relationship to Regional Goal(s):
Project Goals:
HCA intends to expand OB/Gyn care capacity in the existing community clinics by recruiting two (2) new OB/Gyns to the area, by hiring additional support staff, and by expanding the hours of the existing clinics. Additional goals include:

- Expansion of services hours in existing clinics by one day per week and one weekend per month
- Relocating the Pasadena clinic location to a larger space that is closer to the local FQHC (in order to allow for care coordination) and closer to a bus stop
- Increase staffing in the existing OB/Gyn clinics with additional medical assistants (2) , one Office Coordinator, and one Medicaid Enrollment Coordinator

This project addresses the following Region 3 goals:
While the Region has many specific objectives and improvement targets based on stakeholder input and community needs assessments, the over-arching goals that have guided many of our decisions include the following:

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
- Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system, and

- Develop a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes.

Challenges:
HCA expects the biggest challenge for this project to be identifying and securing quality OB/GYNs that are willing to practice in Houston, where there is currently a shortage of these providers, and treat a growing population of indigent patients. HCA will address this challenge by offering competitive benefits and seeking candidates with a calling to treat traditionally underserved populations.

5-Year Expected Outcome for Provider and Patients:
HCA expects that, by recruiting additional OB/GYNs to the East Houston community to maintain and expand obstetrical and gynecological care access for the East Houston patient population, patient satisfaction and health outcomes will improve. OB/Gyns are able to provide primary care in the form of annual checkups for women of reproductive age in the community, and also to provide specialty services for women with specific gynecological and obstetric needs. Improving patient access to these services in a preventative and ongoing capacity is expected to result in improved health outcomes for pregnant women and women at risk for gynecological conditions, and to result in reduced long-term costs for treating women in need of regular gynecological and obstetric services.

Starting Point/Baseline: HCA's 3 current OB/Gyn clinic locations include: Midwives of East Houston – Main Office; Midwives of East Houston – Wayside; and Midwives Care Clinic – Pasadena. These locations see patients on Tuesdays and Wednesdays. The clinics are currently served by a total of nine (9) OB/Gyns. . With a total of three clinics, they average 387 patients/month (East Houston: 252 patients/month; and Pasadena: 97patients/month; Wayside: 38 patients/month). The targeted population is indigent woman of child-bearing age and indigent woman with gynecologic needs.

Rationale:
HCA chose this project because Harris County has a higher rate of low-birth weight than the statewide rate, a lower rate of mammography screening than the statewide rate, and a rate of sexually transmitted infections equal to the statewide rate. These specific problems, along with myriad of others particular to women of a reproductive age, can be treated and often prevented when women have regular access to an OB/Gyn, thus making it imperative for Harris County to increase the availability of these providers in the community. To compound the issue, Harris County has a higher rate of uninsured residents than the statewide rate (almost 1 in 3 residents),

meaning that access to OB/Gyns willing to treat indigent patients is also imperative for the health of women in Harris County.

Project Components:
HCA will meet the core requirements of this project in the following manner:

a. Expand primary care clinic hours: HCA will increase the hours at the Main Office by at least one day per week and offer weekend hours at least once per month, enabling working and school-age girls to access OB/Gyn primary care.
b. Expand primary clinic space: HCA will relocate its Pasadena clinic location into a larger space that is closer to an FQHC and public transportation.
c. Expand primary care clinic staffing: HCA will recruit two (2) additional OB/Gyns into its community clinics, and will hire additional staff to support the increased patient load, which will include two (2) new MAs, an Office Coordinator, and a Medicaid Enrollment Coordinator.

Unique Community Needs Identification Numbers:

- CN.1- Inadequate access to primary care
- CN.2- Inadequate access to specialty care
- CN.13- High teen birth rates
- CN.14- High rates of poor birth outcomes and low birth-weight babies
- CN.15- Insufficient access to services for pregnant women, particularly low income women
- CN.16- Shortage of primary and specialty care physicians
- CN.17- High rate of sexually transmitted diseases

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

This project represents an expansion of an existing initiative, which is to provide OB/Gyn services through local clinics to patients who might otherwise have difficulty accessing primary and preventative OB/Gyn care.

Related Category 3 Outcome Measures:
OD 8: Perinatal Outcomes; IT 8.2: Percentage of Low birth weight births

Bayshore chose this outcome because one intended consequence of increasing community access to OB/Gyns is to reduce the number of unhealthy pregnancies and reduce the number of early deliveries. Those reductions should result in fewer infants being born with low birth weight, which increases their short- and long-term health outcomes, and reduce the cost of providing care to the mothers and infants.

Relationship to Other Projects: The increased access to primary care visits will naturally generate additional need of specialty care visits based on the condition and acuity of the patients served. Understanding that the patient base targeted through this initiative will generate significant specialty care visits due to chronic conditions and lack of previous treatments, this initiative and similar initiatives will focus to 30-day readmission rate reductions, improvement for patient satisfaction scores, and admission rates specific to chronic conditions. Numerous initiatives have been included in the RHP plan and the addendum of the Initiative Grid can directly tie all specialty care projects together by category.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: The valuation of each HCA project takes into account the degree to which the project accomplishes the triple aim of the Waiver: community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. Specifically, this project valuation incorporates the difficulty of recruiting and retaining OB/GYN providers, and need for increasing the number of local providers in the local clinics to meet patient demand. The valuation also takes into account the emphasis that the Region 3 DSRIP work groups have placed on the expansion of specialist services such as OB/GYN care.

Project Option: 1.7.1 Implement Telemedicine program to provide or expand specialist referral services in an area identified as needed to the region: Behavioral Health Telemedicine Services
Performing Provider: HCA Bayshore Medical Center/020817501
Unique Project ID: 020817501.1.2

- Provider: Bayshore Medical Center is a 476-bed facility with its main campus situated in Pasadena, Texas, with an additional campus called East Houston Regional Medical Center located in Houston, Texas. The facility is located in the Houston-Sugarland-Baytown MSA, which serves a population of approximately 6,000,000 people.
- Intervention(s): HCA intends to expand its existing telemedicine program to include a 24/7 tele-psychiatry program in its Bayshore Emergency Department (ED), as well as implementing telemedicine capabilities in the EDs at its other local hospitals. Specifically, HCA will identify the necessary technology to establish the program, reach out to behavioral health providers to participate, train the ED staff at each hospital to effectively use the new capabilities, and will implement protocols for obtaining tele-psychiatry consults and referrals to and from Bayshore.
- Need for the project: Currently, the time from "Initial Contact to Assessment Completion" at the other HCA hospital EDs includes four hours (on average) for the QMHP to arrive, another two hours to complete the assessment, and additional time to obtain a transfer for treatment (which can take days). As a result, the BH/SA patients often languish in area EDs for days awaiting a transfer. This project is intended to more efficiently use the limited staff resources when dealing with overcrowding in the Bayshore ED to provide consults to its own patients and the patients in its sister EDs in a timelier manner.
- Target population: The target population of this project is the residents of the community with behavioral health and substance abuse issues who are likely to seek care in area EDs. HCA's Houston EDs experience 8000-9500 BH/SA related visits per year, with 2800-3500 requiring in-depth psychiatric assessments for appropriate placement. Of these patients, approximately 57-67% are Medicaid-eligible or uninsured. The average time from decision to transfer for these patients is 4-8 hours. Bayshore's ED receives 500-650 BH/SA patient requiring in-depth psychiatric assessments per year, which leads to overcrowding when coupled with the fact that many patients are put in a hold pattern for hours, or even days.
- Category 1 or 2 expected patient benefits: The 24/7 telemedicine capability system should improve the quality, timeliness, and efficiency of consultations and referrals provided to BH/SA patients at hospitals in the area. After implementing the telemedicine program in DY3, HCA expects a 10% increase in the number of telemedicine consults in DY4, and a 20% increase in the number of telemedicine consults in DY5.
- Category 3 outcomes: IT 11.1 – Bayshore will reduce the average ED wait time for BH/SA patients in DYs 3-5, addressing the disparity in access to care that BH/SA patients often experience in all domains, including primary care and up through acute care services. BH/SA patients' health outcomes will improve as they spend less time in EDs and more time receiving the treatment they need. The target annual reductions will be determined in DY3.

DRAFT

Project Option - 1.7.1 Implement Telemedicine program to provide or expand specialist referral services in an area identified as needed to the region: Behavioral Health Telemedicine Services

Performing Provider/TPI: Bayshore Medical Center/020817501
Unique project ID number: 020817501.1.2

Project Description:

HCA intends to expand its existing telemedicine program to include a 24/7 tele-psychiatry program in its Bayshore Emergency Department (ED), as well as implementing telemedicine capabilities in the EDs at West Houston Medical Center, East Houston Regional Medical Center (a campus of Bayshore), Clear Lake Regional Medical Center and Woman's Hospital. The service areas will include the primary and secondary zip codes at these three hospitals which are located in Harris County (Bayshore: 77501, 77502, 77503, 77504, 77506, 77012, 77017, 77034, 77505, 77508, 77536, 77571, 77587, East: 77015, 77530, 77013, 77029, 77044, 77049, 77547 West: 77072, 77082, 77083, 77036, 77042, 77077, 77094, 77099, 77450, Clear Lake: 77058, 77059, 77062, 77586, 77598, Woman's: Harris County) This initiative will result in BH/SA patients from those area EDs, who often have to wait several days for a consult or referral, being rerouted to Bayshore after an initial assessment by a Bayshore (or other) psychiatrist via telemedicine (because Bayshore has psychiatric inpatient beds).

Specifically, HCA will identify the necessary technology to establish the program, reach out to behavioral health providers to participate in the tele-psychiatry program, train the ED staff at each hospital to effectively use the new capabilities, and will implement protocols for obtaining tele-psychiatry consults and referrals to and from Bayshore.

Goals and Relationship to Regional Goals:

Project Goals:

The goal of this project is to reduce the time it takes for BH/SA patients presenting in Bayshore's ED and other HCA EDs in the area to obtain a consultation and/or referral for care. In order to accomplish that goal, Bayshore hopes to increase the number of patients who are able to access telemedicine consultations after the program's inception, and are either transferred to Bayshore from other area EDs, or from Bayshore to non-hospital appropriate care settings.

This project meets the following Region 3 Goals:

While the Region has many specific objectives and improvement targets based on stakeholder input and community needs assessments, the over-arching goals that have guided many of our decisions include the following:

DRAFT

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
- Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system, and
- Develop a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes.

Challenges:

- Identifying and recruiting willing telepsychiatry providers to furnish consultations and/or referrals to Bayshore and other area hospitals' ED patients – in order to address this challenge, the hospital will offer competitive compensation to participating providers, and will seek out providers with a calling to treat traditionally underserved patients.
- Identifying and implementing the most effective technology for operating the program – Bayshore will address this challenge by researching the available options and making a reasoned decision, focused on value, cost, and feasibility.
- Training providers to use the new technology – Bayshore will address this challenge by taking time with the ED staff at Bayshore and other area HCA hospitals to orient them to using the technology, and by creating protocols to guide ED providers.
- Coordinating with the other participating hospitals to ensure smooth patient transitions: Patients will need to be transferred from the other area hospitals to Bayshore when the assessment from their consults is that they require inpatient psychiatric care. Coordinating this transition will require protocols and process, which Bayshore will work with the participating providers to develop and implement.

5-year Expected Outcome for Provider and Patients:

Bayshore expects that its own ED patients and those at its sister facilities will benefit from the program because the 24/7 telemedicine capability will mean no longer having to wait in the Bayshore ED until a psychiatrist is on-site and/or available for a consult and/or referral. This system is intended to improve the quality, timeliness, and efficiency of consultations and referrals provided to patients presenting at Bayshore's ED and other HCA hospitals in the area. Bayshore expects to experience a reduced cost in treating these patients, as they will spend less time waiting in the ED and will experience improved health outcomes. Additionally, Bayshore expects its provision of care to other patients in the ED to improve, as there will be more efficient triaging/transferring/discharge of BH/SA patients into the appropriate setting of care, allowing increased resources to be dedicated to emergent patients.

Starting Point/Baseline:

Currently, the time from “Initial Contact to Assessment Completion” at the other HCA hospital EDs includes four hours (on average) for the QMHP to arrive, and another two hours to complete the assessment. These assessments and/or eventual referrals are done entirely face-to-face, and are usually outsourced to providers not employed by Bayshore. After the initial assessment, it can take up to several days to obtain a transfer to Bayshore for treatment; meanwhile, the BH/SA patient is languishing in the ED. At Bayshore, the ED is overcrowded with patients needing ED consults, which Bayshore cannot provide in a timely manner due to limited staff. The volume for these ED patients is currently averaging 150 assessments per month.

Rationale:

Bayshore chose this project because most of Houston is comprised of federally-designated Health Provider Shortage Areas (including Harris County Hospital District, and many geographical areas within and around Houston) in the domain of mental health. The shortage of providers must be addressed through innovative solutions, such as telemedicine, because the ratio of BH/SA providers to residents with need is only shrinking as the population grows and the amount of money available to pay for health care decreases. Harris County suffers from a higher rate of violent crime, lack of adequate social support, unemployment, and children living in poverty than the statewide average, each of which are conditions that can lead to increased need and utilization of behavioral healthcare/substance abuse services. When patients’ conditions reach an acute level, they often end up in the ED and spend an extended amount of time there (while their conditions worsen and other patients experience longer waits than would otherwise be necessary). Providers must be equipped to quickly assess their conditions and where to best treat them. The telepsychiatry program will make this a quicker and less expensive process for Bayshore and area hospitals, while improving patient outcomes and satisfaction.

Project Components:

Bayshore will address the core components in the following manner:

a) Provide patient consultations by medical and surgical specialists as well as other types of health professional using telecommunications – Bayshore will create relationships with psychiatric service providers who are available to provide consults and referrals (where appropriate) 24 hours a day, seven days a week through technology implemented to allow meaningful assessments. Additionally, Bayshore psychiatrists will provide consults at the local HCA hospital EDs via mobile telehealth units, allowing for expedient transfer of patients to Bayshore when necessary.

b) Conduct quality improvement for project using methods such as rapid cycle improvement – Bayshore will participate in a bi-annual face-to-face meeting with other providers in the RHP performing similar projects to share lessons learned, best practices, and identify key challenges and areas for improvement.

DRAFT

Unique community need identification number the project addresses:

- CN.3- Inadequate access to behavioral health care
- CN.10- High rates of preventable hospital admissions

Related Category 3 Outcome Measures:

OD-11; IT 11.1: Improvement in Clinical Indicator in Identified Disparity Group

Bayshore chose this outcome because one goal behind providing more timely access to consultations and referrals for BH/SA patients in the ED is to address the disparity in access to care that BH/SA patients often experience, starting the primary care domain and extending through access to acute care services. BH/SA patients' health outcomes will improve as they spend less time in EDs and more time receiving the treatment they need. Thus, the clinical indicator that Bayshore will measure is ED wait time to treatment and/or referral and transfer to the appropriate care setting, and the population identified will be BH/SA patients.

Relationship to Other Projects: This behavioral health telemedicine project is one of two projects aimed at improving delivery of behavioral health services. It is part of HCA's larger plan of expanding and developing specialty services along with delivery improvements targeted to particular populations (e.g., geriatric patients and behavioral health patients).

Relationship to Other Performing Providers' Projects in the RHP: An innovative approach to increasing access to primary care and specialty care has been created by the miracles of the internet and computer systems. Telemedicine is leading edge for those communities who cannot easily access behavioral health or specialty care due to remote locations, lack of physicians, or urgency of encounter needs. Numerous telemedicine projects have been proposed, as seen in the Region 3 Initiative grid in the addendum, and all focus to outcomes such as appropriate emergency department utilization, 30-day readmission rates, and patient satisfaction scores.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: The valuation of each HCA project takes into account the degree to which the project accomplishes the triple aim of the Waiver: community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project.

Project valuation rationale: Specifically, this project valuation considers the difficulty of implementing tele-psychiatry capabilities and integrating those capabilities into the emergency departments at these hospitals, as well as the expected benefits to behavioral health patients presenting at the emergency departments. The valuation also takes into account the emphasis that the Region 3 DSRIP work groups have placed on the expansion of specialist services and improved access to behavioral health services.

DRAFT

020817501.1.2	1.7.1	A-B	IMPLEMENT TELEMEDICINE PROGRAM TO PROVIDE OR EXPAND SPECIALIST REFERRAL SERVICES IN AN AREA IDENTIFIED AS NEEDED TO THE REGION: BEHAVIORAL HEALTH TELEMEDICINE SERVICES
HCA – Bayshore Medical Center			020817501
Related Category 3 Outcome Measure(s): OD-6	020817501.3.2	IT-11.1	Improvement in Clinical Indicator in identified disparity group

Year 2 (10/1/2012 – 9/30/2013)	Year 3 (10/1/2013 – 9/30/2014)	Year 4 (10/1/2014 – 9/30/2015)	Year 5 (10/1/2015 – 9/30/2016)
Milestone 1 [P-3]: Create or expand a telemedicine program for selected medical specialties, based upon community and regional need. Metric 1[P-3.1]: Documentation of program materials including implementation plan, vendor agreements/contracts, staff training and HR documents. Baseline/goal: Establish a tele-psychiatry program at Bayshore and other area at least three other HCA hospitals in the community, allowing for more timely consultations and referrals of BH/SA patients by specialist providers, resulting in transfers to and from Bayshore (where appropriate); implementation will include identifying provider partners, implementing the technology, training the staff, and creating protocols and process for transfers and referrals Data Source: Program materials Milestone 1 Estimated Incentive	**Milestone 2** [P-11]: Participate in face to face learning at least twice per year with other providers and the RHP to promote collaborative learning around similar projects. Metric 1 [I-11.1]: Participate in semi-annual face to face meetings or seminars Baseline/Goal: Bayshore hopes to share ideas with other providers using telemedicine in order to identify best practices and address key challenges going forward. Data Source: Documentation of semiannual meetings, including agendas, slides, and/or notes Milestone 2 Estimated Incentive Payment: $2,132,567 **Milestone 3 [P-X1]:** Establish a baseline. Metric [P-X.1]: the number of telemedicine visits for specialty identified as high need	**Milestone 4** [I-12]: Increase the number of telemedicine visits for each specialty identified as high need. Metric 1[1-12.1]: Number of telemedicine visits Goal: Increase the number of ED patients at Bayshore, East Houston, West Houston, and Woman's Hospital presenting with BH/SA needs utilizing tele-psychiatry by 10% over baseline established in DY 3 Data source: ED health records for BH/SA patients treated Milestone 4 Estimated Incentive Payment: $4,277,532	**Milestone 5** [I-12]: Increase the number of telemedicine visits for each specialty identified as high need Metric 1[1-12.1]: Number of telemedicine visits Goal: Increase the number of ED patients at Bayshore, East Houston, West Houston, and Woman's Hospital presenting with BH/SA needs utilizing tele-psychiatry by 20% over baseline established in DY 3. Data Source: ED health records for BH/SA patients treated Milestone 5 Estimated Incentive Payment: $3,533,614

DRAFT

City of Houston Department of Health and Human Services

Pass 1

Project Option - Project Option 1.8.9 - Expansion of school-based sealant and/or fluoride varnish programs that provide sealant placement and/or fluoride varnish applications to otherwise un-served school-aged children by enhancing dental workforce capacity.

Unique Project ID: 0937740-08.1.1

Performing Provider Name/TPI: Houston Department of Health and Human Services/0937740-08

Project Summary: Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas with a population of 2.1 million in 2010. HDHHS has 1,100 employees and a budget of $100,245,403. HDHHS serves the City of Houston through 44 distinct programs. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring and restaurant inspections; birth and death certificates; leadership in emergencies such as hurricanes; operates a comprehensive regional reference laboratory, provides communicable disease prevention and control and surveillance and a variety of health and human services such as the Women, Infants and Children (WIC) nutrition program, senior nutrition services, family planning, oral health services and immunizations via a network of 4 health centers, 14 WIC sites and the Harris County Area Agency on Aging.
Intervention(s): This new project will improve dental health in Medicaid/CHIP or indigent populations by: 1) expanding oral health services for children 6 mos to age 18 in HDHHS dental clinics 2) expanding an evidence-based dental sealant program for elementary school children in low income areas 3) initiating new oral health services for eligible perinatal women through three months post-partum.
During HDHHS' last fiscal year, 10,000 visits were provided via the HDHHS dental clinics. Of this #, 19% were Medicaid clients, 4% on CHIP and 77% uninsured. The project will expand to provide 900 more visits per year. The dental sealant program served 4063 children of which 49% were Medicaid clients, 28% CHIP and 27% uninsured. The project will expand to serve 4000 more children per year. The new perinatal oral health services program will provide 1200 visits per year.
Need for the Project: Early Childhood Caries (ECC) is the most common chronic condition found in young children. Disproportionately affecting low income children, ECC results in infection, pain, and early tooth loss. The project will utilize prevention models and services (screening, oral health education, sealants, and fluoride varnish) that drive down unnecessary caries and costs.
Target Population: The primary target population for the three program components are low income children ages 1-18, at risk 2nd graders that are in schools with a high proportion of minority and low income families and low income eligible perinatal women through post-partum.
Category 1 or 2 expected patient benefits: Increase by 5% over baseline the number of special population members that access services in past 12 months in DY4 and increase by 10% over baseline the number of special population members that access services in past 12 months.
Category 3 outcomes: IT-7.1 Dental Sealant: Increase percentage of children age 6-9 with a dental sealant on a permanent first molar tooth by 5% over baseline in DY4 and by 10% over baseline in DY5 IT-7.2 Cavities: Increase percentage of children with untreated dental caries by 2% over baseline in DY4 and by 5% over baseline in DY5.

Project Option 1.8.9 - Expansion of school-based sealant and/or fluoride varnish programs that provide sealant placement and/or fluoride varnish applications to otherwise un-served school-aged children by enhancing dental workforce capacity through collaborations and partnerships with dental and dental hygiene schools, local health departments, federally qualified health centers, and/or local dental providers: Oral Health Services for At-Risk Populations

Unique Project ID: 0937740-08.1.1
Performing Provider: City of Houston Department of Health and Human Services/ 0937740-08

Project Description:
The City of Houston Health and Human Services (HDHHS) proposes to a) initiate new diagnostic and preventive oral health services for perinatal and safety net eligible persons b) expand Project Saving Smiles (dental sealant program for 2nd graders) and c) link more patients to a dental home.

This project seeks to enhance dental health in underserved populations by: 1) expanding diagnostic, preventive, restorative, and surgical oral health services for safety net eligible persons, 2) expanding an evidence based dental sealant program for elementary school children, Project Saving Smiles and 3) initiating diagnostic, preventive, restorative, and surgical oral health services for eligible perinatal women through three months post-partum

Safety Net Oral Health Services
Houston Department of Health and Human Services (HDHHS) currently provides comprehensive dental care for children ages six (6) months of age through 21 years of age. Title V funding is used to fund these services in addition to the general fund dollars that are allocated by the City of Houston. This project will expand existing services to provide access to safety net oral health services for additional children.

Dental Sealants Program, Project Saving Smiles
Project Saving Smile, which was established more than 5 years ago by HDHHS, provides screening, oral health education, sealants, and fluoride varnish for at-risk 2nd graders. At-risk 2nd graders are identified through partnerships with individual schools, school principals and through Houston Independent School District (HISD), which is the third largest school district in the US. HISD has a very high percentage of minority populations and a large number of schools have a large proportion of low income students receiving free or reduced cost breakfast and lunch program. Currently, Project Saving Smile has a limited capacity, and only able to serve a few schools. Second graders from at-risk, low income schools will be targeted for the expansion of Project Saving Smile. The project will link these 2nd graders to a dental home.

Perinatal Oral Health
The project will also add oral health services for pregnant women to the mix of oral health services offered by HDHHS. By providing perinatal diagnostic, preventive, restorative, and surgical oral health services (during pregnancy and through the third month post-partum), the

performing provider will improve the health and quality of life for at-risk Houston area mothers and their children.

By the end of the three months post-partum the project would1) link the perinatal patients to a dental home, 2) provide anticipatory guidance for perinatal women and their children, 3) promote and support breastfeeding practices with anticipatory guidance, e.g., wiping the baby's gums after breast or bottle feeding and 4) provide a coordinated effort between the prenatal and oral health provider to promote utilization of dental services during pregnancy.

Plaque causing oral diseases, dental caries, gingivitis, and periodontitis can be prevented with optimal oral hygiene. Good oral health during pregnancy and throughout life is imperative to promote health and quality of life for the mother. It also prevents vertical pathogenic bacteria transmission from mother to child, as well as horizontal pathogenic bacteria transmission among all. Yet, many prenatal patients do not receive oral health care services during pregnancy despite evidence that poor oral health can have adverse pregnancy outcomes. There are barriers to care for pregnant women stemming from the patient herself and from the health care system. Due to a lack of understanding about oral health services during pregnancy, oral health and prenatal providers limit their patients' oral health care during pregnancy. Research supports the benefits of providing dental care during pregnancy clearly outweigh any potential risks. Routine access to oral health services is imperative throughout life. With young children, there is an opportunity to begin prevention and for them to enjoy optimal oral health for life.

HDHHS will address and reduce the vertical transmission, mother to child movement, of pathogenic bacteria by treating common oral conditions found in pregnancy, e.g., gingivitis, dental caries, infections due to cariogenic bacteria. In so doing, HDHHS anticipates treating fewer cases of Early Childhood Caries (ECC) among the child patients it serves. The ECC is defined as tooth decay in children under six years of age. The timely provision of oral health services during pregnancy serves to address oral problems thus avoiding systemic infections and the risk of transmission of cavity causing bacteria from the mother to her children. While there is ongoing research, the evidence to date suggests that periodontal treatment during pregnancy does not affect the frequency of low birth weight babies or preterm births, and is safe for the fetus and the mother. The American College of Obstetricians and Gynecologists note: "Caries, poor dentition, and periodontal disease may be associated with an increased risk for preterm delivery. It is very important that pregnant women continue usual dental care in pregnancy. The dental care includes routine brushing and flossing, scheduled cleanings, and any medically needed dental work."

Goals and Relationship to Regional Goals:

The goal of this project is to partner with Dental providers, Dental Schools, School Districts, School principals and other stakeholders and provide services to underserved population who are at risk for poor oral health. The primary goal is to close gaps in access to dental care in certain sub-population groups. The target population addressed for this project will be perinatal women and elementary school children (aged 6-9 years). This is directly related to the regional goal of alleviating dental health disparities by provision of access to dental care. By enhancing access to Preventive Care in high risk populations, a long term investment in dental health ensues.

<u>Project Goals:</u>

The overall goal of this program is to improve oral health in underserved or under-served populations, specifically perinatal women and children.

- Close gaps/disparities in access to dental care services

This project meets the following regional goals:

- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
- Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system.

Challenges:
Some of the challenges that the provider anticipates are 1) Developing an efficient and effective referral process: a) For Safety Net Dental Operations - For dental procedures beyond the HDHHS' scope of services, continue referring to Harris Health System for oral surgery, University of Texas School of Dentistry for Endodontics, Pediatric Dentistry, Orthodontics, and for Oral Surgery 2) Ensuring a dental home for all – disposition of patients after application of dental sealant: For patients with restorative or surgical dental needs and for those with just preventive needs, refer them to their dental home. If they do not have a dental home and do not have private dental insurance, refer them to HDHHS dental clinics to be their dental home. 3) Disposition of patient post-perinatal period – finding a dental home post-perinatal period (three months post-partum): a) If the patient is age-eligible for the HDHHS dental program, retain the patient within the program to complete her restorative and/or surgical care, as well as, to meet their preventive needs b) If the patient is not age-eligible, refer the patient to Harris Health System, Federally Qualified Health Center Dental Clinic, and/or University of Texas School of Dentistry to complete her restorative and/or surgical care, as well as, to meet their preventive needs. Additionally, the challenges mentioned will be addressed by instituting an efficient follow-up process. This follow up procedures will be in place for 60-90 days after the patient completes the program.

5 Year Expected Outcome for Providers and Patients:
The Houston Department of Health and Human Services (HDHHS) as the primary provider expects to see a reduction in early childhood caries in low-income zip codes that have been identified by the Houston Independent School District as those with greater than 70% of students on free/reduced lunch program. The provider also expects to see better dental health in perinatal women and the newborn children in the underserved areas of Houston. Due to the comprehensive nature of the program, dental health in underserved areas is likely to improve among high-risk populations.

Starting Point/Baseline:
Currently, no comprehensive program exists that targets improvement in dental health of perinatal women, young infants, and young elementary school children in high risk populations living in underserved areas. Baseline will be established by the end of in DY 2 of the project for proportion of children with dental sealant and for proportion of children with dental caries.

Rationale:
Oral disease is common in the underserved population. Oral disease can lead to poor nutrition; serious systemic illnesses and conditions such as poor birth outcomes, diabetes, and

cardiovascular disease; and a diminished quality of life and life expectancy. Inadequate access to oral health services compounds other health issues. It can result in untreated dental disease that not only affects the mouth, but can also have physical, mental, economic, and social consequences. Fortunately, many of the adverse effects associated with poor oral health can be prevented with quality regular dental care, both at home and professionally. Increasing, expanding, and enhancing oral health services will improve health outcomes.

Children who have regular access to a dental provider are more likely to have received preventive dental services such as sealant placement. Children who have regular access to a dental provider are less likely to suffer from untreated dental caries. The Centers for Disease Control and Prevention rate the application of sealants within a school-based setting as one of two strongly recommended evidence-based dental public health prevention methods. There is clearly a return on investment associated with dental sealants when applied within a school sealant program: for every $28 spent on placing one dental sealant and preventing decay, at least $70 will be saved by not filling a one-surface cavity.

This program will reach the underserved target population on Medicaid or CHIP as well as many indigent in previously identified zip codes. This program has the potential to improve dental health among at risk population and help close dental health disparity gaps in our population. Cost incurred to the health care system from those that do not have a dental home, or those that do not have access or availability due to other barriers is significant. These are avoidable costs and this program will help offset a portion of this cost by providing care before there is a dental health emergency. The prevention of early childhood caries (ECC) through the provision of oral health services and education for the mother serves to address the documented morbidity and mortality associated with ECC. Among US children, ECC is the most common chronic condition found in young children and yet it is the most prevalent untreated condition in children. Disproportionately affecting low income children, ECC results in infection, pain, and early tooth loss. The ECC is prevalent, costly, and preventable. There are prevention models in place that can affect these statistics while driving down unnecessary caries and costs.

Additionally, dental sealants are cost effective thin coatings applied to the chewing surface of the molar/back teeth to prevent cavities. The painless application of sealants fill-in the deep pits and grooves where food and plaque (bacteria) accumulate. Some 90% of dental caries occur on the occlusal surface of the molars, the targeted surface for sealants. The Centers for Disease Control and Prevention rate the application of sealants within a school-based setting as one of two strongly recommended evidence-based dental public health prevention methods. There is clearly a return on investment associated with dental sealants when applied within a school sealant program: for every $28 spent on placing one dental sealant and preventing decay, at least $70 will be saved by not filling a one-surface cavity.

Project Components:

This project has no required core components. Major features of the project include:

a) Increase services to young elementary school children in low income area schools in partnership with the school district and the individual schools, by providing a sealant placement program off-site.

b) Partnership with University of Texas Dental School, local dental providers to provide enhanced services to target population.

c) Connect all patients to dental home.

d) Implement provision of services to perinatal women, most of who are on Medicaid, through a combination of education, diagnostic, preventive and surgical services to perinatal women through three months post-partum.

Due to the performing provider's experience and established networks in serving low income population, this program will benefit from these experiences. Nevertheless, program processes will be refined and improved through a Plan-Do-Check-Act process. The goal of continuous quality improvement is to establish a cyclical, continuous process of planning, assessing, monitoring, analyzing, measuring and evaluating performance to improve desired outcomes. It is expected that revisions to the protocol, training requirements, partnership processes and expectations will need to be clarified on a regular basis. These will be improved through the PDSA process. Initial program enrollment of a small number of target population will help iron out the program weaknesses and allow for a continuous improvement process.

Unique community need identification numbers that project addresses:

- CN.4 Inadequate access to dental care
- CN.15 Insufficient access to services for pregnant women, particularly low income women
- CN.22 Insufficient access to services that are specifically designed to address racial, ethnic and cultural health care disparities

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:

Currently there are no programs that provide comprehensive population based dental health care to underserved perinatal women. This program will provide dental care to perinatal women, young children and school age children in underserved communities, since there is a lack of access and utilization of care in the targeted communities. This programs aims to close gaps/disparities in access to dental care services and enhance the quality of dental care as well as build capacity in the region by training providers. The project will also expand service capacity in safety net oral health services for children provided at HDHHS dental clinics and expand service capacity in the Project Saving Smiles, dental sealant program.

Related Category 3 Outcome Measures:

OD-7 Oral Health

IT-7.1 Dental Sealant: Percentage of children age 6-9 with a dental sealant on a permanent first molar tooth (Healthy People 2020; CMS Oral Health Initiative goal

IT-7.2 Cavities: Percentage of children with untreated dental caries (Healthy People 2020)

Reasons /rationale for selecting the outcome measures:

The primary outcome measures chosen for this project are: increase in sealant application and reduction in dental caries in elementary school children aged 6-9 years. Elementary school children of this age are a particularly vulnerable because they lose their "baby" teeth and new teeth emerge. In order to ensure the best possible prognosis for the future optimal dental health, both outcomes will be tracked and evaluated. Perinatal women seen in this program will be tracked in terms of an *output measure* to show an increase in number of women served and offered diagnosis, treatment and preventive care. Improved dental health during the perinatal and postnatal period has positive implications for the dental health of both the mother and the child.

Relationship to Other Projects and Plan for Learning Collaborative:

Project results and lessons learned will be disseminated to other members in the regional learning collaborative to share lessons learned and discuss quality improvement strategies. We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Dental services for both adult and children is a service that is currently underfunded and incomplete in access for the targeted patient base. The dental initiatives represented in the RHP plan are specific to community need and location of the patient to ensure strong access to treatment. The outcome measures focus to the reduction of emergency room utilization, patient satisfaction, as well as increase access to the service line. The Region 3 initiative grid in the addendum directly reflects all relationships of dental initiatives.

Project Valuation:

HDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs, 4) Cost Avoidance, 5) Partnership Collaboration, and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease , 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDHHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. Oral Health Service Expansion received a composite Prioritization score of 7.65 and a Public Health Impact score of 7.

Project Option 1.7.7 - Implement remote patient monitoring programs for diagnosis and/or management of care for EMS services.

<u>**Unique Project ID:**</u> 0937740-08.1.2

<u>**Performing Provider Name/TPI:**</u> City of Houston Department of Health and Human Services/0937740-08

<u>**Project Summary:**</u> _Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston. The sub-provider for this project is the City of Houston Fire Department Emergency Medical Services (EMS) which is the primary EMS authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. The City of Houston is a six-hundred plus square mile area spread out over a 1000 square mile region in Southeast Texas. Each year there are over 200,000 EMS incidents involving over 225,000 patients or potential patients. On average, EMS responds to a citizen every 3 minutes. Each EMS response is made by one of 88 City of Houston EMS vehicles. Thirty seven of these are staffed by two paramedics and provide Advanced Life Support (ALS) capabilities. EMS services benefit all Houston residents, and frequently, support those most in need, such as low income mothers and children, the elderly, and Medicaid and minority populations. The telehealth program population is expected to consist of approximately 30% Medicaid enrollees and approximately 20% from the indigent population.

<u>Intervention(s):</u> The City of Houston proposes to make use of telecommunications technologies and connectivity to triage patients with non-life threatening, mild or moderate illnesses via telemedicine with an emergency physician at the City of Houston EMS base station. The clients served will be evaluated on site by Houston Fire Department (HFD) - Emergency Medical Technicians (EMT) and/or paramedics, and if appropriate directed to the Emergency Tele Health and Navigation (ETHAN) Program where they will receive a physician assessment, referrals and follow-up care coordination to assure that they receive appropriate care at the right setting. This new program intends to address 25,000 patients/year in DY4 and 5.

<u>Need for the Project:</u> Rising costs of treating patients with non-emergent conditions that access health care at the ER are well documented. Telehealth provides a viable alternative to direct patients with non-life threatening, mild or moderate illnesses, who would have otherwise been transported to an ED for evaluation.

<u>Target Population:</u> This new program will target callers to 9-1-1 who may be more appropriately served in a setting other than the emergency room**.**

<u>Category 1 or 2 expected patient benefits:</u> Improve by 5% over baseline the percentage of patients using community based nursing, case management, patient education, counseling services for the first time in DY4 and by 10% over baseline in DY5, due to the ETHAN program.

<u>Category 3 outcomes:</u> **IT-9.4: (**ED appropriate utilization) - Reduce all ED visits that are non-emergent among 911 callers by 5% over baseline in DY4 and by 10% over baseline in DY5.

Project Option 1.7.7 - Implement remote patient monitoring programs for diagnosis and/or management of care for EMS services: Emergency Telemedicine and Navigation (ETHAN)

Unique Project ID: 0937740-08.1.2
Performing Provider Name/TPI: City of Houston Department of Health and Human Services &Houston Fire Department (HFD)-EMS /0937740-08

Project Description:
The City of Houston proposes to make use of telecommunications technologies and connectivity to triage patients with non-life threatening, mild or moderate illnesses via telemedicine with an emergency physician at the City of Houston EMS base station. The physician will then determine the most appropriate next step for the patient.

This new program will target callers to 9-1-1 who have been evaluated on site by Houston Fire Department (HFD) - Emergency Medical Technicians (EMT) and/or paramedics, and if appropriate, these callers will be directed to the Emergency Tele Health and Navigation (ETHAN) Program. Seriously or critically ill or injured patients will be treated according to current standard operating procedures and transported to an emergency department (ED). Patients with non-life threatening injuries requiring prompt attention beyond the scope of an EMT or paramedic (severe laceration or apparent fracture) will be transported to an ED. The patients with non-life threatening, mild or moderate illnesses, who would have otherwise been transported to an ED for evaluation, will instead have their case presented via telemedicine to an emergency physician located at the City of Houston EMS base station. The telehealth physician in the ETHAN program will determine the most appropriate next step for the patient. Depending on what the physician decides he or she may offer the patient: 1) taxi transportation to an ED, 2) ambulance transportation to an ED, 3) an appointment the next business day at a federally qualified health care center (FQHC), along with taxi transportation, 4) an appointment the next business day at the patients usual place of primary care, provided the local health care providers participate in this project, along with taxi transportation or 5) homecare instructions with direction to follow-up with the patient's primary care physician.

Houston Fire Department (HFD) ambulances will be equipped with ruggedized iPads (or similar device) to transmit audio-visual communication using wireless Wi-Fi technology to the base station. The Emergency Medical Technicians (EMT) or paramedic will present the patient's history, chief complaint and vitals directly to the physician. The emergency physician will be able to speak directly to and visualize the patient. The patient will also be able to see and speak directly to the physician. If the physician needs additional physical exam findings he or she may request that the EMT or paramedic do the required exam (within their scope of practice).

Clients with a non-life threatening mild or moderate illness who are not referred to the emergency room by the base station physician will be referred to the CareHouston Links program for follow-up of the plan recommended by the physician. CareHouston Links personnel will follow-up with the client within a few hours in order to ensure that the plan is appropriate and achievable. Necessary adjustments to the plan would then be made between the client and navigator. On the following business day, Care Houston Links counselors will follow-up with the patient to determine if the patient in fact followed the advice provided by the physician and navigator, or failed to follow the advice. In situations where the client followed the advice, the

counselor will work with the client and their health care provider to ensure continued compliance with the health care plan. In situations where the client failed to follow the advice, the counselor will determine and record what actually happened and the reasons why. They will also troubleshoot the issues that lead to the failure and work with the client to develop a relationship with an acceptable medical home and health care plan.

ETHAN would initiate care coordination services for 25,000 patients/year by more accurately assessing the 9-1-1 caller's needs and utilizing low cost transportation opportunities to provide the patient more appropriate care in a more appropriate setting than the emergency center. In order to be maximally successful, multiple primary care providers, such as FQHC's, other low cost or publically supported health care clinics, and eventually ACO affiliated physician offices and clinics would need to participate. With adequate provider participation, most non-emergent callers to 9-1-1 can be redirected to the source of health care most appropriate for their level of need. Additional savings would include all direct costs currently incurred to pay for ambulance transportation and emergency department evaluation (potentially unnecessary X-rays, laboratory testing, physician and nursing care costs), as well as the many indirect costs that result from the patients being non-compliant with the overall care plan when they choose to utilize emergency services instead of primary care for primary care problems. The ETHAN program will be implemented city wide in Houston, Texas.

According to a 2008 report from the University of Texas School of Public Health, ER visits related to primary care were rising in Harris County. In 2008, 10.8% of all primary care related ED visits arrived by ambulance transport and 20.9% of all other ED visits arrived by ambulance. The percentage of all ambulance transports that were for a primary care related ED visits was highest among CHIP enrollees (32.5%), followed by Medicaid enrollees (28.2%), and the uninsured (22.4%). The greatest total ambulance transports to the ED were among Medicare enrollees at 53,071 (Table 9, Figure 19).[1] (https://sph.uth.edu/research/centers/chsr/hsrc/).

The ETHAN program will also have a Quality Improvement process in place. The program will institute Plan-Do-Check Act process where the telehealth intervention will initially be administered to a small number of enrolled target population. The goal of continuous quality improvement is to establish a cyclical, continuous process of planning, assessing, monitoring, analyzing, measuring and evaluating performance to improve desired outcomes. At each step and all decision points in the program, detailed records will be kept so that improvements can be made on a continuous basis. Revisions in protocol, retraining of staff and revisions in procedures may be necessary during the initial phase to refine and improve the program early on in the program.

Goals and Relationship to Regional Goals:

The goal of this program is to reduce emergency room transports by ambulance for non-emergent conditions.

Project Goals:

1. Reduce the number of non-emergency ambulance transports
2. Reduce the number of non-emergency ED visits
3. Increase the number of clients appropriately linked to a medical home
4. Increase the number of clients consistently using their medical home
5. Reduce the need for hospitalizations and improve the quality of life of clients

This project meets the following regional goals:

- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
- Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system.

Challenges:

1. The project will actively seek cooperative arrangements with primary care providers to assure access to care is provided in the timeframe recommended by the EMS referring physician. This will require active engagements of primary care providers such as federally qualified health centers, public health systems and private providers of care for patients who seek EMS services via 9-1-1.
2. Getting the public to accept the advice of the physician directing them to a more appropriate and cost effective source of health care other than the emergency department. The CareHouston Links program will provide a personal contact with clients which will help patients understand and act on the advice of the referring physician.

5 Year Expected Outcome for Providers and Patients:

ETHAN will result in a reduction in the number of non-emergency EMS transports and ED visits in high 911 call volume zip codes and will facilitate appropriate use of the health care system for non-emergent 911 callers.

Starting Point/Baseline:

Houston Fire Department EMS Division (FY 2012):

EMS Incidents	239,689
EMS events involving patient transports	127,639
Non-emergency transports	102,112
EMS patients transported to the hospital	136,723

Current data shows that there are over 100,000 non-emergency transports. Certain zip-codes have a high percentage of 911 calls. The non-emergency ER transports is expected to decline in the high volume zip codes due to the ETHAN Program. Because this is a new initiative, we will establish a beginning baseline by Yr 3.

Rationale:

This program provides care coordination, by more accurately assessing the 9-1-1 caller's needs via telemedicine and utilizing low cost transportation opportunities to provide the patient more appropriate care in a more appropriate setting than the emergency center. The performing provider and its partners expect to see a reduction in ER usage among non-emergent 911 callers by using telecommunications technologies and connectivity linked with a patient navigation program (CareHouston Links). The MedStar program, a similar program in the Dallas/Fort Worth area, showed large declines in ED charges and costs due to the Medstar program. The number of calls from repeat callers dropped from 342.3 per month to 143.3 per month among the

DRAFT

186 repeat callers that were enrolled in the program. This saved Medstar over $900,000 in transportation costs and hospital charges fell by $2.8 million. During Fiscal Year 2012, the current CareHouston program, which is similar to the MedStar program and which is a partnership between the HFD and HDHHS to follow-up on frequent 9-1-1 callers, diverted 1,458 clients from using EMS transports to emergency departments for non-emergencies, diverting $2,143,260 in costs for the City of Houston.

There are two major ways this program will be able to demonstrate cost savings to the Health Care System:

1. Diverted ambulance transports
2. Diverted emergency department visits for non-emergencies.

The average cost of a Houston ambulance transport is $1,470. Per the American Hospital Association one ED visit costs approximately $1,318.It is estimated that approximately 48 ambulance transports will be able to be diverted per day. Additional savings would include all direct costs currently incurred to pay for ambulance transportation and emergency department evaluation (potentially unnecessary X-rays, laboratory testing, physician and nursing care costs), as well as the many indirect costs that result from the patients being non-compliant with the overall care plan when they choose to utilize emergency services instead of primary care for primary care problems.

Project Components: There are no required project components for this project option. However, this project will include conduct quality improvement for all aspects of the project. Activities will include Identifying project impacts, "lessons learned" to adapt and scale the program to the local context. Additionally, enhanced telehealth services will be explored based on lessons learned.

Unique Community Need identification numbers that project addresses:

- CN.1- Inadequate access to primary care 2,3
- CN.8- High rates of inappropriate emergency department utilization 2,3

How the Project represents a new initiative or significantly enhances an existing delivery system reform initiative:

Currently the Houston Fire Department uses the Alternate Transportation Program which allows field personnel (EMT's and paramedics) to connect low acuity patients with a paramedic at the centralized base station via telephone where the paramedic interrogates the patient utilizing a telehealth nurse triage algorithm to determine if alternatives to ambulance transportation to an emergency department is safe. Using City of Houston funds through a contract with the Harris County Healthcare Alliance, this program currently financially supports taxi cab transportation and clinic costs (one time only) for patients to be seen at a Houston area federally qualified healthcare center (FQHC). The program is poorly utilized by field personnel for three reasons:

a) The telehealth nurse triage algorithm is designed for a non-emergency setting application and is extremely conservative resulting in a high frequency of recommendations for emergency department evaluation.
b) The interrogation required is time consuming and inefficient
c) The public is unfamiliar with the concept and is not trusting of a non-physician on a telephone giving them advice.

ETHAN is a new program which will replace the Alternative Transportation program which will utilize an emergency physician via technology to assess and determine a recommended course of health care for patients seen by EMTs and paramedics. This program will result in patient's receiving advice from an actual physician who is located at the base station, service does not currently exist.
In addition to having access via technology to a physician, patients will also be referred and followed up by a patient navigator via the Care Houston Links program. Currently the existing Care Houston program only serves frequent 9-1-1 callers. Currently the Houston Fire Department refers persons who call 9-1-1 greater than 3 times in a 3 month period to the Care Houston Program operated by the Houston Department of Health and Human Services. The program is staffed by counselors, navigators, and public health nurses who reach out to the individuals referred through phone, mail, or home visits. Clients are assessed to determine underlying problems such as lack of education regarding health condition, transportation, or any other unmet need. Residents and families are educated about their health and medical condition, the proper use of the EMS system, alternate transportation services and any other unmet needs. ETHAN will provide all clients who do not need to make visits to an emergency room department with access to a care navigation program through the new Care Houston Links program. Care Houston Links staff will assure that clients are connected to medical homes and other needed services. Linking, assessing and referring clients to appropriate services will reduce their need to use emergency services.

Related Category 3 Outcome Measures

OD- 9 Right Care, Right Setting
IT-9.4 Other Outcome Improvement Target (ED appropriate utilization of non-life threatening, mild or moderately ill911 callers)
Rate: Non-life threatening, mild or moderately ill 911 callers connected to further medical care/follow-up during the project year
Reasons/Rationale for selecting the outcome measures:
We chose the outcome measure of inappropriate ED usage in the "Other Outcome Improvement Target" category. By providing access to Telehealth services, this program aims to reduce inappropriate ER usage of non-life threatening, mild or moderately ill 911 callers by telehealth and care coordination; by more accurately assessing the 911 caller's needs to provide the patient more appropriate care in a more appropriate setting than the emergency room. In order to be maximally successful, partnerships with multiple primary care providers, such as FQHC's, other low cost or publically supported health care clinics, and eventually ACO affiliated physician offices and clinics will be needed. With their participation, most non-emergent, non-life threatening, mild or moderately ill 911 callers can be redirected to the most appropriate source of health care.

Relationship to other projects: This project is related to CareHouston Links. This project's focus is on providing appropriate care to non-emergent patients that enter the 911 call system due to a variety of reasons in addition to those callers with non-life threatening, mild or moderately illnesses. By keeping the patients from making an unnecessary ER visit, and providing culturally competent navigation services to redirect patients to an alternate source of care, savings to the health care system per patient will be considerable.

Relationship to other Performing Providers' Projects and Plan for Learning Collaborative:
We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

A primary focus of the waiver as well as our region is ensuring appropriate emergency department utilization for our patient base. The lack of primary care, specialty care, and behavioral health treatment currently creates congestion in the emergency departments thus increasing cost and comprehensive treatment of patients with chronic conditions. The ED initiatives focus to outcomes of readmission rates, appropriate ED utilization, and patient satisfaction and all initiative relationships can be found on the Region 3 initiative grid in the addendum.

Project Valuation:

HDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs 4)Cost Avoidance 5) Partnership Collaboration and 6)Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease , 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

HDHHS gave the Prioritization score a weight of 25% and the Public Health Impact score a weight of 75% to determine the overall project value for the plan. The ETHAN Program received a composite Prioritization score of 7.15 and a Public Health Impact score of 8.

0937740-08.1.2	1.7.7	N/A	PROJECT TITLE: Emergency Telemedicine and Navigation (ETHAN)

City of Houston Department of Health and Human Services

Pass 3

Project Option - 1.8.11 The implementation of dental services for individuals in long-term care facilities, intermediate care facilities, and nursing homes, and for the elderly, and/or those with special needs by enhancing dental workforce capacity through collaborations and partnerships with dental and dental hygiene schools, LHDs, FQHCs, and/or local dental providers

Unique Project ID: 0937740-08.1.1

Performing Provider Name/TPI: City of Houston Department of Health and Human Services/0937740-08

Project Summary: Provider: The performing provider, Houston Department of Health and Human Services (HDHHS) is the public health authority for Houston, Texas, the fourth largest city in the U.S., with a population of 2.1 million in 2010. Established in 1840, HDHHS has grown to a department of 1,100 employees. HDHHS provides core public health services to all Houston residents such as air and water quality monitoring; restaurant inspections; lead paint safety; cancer screening and family planning for the uninsured; communicable disease prevention and control; disease surveillance; birth and death certificates; leadership in emergencies such as hurricanes; services to seniors; WIC programs; immunizations; and others. HDHHS operates 11 multi-service centers, 4 health centers, 14 WIC (Women, Infants and Children nutrition program) sites, the Harris County Area Agency on Aging, a comprehensive regional reference laboratory, and 44 health and human service programs. While HDHHS provides services that benefit all Houston residents, the department also takes additional steps to support those most in need, such as low income mothers and children, the elderly, and minority populations.
Intervention(s): This new project will improve oral health by providing diagnostic, preventive, restorative, and surgical oral health services for the elderly to improve the health and quality of life for Houston area at-risk seniors. Training the next public health work force is also a goal of the program. 4th year dental students from the University of Texas School of Dentistry (UTSD), dental hygiene students from UTSD, and dental hygiene students from Houston Community College (HCC)will be trained to provide dental care for the seniors within one of the HDHHS safety net dental clinics,

Need for the Project: By 2040, the number of US seniors, over the age of 65, is expected to double to 71 million. By 2030, the number of seniors, over the age of 85, is expected to be 9.6 million. As the US seniors live longer, many will be retaining their teeth and many will experience co-morbidities.). Older persons who live below the poverty line were almost three (3) times as likely to report unmet dental needs as those who live at or above the poverty line (11 and 4 percent, respectively).
Target Population: The primary target population will be at risk seniors seen at public clinics and FQHC's.
Category 1 or 2 expected patient benefits: [I-14] Increase by 5% over baseline of special population members that access dental services in DY4 and by 10% over baseline in DY5.
Category 3 outcomes: IT-7.8: Increase by 5% over baseline percentage of patients with chronic disease conditions accessing dental services following referral by their medical provider in DY4 and by 10% over baseline in DY 5.

1.8.11 The implementation of dental services for individuals in long-term care facilities, intermediate care facilities, and nursing homes, and for the elderly, and/or those with special needs by enhancing dental workforce capacity through collaborations and partnerships with dental and dental hygiene schools, LHDs, FQHCs, and/or local dental providers.

Unique Project ID: 0937740-08.1.3 / Pass 3
Performing Provider: City of Houston Department of Health and Human Services/ 0937740-08

Project Description:
The Houston Health and Human Services (HDHHS) proposes to a) provide ongoing diagnostic, preventive, restorative, and surgical oral health services for the low income at-risk elderly in the community; b) provide oral health services for previously screened elderly patients from Area Agency on Aging, Harris Health System, and area Federally Qualified Health Centers; and c) link more elderly to a dental home.

Many older Americans do not have dental insurance. Often these benefits are lost when they retire. The situation may be worse for older women, who generally have lower incomes and may never have had dental insurance. By providing diagnostic, preventive, restorative, and surgical oral health services for the elderly, the HDHHS will improve the health and quality of life for Houston area at-risk seniors. The HDHHS currently contracts with the Harris County Area Agency on Aging (HCAAA) to provide limited dental care for at-risk seniors. In efforts to train the next public health work force, 4th year dental students from the University of Texas School of Dentistry (UTSD), dental hygiene students from UTSD, and dental hygiene students from Houston Community College (HCC) provide dental care for the seniors within one of the HDHHS safety net dental clinics. It is critical for the up-coming work force to be prepared to serve this population. By 2040, the number of US seniors, over the age of 65, is expected to double to 71 million. By 2030, the number of seniors, over the age of 85, is expected to be 9.6 million. As the US seniors live longer, many will be retaining their teeth and many will experience co-morbidities.

In 2013, the HDHHS will provide oral health services at-risk seniors, in conjunction with UTSD and HCC students, in a first time endeavor with HCAAA and neighboring Fort Bend County Area Agency on Aging. The UTSD has already donated dental chairs for this initiative.

Cost savings are realized with prevention. At-risk seniors, having a history of oral health neglect and dry mouth issues, often present with chronic oral health problems, e.g., caries, non-restorable teeth, and lesions, and an inability to chew healthy foods. To assist these seniors from poor oral health to improved oral health can be costly. However, once better oral health is realized and with proper guidance, cost-effective preventive care can ensue. Early detection of oral cancers has shown to be cost effective. At a cost of $84/person/year, significant health benefits and cost savings can be realized. The earlier a cancer is detected, the better the outcome, and the treatment, if needed, is less costly as well. The cost of screening and early detection is approximately 46% less than treatment alone, e.g., $260,351 vs $478,742.

Quality of life is compromised as one ages and takes on chronic debilitating conditions. Rates of depression increase from 1 – 13.5%, as a person ages and moves from an independent to a more dependent situation. Optimal oral health results in an improved quality of life which includes the ability to eat nutritious food, to swallow, to breathe, to speak, to enjoy social interaction, to optimize self-esteem and self-image. Without these valued qualities, it can lead to chronic stress, depression, and economic costs. If we can maintain a healthy condition, costs associated with mental health treatment and dependent care can be reduced.

In general, socioeconomic characteristics play a significant role in who receives dental care. Overall, persons with more than a high school education are twice as likely to have visited the dentist in the past year than were persons with less than a high school education. Non-Hispanic whites were also much more likely to have visited a dentist than were racial/ethnic minorities. (CDC, http://www.cdc.gov/nchs/data/ahcd/agingtrends/03oral.pdf). Older persons who live below the poverty line were almost three (3) times as likely to report unmet dental needs as those who live at or above the poverty line (11 and 4 percent, respectively). 15 Persons from lower socioeconomic groups are also more likely to report having untreated cavities.16 The greater need for dental care among older persons at low socioeconomic levels is coupled with their lower level of private insurance coverage, which leaves this group at a significant disadvantage compared with those at higher socioeconomic levels.[1]

Goals and Relationship to Regional Goals:

The goal of this project is to partner with dental providers, dental and dental hygiene schools, Harris Health System, area FQHCs, and other stakeholders to provide services for underserved population who are at risk for poor oral health. The primary goal is to close gaps in access to dental care in certain sub-population groups. The target population addressed for this project will be the elderly, many of whom also suffer from other chronic conditions. This is directly related to the regional goal of alleviating dental health disparities by provision of access to dental care. By enhancing access to Preventive Care in high risk populations, a long term investment in oral health ensues.

Project Goals:

The overall goal of this program is to improve oral health in underserved seniors.

- Close gaps/disparities in access to dental care services

This project meets the following regional goals:

- Increase access to primary and specialty care services, with a focus on underserved seniors, to ensure patients receive the indicated dental care for their condition, regardless of where they live or their ability to pay.
- Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system.

Challenges:

Some of the challenges the provider anticipates follow:

1) Developing an efficient and effective referral process: For dental procedures beyond the HDHHS' scope of services, refer to Harris Health System and UTSD for oral surgery, UTSD School of Dentistry for Endodontics and Periodontics.

2. Identifying sustainable funding stream
3. Identifying and hiring trained dentists

5 Year Expected Outcome for Providers and Patients:
As the primary provider, the HDHHS expects to see a reduction in number of elderly patients who present with poor oral health. Due to the comprehensive nature and scope of the program, oral health in underserved areas is likely to improve among high-risk populations.

Starting Point/Baseline:
Currently, no comprehensive program exists that targets improvement in oral health of elderly living in the community in underserved areas. Baseline will be established by the end of in DY 3 of the project for proportion of elderly that are seen by program.

Rationale:
Oral disease is common in the underserved population. Oral disease can result in poor nutrition; serious systemic illnesses and conditions such as poor birth outcomes, diabetes, and cardiovascular disease; and a diminished quality of life and life expectancy. Inadequate access to oral health services compounds other health issues. It can result in untreated dental disease that not only affects the mouth, but can also have physical, mental, economic, and social consequences. Fortunately, many of the adverse effects associated with poor oral health can be prevented with quality regular dental care, both at home and professionally. Increasing, expanding, and enhancing oral health services to the elderly will improve health outcomes. As with other health issues, older people have very different oral health needs to children and younger adults. They are more likely to take medication that causes dry mouth, leading to tooth decay and infections of the mouth. More than 400 commonly used medications — many of them for chronic conditions to which the elderly are susceptible — can dry out the mouth.

Nearly one-third of persons 65 years of age and older have untreated dental caries. Slightly more than one-half of non-institutionalized persons 65 years of age and older in 1997 had a dental visit in the past year. Oral health problems can hinder an elderly person's ability to be free of pain and discomfort, to maintain a satisfying and nutritious diet, and to enjoy interpersonal relationships and a positive self-image. Overall, oral health problems are more frequently found in an older adult population for whom other health problems are often a priority.http://www.cdc.gov/nchs/data/ahcd/agingtrends/03oral.pdf).

Project Components:
This project has no required core components. Major features of the project include:

a) Increase dental services for at-risk and low income elderly who have limited or no access to dental care services.
b) Partnership with UTSD, Harris Health System and local dental providers to provide enhanced services to target population.
c) Connect all elderly patients to a dental home.

Due to the performing provider's experience and established networks in serving low income population, this program will benefit from these experiences and community partnerships. Nevertheless, program processes will be refined and improved through a Plan-Do-Check-Act process. The goal of continuous quality improvement is to establish a cyclical, continuous process of planning, assessing, monitoring, analyzing, measuring and evaluating performance to improve desired outcomes. It is expected that revisions to the protocol, training requirements, partnership processes and expectations will need to be clarified on a regular basis. These will be improved through the PDSA process. Initial program enrollment of a small number of target population will iron out program weaknesses and allow for a continuous quality improvement process.

Unique community need identification numbers that project addresses:

- CN.4 Inadequate access to dental care
- CN.22 Insufficient access to services that are specifically designed to address racial, ethnic and cultural health care disparities

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:
Currently there are very few programs that provide comprehensive population based dental health care for underserved older adults. This program will provide dental care for at-risk and low income elderly who have limited or no access to dental care. This programs aims to close gaps/disparities in access to dental care services and enhance the quality of dental care as well as build capacity in the region by training providers. The project will also expand service capacity in safety net geriatric oral health services for elderly provided within an HDHHS safety net dental clinic.

Related Category 3 Outcome Measures:
OD-7 Oral Health
IT-7.8 Chronic Disease Patients Accessing Dental Services: Percentage of patients with chronic disease conditions accessing dental services following referral by their medical provider.

Reasons /rationale for selecting the outcome measures:
The primary outcome measures chosen for this project are increase in number of elderly patients with chronic diseases who access dental care through the program. Multiple comorbidities may place this target population at an even higher risk for complications if they also suffer from poor oral health. By providing dental care and connecting these patients to a dental home, the performing provider expects to see improved oral health in the patients who access this program.

Relationship to Other Projects and Plan for Learning Collaborative:
Project results and lessons learned will be disseminated and shared with other members in the regional learning collaborative in efforts to identify and implement quality improvement strategies. We plan to participate in a region-wide learning collaborative as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region, that have similar projects, will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous quality improvement in our Region's healthcare system.

Dental services for adult and children are currently underfunded and incomplete in access for the targeted patient base. The dental initiatives represented in the RHP plan are specific to community need and location of the patients to ensure strong access to treatment. The outcome measures focus on the reduction of emergency room utilization, patient satisfaction, as well as increase access to the service line. The Region 3 initiative grid in the addendum directly reflects all relationships of dental initiatives.

Project Valuation:

The HDHHS utilized two categories to calculate value for each DSRIP project. The first category is Prioritization and the second is Public Health Impact (see attachment for HDHHS Valuation Tool). HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Prioritization category. The Prioritization category includes the following factors: 1) Transformational Impact, 2) Population Served / Project Size, 3) Alignment with Community Needs, 4) Cost Avoidance, 5) Partnership Collaboration, and 6) Sustainability. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Prioritization category.

Public Health includes activities which seek to achieve the highest level of health for the greatest number of people. Public Health also focuses on preventing problems from happening or re-occurring through programs and activities that promote and protect the health of the entire community. As a public health department, HDHHS added an additional valuation category of Public Health Impact that looked at projects through a public health lens. The Public Health Impact category includes the following factors: 1) Alleviate Health Disparity, 2) Control Communicable and Chronic Disease , 3) Prevention Orientation, 4) Population Health Focus, 5) Access and Connection to Health Services and 6) Evidence Based Health Program. HDHHS scored the project on a scale of 1 (poor) to 9 (exceptional) for each of the six factors that comprise the Public Health Impact category. Each factor was then given a weighted score based on the score rated and a pre-determined percentage weight. The six weighted scores were added to get a composite score for the Public Health Impact category.

The HDHHS gave the Prioritization score a weight of 50% and the Public Health Impact score a weight of 50% to determine the overall project value for the plan. Geriatric Oral Health received a composite Prioritization score of 1.88 and a Public Health Impact score of 1.88.

Columbus Community Hospital

Pass 1

Project Option 1.7.1 - Implement Telemedicine Program to Provide or Expand Specialist Referral Services in an Area Identified as needed to the region

Unique RHP Project Identification Number: 135033204.1.1.

Performing Provider/TPI - Columbus Community Hospital (CCH)/135033204

Project Description Summary:

Provider: Columbus Community Hospital is a 40-bed hospital in Columbus, Texas serving a 25 square mile area and a population of approximately 21,000.

Intervention(s): This project will implement telemedicine to provide clinical support and patient consultations by a pharmacist after hours and on weekends to reduce medication errors.

Need for the project: We currently only have a pharmacist onsite 40 hours per week and have noticed an increase in inpatient admissions, many of which are related to medication errors.

Target population: The target population is our patients that need medication consults after hours. Approximately 70% of our patients are either Medicaid/Medicare eligible or indigent, so, a significant benefit is expected for the patients as well as for the Medicare/Medicaid programs.

Category 1 expected patient benefits:

The project seeks to reduce medication areas by 3% in year 3, additional 3% in year 4 and additional 4% in Year 5.

The project seeks to provide 150 telemedicine consults in DY4 and 200 in DY5.

Category 3 outcomes: IT-6.1 Our goal is to reduce the 30-day potentially preventable all-cause current readmission rate of 21.4% by 1% in year 2, an additional 1% in year 3, an additional 2% in year 4, and an additional 2% in year 5.

Project Option 1.7.1 - Implement telemedicine program to provide or expand specialist referral services: Implement Telemedicine Program to Provide or Expand Specialist Referral Services in an Area Identified as needed to the region

Unique RHP Project Identification Number: 135033204.1.1.

Performing Provider/TPI - Columbus Community Hospital (CCH)/135033204

Project Description:

Improve patient safety through improving pharmacist oversight of prescriber orders by implementing telemedicine/telehealth patient consultations.

CCH is a 40-bed not-for-profit general hospital located in Columbus, Texas. Its service area of 25 square miles includes a population of approximately 21,000. The city of Columbus has a population of 3,900 and is located in Colorado County. Columbus is near Interstate 10 between San Antonio and Houston, Texas.

Colorado County has a median household income of $36,295 which is considerably lower than the income rate of the State of Texas which is $48,259. The county faces several healthcare problems and adult diabetes is one of them with a rate of 10.8%. Adult obesity rate is at a high rate of 28.2%. Another alarming factor is the low income preschool obesity rate at 14.6%. Heart disease is at a high rate of 234.8 compared to the State average of 186.7. Cancer is at a disturbing rate of 190.2 and the State rate is 167.6. As a result of these alarming statistics CCH is confronting with two major factors. First, there is a significant growth in the number of inpatient admissions and second a new EHR went live on February 1, 2012. Based on the above information there is a need to reduce medical errors in the pharmacy area. Presently we have a pharmacist five days a week, Monday – Friday only. We will be adding an offsite pharmacist capability via telemedicine for the weekends starting with four hours per day and expanding to eight hours per day. This type of telemedicine will be a cost effective alternative to adding a full time pharmacist in house on the weekends. Columbus Community Hospital has identified project 1.7., Introduce, Expand, or Enhance Telemedicine/Telehealth, that will provide patient consultations by health professionals (pharmacists) using telemedicine.

Goals and Relationship to Regional Goals:

Project Goals:

Provide electronic health care services to increase patient access to health care.

Telemedicine is viewed as a cost-effective alternative to the more traditional face-to-face way of providing medical care.

Provide pharmacy service for weekend hours not currently available for inpatients.

This project meets the following Region 3 goals:

Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

Challenges:

Finding and contracting with a Pharmacy consulting company to provide telehealth services needed. This challenge was addressed by requesting current pharmacy providers to expand services offered to include this telemedicine service.

Incorporating the telemedicine procedure into the workflow and thereby changing the culture for the employees. This will be addressed by additional education for the pharmacy staff and nursing staff.

Without a Pharmacist on duty, there are a higher number of medication errors in hospitals. The challenges are from medications the patient was on prior to admission, to equivalent medications stocked by the admitting hospital, the administration of these different medications by pharmacy staff and errors upon dismissal.

5 Year Expected Outcome for Provider and Patients:

We expect to see a reduction of medical errors by 4% by DY5.

Starting Point/Baseline:

As of March 31, 2012 Columbus Community Hospital had a medication error rate of 16.4% and there is no pharmacy weekend coverage. This will be used as the baseline.

Rationale:

Columbus Community Hospital wants to improve patient safety through improving pharmacist oversight of prescriber orders. The use of remote service will increase the percentage of orders that are reviewed prospectively prior to initiation of therapy or decrease the amount of time between initiation of therapy and retrospective pharmacist order review. Remote pharmacists will perform a drug regimen review of all patients (including psychiatric and pediatric patients), that will include review for allergy contraindications; reasonable dose (special scrutiny of pediatric patients), route and directions for use; drug/drug, drug/food, and drug/disease interactions; and therapy duplications. Remote pharmacists will make clinical interventions to address any identified issues and to clarify orders. The pharmacist will intervene to make dosage adjustments for renal, vancomycin, aminoglycoside or other dosage recommendations. Pediatric doses can be assessed and a double check performed by a pharmacist for increased patient safety.

More timely review of orders will help prevent near misses from becoming medication administration errors. Adverse drug reactions will be identified and reported. Remote pharmacists can assist with cost containment by assisting with conversion of IV to bioequivalent oral therapy, identification and use of patient's own medication, and recommendations for non-formulary to formulary agents.

From the American Society of Healthcare Pharmacists': Review of medication orders. All medication orders shall be prospectively reviewed by a pharmacist and assessed in relation to pertinent patient and clinical information before the first dose is administered or made available in an automated dispensing device, except in emergent situations in which the treatment of the patient would be significantly compromised by the delay that would result from pharmacist review of the order. There shall be a procedure for retrospective review of these orders. Any questions regarding an order shall be resolved with the prescriber prior to administration, and any action taken as a result of this intervention should be documented in the patient's medical record. Information concerning changes shall be communicated to the appropriate health professionals caring for the patient.[69]

Patient counseling will be provided by the remote pharmacist utilizing audio-visual communication. This will allow the patient to interact with the pharmacist for a one-on-one dialogue to provide information and answer any questions the patient may have to increase medication therapy compliance. In summary, remote services will increase patient safety through more timely review of prescriber orders.

Project Components:

Through the Columbus Telemedicine Project (1.7.1) we will implement telemedicine to provide patient consultations by pharmacists and propose to meet all project core components as listed below:

Provide patient consultation by medical and surgical specialists as well as other types of health professionals using telecommunications

Conduct quality improvement for project using methods such as rapid cycle improvement. Activities include but are not limited to identifying project impacts, identifying lessons learned

Opportunities to scale all or part of the project to a broader patient population, and identifying key challenges associated with expansion of the project, including special considerations for safety-net populations

Milestones and Metrics:

[69] (American Society of Hospital Pharmacists, ASHP technical assistance bulletin on hospital drug distribution and control. Am J Hosp Pharm. 1980; 37:1097–103.)

The following milestones and metrics were chosen for the Telemedicine Project based on the core components and the needs of the target population:

Process Milestones and Metrics: P-4 (P-4.1, P-4.2)

Improvement Milestones and Metrics: I-12 (I-12.1)

Unique community needs identification numbers:

CN 2. – Insufficient access to specialty care (pharmacist)

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:

This project represents a new initiative for our hospital. We will implement telemedicine to provide oversight and guidance to our patients for pharmacy services after hours and on weekends and supports our efforts to reduce medication errors.

Related Category 3 Outcome Measure

OD 3 Potentially preventable readmissions – 30 day readmission rates

IT-3.1 All-cause 30 day readmission rate – readmissions will be reduced thereby reducing hospital's 30 day readmission rate

Reasons/rationale for selecting the outcome measures:

It is important to expand telemedicine to areas where greatest need and highest potential for impact is demonstrated in order to have optimal effect. There is a direct relationship between higher medication errors and readmission. It is the goal to reduce medication errors using the telehealth technology and thereby reducing readmission factors.

Relationship to other Projects:

Columbus Community Hospital contracts with Hunter Pharmacy for pharmacists and pharmacy technicians. This project is being implemented in other small and rural hospitals around the state through the same vendor. This will allow for collaborations with other hospitals as the workforce is often shared and ideas are circulated by the district manager to encourage improvements in the process and performance at each hospital. CCH is only doing one project and is contracting with Hunter Pharmacy.

Relationship to Other Performing Providers' Projects in the RHP:

An innovative approach to increasing access to primary care and specialty care has been created by the miracles of the internet and computer systems. Telemedicine is leading edge for those communities who cannot easily access behavioral health or specialty care due to remote locations, lack of physicians, or urgency of encounter needs. Numerous telemedicine projects have been proposed, as seen in the Region 3 Initiative grid in the addendum, and all focus to outcomes such as appropriate emergency department utilization, 30-day readmission rates, and patient satisfaction scores.

Plan for Learning Collaboration:

We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

Utilizing Telemedicine for the services of a adding a professional pharmacist during times when none has been available in the past will assist in more timely care and administration of medication for inpatients and thereby increase the quality of patient outcomes and satisfactions. The results will be lower medication errors and subsequently reduce readmission rates to the hospital.

Between 2015-2010, $10,877,459 of hospital charges was potentially preventable according to the Texas Department of Health Services. In the second quarter of 2012 the readmission rate for Columbus Community Hospital surpassed the 80th percentile at 21.4% for 30 day readmission for short term care. These above statistics along with admissions increasing in the short term because of a closure of a nearby hospital (Colorado Fayette) make this project is an identified need for our community.

Columbus is a rural community with 44.8% of the population over the age of 45. Unplanned readmissions are difficult for the adult and geriatric population and reducing rate of unnecessary admissions. This project has important benefits to the community at large.

Fort Bend County Clinical Health Services

Pass 1

DRAFT

Project Summary – Fort Bend County 2967606-01 1.1
Development of behavioral health crisis stabilization services as alternatives to hospitalization – Behavioral Health Crisis Response and Intervention

Provider: Fort Bend County Clinical Health Services is a division of the Fort Bend County Health & Human Services Department (FBCHHS), the local health department for the County. Fort Bend County is located in the Houston metropolitan area of southeast Texas. It encompasses a total of 875.0 square miles (562,560 acres). The current population is estimated at almost 607,000. FBCHHS services include: Animal Services, Clinical Health Services, EMS, Environmental Health, Social Services, Veterans Services and Public Health Preparedness. Fort Bend County also has a Behavioral Health Services program.

Intervention: Fort Bend County (FBC) proposes to develop a crisis system that better identifies people with behavioral health needs, responds to those needs and links persons with their most appropriate level of care. The FBC project will include: (1) assessment and enhancement of 911 dispatch system to identify and respond to behavioral health crises, (2) development of a specialized crisis intervention team (CIT) within Fort Bend County Sheriff's Office, and (3) implementation of cross systems training and linkages to appropriate services and supports.

Need for the project: First responders have become the default interveners for behavioral health crises in FBC, with limited options for these patients. The majority of persons experiencing a behavioral health crisis in FBC access assistance through the 911 system. In 2011, FBC Emergency Medical Services (EMS) responded to 1, 171 mental health crisis calls, representing almost a 100% percent increase in the past 6 years. In most cases, multiple entities respond to behavioral health crises that often result in transportation to an emergency room or the FBC jail.

Target population: Persons in FB County experiencing a behavioral health crisis at risk of incarceration. The majority of these patients are uninsured or underinsured.

Category 1 patient benefit milestones: FBC expects to see a reduction in the percentage of patients with behavioral health needs that are incarcerated, or who access EMS and emergency departments. A 10% (160 individuals) decrease in mental health admission and readmissions to criminal justice settings (jail) is expected in DY *4* and 10% in DY and 1600 individuals will receive crisis intervention and/ or follow-up services by the specialized FB CIT.

Category 3 outcome measures: IT 9.2 Reduce emergency visits for behavioral health/ substance abuse by 10%.

Project Option 1.13 - Develop behavioral health crisis stabilization services as alternatives to hospitalization: Fort Bend County Behavioral Health Crisis Response and Intervention

Unique RHP Project Identification Number: 2967606-01 1.1
Performing Provider Center/TPI: Fort Bend County/2967606-01

Project Description:
Fort Bend County (FBC) proposes to develop a crisis system that better identifies people with behavioral health needs, responds to those needs and links persons with their most appropriate level of care.

Our goal is to keep individuals healthy and safe, develop processes and interventions to manage challenging behaviors, and avoid unnecessary use of the emergency room, hospitalization, or incarceration. First responders have become the default interveners for behavioral health crises in FBC, with limited options for these patients. The majority of persons experiencing a behavioral health crisis in FBC access assistance through the 911 system. In 2011, FBC Emergency Medical Services (EMS) responded to 1, 171 mental health crisis calls, representing almost a 100% percent increase in the past 6 years. In most cases, multiple entities respond to behavioral health crises that often result in transportation to an emergency room or the FBC jail. Many of these situations involve non-violent offenses and non-medical emergencies that could be redirected to less restrictive community based services if available. Unfortunately, many persons with mental illness end up in the ER for several hours waiting for an evaluation or transported to the FBC Jail. In 2011, approximately 20% of the population was identified as having a mental illness and even though there was a decrease in the overall jail population, the percentage of persons with mental illness has increased.

The lack of services and coordination has resulted in the jail and emergency rooms becoming the default crisis assessment and stabilization centers for patients with behavioral health needs. These patients often end up for extended periods in local hospital emergency rooms and/or the jail as a last resort. The most recent Needs Assessment of FBC conducted by the Lyndon Baines Johnson School of Public Affairs in the summer of 2011 states that the lack of services for the mentally ill has resulted in "mental health becoming a law enforcement issue."[70]

In order to effectively implement crisis stabilization services in FBC, identification, triage, and referral to the appropriate response system are integral to the process. Thus, the focus of the FBC project is on the identification and appropriate response at the dispatch and first responder levels. Focusing on the front end of the "community crisis system" will ensure that patients' needs (medical and behavioral) and safety are addressed in the timeliest and most appropriate manner. Coordination with behavioral health providers, such as Texana Center, physical health providers (e.g., Fort Bend Family Health), substance abuse treatment (e.g. Fort Bend Regional) and community organizations (e.g., Mental Health America (MHA), National Alliance on Mental Illness (NAMI) will ensure that patients receive clinically necessary and appropriate services and supports. The FBC Behavioral Health Crisis Response and Intervention Team (BHCRIT) Program will enhance the safety net, provide necessary intervention and diversion services, and as a result serve to reduce EMS transports, emergency room admissions,

[70] http://www.rgkcenter.org/sites/default/files/file/research/FB%20Report_for_posting.pdf

DRAFT

and incarcerations. The FBC BHCRIT Program will identify these patients at dispatch and refer them to the appropriate intervention system. The trained law enforcement team (the Crisis Intervention Team (CIT)) will respond and work collaboratively with Texana Center, FBC's Health and Human Services, MHA, NAMI, other behavioral health providers and organizations in the community to assess the patients' needs and provide crisis services as appropriate.

A major gap in Fort Bend County is the lack of a "place" for the assessment and stabilization of crises. Texana Center, the local mental health authority for the county, is proposing a project for the development of these much needed services. The FBC and Texana projects will work collaboratively to ensure coordinated and appropriate care for patients with behavioral health needs. The FBC project will also partner with other behavioral health providers in the region that may be able to provide crisis stabilization services, follow-up services, substance abuse treatment, housing, family and patient education, wraparound supports, and information and referral. As a result, patients with behavioral health needs will be more likely to receive care in the right setting at the right time.

The FBC BHCRIT Program will enhance the safety net, provide necessary intervention and diversion services and as a result serve as the main gatekeeper to EMS transports, admissions to the emergency room, and incarcerations. The FBC project will include: (1) assessment and enhancement of 911 dispatch system to identify and respond to behavioral health crises, (2) development of a specialized crisis intervention team (CIT) within Fort Bend County Sheriff's Office, and (3) implementation of cross systems training and linkages to appropriate services and supports.

The unique community need this project addresses is CN.2 – Insufficient access to behavioral healthcare services, resulting in lack of care or delay of care, delivery of inappropriate and insufficient care, unnecessary and preventable complications, and increased demand on the criminal justice system.

Goals and Relationship to Regional Goals:

Project Goals:

FBC expects to see a reduction in the percentage of patients with behavioral health needs that are incarcerated, or who access EMS and emergency departments. The FBC project presents a major opportunity for infrastructure development and systems transformation. The FBC project is the result of extensive collaboration and commitment among county officials, law enforcement, health and human services, courts, EMS, and many community organizations to redesign current county operations to effectively respond to the behavioral health needs in the community. Through a county led initiative, preliminary work has been done around several of the core components. FBC will expand on the work of this initiative to include additional partners in the region and address emerging needs (e.g., additional community based services, family supports, peer supports, wraparound supports, and physical health). The FBC BHCRIT Program is the critical component of a "community crisis stabilization system" and has the potential to impact the largest number of patients and divert them from entering the criminal justice or hospital systems.

This project meets the following Region 3 goals:

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure that is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction;

- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay; and,
- Develop a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes.

The FBC BHCRIT Program leverages existing resources (911 dispatch system, law enforcement, data systems, emergency medical services, community providers), enhances services, cross-systems training, and data sharing to identify patients with behavioral health needs and link them to appropriate services. First responders, law enforcement and EMS have become the default interveners for behavioral health crises in FBC, who are equipped with limited tools and resources to effectively handle these complex situations. The majority of persons experiencing a behavioral health crisis in FBC access assistance through the 911 system. In order to effectively divert persons with behavioral health needs from the unnecessary use of the emergency rooms, hospitalization, and incarceration, we must change the response and intervention systems that currently exist starting with dispatch and first responders.

Challenges:

Access to appropriate levels of care will be a challenge. There are limited resources for stabilizing and supporting persons with behavioral health disorders in the community. The FBC project will address this by engaging with public and private providers of behavioral health services, community organizations, and volunteer groups. For example, FBC will work with MHA of FBC to develop an on-line resource directory with special attention to high risk populations (e.g., discharged from hospitals, jails, veterans with mental illness, patients with mental illness with children, co-occurring disorders). This project will also focus on the expansion of wraparound supports necessary for keeping persons in the community and developing resiliency to prevent future crises.

The integration of data systems will also be a challenge**.** FBC has well developed data tracking systems but these need to be integrated to facilitate communication regarding patients' needs, linking them to appropriate services and tracking outcomes. The availability of integrated data tracking systems will allow us to continuously identify unmet needs and new resources. The project will work with various partners in the region as well as the county's Information Technology department to develop the most efficient data tracking system. These data elements will be used as part of the project's quality improvement process.

5-year Expected Outcome for Provider and Patients:

FBC expects to see a reduction in the percentage of patients with behavioral health needs that are incarcerated, access EMS and emergency departments. The project will be county wide and include the following zip codes:

77053	77406	77407	77417	77441	77444
77451	77459	77461	77464	77469	77471
77476	77477	77478	77479	77481	77487
77489	77494	77496	77497	77498	77545

DRAFT

Starting Point/Baseline:
Currently a Crisis Response and Intervention program, focusing on 911 dispatch, specialized law enforcement training, and increased community services and supports, does not exist. This is a new program; therefore, the baseline for all metrics and milestones will be established after the project is implemented.

Rationale:
Reasons for selecting the project option: 1.13.1 Develop and implement crisis stabilization services to address the identified gaps in the current community crisis system. For this reason, the focus of the FBC project is on the identification and appropriate response at the dispatch and first responder levels.

Project Components:
Through the FBC BHCRIT Program, we propose to meet all the required project components below and the selected milestones and metrics that relate to the project components.

a. Convene community stakeholders who can support the development of crisis stabilization services to conduct a gap analysis of the current community crisis system and develop a specific action plan that identifies specific crisis stabilization services to address identified gaps. A great deal of work has been done by FBC through the Criminal Justice Mental Health Initiative during the past 4 years with a focus in the past year on the development of law enforcement Crisis Intervention Team and additional behavioral health services.
b. Analyze the current system of crisis stabilization services available in the community including capacity of each service, current utilization patterns, eligibility criteria, and discharge criteria for each service.
c. Assess the behavioral health needs of patients currently receiving crisis services in the jails, emergency departments, or psychiatric hospitals. Determine the types and volume of services needed to resolve crises in community-based settings. Then conduct a gap analysis that will result in a data-driven plan to develop specific community-based crisis stabilization alternatives that will meet the behavioral health needs of the patients (e.g., a minor emergency stabilization site for first responders to utilize as an alternative to costly and time consuming ER settings). FBC has developed data tracking systems for the jail and EMS that allow us to identify persons with behavioral health needs and determine their use of jail and emergency rooms. FBC has worked extensively with various county departments and the Sheriff's Office to identify and assess behavioral health needs of patients in the jail. The FBC project will expand on this work.
d. Explore potential crisis alternative service models and determine acceptable and feasible models for implementation.
e. Review the impact of intervention(s) on access to and quality of behavioral health crisis stabilization services, and identify "lessons learned," opportunities to scale all or part of the intervention(s) to a broader patient population, and key challenges associated with expansion of the intervention(s), including special considerations for safety-net populations.

Milestones & Metrics:
FBC has selected the following process milestones and metrics. These were chosen to ensure core components, some of which have already been fulfilled, are completed and documented appropriately.

- P-2 – Conduct mapping and gap analysis of current crisis system.
- P-3 – Develop implementation plans for needed crisis services.
- P-4 - Hire and train staff to implement identified crisis stabilization services.
- P-5 – Develop administration of operational protocols and clinical guidelines for crisis services.
- P-9 – Participate in face-to-face learning (i.e., meetings or seminars) at least twice per year with other providers and the RHP to promote collaborative learning around similar or shared projects.

Since this is a start-up project and these services are not available, all of these milestones/metrics are necessary for a successful project.
The following improvement milestone and metrics were chosen:
I-10.1: 10% decrease in mental health admission and readmissions to criminal justice settings such as jails or prisons in DY 4 and 10% in DY 5.
The proposed project focusing on the development of a coordinated crisis response system in Fort Bend County, which includes the development of a Crisis Intervention Team, has the main objective of connecting persons with appropriate services and preventing unnecessary incarceration and emergency room utilization. Interventions that prevent individuals from entering and/or cycling through the criminal justice system, such as CIT, can help avert poor health and mental health outcomes, reduce long term medical costs and improve functioning. This milestone was chosen to ensure that the FBC Behavioral Health Crisis Response and Intervention Project is responding appropriately to crisis calls and diverting them from jails and unnecessary hospitalization.

How the project represents a new initiative for the Performing Provider or significantly enhances an existing service delivery reform initiative:
This is a new initiative for FBC and will improve response to patients with behavioral health needs. In addition, this initiative will further the development of needed infrastructures and partnerships to leverage existing resources, develop additional resources based on identified needs, and improve access to care in the community.

Related Category 3 Outcome Measure(s):
The Category 3 Outcome Measure chosen falls within OD-9-Right Care, Right Setting.
Reasons/rationale for selecting the outcome measure(s):
The goal of the FBC project is to divert persons experiencing behavioral health crisis from the incarceration and unnecessary use of emergency departments. The FBC project will focus on the identification of behavioral health crisis, triage and appropriate intervention from the onset of the 911 call followed by the referral to the specialized CIT team and follow-up services. This will divert persons with behavioral health needs to the appropriate services as opposed to EMS transports and admissions to the ER or jails.

Relationship to Other Projects: This project will interface with Crisis Stabilization projects proposed by Texana. Once a law enforcement team is trained to recognize mental illness and

appropriate law enforcement interventions to use for this population, they must have a place to take these individuals other than the jail and emergency rooms for complete evaluation and assessment. The proposed Crisis Stabilization Center will be a critical component to the development of a "coordinated crisis response and intervention" system.

This project will also interface with other FBC projects such as Expand Medical Home, Redesign of Primary Care, and "Ask the Nurse". All of these will facilitate access to essential primary care, which is often overlooked for persons with behavioral health disorders.

Relationship to Other Performing Providers' Projects in the RHP:
The FBC project will interface with other Performing Provider's (PP's) in the region to ensure access to necessary behavioral health services to prevent admissions and readmissions to the jail as well as the unnecessary use of the emergency rooms (e.g., Oak Bend Hospital).
Numerous community needs assessments reflect an extreme need for behavioral health services to include outpatient treatment centers, crisis stabilization units, inpatient beds, and much more. The lack of funding as well as complexity of the regions patient base has limited the amount of behavioral health treatments available to our region and continues to drive cost in emergent and inpatient situations. The Crisis Stabilization Unit has a direct correlation to all behavioral health programs recommended in the RHP plan and will be a focus of two of the largest Local Mental Health Authorities of our region. Both CSU's share the outcome measures of mental health admissions & readmissions, and improvement of patient satisfaction scores. The Region 3 Initiative Grid attached in the addendum reflects the direct relationships of this initiative.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: This project addresses the top priority identified by the FBC 1115 planning group – a system for responding to behavioral health crises and providing appropriate care. This project addresses key components of the "community crisis system" by enhancing the county's dispatch system, cross training dispatchers, law enforcement, EMS and other first responders, developing a specialized law enforcement team (CIT), and developing protocols and systems to connect patients with the most appropriate care in a timely manner. The project was valued based on cost-avoidance by projecting savings associated with incarceration and unnecessary use of emergency departments by patients in Fort Bend County with behavioral health needs. FBC has analyzed data from EMS and the Sheriff's Office for the past several years to determine the number of persons with behavioral health crises that access those systems. Annual cost savings are estimated to be: $450k for avoided ER visits to Oak Bend; $1.8m in avoided incarceration costs; $560k for avoided EMS calls; $1.2m for avoided State Hospital visits; and $80k for avoided transports by law enforcement. This program is projected to avoid costs totaling $4.1m annually or $16.4m over four years.

Fort Bend County Clinical Health Services

Pass 3

DRAFT

Project Summary - Fort Bend County 2967606-01 1.2
Expand Existing Primary Care Capacity – Expand Hours of Service

Provider: Fort Bend County Clinical Health Services is a division of the Fort Bend County Health & Human Services Department (FBCHHS), the local health department for the County. Fort Bend County is located in the Houston metropolitan area of southeast Texas. It encompasses a total of 875.0 square miles (562,560 acres). The current population is estimated at almost 607,000. FBCHHS services include: Animal Services, Clinical Health Services, EMS, Environmental Health, Social Services, Veterans Services and Public Health Preparedness. Fort Bend County also has a Behavioral Health Services Program.

Intervention: This project will expand the hours of operation of the local Federally Qualified Health Center (FQHC) to increase access to primary care for the Medicaid, uninsured and underinsured populations in the county. One of the barriers to establishing a medical home for primary care and chronic care management is that of lack of after-hours care for the working population with no health care coverage or Medicaid coverage. This gap encourages the use of EMS and ED services inappropriately for non-emergent conditions and does not allow for establishment of a medical home. The project will provide increased access to primary care as well as a patient navigation system (expanded in another project) to promote the medical home and provide primary care, prevention services and chronic condition management. In addition, linkages to social service agencies to resolve other issues will be provided. Navigation will include follow up for appointment and medication compliance.

Need for the project: While the county population as a whole is wealthy, 8% of the population (48,560) live below the federal poverty level and 19% of the population has no health insurance coverage (>115,000). In one of the county census divisions, more than 17% of the population lives below the federal poverty level. The county has no hospital district and the only health care payment available to the population that does not qualify for Medicaid/Medicare is the Indigent Health Care program which covers only those with an existing medical condition who have an income of less than 21% of the federal poverty level. The program covers up to $30,000 of eligible medical care per year for individuals who qualify for the program, approximately 1,000 per year. In some areas and some populations in the county, when no primary care is available or affordable, the EMS and ED are by default the primary care providers.

Target Population: Uninsured, underinsured and Medicaid covered individuals who do not access primary care and use emergency services in lieu of a medical home. Patients will receive the benefit of ongoing assistance with medical care for primary care, prevention and chronic conditions as well as being linked to needed social services and transportation.

Category 1 patient benefit milestones: The program will divert patients from high cost EMS transportation and ED visits to the FQHC medical home.

Category 3 outcome measures: IT 1.1 – 10% (DY4) and 20% (DY5) reduction in third next appointment interval in the target population. IT 9.2 - 25% (DY4) and 30% (DY5) reduction in ED use in the target population.

DRAFT

Project Option 1.1.1 – Expand Existing Primary Care Capacity – Expand Hours of Service

Unique RHP Project Identification Number: 2967606-01 1.2 / Pass 3
Performing Provider Name /TPI: Fort Bend County Clinical Health Services / 2967606-01

Project Description:

Fort Bend County proposes a project to expand the hours of operation of the local Federally Qualified Health Center (FQHC) to accommodate the expected increase in use by Indigent Health Care, Medicaid and uninsured patients who are referred into the clinic from the other projects proposed by Fort Bend County. The projects include:

- an expansion of patient navigation designed to improve primary care/medical home use as opposed to emergency department (ED) and emergency medical service transport (EMS) for non-emergent conditions and to improve management of chronic conditions in these populations (2967606-01 2.1)
- a community paramedic project to provide primary care in the home setting with a referral in to the FQHC patient navigation program (2967606-01 2.3), and
- a primary care screening program for colorectal cancer which includes ongoing primary care for overall wellbeing in the FQHC (2967606-01 2.4).

The local FQHC has in place the protocol to manage patients at the level of preventive care, for management of chronic conditions and outpatient acute illnesses. However, the clinic has varied hours by specialty and by day based on the availability of staffing teams to man the clinic. The proposed project would enhance the capacity of the clinic to respond to the number of clients anticipated to be referred in a and followed by the FQHC by increasing the hours of the clinic to a consistent 7am to 7pm schedule and including all Saturdays

Target Zip codes for the program are:

77053	77406	77407	77417	77441	77444
77451	77459	77461	77464	77469	77471
77476	77477	77478	77479	77481	77487
77489	77494	77496	77497	77498	77545

Goals and Relationship to Regional Goals:

The goal of this project is to provide expanded access to primary care by increasing the staffing at the local FQHC and thereby expanding the hours of operation. The goal will increase the number of medically indigent, uninsured, and Medicaid eligible clients who have a medical home, prevention services and chronic disease management. At the same time, the project will reduce the number of patients from this population who use EMS and the ED to serve as their medical care providers. In so doing, the cost of more expensive care will be reduced and the quality of life of impacted community members will be enhanced.

<u>The project meets the following regional goals:</u>

- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
- Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system.

DRAFT

Challenges:
The populations that this project seeks to serve have established patterns of behavior that are not conducive to improved health or to cost effective use of existing medical resources. As with any intervention that seeks to change current behavior, the project will need to be patient centered and be flexible to encourage the change in behavior that is desired. Data collection for baseline and rapid cycle evaluation will need to come from a variety of providers and agencies and will need a systematic collection methodology.

5-year Expected Outcome for Provider and Patients:
Fort Bend County expects to see decreases in use of the ED and EMS for non-urgent conditions, to see improvements in health status of the targeted population, improved follow up with appointments and medications or other interventions and an improvement in recognition of available community resources and the concept of a medical home for all.

Starting Point/Baseline:
Baseline data is not established, although community partners and the FQHC have some data points as background rationale for the project. Data will be gathered on past and current users of the FQHS, the EMS transportation system, hospital EDs and the Fort Bend County Indigent Care program for non-emergent and for frequent users of the high-end resources to establish the patterns of resource use as a starting point for the proposed program. In the first six months of the program, data gathering systems will be put in place to monitor the successful referral and engagement of patients from the target populations.

Rationale:
Fort Bend County does not have a hospital district structure for indigent healthcare or for the uninsured and underinsured population of the County. The County participates in the state mandated Indigent Health Care Program which provides care for qualifying individuals whose income is below 22% of the Federal Poverty Level. With a population estimate of 606,000, there are more than 48,500 (8%) individuals living below the Federal Poverty Level and up to 145,000 uninsured at this time in the County[1]. For these individuals, medical care is often beyond their economic reach. Cash payment options and even sliding scale fees take lower priority than housing payments and food. One of the ways that the indigent population of the County avoids payment up front is to utilize the EMS 9-1-1 response system to obtain a "free" ride to the hospital, to receive priority care in the Emergency Department because of EMS transport and to not have a co-pay on site at the hospital.

Data from the local hospital handling the majority of indigent or uninsured/ underinsured clients in the county, shows that more than two thirds of the ED visits in 2011 were not of an emergent nature. In addition, of the approximately 10,000 patients seen in the first half of this year, 20% were Medicare enrollees, 37% Medicare and Medicaid managed care, and 1% county indigent health care. The remaining 42% are self-pay of which the majority have no means to pay for their health care.

Along with the use of expensive EMS and ED services for non-emergent illnesses, is the use of these same resources for chronic conditions which could better be managed and controlled in an outpatient setting using a medical home approach. Barriers to patients voluntarily seeking

this option include lack of knowledge and understanding of their own medical conditions and of the resources available, lack of transportation, inability to pay fees and available hours for care.

In addition to these issues, the working but uninsured or underinsured population cannot afford to take off work to attend doctor appointments for themselves or their dependents during normal working hours. Expanding the hours of operation will assist with allowing referred patients from the target population to take advantage of the FQHC and establish a medical home.

The County Indigent Health Care program currently focuses on the need for care once an illness has developed and does not include a preventive or chronic care model.

When a patient is provided stabilization care by the County EMS department and then refuses transportation to the hospital, valuable continuing care coordination and follow-up is lost. A study of frequent users of the County EMS service showed 15,000 patients with more than three uses of the EMS service in a span of 18 months. The highest number was 20 calls in 18 months. The highest number of calls for one individual in the calendar year 2011 was 16 calls, but one individual has already reached 18 calls in the first 8 months of 2012.

Project Components:

Required core project components: 1.1.1

a) Expand primary care clinic space (this component is not needed for the project)

the additional staff and hours will be in the same location(s) of the FQHC and additional space is not required to accomplish this project.

b) Expand primary care clinic hours

The FQHC clinic currently has different hours each day, and is only open on certain Saturdays. This project will add one full team of providers and the shifts will be adjusted to allow a full 7am to 7pm schedule each week day and to cover each Saturday. The standard schedule will provide increased access to primary care for the target population, particularly those who are employed and cannot make appointments from 8-5..

c) Expand primary care clinic staffing

As noted above, one full team of providers, include medical and support staff, will be added to the clinic roster to allow rotation of shifts to cover a standard 7am to 7pm schedule each weekday and to cover every Saturday.

Milestones and Metrics:

Process Milestones and Metrics

P-4. Milestone: Expand the hours of a primary care clinic, including evening and/or weekend Hours (Metric P-4.1)

P-5. Milestone: Train/hire additional primary care providers and staff and/or increase the number of primary care clinics for existing providers (Metric P-5.1).

Improvement Milestones and Metrics

I-12. Milestone: Increase primary care clinic volume of visits and evidence of improved access for patients seeking services. (Metric I-12.1)

I-15. Milestone: Increase access to primary care capacity. (Metric I-15.1)

Unique community need identification number the project addresses:

- CN.7 Insufficient access to care coordination practice management and integrated care treatment programs.

DRAFT

- CN.8 High rates of inappropriate emergency department utilization
- CN.9 High rates of preventable hospital admissions
- CN.11 High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative.
This project uses the existing medical practice in the local FQHC and expands the available hours of access to primary care at the clinic. It additionally provides access to the care coordination protocol for those traditionally not involved in coordinated care systems which can lead to improved health outcomes and reduction in encounters with EMS and the ED.

Related Category 3 Outcome Measures:
OD-1 Primary and Chronic Disease Management (IT 1.1 – Third Next Available Appointment)
OD-9 Right Care, Right Setting (IT 9.2 – ED Appropriate Utilization / Reduce ED use in target population referred to Care Coordination Program)
Reasons/Rationale for selecting the outcome measures:
The target populations of Medicaid patients, County Indigent Care patients, uninsured or underinsured patients have habitually used high end medical resources such as the ED due to lack of financial resources to pay for medical care, or lack of access to primary care sites in the evenings or on weekends. The measures will allow measurement of improvements in access and reduction in use of the ED.

Relationship to other Projects: This project supports the Chronic Disease registry and intervention projects proposed by our partners, the local hospital authority, and the FQHC as well as the care coordination, colorectal screening and community paramedic programs proposed by the county. The intention of all projects is to decrease the burden of care on the EMS and emergency departments as well as to establish a medical home and improved coordination of care model for chronic and non-emergent conditions that will improve the health of the individuals involved, resulting in improved health and reduce the cost of care.

Relationship to Other Performing Providers' Projects in the RHP:
Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have

DRAFT

similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

This project addresses a top priority identified by the FBC 1115 Access to Care planning group – increased hours of service for community residents who are medically indigent, uninsured or underinsured. The project aims to reduce EMS and ED use in this population, thereby improving the health of the targeted population by access to ongoing preventive and chronic disease care in a patient centered program as opposed to episodic disease care in high cost resource settings. Valuation is based on cost avoidance, projecting savings associated with reducing unnecessary EMS and ED use by patients in the target population. Fort Bend County has an estimated annual utilization of ED totaling 20,000 patients. 42% (8,400) are self-pay with no insurance coverage and 2/3's of these ED uses (5,600) were not of an emergent nature. With successful diversion of 7% of these ED uses (392/yr), Fort Bend County will avoid ED costs of $2.2 million over four years based on a cost per visit of $1,400.

DRAFT

Gulf Coast Medical Center

Pass 1

Project Option 1.9.2-Expand Specialty Care Capacity: Establish Adult Inpatient Psychiatric Unit
Unique RHP Project ID: 178815001.1.1
Performing Provider Name/TPI: Gulf Coast Medical Center/178815001

Project Summary:
Provider: Gulf Coast Medical Center, located in Wharton County, is a for profit acute care facility licensed for 161 beds. Services provided include general medical care, surgical services, women's services, radiology, cardiopulmonary, wound care center, intensive care (12 beds), emergency department, and gero-psych (17 beds). Although November is not yet final this facility has provided charity care for a total of $8,831,031 for 2012 year to date.

Volume Statistics-Year to Date 2012	Patient Payor Mix	Patient Demographics
Hospital Admissions 1,323 Births 236 Emergency Visits 8,948	Self Pay 16% Medicaid 17% Medicare 44% Other Funding 2% Commercial Ins. 21%	Hispanic 36% African American 31% Caucasian 31% Other 2%

Intervention (s):
This project will establish a 28 bed adult inpatient psychiatric unit within Gulf Coast Medical Center which will be dedicated to the treatment of general psychiatric disorders for the age population of 18 through 64 years of age and evaluate outpatient center development for follow up care.
Need for the Project: Wharton County and the surrounding rural area are currently underserved with regard to Psychiatric Care. In addition, finding an accepting facility for those patients presenting to the Emergency Department (ED) in need of inpatient psychiatric treatment is most difficult. Treatment delay has been known to occur frequently due to lack of beds at treatment facilities which require patients to remain in our ED until such time that a bed is secured and transfer can occur.
Target Population: All patients requiring inpatient level of care for the treatment of psychiatric disorders from within Wharton County and the surrounding rural areas may benefit from this project. Currently no baseline data is available as inpatient psychiatric treatment facilities are non existent in the County.
Category 1 Expected Patient Benefits: Our goal is to implement a process by which referrals are processed in a timely for inpatient psychiatric admission to prevent delay of treatment. Baseline will be established in DY 2 with a time improvement DY 3, 4, and 5. In addition, average daily census will improve DY 3, 4, and 5 as compared to baseline established in DY2.
Category 3 Outcomes: IT-1.18 Our goal is to improve follow up rates with mental health practitioner by 5% in DY4 and 10%in DY5 as compared to baseline which will be established in DY3.
IT-1.20 Our goal is to improve timeliness of inpatient admission for mental illness by % of increase of admission rate DY4 and DY 5 as compared to baseline established in DY 3.

Project Option 1.9.2- Expand Specialty Care Capacity: Establish Adult Inpatient Psychiatric Unit

Unique RPH Provider Identification Number: 178815001.1.1

Performing Provider Name/TPI: Gulf Coast Medical Center/178815001

Project Description:
Gulf Coast Medical Center proposes a project (1.9 Expand Specialty Care Capacity) which would allow access to inpatient level of treatment for adults with psychiatric disorders.

The performing provider is currently in the planning stages of establishing a 28 bed ~~patient~~ adult psychiatric unit ~~with 14 inpatient beds being~~ dedicated to the treatment of general psychiatric disorders. ~~and 14 inpatient beds being dedicated to the treatment of the military forces and their dependents with the focus being post traumatic stress disorder~~. Current challenges facing the provider include the lack of adult inpatient psychiatric care within Wharton County and the surrounding rural areas. In addition, finding an accepting facility for inpatient treatment for this diagnosis specific population is most difficult. Treatment delay is common with the psychiatric patient remaining in the Emergency Department until such time that a bed becomes available and the transfer is secured. This delay in care has been noted to be greater than 60 hours in some cases. The addition of an inpatient adult psych unit aligns with the regional goal of increasing access to specialty services and to ensure patients receive the most appropriate care for their condition. Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. To achieve success as an integrated network, gaps must be thoroughly assessed and addressed. The expected outcome of the project allows for the treatment of psychiatric disorders of adult patients requiring inpatient level of care within Wharton County. Currently specialty treatment on an inpatient level for psychiatric conditions is nonexistent for the adult patient population less than 65 years of age.

Goal (s) and Their Relationship to Regional Goals:

The goal of this project is to provide inpatient level of psychiatric care for the adult patients in Wharton County and the surrounding rural areas. ~~as well as treatment for post traumatic stress to the military population and their dependents.~~

Project Goals:

- Provide inpatient psychiatric care to the adult population by establishing an inpatient Psych Unit with ~~14~~ 28 beds designated for the treatment of general psychiatric disorders.
- ~~Provide inpatient psychiatric care to the military forces and their dependents with emphasis on the treatment of post traumatic stress syndrome.~~

This project meets the following Region 3 goals:

- Increase access to specialty care services to ensure patient receive the most appropriate care for their condition.

Challenges:

Wharton County and the surrounding rural area are currently underserved with regard to Psychiatric Care. Information obtained from the United States Census Bureau for 2011 the population of Wharton County is estimated at 41,314. Of those, approximately 58.50% are between the ages of 18 and 65 (this does not include the census of the surrounding areas).

Although this total will not require treatment for psychiatric disorders the potential for need has been observed and witnessed frequently in the Emergency Department of Gulf Coast Medical Center. The challenge of obtaining the most appropriate care for their condition as noted in the regional goals is being experienced firsthand.

~~According to an April, 2012 report in the Medical Surveillance Monthly Report (MSMR) which is a publication of the Military Forces Healthy Surveillance Center the number one (1) ranked hospitalization diagnosis among the military for 2011 was mental disorders. This diagnosis ranked number (2) for 2007 as well as 2009. ICD-9-CM codes were utilized to report the primary discharge diagnoses.~~

Starting Point/Baseline:

Currently the only clients that have an inpatient treatment option for psychiatric disorders in Wharton County are those individuals age 65 and over. Gulf Coast Medical Center has a 17 -bed inpatient Geropsych Unit. Adult inpatient psychiatric care is non-existent however with the development of an inpatient unit this performing provider will be able to provide inpatient care to a total population of 28 at a given time. Therefore, the baseline for all milestones and metrics will be established following project implementation.

Rationale:

Gulf Coast Medical Center continuously faces challenges in attempting to meet the care needs of those patients presenting with psychiatric disorders to the Emergency Department (ED). Without inpatient treatment capabilities the only option is to transfer patients to facilities that provide inpatient psychiatric care which are very limited and most often at capacity. Patients requiring the most appropriate care for their psychiatric condition are not receiving the care due to lack of inpatient facilities within the county, or they experience a delay in the care if a transfer is successful outside of the county.

Project Components:

Through the establishment of an Adult Inpatient Psychiatric Unit, we propose to meet all required project components listed below and believe the selected milestones and metrics relate to the project components.

- ~~a) Identify high impact/most impacted specialty services and gaps in care and coordination. (P-1; P-4)~~
- ~~b) Increase the number of trainees choosing targeted shortage specialties. (P-2)~~
- ~~c) Design workforce enhancement initiatives to support access to specialty providers in underserved markets and areas (recruitment and retention). (P-3)~~
- ~~d) Conduct quality improvement for project using methods such as rapid cycle improvement. (P-5)~~
- a) Increase service availability with extended hours
- b) Increase number of specialty clinic locations
- c) Implement transparent, standardized referrals across the system.
- d) Conduct quality improvement for project using methods such as rapid cycle improvement. Activities may include, but not limited to, identifying project impacts, “lessons learned”, opportunities to scale all or part of the project to a broader patient population, and identifying key challenges associated with expansion of the project, including special considerations for safety-net populations.

Milestones and Metrics:
The following milestones and metrics have been chosen for the Establishment of an Adult Inpatient Psychiatric Unit:

- Process Milestones and Metrics: P-1 (P-1.1); P-2 (P-2.1); P-4 (P-4.2); P-5 (P-5.1); P-21 (P-21.1)
- Improvement Milestone and Metrics: I-33 (LW1)
- Improvement Target and Metrics: OD-1 (IT-1.18); (IT-1.20)

Unique Community Needs Identification Number the Project Addresses:
The project addresses the following unique community needs as identified in the community needs assessment:

- CN.2 Inadequate access to specialty care
- CN.3 Inadequate access to behavioral health care
- ~~CN.5 Inadequate access to care for veterans and active military, particularly mental health and substance abuse services~~

How the project represents a new initiative for the performing provider or significantly enhances an existing delivery system reform initiative:
Currently, an Inpatient Adult Psychiatric Unit does not exist at Gulf Coast Medical Center nor in Wharton County. This initiative will be new and will provide access for inpatient treatment for the target population of those individuals requiring inpatient hospitalization for the treatment of mental disorders. In addition, as part of this performing providers Category 1 project the possibility of an outpatient center for following up will be explored.

<u>Related Category 3 Outcome Measures:</u>
OD-1 Primary Care and Chronic Disease Management
IT-1.18 Follow-up after Hospitalization for Mental Illness—NFQ 0576

- Rate 1: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 30 days after discharge.
- Rate 2: An outpatient visit, intensive outpatient encounter or partial hospitalization with a mental health practitioner within 7 days after discharge.

IT-1.20 Timeliness of Inpatient Admission for Mental Illness (referral/admission to Unit).

Reasons/Rational for Selecting the Outcome Measure:
Follow up after hospitalization for mental illness was selected as the Category 3 outcome measure by this performing provider to ensure that the treatment plan established for the patient prior to discharge continues through the continuum of care for outpatient care. Non compliance for follow up care on an outpatient basis results in possible readmission. In addition, the necessity of a fast track approach from referral to admission/arrival on the unit is of utmost importance to avoid delay in the initiation of treatment.

<u>Relationships to Other Projects:</u>
The expansion of specialty care is the only DSRIP project for Gulf Coast Medical Center.

Relationship to Other Performing Provider Projects in the RHP:
The behavioral health inpatient crisis in Region 3 is considerable and the increased capacity proposed in the RHP plan will only contribute a small impression into the overall community need for inpatient treatment. The outpatient focus of many RHP Plan initiatives will help numerous facilities focus to treating the patients in an ambulatory setting as well as continued navigation of services with a focus to keeping patients from the inpatient unit. This initiative is only similar to others in the sense of the category of behavioral health but is different in the sense that it focuses to inpatient bed capacity versus outpatient comprehensive treatments. The Region 3 Initiative Grid attached in the addendum will show the relationship to other programs.

Plan for Learning Collaborative:
We plan to participate in a region wide learning collaborative as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:
The following allocation for DY 2 through DY 5 is as follow for a total of $3,823,217:
Y2 $936,218 (72%)
Y3 1,007,685 (65%)
Y4 1,077,987 (51%)
Y5 801,327 (51%)

Areas considered when allocating funds for this project included the importance of ensuring individuals within Wharton County and the surrounding rural areas ~~as well as the military~~ the care needed with regard to mental disorders. A 28 - bed inpatient adult psychiatric unit would allow individual's timely access to care for mental disorders whereas currently delay in care is experienced frequently as bed availability is limited and waiting lists for beds are being utilized.

DRAFT

Project Option 1.1.1- Establish more primary care clinics: Gulfgate Area Same Day Access Clinic

Unique RHP Project ID: 133355104.1.1 / Pass 1

Performing Provider Name/TPI: Harris Health System / 133355104

Project Summary:

Provider: Harris Health System is comprised of 16 community health centers, seven school-based clinics, a dental center, dialysis center, five mobile health units, one outpatient specialty services clinic, and three hospitals. With a tax base of $511.6 million, Harris Health System was able to provide more than $1.254 billion in charity care during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 35,343 Births (babies delivered)- 6,643 Emergency visits- 173,263 Outpatient clinic visits- 1,054,770	Self-Pay- 62.6% Medicaid and CHIP- 23.4% Medicare- 8.6% Other Funding- 3.6% Commercial Insurance- 1.8%	Hispanic- 57.4% African American- 26.3% Caucasian- 9.2% Asian- 4.8% Other- 2.2% American Indian- 0.2%

Intervention(s): Harris Health System proposes to expand the capacity of primary care by establishing an adult-focused primary care same day access clinic near the Gulfgate Health Center that offers same day visits during extended hours to meet demand that saturated existing Harris Health System health centers cannot meet.

Need for the project: Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health center providers are currently 95% empaneled. For the Gulfgate health center, there were 792 unduplicated patients for which there were no Family Practice appointments available in the month of September 2012 alone.

Target Population: All current and potential patients within the system may benefit from this project (Medicaid and CHIP-23.4% / Self-Pay- 62.6%), specifically those in the zip code 77012.

Category 1 or 2 expected patient benefits: Our goal is to increase primary care clinic completed visits at same day access clinic by 5% over baseline in DY4 and 10% over baseline in DY5. The project seeks to increase completed visits for same day access by 31,000 visits in DY5 over the baseline in DY3.

Category 3 outcomes: IT-6.1: Our goal is to increase "Ease of scheduling appointments" score by 1% above baseline in DY4 and 2% above baseline in DY5 (Press Ganey).

DRAFT

Project Option 1.1.1- Establish more primary care clinics: Gulfgate Area Same Day Access Clinic

Unique RHP Project ID: 133355104.1.1 / Pass 1

Performing Provider Name/TPI: Harris Health System / 133355104

Project Description:

Harris Health System proposes to expand the capacity of primary care by establishing adult-focused primary care same day access clinics that offer same day visits during extended hours to meet demand that saturated existing Harris Health System health centers cannot meet. Same day access clinics will better accommodate the needs of the community by allowing them to receive the right care, at the right time, in the right setting.

The same day access clinic will ideally be located in or around the following zip code to meet the adult primary care demand surrounding the Gulfgate Health Center: 77012. The clinic will be approximately 3,000-4,000 square feet of leased space. The Facilities and Planning department at the Harris Health System has confirmed that such lease space is available in or around the target zip code(s). Harris Health System plans to add new providers and staff to operate the clinic for extended evening hours and weekend hours, in addition to regular weekday hours, based on demand. Point of Care lab testing will be available. If patients are in need of imaging or pharmacy services, the clinic will be located near a health center that provides those services.

Goals and Relationship to Regional Goals:

The goals of this project are to:

- Increase capacity for same day primary care through establishment of more accessible care locations across Harris County
- Increase access to same day primary care during extended hours and weekends

Expanding the capacity of primary care through additional clinics across the county and extended operating hours to better accommodate the needs of the community will allow patients to receive the right care at the right time in the right setting.

This project meets the following Region 3 goals:

- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

The Gulfgate same day access clinic will increase access to primary care in a high-demand area of underserved individuals while ensuring that patients have access to care in the appropriate setting. Harris County residents will be treated, and care discounted, according to Harris Health's sliding fee scale, with determination of eligibility for financial assistance.

DRAFT

Challenges and how to address:

General primary care capacity has been a challenge for the Harris Health System. The same day access clinic will provide same day access for Medical Home and non-Medical Home patients. A significant challenge for the Harris Health System has been adequate capacity to offer Medical Homes for patients who do not have a primary care provider. As patients are seen in the same day clinic setting, this will continue to be a problem for those patients who need care for chronic conditions or other specialized care. In addition, meeting the demand for intensive behavioral health care needs that will present at same day access clinics will prove to be a challenge. To address these challenges we propose to direct patients with chronic conditions into the Medical Home setting at a Harris Health System health center or refer to a primary care setting at a local FQHC. Patients with behavioral health needs will be referred to behavioral health providers.

5-Year Expected Outcome for Provider and Patients:

Over the course of the 5-Year Waiver, Harris Health System expects to realize:

- Increased adult-focused primary care capacity through same day care clinics for primary care treatable conditions

Starting Point/Baseline:

For performance purposes, the baseline will be set at 0 visits since this is a new clinic that currently is not operational.

Rationale:

Reasons for selecting the project option:

Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health center providers are currently 95% empaneled. Moreover, physicians in Harris Health health centers carry a panel of 2,250 patients, which is higher than the industry standard of approximately 1,500 patients. Full panels lead to decreased access to primary care appointments at health centers. These health centers are approaching maximum capacity for empaneled patients. From March 2012-September 2012, the Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care. For the Gulfgate health center, there were 792 unduplicated patients for which there were no Family Practice appointments available in the month of September 2012 alone. Gulfgate received 144 Ask My Nurse in-basket messages per month for patients that needed same day appointments that could not be scheduled by the Patient Appointment Center. Within the Harris Health System, 26% of all requests received in September 2012 for Family Practice appointments that could not be scheduled were for patients living in zip codes served by the Gulfgate health center. These numbers, however, do not capture the full volume of unmet demand due to the fact that some calls were dropped as patients were placed on hold and some

patients who needed care did not attempt to obtain an appointment based on previous difficulties obtaining same day appointments. Based on 2012 data of incoming patient calls to the Patient Appointment Center over 22,400 unduplicated patients living near the Gulfgate Health Center were unable to get an appointment.

The addition of same day access clinics will result in increased access to same day care for primary care treatable conditions, a more cost effective and appropriate setting than emergency centers and a more accessible setting than saturated Medical Home health centers.

Project Components:

Not Applicable / The project option 1.1.1 do not have components

Milestones & Metrics:

- Process Milestones and Metrics- P-1 (P-1.1); P-5 (P-5.1); P-X (P-X.1); P-X2 (P-X2.1)
- Improvement Milestones and Metrics- I-12 (I-12.1)

Unique community need identification number the project addresses:

This project addresses the following community needs according to the community needs assessment:

- CN.1- Inadequate access to primary care
- CN.8- High rates of inappropriate emergency department utilization
- CN.2- Inadequate access to specialty care

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

Currently, Harris Health System does not guarantee same day care for patients who are not enrolled in a Medical Home and empaneled to a primary care physician. Thus, the same day access clinic will be a new initiative for Harris Health by providing access to same day visits regardless of Medical Home enrollment. Moreover, current health centers offer an array of ancillary services, including full service outpatient pharmacies and laboratories, in addition to various specialty and radiology services. The same day access clinic will offer limited laboratory services and will not offer radiology or pharmacy services but will refer patients to other facilities for these services as needed.

Related Category 3 Outcome Measure(s):

OD-6 Patient Satisfaction

- IT-6.1- Percent improvement over baseline of patient satisfaction scores (standalone)
    - (1) are getting timely care, appointments, and information

Reasons/rationale for selecting the outcome measure(s):

DRAFT

IT- 6.1 will measure improvement in satisfaction scores over time relating to timeliness of care at the Gulfgate same day access clinic, specifically measuring the mean score for the Press Ganey survey question- “Ease of scheduling appointments.” The same day access clinic will increase capacity for primary care visits within the Harris Health System, which will enhance access and improve the patient’s experience in obtaining services. Patient satisfaction scores have been historically poor for health centers regarding timely access to care. The same day access clinic will offer an efficient venue that offers same day visits, affording patients the opportunity to seek care in a setting that is appropriate for the level of care they need and more cost effective than other alternatives.

Relationship to other Projects:

Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused on percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.

Project Valuation: This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in this area of Harris County. The value of the project is based on the clinic’s capacity to provide primary care services, including laboratory point-of-care testing, along with timely referrals for specialty care, imaging and other needed services within the Harris Health System network. The clinic can ultimately care for the episodic primary care needs of over ten thousand patients annually, and refer new patients with chronic disease management needs to one of the NCQA certified medical home clinics that are operated by Harris Health. In addition, the availability of same day primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

Project Option 1.1.1- Establish more primary care clinics: People's Area Same Day Access Clinic

Unique RHP Project ID: 133355104.1.2 / Pass 1

Performing Provider Name/TPI: Harris Health System / 133355104

Project Summary:

Provider:

Harris Health System is comprised of 16 community health centers, seven school-based clinics, a dental center, dialysis center, five mobile health units, one outpatient specialty services clinic, and three hospitals. With a tax base of $511.6 million, Harris Health System was able to provide more than $1.254 billion in charity care during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 35,343 Births (babies delivered)- 6,643 Emergency visits- 173,263 Outpatient clinic visits- 1,054,770	Self-Pay- 62.6% Medicaid and CHIP- 23.4% Medicare- 8.6% Other Funding- 3.6% Commercial Insurance- 1.8%	Hispanic- 57.4% African American- 26.3% Caucasian- 9.2% Asian- 4.8% Other- 2.2% American Indian- 0.2%

Intervention(s):

Harris Health System proposes to expand the capacity of primary care by establishing an adult-focused primary care same day access clinic near the People's Health Center that offers same day visits during extended hours to meet demand that saturated existing Harris Health System health centers cannot meet.

Need for the project:

Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health center providers are currently 95% empaneled. For the People's health center, there were 465 unduplicated patients for which there were no Family Practice appointments available in the month of September 2012 alone.

Target Population:

All current and potential patients seeking primary care services within the system may benefit from this project (Medicaid and CHIP-23.4% / Self-Pay- 62.6%), specifically those in the zip code 77449.

Category 1 or 2 expected patient benefits:

Our goal is to increase primary care clinic completed visits at same day access clinic by 3% over baseline in DY4 and 5% over baseline in DY5. The project seeks to increase primary care completed visits for same day access by 31,000 visits by DY5 over the baseline in DY3.

Category 3 outcomes:

IT-6.1: Our goal is to increase "Ease of scheduling appointments" score by 1% above baseline in DY4 and 2% above baseline in DY5 (Press Ganey).

DRAFT

Project Option 1.1.1- Establish more primary care clinics: People's Area Same Day Access Clinic

Unique RHP Project ID: 133355104.1.2 / Pass 1

Performing Provider Name/TPI: Harris Health System / 133355104

Project Description:

Harris Health System proposes to expand the capacity of primary care by establishing adult-focused primary care same day access clinics that offer same day visits during extended hours to meet demand that saturated existing Harris Health System health center health centers cannot meet. Same day access clinics will better accommodate the needs of the community by allowing them to receive the right care, at the right time, in the right setting.

The same day access clinic will ideally be located in or around the following zip code to meet the adult primary care demand surrounding the People's Health Center: 77057. The clinic will be approximately 3, 000-4,000 square feet of leased space. The Facilities and Planning department at the Harris Health System has confirmed that such lease space is available in or around the target zip code. Harris Health System plans to add new providers and staff to operate the clinic for extended evening hours and weekend hours, in addition to regular weekday hours, based on demand. Point of Care lab testing will be available. If patients are in need of imaging or pharmacy services, the clinic will be located near a health center that provides those services.

Goals and Relationship to Regional Goals:

The goals of this project are to:

- Increase capacity for same day primary care through establishment of more accessible care locations across Harris County
- Increase access to same day primary care during extended hours and weekends

Expanding the capacity of primary care through additional clinics across the county and extended operating hours to better accommodate the needs of the community will allow patients to receive the right care at the right time in the right setting.

This project meets the following Region 3 goals:

- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

The People's same day access clinic will increase access to primary care in a high-demand area of underserved individuals while ensuring that patients have access to care in the appropriate setting. Harris County residents will be treated, and care discounted, according to Harris Health's sliding scale, with determination of eligibility for financial assistance.

Challenges and how to address:

General primary care capacity has been a challenge for the Harris Health System. The same day access clinic will provide same day access for Medical Home and non-Medical Home patients. A significant challenge for the Harris Health System has been adequate capacity to offer Medical Homes for patients who do not have a primary care provider. As patients are seen in the same day clinic setting, this will continue to be a problem for those patients who need care for chronic conditions or other specialized care. In addition, meeting the demand for intensive behavioral health care needs that will present at same day access clinics will prove to be a challenge. To address these challenges we propose to direct patients with chronic conditions into the Medical Home setting at a Harris Health System health center or refer to a primary care setting at a local FQHC. Patients with behavioral health needs will be referred to behavioral health providers.

5-Year Expected Outcome for Provider and Patients:

Over the course of the 5-Year Waiver, Harris Health System expects to realize:

- Increased adult-focused primary care capacity through same day care clinics for primary care treatable conditions

Starting Point/Baseline:

For performance purposes, the baseline will be set at 0 visits since this is a new clinic that currently is not operational.

Rationale:

Reasons for selecting the project option:

Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health center providers are currently 95% empaneled. Moreover, physicians in Harris Health centers carry a panel of 2,250 patients, which is higher than the industry standard of approximately 1,500 patients. Full panels lead to decreased access to primary care appointments at health centers. These health centers are approaching maximum capacity for empaneled patients. From March 2012-September 2012, the Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care. For the People's health center, there were 465 unduplicated patients for which there were no Family Practice appointments available in the month of September 2012 alone. People's Health Center
received 60 Ask My Nurse in-basket messages per month for patients that needed same day appointments that could not be scheduled by the Patient Appointment Center. Within the Harris Health System, 15% of all requests received in September 2012 for Family Practice appointments that could not be scheduled were for patients living in zip codes served by the People's Health Center. These numbers, however, do not capture the full volume of unmet

demand due to the fact that some calls were dropped as patients were placed on hold and some patients who needed care did not attempt to obtain an appointment based on previous difficulties obtaining same day appointments. Based on 2012 data of incoming patient calls to the Patient Appointment Center over 19,200 unduplicated patients living near the People's Health Center were unable to get an appointment.

The addition of same day access clinics will result in increased access to same day care for primary care treatable conditions, a more cost effective and appropriate setting than emergency centers and a more accessible setting than saturated Medical Home health centers.

Project Components:

Not Applicable / The project option 1.1.1 do not have components

Milestones & Metrics:

- Process Milestones and Metrics- P-1 (P-1.1); P-5 (P-5.1); P-X (P-X.1); P-X2 (P-X2.1)
- Improvement Milestones and Metrics- I-12 (I-12.1)

Unique community need identification number the project addresses:

This project addresses the following community needs according to the community needs assessment:

- CN.1- Inadequate access to primary care
- CN.8- High rates of inappropriate emergency department utilization
- CN.2- Inadequate access to specialty care

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

Currently, Harris Health System does not guarantee same day care for patients who are not enrolled in a Medical Home and empaneled to a primary care physician. Thus, the same day access clinic will be a new initiative for Harris Health by providing access to same day visits regardless of Medical Home enrollment. Moreover, current health centers offer an array of ancillary services, including full service outpatient pharmacies and laboratories, in addition to various specialty and radiology services. The same day access clinic will offer limited laboratory services and will not offer radiology or pharmacy services.

Related Category 3 Outcome Measure(s):

OD-6 Patient Satisfaction

- IT-6.1- Percent improvement over baseline of patient satisfaction scores (standalone)
    - (1) are getting timely care, appointments, and information

Reasons/rationale for selecting the outcome measure(s):

DRAFT

IT- 6.1 will measure improvement in satisfaction scores over time relating to timeliness of care at the People's same day access clinic, specifically measuring the mean score for the Press Ganey survey question- "Ease of scheduling appointments." The same day access clinic will increase capacity for primary care visits within the Harris Health System, which will enhance access and improve the patient's experience in obtaining services. Patient satisfaction scores have been historically poor for health centers regarding timely access to care. The same day access clinic will offer an efficient venue that offers same day visits, affording patients the opportunity to seek care in a high-satisfaction setting that is appropriate for the level of care they need and more cost effective than other alternatives.

Relationship to other Projects:

Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in this area of Harris County. The value of the project is based on the clinic's capacity to provide primary care services, including laboratory point-of-care testing, along with timely referrals for specialty care, imaging and other needed services within the Harris Health System network. The clinic can ultimately care for the episodic primary care needs of over ten thousand patients annually, and refer new patients with chronic disease management needs to one of the NCQA certified medical home clinics that are operated by Harris Health. In addition, the availability of same day primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

DRAFT

Project Option 1.1.2- Expand existing primary care capacity: Expand Capacity of existing Health Centers

<u>Unique RHP Project ID:</u> 133355104.1.3 / Pass 1

<u>Performing Provider Name/TPI:</u> Harris Health System / 133355104

<u>Project Description:</u>

Harris Health System proposes to expand the existing capacity of primary care by adding primary care providers to the Health Centers. Adding providers will increase appointment availability.

The clinic will be adding full time equivalent primary care providers to meet the adult primary care demand surrounding the Health Centers. Harris Health System plans to add additional providers and support staff to maximize the use of our existing clinical space. The additional providers will work from existing exam rooms that are currently not being utilized. The hours of operation will be Monday through Friday, 8 -5 pm. The additional providers will assist in providing capacity to offer Medical Homes for patients who do not have a primary care provider.

Goal(s) and Relationship to Regional Goal(s):

<u>The goals of this project are to:</u>

- Increase capacity for primary care through the addition of primary care providers in the Medical Home setting.

Expanding the capacity of primary care through additional providers will increase appointment availability, allowing patients to receive timely care for the management of their chronic conditions.

<u>This project meets the following Region 3 goals:</u>

- Increase access to primary and specialty services with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

The expansion of primary care capacity will increase access to primary care in high demand areas of underserved individuals while ensuring that patients have access to care in the appropriate setting. Harris County residents will be treated, and care discounted, according to the Harris Health System sliding scale, with determination of eligibility of financial assistance.

Challenges:

The general primary care capacity has been a challenge for the Harris Health System. The providers are approximately 95% empaneled and thus unable to accept new patients at most Health Centers. The clinics currently have existing clinical space that’s being underutilized. To

DRAFT

address these challenges, we propose to add additional physicians to maximize the use of clinical space for patient care. The additional providers will increase the access to new patients and improve appointment availability.

5-Year Expected Outcome for Provider and Patients:

Over the course of the 5-Year Waiver, Harris Health System expects to realize:

- Increased capacity to offer Medical Homes primarily for adults by adding providers in the existing primary care setting.
- Over time, overall patient satisfaction for Access at targeted health centers will increase.

Starting Point/Baseline:

The baseline for Harris Health System FY2012 is 228,070 primary care visits.

The baseline for Ease of scheduling appointments as measured by Press Ganey for the period October 2011 through September 2012 Patient Satisfaction Survey year is 71.3%.

Rationale:

Currently, Harris Health System Health Centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health Center providers are currently 95% empaneled. Moreover, physicians in Harris Health System Health Centers carry a panel of 2,250 patients, plus an additional 500 patients for each midlevel provider who works with the physician to manage the patient panel. These panel sizes are higher than the industry standard of approximately 1,500 patients. Full panels lead to decreased access to primary care appointments at the Health Centers. These Health Centers are approaching maximum capacity for empaneled patients. From March 2012-September 2012, the Harris Health System Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care. Additionally, the Health Centers received 716 Ask My Nurse in-basket messages per month for patients that needed same day appointments that could not be scheduled by the Patient Appointment Center. These numbers, however, do not capture the full volume of unmet demand due to the fact that some calls were dropped as patients were placed on hold and some patients who needed care did not attempt to obtain an appointment based on previous difficulties obtaining same day appointments.

Project Components:

a) Expand primary care clinic space
b) Expand primary care clinic hours
c) Expand primary care clinic staffing

Expansion of primary care clinic space is not necessary at this time because the clinic has underutilized exam rooms. The visit demand is for regular operating hours.

DRAFT

Milestones & (Metrics):

- Process Milestones and Metrics- P-5 (P-5.1); P-X (P-X.1)
- Improvement Milestones and Metrics- I-12 (I-12.1)

Unique community need identification number the project addresses:

This project addresses the following community needs according to the community needs assessment:

- CN.1- Inadequate access to primary care
- CN.11- High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease, including: Cancer, Diabetes, Obesity, Cardiovascular disease, Asthma, AIDS/HIV

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

The addition of primary care providers in the existing Health Centers complements the proposed projects to establish same day access . As patients are treated in same day access clinics, patients in need of a Medical Home will be routed to Harris Health System Health Centers.

Related Category 3 Outcome Measure(s):

OD-6 Patient Satisfaction

- IT-6.1 Percent improvement over baseline of patient satisfaction scores

Reasons/rationale for selecting the outcome measure(s):

The expansion of primary care capacity in the existing Health Centers will increase capacity for primary care visits within the Harris Health System, which will enhance access and improve the patient experience in obtaining services. Patient satisfaction scores for timely access to care for the Health Centers have historically been below expectations. The expansion of primary care capacity in the existing Health Centers will offer additional access, affording patients the opportunity to seek care in the right setting. The current score for Ease of scheduling appointment for the Health Centers is 71.3%. The additional providers will add capacity for appointments, which will increase appointment availability for both new and return patients. The enhanced access to care will result in improved patient satisfaction scores as related to Ease of scheduling appointments.

Relationship to other Projects:

Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern

relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in Harris County. The value of the project is based on the expansion of services in Harris Health System's NCQA certified medical home clinics, substantially increasing our capacity to provide primary care services, including laboratory testing, imaging, and other ancillary services, along with prescription medications and timely referrals for specialty care and other needed services within the Harris Health System network. The increase in provider staffing throughout the existing medical home network can ultimately care for the primary care needs of an additional twenty-three thousand patients annually, including the coordination of chronic disease education and management for patients needing those services. In addition, the availability of incremental primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

Project Option 1.1.1- Establish more primary care clinics: West and Northwest 1 Area Health Centers

Unique RHP Project ID: 133355104.1.4 / Pass 1

Performing Provider Name/TPI: Harris Health System / 133355104

Project Summary:

Provider:

Harris Health System is comprised of 16 community health centers, seven school-based clinics, a dental center, dialysis center, five mobile health units, one outpatient specialty services clinic, and three hospitals. With a tax base of $511.6 million, Harris Health System was able to provide more than $1.254 billion in charity care during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 35,343 Births (babies delivered)- 6,643 Emergency visits- 173,263 Outpatient clinic visits- 1,054,770	Self-Pay- 62.6% Medicaid and CHIP- 23.4% Medicare- 8.6% Other Funding- 3.6% Commercial Insurance- 1.8%	Hispanic- 57.4% African American- 26.3% Caucasian- 9.2% Asian- 4.8% Other- 2.2% American Indian- 0.2%

Intervention(s):

Harris Health System proposes to expand the capacity of primary care by adding the West and Northwest 1 Area Health Centers to the complement of existing health centers to establish Medical Homes primarily for the adult population.

Need for the project:

Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with limited capacity. Health center providers are currently 95% empaneled. For the Northwest and El Franco Lee Health Centers combined, there were 852 unduplicated patients for which there were no Family Practice appointments available in September 2012 alone.

Target Population:

All current and potential patients seeking primary care services within the system may benefit from this project (Medicaid and CHIP-23.4% / Self-Pay- 62.6%), specifically those in the zip codes: 77449 and 77065.

Category 1 or 2 expected patient benefits:

Our goal is to increase primary care clinic completed visits at West and Northwest 1 Area Health Centers by 3% over baseline in DY4 and 5% over baseline in DY5. The project seeks to increase primary care completed visits by an additional 15,000 visits at each center by DY5 over the baseline in DY3.

Category 3 outcomes:

IT-1.10: Our goal is to decrease the percentage of patients with poorly controlled diabetes by 0.5% below baseline in DY4 and 1% in DY5.

Project Option 1.1.1- Establish more primary care clinics: West and Northwest 1 Area Health Centers
<u>Unique RHP Project ID:</u> 133355104.1.4 / Pass 1

<u>Performing Provider Name/TPI:</u> Harris Health System / 133355104

<u>Project Description:</u>

Harris Health System proposes to expand the capacity of primary care by adding the West and Northwest 1 Area Health Centers to the complement of existing health centers to establish Medical Homes primarily for the adult population. The additional Health Centers will better accommodate the needs of the community by allowing them to receive the right care, at the right time, in the right setting.

The Health Centers will be located in the following zip codes to meet the adult primary care demand surrounding the Northwest and El Franco Lee Health Centers: 77449 and 77065. The Health Centers will be approximately 5,000-10,000 square feet of leased space. The Facilities and Planning department at the Harris Health System has confirmed that lease space is available at 5503 North Fry Road, Katy, Texas 77449 and such lease space is available in or around the target zip code of 77065. Harris Health System plans to add new providers and staff to operate the Health Centers for extended hours, in addition to regular weekday hours, based on demand. Point of Care lab testing will be available. The clinic will also offer limited imaging services. Patient prescriptions will be available through a Central Fill Pharmacy, a complementary submitted project, which will facilitate delivery of prescriptions to the patient's home or to the Health Center within 24 hours.

Goal(s) and Relationship to Regional Goal(s):

The goals of this project are to:

- Increase capacity for primary care through the addition of a primary care Health Center that will serve as a Medical Home primarily for the adult population.

Expanding the capacity of primary care through additional Health Centers across the county and extended operating hours to better accommodate the needs of the community will allow patients to receive the right care at the right time in the right setting.

<u>This project meets the following Region 3 goals:</u>

- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

The West and Northwest 1 clinics will increase access to primary care in a high-demand area of underserved individuals while ensuring that patients have access to care in the appropriate setting. Harris County residents will be treated, and care discounted, according to Harris Health's sliding fee scale, with determination of eligibility for financial assistance.

Challenges and how to address:

General primary care capacity has been a challenge for the Harris Health System. The West and Northwest 1 Area Health Centers will provide access to a Medical Home for patients. A significant challenge for the Harris Health System has been adequate capacity to offer Medical Homes for patients who do not have a primary care provider. The providers are approximately 95% empaneled and thus unable to accept new patients at most Health Centers. To address these challenges, we propose to add these Health Centers to increase access for new patients and improve appointment availability.

5-Year Expected Outcome for Provider and Patients:

Over the course of the 5-Year Waiver, Harris Health System expects to realize:

- Increased adult-focused primary care capacity through the addition of the West and Northwest 1 Area Health Centers.

Starting Point/Baseline:

For performance purposes, the baseline will be set at 0 visits since these are new Health Centers that currently are not operational.

Rationale:

Currently, Harris Health System Health Centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health Center providers are currently 95% empaneled. Moreover, physicians in Harris Health System Health Centers carry a panel of 2,250 patients, which is higher than the industry standard of approximately 1,500 patients. Full panels lead to decreased access to primary care appointments at Health Centers. These Health Centers are approaching maximum capacity for empaneled patients. From March 2012-September 2012, the Harris Health System Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care. For the Northwest and El Franco Lee Health Centers combined, there were 852 unduplicated patients for which there were no Family Practice appointments available in the month of September 2012 alone. The Northwest and El Franco Lee Health Centers received 145 Ask My Nurse in-basket messages per month for patients that needed same day appointments that could not be scheduled by the Patient Appointment Center. Within the Harris Health System, 28% of all requests received in September 2012 for Family Practice appointments that could not be scheduled were for patients living in zip codes served by the El Franco Lee and Northwest Health Centers. These numbers, however, do not capture the full volume of unmet demand due to the fact that some patients may be likely to hang up when placed on hold and some patients who needed care likely did not attempt to obtain an appointment based on previous difficulties obtaining appointments. Based on 2012 data of

incoming patient calls to the Patient Appointment Center over 34,000 unduplicated patients were unable to get an appointment.

Additional Health Centers will result in increased access to primary care and establishment of more Medical Homes in light of the high level of saturation at existing Health Centers. The Health Centers also offer a more cost effective and appropriate care setting for primary care treatable conditions than emergency centers.

Project Components:

Not Applicable / The project option 1.1.1 does not have components

Milestones & (Metrics):

- Process Milestones and Metrics- P-1 (P-1.1); P-5 (P-5.1); P-X (P-X.1); P-X2 (P-X2.1)
- Improvement Milestones and Metrics- I-12 (I-12.1)

Unique community need identification number the project addresses:

This project addresses the following community needs according to the community needs assessment:

- CN.1- Inadequate access to primary care
- CN.8- High rates of inappropriate emergency department utilization

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

The addition of Health Centers to the existing platform of Health Centers that offer Medical Homes complements the proposed establishment of same day clinics. As patients are treated in same day access sites, patients in need of care management available at Medical Home sites will be routed to Harris Health System Health Centers.

Related Category 3 Outcome Measure(s):

OD-1 Primary Care and Chronic Disease Management

- IT-1.10- Diabetes care: HbA1c poor control (>9.0%)

Reasons/rationale for selecting the outcome measure(s):

The West and Northwest 1 Area Health Centers will increase capacity for primary care visits within the Harris Health System, which will enhance access and improve the patient's experience in obtaining services. The West and Northwest 1 Area Health Centers will offer additional access, affording patients the opportunity to seek care. The improved appointment

availability to care will allow diabetes patients enhanced access to better manage diabetes. The West and Northwest 1 Area Health Centers will establish the baseline of percentage of poorly controlled diabetes (>9.0%) in DY3. The Health Center will increase appointment availability for both new and return patients. The enhanced access to care will result in improved hemoglobin A1c (<9.0%).

Relationship to other Projects: Patient prescriptions will be available through a Central Fill Pharmacy, a complementary submitted project, which will facilitate delivery of prescriptions to the patient's home or to the Health Center within 24 hours. Harris Health System proposes to expand the existing capacity of primary care by adding primary care providers to the Health Centers. Adding providers will increase appointment availability.

Relationship to Other Performing Providers' Projects in the RHP:

Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in this area of Harris County. The value of the project is based on the clinic's capacity to provide a medical home for primary care services, including laboratory point-of-care testing, some imaging, other ancillary services and prescription medications along with timely referrals for specialty care and other needed services within the Harris Health System network. The clinic can ultimately care for the comprehensive primary care needs of over five thousand patients annually, including the coordination of chronic disease education and management for patients needing those services. In addition, the availability of timely primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment

and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

Project Option 1.1.1- Establish more primary care clinics: Southwest, Medical Center, and Northeast Same Day Access Clinics

Unique RHP Project ID: 133355104.1.6 / Pass 1
Performing Provider Name/TPI: Harris Health System / 133355104
Project Summary:
Provider:
Harris Health System is comprised of 16 community health centers, seven school-based clinics, a dental center, dialysis center, five mobile health units, one outpatient specialty services clinic, and three hospitals. With a tax base of $511.6 million, Harris Health System was able to provide more than $1.254 billion in charity care during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 35,343 Births (babies delivered)- 6,643 Emergency visits- 173,263 Outpatient clinic visits- 1,054,770	Self-Pay- 62.6% Medicaid and CHIP- 23.4% Medicare- 8.6% Other Funding- 3.6% Commercial Insurance- 1.8%	Hispanic- 57.4% African American- 26.3% Caucasian- 9.2% Asian- 4.8% Other- 2.2% American Indian- 0.2%

Intervention(s):
Harris Health System proposes to expand the capacity of primary care by establishing adult-focused primary care clinics that offer same day visits during extended hours to meet demand that saturated existing Harris Health System health centers cannot meet.
Need for the project:
Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health center providers are currently 95% empaneled. From March 2012-September 2012, the Harris Health System Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care.
Target Population:
All current and potential patients seeking primary care services within the system may benefit from this project (Medicaid and CHIP-23.4% / Self-Pay- 62.6%), specifically those residing in or around the following zip codes: 77031, 77026, 77028, 77030, 77025.
Category 1 or 2 expected patient benefits:
Our goal is to increase primary care clinic completed visits at same day access clinics by 3% over baseline in DY4 and 5% over baseline in DY5. The project seeks to increase primary care completed visits by an additional 55,500 visits in DY 5 over the baseline in DY3.
Category 3 outcomes:
IT-6.1: Our goal is to increase “Ease of scheduling appointments” score by 1% above baseline in DY4 and 2% above baseline in DY5 (Press Ganey).

Project Option 1.1.1- Establish more primary care clinics: Southwest, Medical Center, and Northeast Same Day Access Clinics
Unique RHP Project ID: 133355104.1.6 / Pass 1

Performing Provider Name/TPI: Harris Health System / 133355104

Project Description:

Harris Health System proposes to expand the capacity of primary care by establishing adult-focused primary care clinics that offer same day visits during extended hours to meet demand that saturated existing Harris Health System health centers cannot meet. Same day access clinics will better accommodate the needs of the community by allowing them to receive the right care, at the right time, in the right setting.

The same day access clinics will be located in or around the following zip codes to meet the adult primary care demand surrounding the El Franco Lee and People's Health Centers, LBJ General Hospital, and Ben Taub General Hospital: 77031, 77026, 77028, 77030, and 77025. The three clinics will be approximately 1,500-3,000 square feet each of leased space. The Facilities and Planning department at the Harris Health System has confirmed that such lease space is available in or around the target zip codes. Harris Health System plans to add new providers and staff to operate the clinic for extended evening hours and weekend hours, in addition to regular weekday hours, based on demand. Point of Care lab testing will be available. If patients are in need of imaging or pharmacy services, they will be referred to the nearest facility that provides those services.

Goals and Relationship to Regional Goals:

The goals of this project are to:

- Increase capacity for same day primary care through establishment of more accessible care locations across Harris County
- Increase access to same day primary care during extended hours and weekends

Expanding the capacity of primary care through additional clinics across the county and extended operating hours to better accommodate the needs of the community will allow patients to receive the right care at the right time in the right setting.

This project meets the following Region 3 goals:

- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

The three new same day access clinics will increase access to primary care in high demand areas of underserved individuals while ensuring that patients have access to care in the

appropriate setting. Harris County residents will be treated, and care discounted, according to the Harris Health System sliding scale, with determination of eligibility for financial assistance.

Challenges and how to address:

General primary care capacity has been a challenge for the Harris Health System. The same day access clinics will provide same day access for Medical Home and non-Medical Home patients. A significant challenge for the Harris Health System has been adequate capacity to offer Medical Homes for patients who do not have a primary care provider. As patients are seen in the same day clinic setting, this will continue to be a problem for those patients who need care for chronic conditions or other specialized care. In addition, meeting the demand for intensive behavioral health care needs that will present at same day access clinics will prove to be a challenge. To address these challenges we propose to direct patients with chronic conditions into the Medical Home setting at a Harris Health System health center or refer to a primary care setting at a local FQHC. Patients with behavioral health needs will be referred to behavioral health providers.

5-Year Expected Outcome for Provider and Patients:

Over the course of the 5-Year Waiver, Harris Health System expects to realize:

- Increased adult-focused primary care capacity through same day care clinics for primary care treatable conditions

Starting Point/Baseline:

For performance purposes, the baseline will be set at 0 visits since these are new clinics that currently are not operational.

Rationale:

Reasons for selecting the project option:

Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health center providers are currently 95% empaneled. Moreover, physicians in Harris Health System health centers carry a panel of 2,250 patients, which is higher than the industry standard of approximately 1,500 patients. Full panels lead to decreased access to primary care appointments at health centers. These health centers are approaching maximum capacity for empaneled patients. From March 2012-September 2012, the Harris Health System Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care. For the El Franco Lee and People's health centers, there were 908 unduplicated patients for which there were no Family Practice appointments available in the

month of September 2012 alone. Within the Harris Health System, 30% of all requests received in September 2012 for Family Practice appointments that could not be scheduled were for patients living in zip codes served by the El Franco Lee and People's health centers. El Franco Lee and People's Health Centers received 145 Ask My Nurse in-basket messages per month for patients that needed same day appointments that could not be scheduled by the Patient Appointment Center. These numbers, however, do not capture the full volume of unmet demand due to the fact that some calls were dropped as patients were placed on hold and some patients who needed care did not attempt to obtain an appointment based on previous difficulties obtaining same day appointments. Based on 2012 data of incoming patient calls to the Patient Appointment Center, 4627 unduplicated patients living near the El Franco Lee and People's Health Centers were unable to get an appointment.

Ben Taub and LBJ General Hospital sees a high volume of patients that would be more appropriately treated in the same day access clinic setting The addition of same day access clinics in close proximity will result in increased access to same day care for primary care treatable conditions, a more cost effective and appropriate setting than emergency centers and a more accessible setting than saturated Medical Home health centers.

Project Components:

Not Applicable / The project option 1.1.1 do not have components

Milestones & Metrics:

- Process Milestones and Metrics- P-1 (P-1.1); P-5 (P-5.1); P-X (P-X.1); P-X2 (P-X2.1)
- Improvement Milestones and Metrics- I-12 (I-12.1)

Unique community need identification number the project addresses:

This project addresses the following community needs according to the community needs assessment:

- CN.1- Inadequate access to primary care
- CN.8- High rates of inappropriate emergency department utilization
- CN.2- Inadequate access to specialty care

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

Currently, Harris Health System does not guarantee same day care for patients who are not enrolled in a Medical Home and empaneled to a primary care physician. Thus, the same day access clinics will be a new initiative for Harris Health by providing access to same day visits regardless of Medical Home enrollment. Moreover, current health centers offer an array of ancillary services, including full service outpatient pharmacies and laboratories, in addition to various specialty and radiology services. The same day access clinics will offer limited

laboratory services and will not offer radiology or pharmacy services but will refer patients to other facilities for these services as needed.

Related Category 3 Outcome Measure(s):

OD-6 Patient Satisfaction

- IT-6.1- Percent improvement over baseline of patient satisfaction scores (standalone)
    - (1) are getting timely care, appointments, and information

Reasons/rationale for selecting the outcome measure(s):

IT- 6.1 will measure improvement in satisfaction scores over time relating to timeliness of care at the Southwest, Medical Center, and Northeast same day access clinics, specifically measuring the mean score for the Press Ganey survey question- "Ease of scheduling appointments." The same day access clinics will increase capacity for primary care visits within the Harris Health System, which will enhance access and improve the patient's experience in obtaining services. Patient satisfaction scores have been historically poor for health centers regarding timely access to care. The same day access clinics will offer an efficient venue that offers same day visits, affording patients the opportunity to seek care in a setting that is appropriate for the level of care they need and more cost effective than other alternatives.

Relationship to other Projects:

Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in this area of Harris County. The value of the project is based on the clinics' capacity to provide primary care services, including laboratory point-of-care testing, along with timely referrals for specialty care, imaging

DRAFT

and other needed services within the Harris Health System network. Each of the three clinics can ultimately care for the episodic primary care needs of over six thousand patients annually, and refer new patients with chronic disease management needs to one of the NCQA certified medical home clinics that are operated by Harris Health. In addition, the availability of same day primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

Project Option 1.9.3- "Other" project option: Implement other evidence-based project to expand specialty care capacity: Pre-consult evaluations to facilitate efficient specialty care.

Unique Project ID #: 133355104.1.7 / Pass 1
Performing Provider/TPI: Harris Health System/133355104
Project Summary:
Provider:
Harris Health System is comprised of 16 community health centers, seven school-based clinics, a dental center, dialysis center, five mobile health units, one outpatient specialty services clinic, and three hospitals. With a tax base of $511.6 million, Harris Health System was able to provide more than $1.254 billion in charity care during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 35,343 Births (babies delivered)- 6,643 Emergency visits- 173,263 Outpatient visits- 1,054,770	Self-Pay- 62.6% Medicaid and CHIP- 23.4% Medicare- 8.6% Other Funding- 3.6% Commercial Insurance- 1.8%	Hispanic- 57.4% African American- 26.3% Caucasian- 9.2% Asian- 4.8% Other- 2.4%

Intervention(s):
This project will address the inefficiency of specialty clinics (focusing primarily on diabetes and rheumatology clinics) by making possible ordering best practices diagnostic algorithmic workups and eliminating the current practice of sequential ordering of individual tests which is resources and time wasteful as well as error prone. This will insure optimal testing prior to specialty consult and appropriate referral. The project will streamline the referral process and increase the productivity of both PCPs and specialists.
Need for the project:
It takes about 6 months to get a consult in the Harris Health rheumatology clinic. Similar backlogs exist for other consult services. Most patients arrive for their consult with inadequate work ups or do not have the condition in question. This number is about 50% of total number of consults in rheumatology service. The inadequacy of consultation process for diabetic patients is also illustrated by the fact that over 43% of African Americans are not aware of their diabetic kidney disease until one week prior to kidney failure and need for dialysis. We have identified several causes of the inefficiency that could be addressed by restructuring the diagnostic process.
Target Population:
All patients within the system may benefit from this project (Medicaid and CHIP-23.4% / Self-Pay- 62.6%), with a focus on those referred to diabetes and rheumatologic clinics.
Category 1 or 2 expected patient benefits:
Our goal is to decrease the rate of rejected/accepted primary care provider-initiated referrals to specialty care: decrease by 20%; 35%; 40% of baseline in DY3-DY5 in the diabetes and rheumatologic clinics. The estimated number of patients is (DY2-DY5) is about 3000.
Category 3 outcomes:
IT-1.1- Our goal is to decrease wait time from specialty referral to specialty clinic visit 20%, 30% and 40% from baseline in DY3-DY5 respectively.
IT-1.14- Diabetes care: Microalbumin/Nephropathy- Goals for DY4 and DY5 to be determined.
IT-6.1- Our goal is to increase satisfaction scores: patient's rating of doctor access to specialist- by 3% above baseline in DY4 and 5% in DY5.

DRAFT

Project Option 1.9.3- "Other" project option: Implement other evidence-based project to expand specialty care capacity: Pre-consult evaluations to facilitate efficient specialty care.

Unique Project ID #: 133355104.1.7 / Pass 1
Performing Provider/TPI: Harris Health System/133355104

Project Description:
Harris Health System proposes a project that will address the opportunity for increased efficiency in the referral processes to specialty clinics. This project will focus on developing algorithms to address diabetes mellitus and rheumatology clinic.

ACOs and medical homes are designed to ensure continuity of care and facilitation of efficient use of specialty consultations. This project will address two limitations of these models: first, the limited ability of providers to keep current with the ever more complex diagnostic technologies and, second, the wasteful procedures necessary to navigate the labyrinth of operational inefficiencies. Our approach is based on the fact that pathologists through the laboratories produce around 70% of all data in medical records and are specifically trained in diagnostic medicine. The goal is to use these resources in an efficient consultative manner to improve selection and preparation of patients for specialty consultations across the entire spectrum of the Harris Health System.

Harris Health System serves Harris County, which is the 3rd largest County in the US. The system has a $1.2 billion budget, 7500 FTEs and operates 3 hospitals and an ambulatory network with over 1,000,000 visits annually, 10,000 consults / month and 10,000 calls for appointments per week. The Harris Health clinics systematically experience shortage of clinic availability for specialty consults. For example, it usually takes about 6 months to get a rheumatologist consult at the Lyndon B. Johnson rheumatology clinic. Similar backlogs exist for other consult services. This delays the initiation of the necessary treatment, negatively affects the patient's health, and produces dissatisfaction and frustration. Our analysis and discussions with clinicians revealed several causes of the backlogs that could be addressed with little capital investments by restructuring of the diagnostic process.

The current system requires physician's justification of every test on every patient. It is unreasonable to expect any practicing clinician to be familiar with the best diagnostic practices across the entire spectrum of diseases. EMRs make patient information accessible, but offer little help in either directing workups of complex conditions or managing arcane and wasteful processes of test ordering and reporting.

This project will focus primarily on diabetes mellitus (DM)/pre-diabetes and rheumatologic conditions. Our plan is to make it possible for providers to efficiently order the most appropriate best practices algorithm driven laboratory workups for particular patients. The pre-consult algorithms will be developed by pathologists in consultation with both primary care and specialist providers. They will be executed in the laboratory and reported with a concise explanation of what was done and the meaning of the results. The interpretation of algorithms will be done by pathologists during the developmental phase. As best practices become clarified, nurses or other personnel will likely be able to interpret some algorithms. However, others that require review of the medical record and a physician's judgment will continue to be done by pathologists. As the expertise and infrastructure develop, we will consider piloting similar approaches to several other specialties (Hematology and coagulation, Hepatology, etc.) that are not a part of the milestones and goals formulated for this project. The project will begin with

pre-consult evaluations for rheumatology and endocrinology and progress to the entire spectrum of diagnostic medicine.

This evaluation will be used by referral service (specially trained referral nurses interacting with clinical pathologists) to determine the need for consult, for triaging the consult requests depending on urgency and clinical condition. The approach will also ensure that the patients come to the specialty consult with the entire set of tests needed to make the diagnosis, thus eliminating/minimizing the need for additional visits. As a result, introduction of this approach will free up significant number of specialist consult spots, increase the productivity of the specialist and "unclog" the referral service by increasing the throughput without employing additional providers and major capital investments. For consult requests that are denied, referring primary care physicians will receive a detailed explanation of the reasons and alternatives to consider.

The project's final outcome will be expansion of specialty care by increasing productivity and streamlining the work of existing PCPs and specialists. It combines elements of expanding specialty care and improved access to specialty care with emphasis on improving effectiveness of existing personnel and facilities by inserting diagnostic algorithms and pathologists' pre-consults into the preparation for specialty consults. This project is intended to make better use of existing specialty services without major capital investments.

In regard to diabetes significant emphasis will be placed on certain ethnic populations (Hispanics, African Americans and Asian/Vietnamise) considering the disproportionally high prevalence of this condition and early complications in these ethnic groups. There is vast literature supporting this notion for African Americans. Disturbingly, the incidence of end stage renal disease (ESRD) due largely to diabetes continues to mount in young African Americans (J Am Soc Nephrology 18, 1038-45, 2007). African Americans make up only 13% of the US population, yet constitute 32% of patients with ESRD. The risk for developing ESRD is at least three-fold higher in African Americans. .Very troublesome that according to this study over 43% of African Americans with kidney failure were not aware of kidney disease until one week before their kidneys failed entirely and they required dialysis. Hispanic Americans also have a high prevalence of diabetes. Among all diabetics, Hispanic patients are six times more likely to develop chronic kidney disease and to advance to end-stage disease. Experience at Harris Health points also towards increased prevalence among Vietnamese. About 50% of patients served by Harris Health are Hispanic, 26% - African Americans and 5% - Asian (mainly Vietnamese). That provides an idea of involved costs and possible savings if diabetes early evaluation program (DEEP) and complications early evaluation program (CEEP) (see the goals section below) are successfully implemented.

Goals and Relationship to Regional Goals:

Project goals:

- Develop an algorithm for diabetes early evaluation program (DEEP) and for diabetes complications early evaluation program (CEEP) and implement programs in clinics. The CEEP will focus primarily on kidney complications (nephropathy); it will also require blood pressure measurements, retinal and foot examinations by PCPs as a part of the algorithm to satisfy the fast track of the referral protocol
- Introduce the algorithm-based work-ups and pre-consult evaluations for major rheumatologic conditions (total 5).

- Develop laboratory and referral center workflows and train technologists and nurses to execute them.
- Develop knowledge based systems to facilitate efficient preparation of reports that contain both the test results and an explanation of the implications for each patient.
- Work with information technology (IT) department to implement ordering and reporting of the algorithm-based work-ups.
- Assess the value of algorithmic and consultative diagnostic workups for clinicians and use their input to further improve of the effectiveness processes.

This project meets the following regional goals:

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

All the regional institutions providing diagnostic and consulting services experience the same problems with shortness of slots for clinic visits and especially for consults. Thus, this project will provide a demonstration of means to improve efficiency of healthcare and patient satisfaction in the region.

Challenges:

We have found that both PCP and specialist physicians immediately understand value of this project and are anxious to participate in developing and using algorithms. The challenges lie within laboratories that must develop new workflows, with pathologists who must learn a new discipline and with information systems who must build complex new functionality.

Our approach is to use manual or pilot scale methods to introduce and refine processes. A medical technologist will manage samples in the laboratory, order tests of an algorithm, and collate results for pathologist interpretation. The interpretations will be facilitated using database that we have used for years in assisting with complex interpretations in hematopathology (http://pathology.uth.tmc.edu/faculty/pages/nguyen-nghia/decision.html). We will work with information systems continuously to determine when a process is sufficiently stable to warrant full development and then plan and execute such development. Education of nurses and medical technologists as well as pathologists is essential.

5-year expected outcome for Performing Provider and patients:

- Increase the capacity of clinics and consulting services by reducing the number of patient visits required to solve diagnostic problems.
- Reduce the need for emergency room visits and hospitalizations that result from delayed or inaccurate diagnoses in the clinics.
- Increase (with little capital investments) the throughput and productivity of the specialists consulting services by "unclogging" the Consulting System through eliminating unnecessary consults and minimizing the number of excessive visits due to incomplete pre-consult testing.
- Improve quality of care by decreasing the waiting time and eliminating unnecessary repeated visits due to incomplete pre-consult testing; enhancing patients' satisfaction.

- Make possible (or facilitate) providing quality care for expected significant influx of patients due to implementation of ACA and the 1115 Waver without major increase of numbers of providers and capital investment..

Starting Point/Baseline:
The Harris Health System has a busy centralized referral department staffed by nurses (10) and clerks. We began working with this department early in the process of developing algorithms in order obtain an illustration of the effectiveness of this approach. The focus was on systemic lupus erythematosus (SLE) referrals. The test run demonstrated that implementation of the algorithms could help greatly with workflow and result in reduction of the backlog for the rheumatology clinic by about half (from nearly 6 to about 2 1/2 months).

In review of 80 cases in the test run of the algorithm for SLE in late May, June and early July, it became clear that this might provide significant benefits if properly applied.. For example, of the 80 cases, 4 were graded as ‘URGENT, 30 were ‘APPROVED for routine consultation and 49 were ‘DENIED. Some of the denials were returned to complete the necessary laboratory work. Six patients had positive TSH or hepatitis panels, which warranted an endocrinology or gastrointestinal rather than rheumatology consultations. It has been demonstrated that proper managing of the proposed program could substantially reduce the number of inappropriate consultations and allow e patients with more severe disease to obtain early rheumatology appointments. Only 15 of the 80 patients had a urinalysis, sedimentation rate and CRP performed. Many others did not have CBCs or appropriate autoantibody measurements. Under the proposed plan, the pathologist reviewing the consult will order the indicated tests using the already collected sample. This will save time and money for the patients, nurses and physicians who would otherwise have to pass the information to several facilities to get the testing done.

Some of the cases appear to be more complex, requiring review of the medical records and physician’s judgment. Adding specialized laboratory medicine physician’s judgment at a critical point in the work-up would be far more effective and efficient than available alternatives. This is an example where specialized expertise in laboratory work-ups of patients with suspected SLE would be preferable instead of trying to educate primary care providers across the system in areas of technology they will only use occasionally. Pathologists will collate the results into a single report with a narrative explanation of what was done and the meaning of the results. Intention is to make this understandable and educational to both providers and patients.

Rationale:

A significant number of patients scheduled for specialty consults often do not have the condition in question. These patients get scheduled for consult due to PCP overload, insufficient or inappropriate laboratory testing and cumbersome delivery of laboratory results. A rough estimate shows that this number is about 50% of total number of consults in rheumatology service. PCPs need assistance in choosing the optimal tests to make the best diagnostic decisions and eliminate unnecessary consults to triage the remaining consults based on the urgency of the situation and need for specialist involvement.

Extended laboratory diagnostic work-ups commonly start after the initial visit to a specialist. Second/third visits are typically necessary for the data to be reviewed by a specialist and management decisions to be made and implemented. This process takes up a significant

DRAFT

number of consult clinic openings that could be used more effectively by other patients in line and delays the implementation of treatment.

It is not uncommon that by the time laboratory testing is completed, it becomes clear that the patient did not have the condition in question. At this point, the patient may have already undergone up to 3 unnecessary specialty clinic visits. This often leads to repetition of the entire process until there is a correct diagnosis.

Laboratories produce 70% of all data in typical medical records, and placing professional expertise in the laboratory makes it possible for PCP's to order algorithmic workups and laboratory consultations. Clinical pathologists would be responsible for reviewing data and providing actionable reports for clinicians. Best practice algorithms will be made conveniently available to all providers and executed efficiently within the laboratory saving costs, time, and frustrations of unnecessary or inappropriate tests and nonproductive clinic visits.

Medical errors are significant contributors to cost and undesirable outcomes in medicine. Significant errors are reported to occur in as much as 15% of cases. (Diagnostic Errors in Acute Care , 2010) Much attention has been focused on therapeutic errors such as drug dose; however, diagnostic errors are responsible for twice as many adverse events as medication errors. (Creating a Value-Driven Laboratory:Opportunities in the New Marketplace, 2012) 44% of the diagnostic errors were failure to order, report, process or follow up on results of laboratory tests or x-rays. In addition, 70% of diagnostic errors have been attributed to data gathering, data synthesis, or clinical knowledge (Creating a Value-Driven Laboratory:Opportunities in the New Marketplace, 2012). Introduction of evidence based work-ups and use of locally developed best practices algorithms together with the expertise of specialists in diagnostic laboratory medicine will reduce errors and improve performance in each of these areas.

Project Components: Not applicable.

Milestones and Metrics: P-X1, P-X1.1; P-X2, P-X2.1, P-2, P-2.1; P-5, P-5.1; P-6, P-6.1**;** I-X1, I-X1.1; I-X2,I-X2.1; I-26, I-26.1

Unique community need identification numbers the project addresses:

- CN.2 Inadequate access to specialty care

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:

This is an entirely new initiative for Harris Health System. Some institutions such as Partners in Boston, use pre-consult algorithms and others like Vanderbilt, use pathologist laboratory consultations; but, we do not know of any other institution that has initiated a project that combines these elements together. In developing the programs for diabetes (DEEP and CEEP), we will use the experience of others that have successfully accomplished elsewhere. The National Kidney Foundation uses an algorithm of clinical and laboratory data in order to identify people with diabetes and/or kidney disease before they become clinically symptomatic, namely, the Kidney Early Evaluation Program (KEEP.) Another program implemented by the University of Miami screened employees of the Polk County School Board. In only two years, it produced savings in total healthcare costs of $456.44 / per covered live / per year for an ROI of 1:1.73. The savings from case finding are expected to increase further as the patients continue with chronic

care. We will work with specialist and primary care physicians in Harris Health to adapt these and other best practices to our environment and our goals.

Related Category 3 Outcome Measures:

- OD-1: Primary Care and Chronic Disease Management
  IT-1.1: Third Next Available Appointment (non-standalone)
  IT-1.14: Diabetes care: Microalbumin/Nephropathy- NQF 0062 (non-standalone)
- OD-6: Patient Satisfaction
  IT-6.1(3): Percent improvement over baseline of patient satisfaction scores: patient's rating of doctor access to specialist (stand-alone)

Reasons/rationale for selecting the outcome measures:

In an effort to increase efficiencies in the primary care setting, this project is proposing algorithms for diabetes and rheumotological conditions. We decided to measure three outcomes that are overall goals of the project. In an effort to increase efficiencies, we have chosen IT-1.1 as we aim to decrease the amount of time a patient must wait between specialty clinic referral and actual visit. Diabetes is a focus for our region, and we plan to implement an algorithm that will focus on diabetes screening. We decided that IT-1.14 is important in the success of this particular part of the project. IT-6.1(1) was chosen because Harris Health System wants to continuously provide efficient care without ever losing sight of the patient experience.

Relationship to other projects: The increase of primary care and specialty care will naturally result in additional ambulatory care encounters for our region patient base. The ambulatory initiatives cover items such as laboratory, PT/OT, social work, etc. and are a necessity of our patients to ensure a comprehensive treatment for access as well as cost avoidance. The Region 3 initiative grid in the addendum reflects all ambulatory operations initiatives.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: This project will focus primarily on diabetes mellitus (DM)/pre-diabetes and rheumatologic conditions, making it possible for providers to efficiently order the most appropriate best practices algorithm driven laboratory workups for particular patients. The value of the project is based on cost savings and efficiencies through (1) increasing the capacity of clinics and consulting services by reducing the number of patient visits required to solve diagnostic problems, (2) reducing the need for emergency room visits and hospitalizations that result from delayed or inaccurate diagnoses in the clinics. (3) increasing the throughput and productivity of the specialists consulting services by eliminating unnecessary consults, and (4) improving quality of care by decreasing the waiting time and eliminating unnecessary repeated visits due to incomplete pre-consult testing; thus enhancing patients' satisfaction. In addition, these improvements will facilitate providing quality care for expected significant influx of patients due to implementation of ACA and the 1115 Waver without a major increase in the number of providers and capital investment.

Project Option- 1.1.2 Expand Existing Primary Care Capacity: Referrals to FQHCs
Unique RHP Project ID: 133355104.1.8 / Pass 1
Performing Provider Name/TPI: Harris Health System / 133355104
Project Summary:
Provider:
Harris Health System is comprised of 16 community health centers, seven school-based clinics, a dental center, dialysis center, five mobile health units, one outpatient specialty services clinic, and three hospitals. With a tax base of $511.6 million, Harris Health System was able to provide more than $1.254 billion in charity care during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 35,343 Births (babies delivered)- 6,643 Emergency visits- 173,263 Outpatient clinic visits- 1,054,770	Self-Pay- 62.6% Medicaid and CHIP- 23.4% Medicare- 8.6% Other Funding- 3.6% Commercial Insurance- 1.8%	Hispanic- 57.4% African American- 26.3% Caucasian- 9.2% Asian- 4.8% Other- 2.2% American Indian- 0.2%

Intervention(s):
Harris Health System proposes to collaborate with FQHCs by adding additional providers and nursing support staff to targeted FQHCs, as well as develop a seamless referral process by which Harris Health can refer primary care patients to FQHCs, as necessary. The additional providers will result in an additional 25,000 visits by DY5.
Need for the project:
Currently, FQHCs throughout Harris County serve high demand, underserved areas. However, many have underutilized clinic space that can accommodate additional providers and expand existing primary care capacity.
Target Population:
All current and potential patients seeking primary care services within the system and at FQHCs may benefit from this project (Overall Payor Mix: Medicaid and CHIP-23.4% / Self-Pay-62.6%).
Category 1 or 2 expected patient benefits:
Our goal is to increase primary care clinic completed visits by additional primary care providers by 3% over baseline in DY4 and 5% in DY5. An additional 25,000 visits over baseline are expected by DY5.
Category 3 outcomes:
IT-6.1: Our goal is to increase satisfaction scores overall by 1% above baseline (for FQHCs that added providers in DY 3) in DY4 and Increase satisfaction scores overall by 2% above baseline (for FQHCs that added providers in DY 3) and increase satisfaction scores for 1% overall for FQHCs that added providers in DY 4) in DY5.

DRAFT

Project Option- 1.1.2 Expand Existing Primary Care Capacity: Referrals to FQHCs

Unique RHP Project ID: 133355104.1.8 / Pass 1

Performing Provider Name/TPI: Harris Health System / 133355104

Project Description:

Harris Health System proposes to expand the capacity of primary care by adding additional primary care providers and staff to local Federally Qualified Health Centers in order to meet the demand that saturated existing Harris Health System health centers cannot meet.

Currently, FQHCs throughout Harris County serve high demand, underserved areas. However, many have underutilized clinic space that can accommodate additional providers and expand existing primary care capacity. Thus, Harris Health System proposes to collaborate with FQHCs by adding additional providers and nursing support staff to targeted FQHCs, as well as develop a seamless referral process by which Harris Health can refer primary care patients to FQHCs, as necessary. The additional providers will result in an additional 25,000 visits by DY5. Each FQHC differs in size, location, and target population, but many are located proximate to a Harris Health System health center, allowing for easy referrals and convenient locations for many patients. Partner FQHCs include: Central Care Community Health Center, El Centro de Corazon; Good Neighbor Healthcare Center; Healthcare for the Homeless – Houston; Houston Area Community Services (HACS); HOPE Clinic; Independence Heights Community Health Center; Legacy Community Health Services; Pasadena Health Center; Spring Branch Community Health Center; and Vecino Health Centers (Denver Harbor Family Clinic and Airline Children's Clinic). Target zip codes are listed below according to FQHC partner. Healthcare for the Homeless-Houston serves all zip codes.

Goal(s) and Relationship to Regional Goal(s):

The goals of this project are to:

- Increase capacity for primary care by adding providers and nursing support staff to existing, underutilized clinic space

Expanding the capacity of primary care through additional providers at FQHCs will better accommodate the needs of the community and allow patients to receive the right care at the right time in the right setting.

This project meets the following Region 3 goals:

- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

This project will increase access to primary care in high-demand areas of underserved individuals while ensuring that patients have access to care in the appropriate setting, regardless of their ability to pay.

Challenges:

General primary care capacity has been a challenge for the Harris Health System. A significant challenge for the Harris Health System has been adequate capacity to offer Medical Homes for patients who do not have a primary care provider. The Referrals to FQHCs project will expand capacity for primary care and connect patients to care in a timely fashion that would otherwise not be possible. There will be an additional challenge to develop a referral system for patients who seek an appointment at the Harris Health System for whom the demand cannot be met, as well as a referral system for patients who seek care for primary care treatable conditions in the Harris Health Emergency Centers. A seamless system will be developed so that patients are referred to the FQHCs for establishment of a Medical Home.

The nature of the partnerships required by this project adds complexity to successful implementation. While the project requires additional contract procurement for the subcontracting of services, the Legal and Compliance departments at Harris Health System have significant experience in this area and Harris Health currently subcontracts for a number of services. Monitoring provider and staff recruitment activities, provider performance, and adherence to standardized referral guidelines will also be a challenge. The development of

DRAFT

standardized processes and procedures relating to the aforementioned areas of concern will be a focus of the planning period in DY2.

5-Year Expected Outcome for Provider and Patients:

Over the course of the 5-Year Waiver, Harris Health System expects to realize:

- Increased adult-focused primary care capacity (25,000 additional visits) through additional providers at FQHCs and a smooth referral process.

In DY 5, Harris Health hopes to have 25,000 completed visits through the referral and new providers.

Starting Point/Baseline:

For performance purposes, the baseline will be set at 0 additional visits at targeted FQHCs.

Rationale:

Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health center providers are currently 95% empaneled. Moreover, physicians in Harris Health System health centers carry a panel of 2,250 patients, plus an additional 500 patients for each midlevel provider who works with them to manage their patient panel. These panel sizes are higher than the industry standard of approximately 1,500 patients. Full panels lead to decreased access to primary care appointments at health centers. These health centers are approaching maximum capacity for empaneled patients. From March 2012-September 2012, the Harris Health System Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care. This volume, however, does not capture the full volume of unmet demand. Without access to primary care, patients are more likely to seek care in Emergency Centers, which is a higher cost and not convenient for patient. Care is better coordinated in a Medical Home, leading to better management of chronic disease, improved patient satisfaction, and better outcomes

The addition of providers at local FQHCs will result in increased access to primary care.

Project Components:

a) Expand primary care clinic space
b) Expand primary care clinic hours
c) Expand primary care clinic staffing- (P-5) Additional providers and staff will be hired at FQHCs.

This project will not directly address components a) or b). At targeted FQHCs, there is significant space that is currently underutilized. Moreover, expanded hours are already offered at select FQHCs. Thus, this project aims to maximize space by adding primary care staffing to the current infrastructure and operating hours.

Milestones & (Metrics):

- Process Milestones and Metrics- P-5 (P-5.1); P-X (P-X.1)
- Improvement Milestones and Metrics- I-12 (I-12.1)

Unique community need identification number the project addresses:

This project addresses the following community needs according to the community needs assessment:

- CN.1- Inadequate access to primary care

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

While Harris Health System has collaborated with local FQHCs in various ways, a project aimed at increasing providers and developing a formalized referral process for primary care has not been explored. The project will promote true collaboration through a mutual, patient-centered goal that will refer patients to a primary care location that is appropriate and convenient by leveraging the ability of the Harris Health System to secure and fund additional providers. This project to refer patients to the FQHCs complements the project to establish same day access clinics (133355104.1.1; 133355104.1.2 133355104.1.6).

<u>Related Category 3 Outcome Measure(s):</u>

OD-6 Patient Satisfaction

- IT-6.1- Percent improvement over baseline of patient satisfaction scores (standalone)
  - (1) are getting timely care, appointments, and information

Reasons/rationale for selecting the outcome measure(s):

From March 2012-September 2012, the Harris Health System Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care. According survey results for the last 12 months as reported by Press Ganey, the patient satisfaction score for all Harris Health primary care Medical Home health centers regarding standard Access to Care survey questions is 76.8. Without access to primary care, patients are more likely to seek care in Emergency Centers, where they will wait longer and their care is not coordinated. If patients are satisfied with the care they receive at their Medical Home, they are more likely to seek care promptly when needed in the appropriate setting, more adherent to provider recommendations for disease management, and more satisfied with the care they receive. We have selected IT-6.1 because it is an effective tool for assessing improvement in access to care and for the targeted development of process improvement needs. Harris Health System wishes to ensure a positive patient experience internally and in the area at partner FQHC facilities.

DRAFT

Relationship to other Projects:

Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved/uninsured population in Harris County. It will expand capacity for primary care medical homes and connect patients to care in a timely fashion that might not otherwise be possible. A referral system will be developed for patients who seek an appointment at the Harris Health System for whom the demand cannot be met in a timely manner, as well as for patients who seek care for primary care treatable conditions in the Harris Health Emergency Centers. The value of the project is based on the incremental capacity to provide primary care services at the community FQHCs, along with timely referrals for specialty care and other needed services within the Harris Health System network. This expansion can ultimately care for the primary care needs of over eight thousand patients annually. In addition, the availability of incremental primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

DRAFT

Project Option 1.12.2 - Expand the number of community based settings where behavioral health services may be delivered in underserved areas: Expansion of Pediatric Behavioral Health Services

Unique RHP Project Identification Number: 133355104.1.9 / Pass 1
Performing Provider Name/TPI: Harris Health System/TPI 133355104
Project Summary:
Provider:
Harris Health System is comprised of 16 community health centers, seven school-based clinics, a dental center, dialysis center, five mobile health units, one outpatient specialty services clinic, and three hospitals. With a tax base of $511.6 million, Harris Health System was able to provide more than $1.254 billion in charity care during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 35,343 Births (babies delivered)- 6,643 Emergency visits- 173,263 Outpatient clinic visits- 1,054,770	Self-Pay- 62.6% Medicaid and CHIP- 23.4% Medicare- 8.6% Other Funding- 3.6% Commercial Insurance- 1.8%	Hispanic- 57.4% African American- 26.3% Caucasian- 9.2% Asian- 4.8% Other- 2.2% American Indian- 0.2%

Intervention(s):
This project will address the shortage of pediatric and adolescent behavioral health services by implementing and expanding these services across eight facilities within the system. We propose to expand psychiatry to 5.0 FTEs and expand behavioral therapy to 11 FTEs.
Need for the project:
Currently, Harris Health System offers pediatric and adolescent behavioral health services at five of its facilities with a total of 1.3 psychiatry FTEs and 3.4 behavioral therapy FTEs.
Target Population:
This project specifically targets patients in the following zip codes and surrounding areas of Harris County seeking behavioral health services: 77009, 77099, 77547, 77039, 77520, 77504, 77084, and 77070. Data from FY2012 shows that 60% of all pediatric visits in Harris Health System were funded.
Category 1 or 2 expected patient benefits:
Our DY3 goal is to increase the number of visits from baseline by 25%. In DY4, we aim to increase by 70% from DY3 completed visits and in DY5 we aim to increase by 90% from DY4 completed visits. We estimate that we will provide an additional 20,000 visits by DY5.
Category 3 outcomes:
IT-6.1: Our goal is to increase patient satisfaction scores (patients are getting timely care, appointments, and information) by 1.5% in DY4 and 2% in DY5.

Project Option 1.12.2 - Expand the number of community based settings where behavioral health services may be delivered in underserved areas: Expansion of Pediatric Behavioral Health Services

Unique RHP Project Identification Number: 133355104.1.9 / Pass 1

Performing Provider Name/TPI: Harris Health System/TPI 133355104

Project Description:
Harris Health System will address Project Option 1.12.2 related to the shortage of pediatric and adolescent behavioral health services by implementing and expanding these services across eight facilities within the system.

Currently, Harris Health System offers pediatric and adolescent behavioral health services at five of its facilities. The scope of this project is to increase access to these services in areas of high need in the community, specifically to serve the following zip codes and surrounding areas of Harris County: 77009, 77099, 77547, 77039, 77520, 77504, 77084, and 77070.

Goals and Regional Goals:

Project Goals:

- Increase psychiatry and behavioral therapy staffing at existing locations within Harris Health System. We propose to expand psychiatry to 5.0 FTEs (currently 1.3 FTEs) and expand behavioral therapy to 11 FTEs (currently 3.4 FTEs). We will also hire 5.0 additional FTEs of support staff. The additional workforce will increase access to behavioral health services for the pediatric population of Harris County.
- Increase capacity in underserved areas.
- Treat children and adolescents in appropriate outpatient setting for potential decrease in need for inpatient behavioral health services.

Regional goals addressed with the project:

- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition.
    - This project addresses this regional goal by focusing on areas with high numbers of low-income families who may otherwise not have adequate access to appropriate levels of outpatient behavioral health services for children and adolescents.
- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction
    - This project addresses the growing need for behavioral health services for the state of Texas. Expansion of services will help address this need at an earlier stage in life, which is vital for a successful outcome.

Challenges:
There are an inadequate number of behavioral health providers in the region and across the state of Texas, which includes a shortage of child psychiatrists. Harris Health System faces an even greater challenge, as much of our patient population served is primarily Spanish speaking, making it more difficult to find behavioral health professionals who can communicate effectively in the patient's language of choice. Harris Health System plans to actively recruit, hire, and train behavioral health providers to address these challenges in DY2.

- Inpatient behavioral health services have been reduced in Harris County. One of the area's major inpatient psychiatric hospitals was closed due to loss of its Medicaid/Medicare certification. The lack of inpatient beds for pediatric and adolescent behavioral health patients is a challenge for Harris Health System, the region, and Texas as a whole. Behavioral health needs may lead to school failure, behavioral conflicts, and substance abuse; if left untreated, these problems may become more difficult and costly to treat. Expanding pediatric and adolescent behavioral health services through projects as proposed, has the potential to help decrease the need for inpatient behavioral health beds by addressing issues at earlier stages in life.

5-Year Expected Outcome for Performing Provider and Patients:
By addressing the challenges for the region and Harris Health System as performing provider, we expect to achieve the overarching goal of increasing availability to pediatric and adolescent behavioral health services to underserved areas of Harris County. In reaching these goals, we expect to maintain high levels of patient satisfaction as evident by our survey scores reported throughout the latter demonstration years of the waiver.

Starting Point/Baseline:
Volume: In FY12, there were approximately 3,867 pediatric psychiatry and behavioral health therapy visits and 44,800 primary care pediatric visits. For FY13, we estimate 6,000 pediatric psychiatry and behavioral health therapy visits.

FTEs: In FY12, there were 0.9 psychiatry FTEs and 2.4 behavioral therapy FTEs.

These metrics will serve as baselines for the expected increase in volume per year and required workforce beginning in DY3.

Rationale:
Studies have shown that at least 1 in 5 children and adolescents have a mental health disorder in the United States, with 1 in 10 children suffering a disorder so severe that it disrupts daily living (SAMHSA'S National Mental Health Information Center, 2003). Texas children are not receiving adequate behavioral health care services (Children's Mental Health in Texas: A State of the State Report, 2006).

Current challenges for adequate delivery of pediatric behavioral health delivery include funding, insurance limitations, limited providers, language and cultural barriers between providers and patients, growing need, social stigma, and a lack of parental and early intervention services. Currently, Texas ranks 49th in the nation in behavioral health expenditures per capita (National Association of State Mental Health Program Directors Research Institute, Inc.). Due to limited funding, state agencies focus on severe crisis treatment. There are 1.4 million children without health insurance in Texas (Children's Defense Fund, 2006), and behavioral health services available to these children are limited.

Project Components:

This project option does not have required components.

Milestones and Metrics:

Harris Health System has chosen project option 1.12.2: Enhance service availability (i.e., hours, locations, transportation, mobile clinics) of appropriate levels of behavioral health care to best fit the scope and goals of this project.

- Process Milestones and Metrics:
  - P-4, P-4.1
  - P-6, P-6.1
  - P-10, P-10.1
- Improvement Milestones and Metrics:
  - I-11, I-11.1

Unique Community Need Identification Numbers:

The scope and goals of this project specifically address three of the identified community needs from the regional needs assessment. The project focuses on CN.3 and CN.18 by increasing access for pediatric and adolescent patients to behavioral health services. This aligns with CN.6 by addressing the importance of adequate access and behavioral health treatment for children and potential long term benefits.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:

This is not a new initiative for Harris Health System, however, this is an expansion of an existing service. This initiative will greatly enhance the services offered to this underserved population.

<u>**Related Category 3 Outcome Measure:**</u>

OD-6 Patient Satisfaction
IT-6.1(1) Percent improvement over baseline of patient satisfaction scores: Patients are getting timely care appointments and information

Reasons/rationale for selecting the outcome measure:

This measure focuses on patient satisfaction outcomes to ensure patients are receiving care and appointments in a timely manner for behavioral health services regardless of ability to pay. Harris Health System highly values our patients and will continuously work on opportunities for improvement. This outcome measure allows Harris Health to focus on improvements that value the patient as a whole and not only based on clinical indicators. We will begin to measure in DY4.

Relationship to other Projects:

The behavioral health crisis in Region 3 is considerable and the proposed initiatives in our RHP plan will only imply a small impression into the overall community need for treatment, but is a good start. The outpatient focus of many RHP Plan initiatives will help numerous facilities focus to treating the patients in an ambulatory setting as well as continued navigation of services with a focus to keeping patients from the inpatient unit. This initiative is similar to many others in the sense of the category of behavioral health. The Region 3 Initiative Grid attached in the addendum will show the relationship to other programs.

Plan for Learning Collaborative:

As performing provider, Harris Health System plans to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

The goal of this project is to increase psychiatry and behavioral therapy staffing at existing pediatric locations within Harris Health System. Expanding pediatric and adolescent behavioral health services has the potential to help decrease the future need for inpatient behavioral health beds by addressing issues at earlier stages in life. Untreated behavioral health needs may lead to school failure, behavioral conflicts, and substance abuse; the longer the issues are left untreated, the more difficult and costly it is to provide effective treatment. The increase in provider staffing throughout the existing pediatric services network can ultimately meet the behavioral care needs of an additional eight thousand patients annually.

Project Option 1.12.4- Other- Enhance service availability of appropriate levels of behavioral health care: Expansion of Ambulatory Mental Health Services

Unique RHP Project ID: 133355104.1.10 / Pass 1
Performing Provider Name/TPI: Harris Health System / 133355104
Project Summary:
Provider:
Harris Health System is comprised of 16 community health centers, seven school-based clinics, a dental center, dialysis center, five mobile health units, one outpatient specialty services clinic, and three hospitals. With a tax base of $511.6 million, Harris Health System was able to provide more than $1.254 billion in charity care during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 35,343 Births (babies delivered)- 6,643 Emergency visits- 173,263 Outpatient clinic visits- 1,054,770	Self-Pay- 62.6% Medicaid and CHIP- 23.4% Medicare- 8.6% Other Funding- 3.6% Commercial Insurance- 1.8%	Hispanic- 57.4% African American- 26.3% Caucasian- 9.2% Asian- 4.8% Other- 2.2% American Indian- 0.2%

Intervention(s):
This project will to enhance service availability of appropriate levels of behavioral health care by expanding mental health services in the ambulatory care setting. Therapists and psychiatrists will be added (4.5 Psychiatry FTEs and 24 Therapy FTEs) to existing Harris Health System health centers across Harris County.
Need for the project:
Hours and appointment availability is currently limited. There are only 4.5 Psychiatry FTEs and 12.6 Therapy FTEs in the health centers.
Target Population:
All patients within the system seeking behavioral health services may benefit from this project (Overall Payor Mix: Medicaid and CHIP-23.4% / Self-Pay- 62.6%). .
Category 1 or 2 expected patient benefits:
Our goal is to increase the number of unique patients with a primary diagnosis of mental illness treated in the primary care setting by 3% over baseline in DY3, 5% in DY4 and 8% in DY5..
Category 3 outcomes:
IT- 1.20: Our goal is to increase the percent of patients diagnosed with major depression that are adherent to prescribed medication treatment plan. Adherence will be 15% of the identified patient population in DY4 and 20% in DY5.

Project Option 1.12.4- Other- Enhance service availability of appropriate levels of behavioral health care: Expansion of Ambulatory Mental Health Services

Unique RHP Project ID: 133355104.1.10 / Pass 1

Performing Provider Name/TPI: Harris Health System / 133355104

Project Description:

Harris Health System proposes to enhance service availability of appropriate levels of behavioral health care by expanding mental health services in the ambulatory care setting. Therapists and psychiatrists will be added to existing Harris Health System health centers across Harris County. Currently, each of the targeted health centers offers mental services, but with limited hours and appointment availability. Mental health provider FTEs will be added to each of the health centers below, in existing underutilized space. Appointment availability and service hours within the boundaries of normal operating hours will be expanded.

Goals and Relationship to Regional Goals:

The goals of this project are to:

- Increase access to and capacity for mental health services in the ambulatory care setting
- Develop a mechanism for the identification of the mentally ill population within Harris Health community centers
- Improve medication adherence by monitoring pharmacy utilization
- Enhanced access to mental health services and the ability to track and monitor medication adherence promote a decrease in acute care and emergency center visit utilization and thereby lowers overall cost of care per patient

This project meets the following Region 3 goals:

- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

Additional provider FTEs will increase access to a high-demand specialty care service in high-demand areas of underserved individuals. The health center is the appropriate setting for outpatient mental health needs. Harris Health System ensures that Harris County residents will receive care regardless of their ability to pay.

Challenges:

This project possesses challenges relative to the patient population and the data collection of medication adherence.

1. Initial identification of primary diagnosed patients with major depression
2. Cultural nuances and family dynamics that impact seeking treatment for mental health/major depression concerns
3. Retrieval of data relative to pharmacy utilization and patient medication adherence
4. Recruitment of sufficient psychiatrist to optimize patient capacity
5. Recruitment of mental health professionals to complement the psychiatrists' case load for behavioral intervention and counseling services

Challenges will be addressed by working collaboratively with Harris Health's academic partners and residency programs to secure psychiatrists for the mental health primary care expansion. Providing a clinical setting for residents will aid in securing future psychiatrists to sustain the program as attrition occurs. Recruitment of mental health professionals will be enhanced by internal and external recruitment efforts and in collaboration with the region's academic partners.

An initial internal data retrieval of all patient encounters across the continuum for Harris Health patients, with a primary diagnosis of major depression or a diagnosis of another mental health concern (in accordance with DSM 1V) will be conducted. Following identification of the patient population, a culturally sensitive program for patient contact and monitoring will be established in collaboration with the mental health team of professionals. A plan for retrieval of pharmacy utilization will be developed in conjunction with the Chief of Pharmacy and community health center staff pharmacists to ascertain medication for tracking and capacity and timeframes for reporting. Language barriers will be mitigated by the use of bilingual psychiatrists, mental health professionals, and ready access to patient interpretive services either on-site or telephonically.

5-Year Expected Outcome for Provider and Patients:

Over the course of the 5-Year Waiver, Harris Health System expects to realize:

- Increased access to mental health services in the ambulatory care setting.
- Increase the number of adults enrolled in a Harris Health Medical Home with a diagnosis of major depression or dysthymia and an initial PHQ-9 score greater than nine who achieve remission at twelve months
- Patients with a primary diagnosis of major depression will demonstrate improved adherence to medication management

Starting Point/Baseline:

To be established in DY2.

DRAFT

Rationale:

Mental health concerns are attributed to 25 % of the population in the US, and 50 % will be treated for such at least once in a lifetime (CDC , 2011).Mental health, specifically major depression, bipolar disorder and dysthymia, are the most common mental health disorders treated in the ambulatory care setting at Harris Health. Major depression is proven to be a concurrent disorder as a result of a chronic disease, and as an example, Harris Health has 47, 000 patients with diabetes and Harris County has 9% of its 4 million residents with a diagnosis of diabetes (CDC, 2011).

Formulary dispensing includes serotonin specific reuptake inhibitors (SSRI) as part of the top 6 medications prescribed for mental health. Psychiatric assessment with associated medication and stabilization are essential, but therapists are required in order to provide counseling and education relative to coping skills, problem solving, and management of behavioral symptomatology. Psychiatric and mental health professional services are interdependent and relative to successful patient outcomes. Ready access to providers and therapists is crucial to permit timely de-escalation, clinical interventions, and promotion of

mental health. Harris Health has geriatric treatment centers and mental health concerns in Texas according to the CDC (2008) accounts for as much as 14 % in residents over the age of 50.

While Harris Health System offers mental health services, hours and appointment availability is currently limited. There are only 4.5 Psychiatry FTEs and 12.6 Therapy FTEs in the health centers.

Project Components:

The chosen project option does not have any required core components.

Milestones & Metrics:

- Process Milestones and Metrics- P-10 (P-10.1); P-X1 (P-X.1); P-X2 (P-X2.1)
- Improvement Milestones and Metrics- I-X1 (I-X1.1)

Unique community need identification number the project addresses:

This project addresses the following community needs according to the community needs assessment:

- CN.2- Inadequate access to specialty care
- CN.3- Inadequate access to behavioral health care

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

Currently, Harris Health System offers limited mental health service availability in health centers. This project enhances the expansion of pediatric behavioral health services as well. In addition, it provides the ambulatory care providers that will support an expanded inpatient capacity and hospital-based service capacity at Harris Health System hospitals: Ben Taub General Hospital and LBJ General Hospital. Additionally this initiative will track, monitor, and report on medication adherence for patients with a primary diagnosis of major depression.

Related Category 3 Outcome Measure(s):

OD-1 Primary Care and Chronic Disease Management

- IT- 1.20 Other outcome target: Percent of patients diagnosed with major depression that are adherent to prescribed medication treatment plan

Reasons/rationale for selecting the outcome measure(s):

Mental health, specifically major depression, bipolar disorder and dysthymia, are the most common mental health disorders treated in the ambulatory care setting at Harris Health. Major depression is proven to be a concurrent disorder as a result of a chronic disease, and as an

DRAFT

example, Harris Health has 47, 000 patients with diabetes and Harris County has 9% of its 4 million residents with a diagnosis of diabetes (CDC, 2011).

Relationship to other Projects:

The Harris Health projects of implementing a disease registry will aid in the identification of patients with a mental health diagnosis, predict utilization and cost, and also track medications prescribed and filled.

Relationship to Other Performing Providers' Projects in the RHP:

The behavioral health crisis in Region 3 is considerable and the proposed initiatives in our RHP plan will only imply a small impression into the overall community need for treatment, but is a good start. The outpatient focus of many RHP Plan initiatives will help numerous facilities focus to treating the patients in an ambulatory setting as well as continued navigation of services with a focus to keeping patients from the inpatient unit. This initiative is similar to many others in the sense of the category of behavioral health. The Region 3 Initiative Grid attached in the addendum will show the relationship to other programs.

The cohabitation of primary care and behavioral health is an important focus of our region in order to treat the patient base with comprehensive physical and behavioral healthcare issues. There are multiple initiatives in our RHP plan that address this need and all can be found on the Region 3 Initiative Grid in the addendums. The outcome measures focused to screening measures and access of the patient base.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

The goal of this project is to increase psychiatry and behavioral therapy staffing at current medical home primary care clinics, in existing underutilized space. All of the targeted health centers offer behavioral services; however the hours and appointment availability are limited. Service hours and appointment capacity will be expanded within each of the clinics. Enhanced access to mental health services and the ability to track and monitor medication adherence will promote a decrease in acute care and emergency center visit utilization, as well as potentially decrease the need for additional inpatient psychiatric beds, thereby lowering the overall cost of care. The increase in provider staffing throughout the existing primary care services network can ultimately meet the behavioral care needs of an additional seven thousand patients annually.

Project Option 1.3.1- Implement/Enhance and Use Chronic Disease Management Registry Functionalities: Implement a Chronic Disease Management Registry

Unique RHP Project ID: 133355104.1.11 / Pass 1
Performing Provider Name/TPI: Harris Health System / 133355104

Project Summary:

Provider:
Harris Health System is comprised of 16 community health centers, seven school-based clinics, a dental center, dialysis center, five mobile health units, one outpatient specialty services clinic, and three hospitals. With a tax base of $511.6 million, Harris Health System was able to provide more than $1.254 billion in charity care during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 35,343 Births (babies delivered)- 6,643 Emergency visits- 173,263 Outpatient clinic visits- 1,054,770	Self-Pay- 62.6% Medicaid and CHIP- 23.4% Medicare- 8.6% Other Funding- 3.6% Commercial Insurance- 1.8%	Hispanic- 57.4% African American- 26.3% Caucasian- 9.2% Asian- 4.8% Other- 2.2% American Indian- 0.2%

Intervention(s):
This project will develop a chronic disease management registry to use system-wide to ensure providers and clinical staff has access to determine patient status and identify physical, psychosocial and emotional needs of the chronically ill patient.

Need for the project:
The purpose is to provide the ability to identify patients at risk based on chronic disease states and associated utilization patterns. When patients' needs are identified then are educated and empowered to self-manage, quality improves, inappropriate utilization decreases, and the cost per capita declines.

Target Population:
All patients within the system with may benefit from this project (Medicaid and CHIP-23.4% / Self-Pay- 62.6%), specifically those with chronic diseases to include diabetes, COPD, asthma, heart failure, and obesity.

Category 1 or 2 expected patient benefits:
Our DY4 goal is to improve upon DY2 baseline of patient identification in registry by 30%. Our DY5 goal is for 50% of patients in registry have at least 1 contact in the prior year period. The estimated total number of patients that would be managed within the registry would be > 10,000 patients.

Category 3 outcomes:
IT-3.2: Our goal is to reduce congestive heart failure 30 day readmission rates by 3% of baseline in DY4 and 5% of baseline in DY5

Project Option 1.3.1- Implement/Enhance and Use Chronic Disease Management Registry Functionalities: Implement a Chronic Disease Management Registry

Unique RHP Project ID: 133355104.1.11 / Pass 1
Performing Provider Name/TPI: Harris Health System / 133355104

Project Description:

Harris Health System will develop a chronic disease management registry to use system-wide to ensure providers and clinical staff has access to determine patient status and identify physical, psychosocial and emotional needs of the chronically ill patient. Electronic information sharing will promote a continuum of awareness of adherence to treatment plans, pharmacy, and primary and secondary care utilization. The purpose of the implementation of a disease registry is to provide the ability to identify patients at risk based on chronic disease states and associated utilization patterns that will facilitate the ability to identify gaps in service and deficits in patient understanding and self-management of their disease. When patients' needs are identified then are educated and empowered to self-manage quality improves inappropriate utilization decrease and the cost per capita declines. The project will utilize the existing electronic medical record and enhance the capabilities to implement a comprehensive disease registry.

Goal(s) and Relationship to Regional Goals:

The goals of this project are to:

- Identification of Harris Health patients at risk based on chronic disease process and severity of illness established by utilization of emergency center visits, acute care admissions and readmissions
- Identification of Harris Health patients who are at risk for decline in their respective chronic disease processes based on evidence relative to individual patient pharmacy utilization as indicative of adherence to treatment plan and ascertain barriers to adherence
- Stratify patients based on need relative to utilization indicating a deficit in education, instruction or support both financial and emotional
- Electronic reporting on ambulatory care sensitive conditions will delineate patient need for case management services to promote self- management

This project meets the following Region 3 goals:

- Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system, and
- Develop a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes.

Challenges or Issues:

Population served by Harris Health has a literacy level averaging 5th grade

- Culturally diverse population to include Hispanics and African American who are predisposed to diabetes, hypertension, and obesity (Harris Health System Fact Sheet 2012)
    - Hispanic 57.4%
    - African American 26.3%
    - Caucasian 9.2%
    - Asian 4.8%
    - Other 2.2%
    - American Indian 0.2%
- Inability to identify patients proactively based on lack of cohort data specific to individual patients, disease processes and respective utilization

The project will address the above challenges by capture of individual demographic data in a searchable database that will be aligned with utilization, cohorted to a disease process (s) and associated with NDC (pharmacy) utilization. Evaluation of the data will depict the penetration of chronic disease demographically and permit the specific patient centered programs for self-management and financial assistance to be availed to promote self-management and early intervention. Individual identification of need based on utilization and specific disease process will permit the development of patient specific intervention to address psychosocial barriers to care delivery.

5-year Expected Outcome for Provider and Patient:

Patients with chronic illness will have improved health, via management, the cost per patient is decreased due to decreased acute care and emergency visit utilization, and quality is improved via the proactive identification of patient need and access to same is available.

Starting Point/Baseline:

Because the disease registry project is a new endeavor, the baseline for this project is currently 0 patients enrolled in the registry. A baseline for patients registered will be established in DY 3 and will serve as the basis of our improvement targets for DY 4 and DY5.

Current status:

Harris Health per internal data has 47,000 patients in the served population and the top 5 diagnoses of chronic disease are heart failure, hypertension, obesity, depression, and chronic respiratory to include Chronic Obstructive Pulmonary Disease and asthma (October 2011-September 2012). Without a disease registry it is difficult to establish the incidence and prevalence.

Rationale:

Project option 1.3.1 is selected based on the need to implement a searchable comprehensive registry that will electronically be capable of reporting data to efficiently identify, and evaluate patients with chronic disease, and their associated utilization. Additionally the disease registry will provide data to analyze to address the reasons for emergency and visits and readmissions to acute care based on a deficit in the patient's ability to self-manage their disease process. A disease registry also will promote the adaptation of existing or implementation of new programs based on demographic data retrieved specific to chronic disease and the ambulatory case sensitive conditions.

Project components:

a) Enter patient data into unique chronic disease registry. The patient clinical information to include laboratory values, diagnostic testing and procedural interventions will be extrapolated and electronically captured from the electronic medical record which will interface with the disease registry software. Patient data will be captured utilizing predetermined inclusion criteria, and entered into discrete data fields which will provide the structure for entry into the disease registry. Based on data collected and retrieved the patients will be identified based on place of service and provider. As a result each patient's unique data will be collected from any access point across the continuum so as to ascertain management of the chronic disease and associated professional and patient interventions and outcomes.
b) Use registry data to proactively contact, educate, and track patients by disease status, risk status, self-management status, community and family need.
c) Use registry reports to develop and implement targeted QI plan. Reports will be electronically produced as part of key performance indicator dashboard and will be reviewed at a minimum by the Ambulatory Care Committee, the Quality Governance Council, and as applicable the Board of Managers.
d) Conduct quality improvement for project using methods such as rapid cycle improvement. Activities may include, but are not limited to, identifying project impacts, identifying "lessons learned," opportunities to scale all or part of the project to a broader patient population, and identifying key challenges associated with expansion of the project, including special considerations for safety-net populations.

Unique community need identification numbers the project addresses:

- CN .8 –High rates of inappropriate emergency department utilization
- CN.9- High rates of preventable hospital readmissions
- CN.10- High rates of preventable hospital admissions
- CN.11 – High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease including:
    - Asthma
    - Diabetes
    - Obesity
    - Cardiovascular
    - Aids/HIV
    - Cancer

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

The project is a new initiative for Harris Health and does not exist today in any form. The current electronic health record does not capture data in patient categories or cohort data that is electronically available to the end user to drive decision making, to meet the needs of the community with chronic illness.

<u>Related Category 3 Outcome Measure(s):</u>

OD-3 Potentially Preventable Re-Admissions- 30 day Readmission Rates

- IT- 3.2 Congestive Heart Failure Admission rate (CHF)- PQI #8

Category 3 outcome measures are related to primary care, management of chronic disease and cost. The rationale for selecting IT 3.2 is relevant to the high volume of patients at Harris Health diagnosed with ambulatory care sensitive conditions pertinent to chronic disease such as COPD, asthma, Hypertension, diabetes and heart failure. An active disease registry will promote the management of patients via their identification in the population, patterns of utilization and their ability to self-manage thereby preventing inappropriate admissions or readmissions for the ambulatory care sensitive condition.

Relationship to other Projects:

The sheer volume of population, as well as the complexity of patient conditions, dictates the need of numerous disease registries in our region to properly identify and manage chronic conditions. The concept is utilized consistently throughout our region in order to help achieve milestones and outcomes specific to patient conditions. All disease registries presented have a similarity in concept but are unique in the sense of condition or patient population focus. The Region 3 initiative grid in the addendum reflects direct relations between all projects.

Plan for Learning Collaborative:

We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

The purpose of the implementation of a disease registry is to provide the ability to identify patients at risk based on chronic disease states and associated utilization patterns that will facilitate the ability to identify gaps in service and deficits in patient understanding and self-management of their disease. Patients with chronic illness will have improved health, via education and case management, the cost per patient is decreased due to decreased acute care and emergency visit utilization, and the patient's quality of life is improved. Harris Health internal data for the most recent year has 47,000 patients with one or more of the top 5 diagnoses of chronic disease – heart failure, hypertension, obesity, depression, and chronic respiratory. With a disease registry allowing us to establish clear incidence and prevalence data, the cost saving opportunity related to the potential improved management of these conditions is substantial.

Project Option 1.10.4- Implement other evidence-based project to enhance performance improvement and reporting capacity: Center of Innovation

Unique RHP Project ID: 133355104.1.12 / Pass 1

Performing Provider Name/TPI: Harris Health System / 133355104

Project Summary:

Provider:
Harris Health System is comprised of 16 community health centers, seven school-based clinics, a dental center, dialysis center, five mobile health units, one outpatient specialty services clinic, and three hospitals. With a tax base of $511.6 million, Harris Health System was able to provide more than $1.254 billion in charity care during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 35,343 Births (babies delivered)- 6,643 Emergency visits- 173,263 Outpatient clinic visits- 1,054,770	Self-Pay- 62.6% Medicaid and CHIP- 23.4% Medicare- 8.6% Other Funding- 3.6% Commercial Insurance- 1.8%	Hispanic- 57.4% African American- 26.3% Caucasian- 9.2% Asian- 4.8% Other- 2.2% American Indian- 0.2%

Intervention(s):
This project will establish a Center of Innovation to expand quality improvement capacity through people, processes and technology so that the resources are in place to conduct, report, drive and measure quality improvement.
Need for the project:
There is strong rationale and evidence to suggest that a comprehensive Center for Innovation in Healthcare would increase the value of healthcare (best care with lower cost).
Target Population:
Specifically, CLABSI patients will initially be targeted; however, the target population will change as new performance activities develop. (Overall Payor Mix: Medicaid and CHIP-23.4% / Self-Pay- 62.6%).
Category 1 or 2 expected patient benefits:
The project seeks to demonstrate ≥2 performance activities in DY 4 and ≥5 in DY5 that were designed and implemented based on the data in the reports and efforts of the Center of Innovation. This project would target an estimated 1000+ patients.
Category 3 outcomes:
IT-4.2: Our goal is to decrease the number of cases of CLABSI as designated by IQR criteria at Harris Health System by 20% of baseline in DY4 and 30% of baseline in DY5.

Project Option 1.10.4- Implement other evidence-based project to enhance performance improvement and reporting capacity: Center of Innovation

<u>Unique RHP Project ID:</u> 133355104.1.12 / Pass 1

<u>Performing Provider Name/TPI:</u> Harris Health System / 133355104

<u>Project Description:</u>

Harris Health System proposes to establish a Center of Innovation to expand quality improvement capacity through people, processes and technology so that the resources are in place to conduct, report, drive and measure quality improvement.

In order to respond to the rapidly changing industry, innovation must be at the center of care delivery redesign, competitive strategy, and the development of internal resources. The Center of Innovation in Healthcare will serve as a platform for transformational change to create better value in healthcare. The innovations resulting from Harris Health System's Center of Innovation will be centered around patients in the hospital, in outpatient settings, and with partners in the community. The implementation activities entail redesign of healthcare delivery processes, team building, care coordination, physician and nursing training and education of stakeholders.

Central staff at the institute comprised of healthcare leaders with expertise in the science of healthcare delivery, innovation, public health, systems engineers, information technology, community leaders and patients, will be created to innovate, collaborate and assist in delivering concepts to transform the delivery of care in our region and share nationally. The implementation activities would require support of the center design team of 15-20 experts in the science of healthcare delivery, patient safety, systems engineering, information technology, public health, and social services among others. The center would also require a facility for the core design team and 4-6 meeting rooms for team meetings. Administrative staff will be needed for coordination of activities. The first 12 months would also involve training of key physician and nursing leaders in the core concepts of patient safety and quality improvement to build a culture receptive to innovation. Additional support may include transportation for patient and community members to the facility; travel costs to learn from successful sustained programs with high impact; additional training for team members. The existing physician and nursing expertise would serve as a foundation for the initial design and implementation teams.

The center will define high impact opportunities in patient safety, clinical effectiveness of evidence based best practices, population health, care coordination and unmet patient needs in Medicaid and uninsured patients. The center design team will partner with healthcare providers, patients and other stakeholders to innovate and pilot the implementation. The innovation will require rapid assessment and modification cycles, clear metrics and local support for change through partnership between the local and center design team. A comprehensive evaluation of

the innovation by the center will drive the continuous PDSA cycles until the impact is sustained. Replication of the successful innovation will be carried out throughout the organization. The science of innovation will be amplified by dissemination of the new knowledge.

This initiative is most suited to be initiated in Harris County because of: (a) the local expertise in the science of healthcare delivery, public health, information technology in reducing patient errors, and healthcare systems engineering (b) high rate of uninsured and Medicaid patients in the county (c) the international expertise at UT Health (via the Academy of Patient Safety and Clinical Effectiveness and the Center for Healthcare Quality and Safety, (d) long history of partnerships with national organizations (IHI, UHC, AHRQ, NQF) (e) the potential for rapid dissemination and implementation of the program throughout the country and nationally.

Goal(s) and Relationship to Regional Goal(s):

The goals of this project are to:

- Establish a Center of Innovation to leverage information technology, financial data, clinical knowledge, and human resources to implement performance improvement activities and promote a culture of innovation across the Harris Health System.
- Hire and train Center of Innovation quality improvement staff in well-proven quality and efficiency improvement principles, tools and processes.
- Enhance performance improvement and reporting capacity across the Harris Health System.
- Improve central line-associated bloodstream infections (CLABSI) rates at Harris Health System.

This project meets the following Region 3 goals:

- Develop a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes.

The Center of Innovation will work to develop and instill a culture of transformation and innovation within the Harris Health System through promotion of creativity and facilitation of collaboration, calculated risk-taking, and problem solving. The efficient and effective use of IT and clinical best practices will be ensured by staff to be hired and trained in quality and efficiency improvement principles, such as Lean/Six Sigma. Best practices will be shared at face-to-face meetings within the region and the Center of Innovation will participate in learning events with the possibility of presenting findings.

Challenges and how we will address them:

The primary challenges will be:

a) Creating a culture for rapid implementation and sustainability

b) Integrating data with national benchmarking programs in patient safety, mortality, and hospital costs
c) Obtaining accurate, real-time data to evaluate the effectiveness of the program

Harris Health System will create a culture for rapid implementation and sustainability through, dedicated, highly-skilled resources and support from executive leadership. Data will be integrated with currently used benchmarking programs at Harris Health, while the organization continuously seeks opportunities to move toward the most relevant benchmarking programs for the organization. Data needs will be met by the dedicated efforts of the internal information technology department to achieving accurate, timely data.

5-Year Expected Outcome for Provider and Patients:

Over the course of the 5-Year Waiver, Harris Health System expects to realize:

- A culture of ongoing transformation and innovation that is supported by a Center of Innovation staffed by highly-skilled healthcare workers capable of impacting clinical and operational outcomes in a way that aligns with the strategic goals of the organization.

Starting Point/Baseline:

The Center for Innovation is a new initiative for Harris Health System; thus, the baseline will be 0 for all milestones and metrics.

Rationale:

Reasons for selecting the project option:

There is strong rationale and evidence to suggest that a comprehensive Center for Innovation in Healthcare would increase the value of healthcare (best care with lower cost).

Centers of healthcare innovation at Cincinnati Children's Hospital, UCLA Medical Center, Geisinger Health System and the programs such as UT Health's program for chronically ill children piloted by Dr. Tyson are excellent references. The success of these programs demonstrates high reliability organizations in patient safety, clinical effectiveness, cost of care and integration of nontraditional community resources to improve health. These centers have reduced patient harm, improved mortality, reduced patient readmissions and emergency room visits, improved patient satisfaction and reduced disparities in healthcare delivery.

Project Components:

Not applicable / Project option 1.10.4 does not have components.

Milestones & (Metrics):

- Process Milestones and Metrics- P-1 (P-1.1); P-2 (P-2.1); P-4 (P-4.1); P-6 (P-6.1; P-6.2); P-9 (P-9.1)
- Improvement Milestones and Metrics- I-10 (I-10.2)

Unique community need identification number the project addresses:

This project addresses the following community needs according to the community needs assessment:

- CN.9- High rates of preventable hospital readmissions
- CN.10-High rates of preventable hospital admissions

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:
The Harris Health System currently does not have a Center of Innovation or another similar initiative.

Related Category 3 Outcome Measure(s):

OD- Potentially Preventable Complications and Healthcare Acquired Conditions

- IT-4.2 Central line-associated bloodstream infections (CLABSI) rates

Reasons/rationale for selecting the outcome measure(s):

Central line infections are common preventable complications and can be substantially reduced through design of systems processes and interdisciplinary care models. Sustained reduction and elimination of healthcare associated infections will require healthcare redesign.

Relationship to other Projects:

Innovation is key to the transformation of healthcare in our community. The consistency of innovation in our region allows for increased improvements based on research trends, patient need, and provider availability. The waiver funding allows for innovation in specific areas and all innovative projects included in the plan are similar in the fact of program redesigns for historic treatments, and focus to chronic condition outcome measures such as central line infections. The Region 3 initiative grid in the addendum can provide a side by side comparison of all projects that directly relate to innovation.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

The goal of the center is to define high impact opportunities in patient safety, clinical effectiveness of evidence based best practices, population health, care coordination and unmet patient needs in Medicaid and uninsured patients. The center design team will partner with

healthcare providers, patients and other stakeholders to develop innovation strategies and plans, and pilot the implementation. As noted earlier, centers of healthcare innovation at other prominent healthcare organizations are excellent references. The success of these programs demonstrates high reliability organizations in patient safety, clinical effectiveness, cost of care and integration of nontraditional community resources to improve health. These centers have reduced patient harm, improved mortality, reduced patient admissions, readmissions and emergency room visits, improved patient satisfaction and reduced disparities in healthcare delivery.

Harris County Hospital District Ben Taub General Hospital

Pass 2

DRAFT

Project Option 1.9.2-Improve access to specialty care: Increase access to outpatient Physical and Occupational Therapy specialty services

Unique RHP Project ID: 133355104.1.13 / Pass 2
Performing Provider Name/TPI: Harris Health System / 133355104

Project Summary:

Provider:
Harris Health System is comprised of 16 community health centers, seven school-based clinics, a dental center, dialysis center, five mobile health units, one outpatient specialty services clinic, and three hospitals. With a tax base of $511.6 million, Harris Health System was able to provide more than $1.254 billion in charity care during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 35,343 Births (babies delivered)- 6,643 Emergency visits- 173,263 Outpatient clinic visits- 1,054,770	Self-Pay- 62.6% Medicaid and CHIP- 23.4% Medicare- 8.6% Other Funding- 3.6% Commercial Insurance- 1.8%	Hispanic- 57.4% African American- 26.3% Caucasian- 9.2% Asian- 4.8% Other- 2.2% American Indian- 0.2%

Intervention(s):
This project will increase the number of outpatient physical and occupational therapy providers in order to improve access and meet unmet demand for patients who are being referred for services from NCQA medical homes and specialty clinics.

Need for the project:
With current staffing 1040 new patients per month on average are appointed and seen. This is compared to the total number of referrals received which is 2487. Based on the current average monthly referral volume and the Physical and Occupational Therapy provider panel capacity it was determined that an additional 23 FTE's are required to meet demand.

Target Population:
Any patient appropriate for outpatient physical and/or occupational therapy within the system may benefit from this project (Overall payor mix: Medicaid and CHIP-23.4% / Self-Pay- 62.6%).

Category 1 or 2 expected patient benefits:
Our goals are to increase the number of patients seen per month by specialty Physical and Occupational Therapy services by 1,320 and increase the number of FTEs by 23.

Category 3 outcomes:
IT-10.1: Our goal is to improve quality of life (QOL) scores to greater than 50 at discharge from therapy for at least 10% of the patients seen in DY4 and for at least 20% of the patients seen in DY5.

Project Option 1.9.2-Improve access to specialty care: Increase access to outpatient Physical and Occupational Therapy specialty services

Unique RHP Project ID: 133355104.1.13 / Pass 2

Performing Provider Name/TPI: Harris Health System / 133355104

Project Description:
Harris Health System Rehabilitation Services proposes to increase the number of outpatient physical and occupational therapy providers in order to improve access and meet unmet demand for patients who are being referred for services from NCQA medical homes and specialty clinics.

This project will increase the capacity to provide outpatient physical and occupational therapy services and the availability of therapy providers to meet the current unmet demand from referring primary care providers to the underserved areas of Harris County, primarily low-income, uninsured and Medicaid populations. Outpatient Physical Therapy and Occupational Therapy (PT and OT) services are targeted to populations who are at risk for impairments in activities of daily living resulting from a lack of access to specialty care. The project will improve access and expand current outpatient physical and occupational therapy services that would result in improved quality of life by persons served.

The Harris Health System Rehabilitation Services and Child Life Department serves 13 community health clinics (Medical Homes) and the specialty clinics at Ben Taub General Hospital, Lyndon B. General Hospital, and Quentin Mease Community Hospital. With current staffing 1040 new patients per month on average are appointed and seen. This is compared to the total number of referrals received which is 2487. The average monthly referral volume by discipline is as follows:

- Medical Home Average Monthly referrals
  - Physical Therapy: 1592
  - Occupational Therapy: 285
  - Total: 1877
- Specialty Clinic Average Monthly referrals
  - Physical Therapy: 412
  - Occupational Therapy: 198
  - Total: 610
- Total number of patients seeking therapy per month:
  - 2487
- Total number of patients currently seen per month:
  - 1040
- Total number of patients who are unable to receive services per month:
  - 1447
- Additional patients to be served per month with additional FTE's:
  - 1320

Based on the current average monthly referral volume and the Physical and Occupational Therapy provider panel capacity it was determined that an additional 23 FTE's are required to

meet demand. The department currently has 30.5 funded FTE's as compared to a need for 53.42 FTE's required to provide services referred to by a primary care physician's order.

A six-month pilot was conducted from January 16, 2012 to July 16, 2012 to conduct a gap analysis for services provided and to formally define the role of physical and occupational therapists in the medical home. The results of the pilot are as follows:

1. PT's and OT's are integral part of the medical home patient care team as evidenced by their role in management of musculoskeletal and neuromuscular disorders.
2. New business model of care should be implemented to support NCQA Standards.
3. Access to care was identified as the major barrier to improved patient outcomes.

Successful completion of the pilot resulted in approval from Harris Health Leadership to adopt new medical home business model so that all referred patients have access and NCQA Standards can be adhered to. It was determined that access to specialty care (PT and OT) needs to be addressed to improve the quality of life of persons served.

The project will improve access to specialty care by providing an additional 23 PT and OT providers to the Rehabilitation Services department and by adding additional outpatient therapy treatment space near the referring clinics.

Target Zip Codes:

77030	77088	77009	77018	77056
77026	77039	77012	77074	77099
77004	77520	77047	77028	77338

Goals and Relationship to Regional Goals:

The goal of this project is to use physical therapists, physical therapist assistants, and occupational therapists to provide specialty care to patients who have impaired functional mobility and activities of daily living due to decreased quality of life. Once referred from a primary care physician, patients will have access to qualified rehabilitation professionals who will provide an individualized treatment plan based on the diagnosis and impairments identified from an evaluation. Early intervention and appropriate access to care will result in improved health outcomes because treatment can be delivered in an acute phase of the patient's disorder as opposed to the chronic state that often occurs because of delayed access.

Project Goals:

- Increase the number of patients seen per month by specialty Physical and Occupational Therapy services by 1,320.
- Improve the health outcomes of referred patients through improved access to specialty Physical and Occupational Therapy services.
- Decrease barriers to access to specialty Physical and Occupational Therapy services by placing additional staff and clinics in underserved areas of Harris County

This project meets the following regional goals:

- Transform healthcare delivery from a tertiary care model of episodic care to a primary/secondary model of patient-centered, coordinated care model of care by integrating Physical and Occupational therapy services within the medical home model. This will improve health outcomes, and reduce health care costs by increasing access to specialty care services.

- Build on a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
- Increase access to primary and specialty care services, with a focus on underserved populations to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

Increasing the number of Physical and Occupational therapy staff will not only increase access to our patients who are in need of these specialty services, but it will also increase access to our medical home leadership and staff for improved communication, education and population management.

Challenges:

- Highly competitive hiring market, creating challenges in finding staff to fill the newly created positions.
- Finding innovative ways to mentor and integrate new staff into the larger health system due to geographical separation.
- Lack of education to physicians and specialty care providers about how to assess and refer patients to Physical and Occupational Therapy services.

Harris Health's Rehabilitation Services department has an excellent reputation in the city and state for staff that are highly trained and specialized providers. This attracts therapists from several educational institutions that seek employment with Harris Health to be mentored and to serve a diverse patient population. In addition, the department has an active student program that allows individuals to be trained within our system which further attracts recent graduates to seek employment with our department. Currently there are no vacant positions in the outpatient rehabilitation services department. Due to the additional locations being separate from the current staff, a mentoring program will be developed. This mentoring program will involve experienced therapists to rotate initially to the location for orientation and mentoring. Then a rotation of staff will occur annually for ongoing mentoring and development. In addition the rehabilitation services department has a well-established education program for its entire staff that occurs throughout the year. With this program, each of the referring clinics will be assigned a lead contact therapist to oversee the needs of the clinic and its physicians. This lead therapist will attend physician meetings and work closely with the physicians to provide ongoing education on the specific population seen at each clinic. In addition, the physicians will have direct contact with the lead therapist assigned to the clinic via phone or electronic communication at all times. With these strategies, the challenges identified can be overcome.

5-Year Expected Outcome for Provider and Patients:

Harris Health System Outpatient Rehabilitation Services expects to improve access to care for patients referred to specialty Physical and Occupational therapy care. Barriers to access to care will be reduced through geographically located clinics in underserved areas. Additionally, it is expected that patients seeking specialty Physical and Occupational Therapy services will have an increased quality of life through earlier intervention. Expected outcomes will relate to the project goals described above.

Starting Point/Baseline:

With the current 30.5 funded FTE's the physical therapy and occupational therapy services are able to provide care for approximately 776 individual's seeking physical therapy and 264 individual's seeking occupational therapy per month for a total of 1,040 individuals served per month. The current number of referrals per month from primary care physicians total 2,487, this leaves a disparity of 1,447 individuals not having access to the specialty care of physical therapy and occupational therapy. In addition, the physical therapy and occupational therapy services are provided at two locations at LBJ General Hospital and Quentin Mease Hospital limiting access to patients that live in the western part of the Harris County due to a variety of barriers, including, but not limited to transportation. To serve the individuals not currently able to access services an additional 23 FTE's will be needed, including 12 physical therapists, 3 physical therapist assistants, 6 occupational therapists, 1 wellness program manager, and 1 program operations manager. The total acquisition of these additional FTE's would occur over a 3 year period. The program operations manager would be hired year two and the wellness program manager would be hired year four for program analysis, staff education, development and strategic planning.

Rationale:

A large number of patients, who are enrolled in Medicaid, are uninsured or underinsured in Harris County are not receiving Physical therapy and Occupational Therapy services due to limited access. Currently there are only two outpatient therapy clinics in the Harris Health System and both are more centrally located. This leaves much of the county without local therapy services. The proposed clinic locations will be located in underserved areas of Harris County where access to specialty Physical and Occupational Therapy services is limited.

Project Components:

a) Increase service availability with extended hours: The clinics would operate similarly to the current clinics which have extended hours from 7 am to 5:30 pm.
b) Increase number of specialty clinic locations: This program would offer two additional locations located in underserved areas of the county either in existing community health clinics or in a local existing commercial structure. Additional staff will be hired to operate these clinics.
c) Implement transparent, standardized referrals across the system: Due to the integrated electronic medical record system all referring providers would refer patients to the specialty services of physical therapy and occupational therapy in a standardized format for all providers and everyone in the system will be able to see the referral and when the individual's appointment is made.
d) Conduct quality improvement projects: With this program a wellness program coordinator and program operations manager will provide ongoing evaluation of the program. These personnel will identify barriers to access and create solutions to circumvent these obstacles. They will continually measure and analyze the difference between number of total referrals for the system and the number patients served to determine availability of services. In addition, they will evaluate the improvement that therapy services make on the individual's served quality of life and adjust services as needed to best serve the population for optimal outcomes. Finally, further evaluation of the population served will be conducted to determine continual changes to the program to

improve the overall health of the population through therapy services with increased access. Plan Do Study Act cycles will be implemented to continually evaluate process improvements throughout the project.

Unique community need identification numbers the project addresses:

- CN.2- Inadequate access to specialty care
- CN.6- Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children and elderly
- CN.11- High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease, including
  - Cancer
  - Diabetes
  - Obesity
  - Cardiovascular disease
  - Asthma
  - AIDS/HIV

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:

Currently the Harris Health System Outpatient Rehabilitation Services department is serving medical home patients in two centrally located outpatient facilities. Additionally, current staffing is not adequate to meet the demand for specialty Physical and Occupational Therapy services. This project will enhance the ability to serve more patients, that is, improve access to these services, while at the same time improve health outcomes and quality of life for the patients served. By locating new clinics in underserved areas and adding additional staff this project will reduce barriers to accessing specialty therapy services and further integrating these services into the medical home model.

Related Category 3 Outcome Measure(s):

OD- 10 Quality of Life/Functional Status:

- IT-10.1 Quality of Life
  a. *Demonstrate improvement in quality (QOL) scores, as measured by evidence based and validated assessment tool, for the target population.* Patients will complete the Short Form Health Survey (SF-36) upon initial evaluation and upon discharge from Physical or Occupational Therapy to measure the patient's perceived quality of life before and after therapy intervention. This tool is evidence based and validated for a wide range of diagnostic groups that are routinely seen in outpatient services.
  b. *Data source:* The SF-36 was developed by the RAND Corporation as part of the multi-year Medical Outcomes Study to explain variations in patient outcomes. The SF-36 is a multipurpose, 36-item survey that measures eight domains of health: physical functioning, role limitations due to physical health, bodily pain, general health perceptions, vitality, social functioning, role limitations due to emotional problems, and mental health. It yields scale scores for each of these eight health domains, and two summary measures of physical and mental health: the Physical Component Summary (PCS) and Mental Component Summary (MCS). A copy of this form will be provided as needed.

Reasons/rationale for selecting the outcome measure:

Lack of access to specialty Physical and Occupational Therapy services results in decreased quality of life. Earlier intervention and improved access for acute neuro and musculoskeletal deficiencies result in less impairment, improved quality of life, and ultimately decreased health care costs. The SF-36 will allow therapists to track patients' self-reported perceived quality of life to help manage treatment programs and produce improved health outcomes.

This outcome measure was selected because it is able to be used on individuals from a wide range of age groups and treatment groups with a variety of diseases and conditions. In addition, this outcome measure is available in over 140 translations. This tool is evidence based and validated for a wide range of diagnostic groups that are routinely seen in outpatient services.

Relationship to other Projects and Other Performing Providers Projects in the RHP:

This project will work in conjunction with Harris Health System Casa de Amigos Same Day Access Clinic and Southwest Area Same Day Access Clinic. This project will support the expansion of primary care physician services projects by accommodating the likely rise in referrals to specialty Physical and Occupational therapy services in the increase in staffing levels.

The increased access to primary care visits will naturally generate additional need of specialty care visits based on the condition and acuity of the patients served. Understanding that the patient base targeted through this initiative will generate significant specialty care visits due to chronic conditions and lack of previous treatments, this initiative and similar initiatives will focus to 30-day readmission rate reductions, improvement for patient satisfaction scores, and admission rates specific to chronic conditions. Numerous initiatives have been included in the RHP plan and the addendum of the Initiative Grid can directly tie all specialty care projects together by category.

Plan for Learning Collaborative:

We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

This project will increase the capacity to provide outpatient physical and occupational therapy services to the underserved areas of Harris County, primarily low-income, uninsured and Medicaid populations. The expanded Outpatient Physical Therapy and Occupational Therapy (PT and OT) services will be targeted to populations who are at risk for impairments in activities of daily living resulting from a lack of access to specialty care. The project will improve access by providing an additional 23 PT and OT providers to the Rehabilitation Services department and by adding additional outpatient therapy treatment space near the referring clinics, facilitating an increase in the number of patients seen per month by specialty Physical and Occupational Therapy services of 1,320 patients. The project will result in improved quality of life by persons served, measured by a standard health survey.

Project Option 1.1.1- Establish more primary care clinics: Casa de Amigos Same Day Access Clinic

Unique RHP Project ID: 133355104.1.14 / Pass 2

Performing Provider Name/TPI: Harris Health System / 133355104

Project Summary:

Provider:

Harris Health System is comprised of 16 community health centers, seven school-based clinics, a dental center, dialysis center, five mobile health units, one outpatient specialty services clinic, and three hospitals. With a tax base of $511.6 million, Harris Health System was able to provide more than $1.254 billion in charity care during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 35,343 Births (babies delivered)- 6,643 Emergency visits- 173,263 Outpatient clinic visits- 1,054,770	Self-Pay- 62.6% Medicaid and CHIP- 23.4% Medicare- 8.6% Other Funding- 3.6% Commercial Insurance- 1.8%	Hispanic- 57.4% African American- 26.3% Caucasian- 9.2% Asian- 4.8% Other- 2.2% American Indian- 0.2%

Intervention(s):

This project will expand the capacity of primary care by establishing an adult-focused primary care clinic near the current Casa de Amigos Health Center that offers same day visits during extended hours to meet demand that saturated existing Harris Health System health centers cannot meet.

Need for the project:

Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health center providers are currently 95% empaneled. For the Casa de Amigos health center, there were 107 unduplicated patients for which there were no Family Practice appointments available in the month of September 2012 alone.

Target Population:

Any patient seeking primary care within the system may benefit from this project (Medicaid and CHIP-23.4% / Self-Pay- 62.6%).

Category 1 or 2 expected patient benefits:

Our goals are to increase completed visits at same day access clinic by 3% over baseline in DY4 and 5% in DY5. The project seeks to increase completed visits for same day access by 31,000 visits by DY5 over the baseline established in DY3.

Category 3 outcomes:

IT-6.1: Our goal is to increase “Ease of scheduling appointments” score by 1% above baseline in DY4 and 2% in DY5.

Project Option 1.1.1- Establish more primary care clinics: Casa de Amigos Same Day Access Clinic

Unique RHP Project ID: 133355104.1.14 / Pass 2

Performing Provider Name/TPI: Harris Health System / 133355104

Project Description:

Harris Health System proposes to expand the capacity of primary care by establishing adult-focused primary care clinics that offer same day visits during extended hours to meet demand that saturated existing Harris Health System health centers cannot meet. Same day access clinics will better accommodate the needs of the community by allowing them to receive the right care, at the right time, in the right setting.

A same day access clinic will ideally be located in or around the following zip code to meet the adult primary care demand surrounding the Casa de Amigos Health Center (Casa): 77009. The clinic will be approximately 3,000-4,000 square feet of leased space. The Facilities and Planning department at the Harris Health System has confirmed that such lease space is available in or around the target zip code. Harris Health System plans to add new providers and staff to operate the clinic for extended evening hours and weekend hours, in addition to regular weekday hours, based on demand. Point of Care lab testing will be available. If patients are in need of imaging or pharmacy services, they will be referred to the nearest health center that provides those services.

Goal(s) and Relationship to Regional Goal(s):

The goals of this project are to:

- Increase capacity for same day primary care through establishment of more accessible care locations across Harris County
- Increase access to same day primary care during extended hours and weekends

Expanding the capacity of primary care through additional clinics across the county and extended operating hours to better accommodate the needs of the community will allow patients to receive the right care at the right time in the right setting.

This project meets the following Region 3 goals:

- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

The Casa de Amigos same day access clinic will increase access to primary care in a high-demand area of underserved individuals while ensuring that patients have access to care in the

appropriate setting. Harris County residents will be treated, and care discounted, according to Harris Health's sliding fee scale, with determination of eligibility for financial assistance.

Challenges and how to address:

General primary care capacity has been a challenge for the Harris Health System. The same day access clinic will provide same day access for Medical Home and non-Medical Home patients. A significant challenge for the Harris Health System has been adequate capacity to offer Medical Homes for patients who do not have a primary care provider. As patients are seen in the same day access clinic setting, this will continue to be a problem for those patients who need care for chronic conditions or other specialized care. In addition, meeting the demand for intensive behavioral health care needs that will present at same day clinics will prove to be a challenge. To address these challenges we propose to direct patients with chronic conditions into the Medical Home setting at a Harris Health System health center or refer to a primary care setting at a local FQHC. Patients with behavioral health needs will be referred to behavioral health providers.

5-Year Expected Outcome for Provider and Patients:

Over the course of the 5-Year Waiver, Harris Health System expects to realize:

- Increased adult-focused primary care capacity through same day care clinics for primary care treatable conditions

Starting Point/Baseline:

For performance purposes, the baseline will be set at 0 visits since this is a new clinic that currently is not operational.

Rationale:

Reasons for selecting the project option:

Currently, Harris Health System health centers are designated NCQA Primary Care Medical Homes with increasingly limited capacity. Health center providers are currently 95% empaneled. Moreover, physicians in Harris Health System health centers carry a panel of 2,250 patients, which is higher than the industry standard of approximately 1,500 patients. Full panels lead to decreased access to primary care appointments at health centers. These health centers are approaching maximum capacity for empaneled patients. From March 2012-September 2012, the Harris Health System Patient Appointment Center was unable to schedule 68,247 unduplicated patients for primary care. For the Casa de Amigos Health Center, there were 107 unduplicated patients for which there were no Family Practice appointments available in the month of September 2012 alone. Casa de Amigos received 49 Ask My Nurse in-basket messages per month for patients that needed same day appointments that could not be scheduled by the Patient Appointment Center. These numbers, however, do not capture the full volume of unmet demand

due to the fact that some calls were dropped as patients were placed on hold and some patients who needed care did not attempt to obtain an appointment based on previous difficulties obtaining same day appointments. Based on 2012 data of incoming patient calls to the Patient Appointment Center, 4627 unduplicated patients living near Casa de Amigos Health Center were unable to get an appointment.

The addition of same day access clinics will result in increased access to same day care for primary care treatable conditions, a more cost effective and appropriate setting than emergency centers and a more accessible setting than saturated Medical Home health centers.

Project Components:

Not Applicable / The project option 1.1.1 do not have components

Milestones & Metrics:

- Process Milestones and Metrics- P-1 (P-1.1); P-5 (P-5.1); P-X (P-X.1); P-X2 (P-X2.1)
- Improvement Milestones and Metrics- I-12 (I-12.1)

Unique community need identification number the project addresses:

This project addresses the following community needs according to the community needs assessment:

- CN.1- Inadequate access to primary care
- CN.8- High rates of inappropriate emergency department utilization
- CN.2- Inadequate access to specialty care

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

Currently, Harris Health System does not guarantee same day care for patients who are not enrolled in a Medical Home and empaneled to a primary care physician. Thus, the same day access clinic will be a new initiative for Harris Health by providing access to same day visits regardless of Medical Home enrollment. Moreover, current health centers offer an array of ancillary services, including full service outpatient pharmacies and laboratories, in addition to various specialty and radiology services. The same day access clinic will offer limited laboratory services and will not offer radiology or pharmacy services but will refer patients to other facilities for these services as needed.

<u>Related Category 3 Outcome Measure(s):</u>

OD-6 Patient Satisfaction

- IT-6.1- Percent improvement over baseline of patient satisfaction scores (standalone)
  - (1) are getting timely care, appointments, and information

Reasons/rationale for selecting the outcome measure(s):

IT- 6.1 will measure improvement in satisfaction scores over time relating to timeliness of care at the Casa de Amigos (Casa) same day access clinic, specifically measuring the mean score for the Press Ganey survey question- "Ease of scheduling appointments." The same day access clinic will increase capacity for primary care visits within the Harris Health System, which will enhance access and improve the patient's experience in obtaining services. Patient satisfaction scores have been historically poor for health centers regarding timely access to care. The same day access clinic will offer an efficient venue that offers same day visits, affording patients the opportunity to seek care in a high-satisfaction setting that is appropriate for the level of care they need and more cost effective than other alternatives.

Relationship to other Projects and Other Performing Providers' Projects in the RHP: Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: This project addresses one of the main objectives of the 1115 Waiver; increasing access to primary care for the underserved population in this area of Harris County. The value of the project is based on the clinic's capacity to provide primary care services, including laboratory point-of-care testing, along with timely referrals for specialty care, imaging and other needed services within the Harris Health System network. The clinic can ultimately care for the episodic primary care needs of over ten thousand patients annually, and refer new patients with chronic disease management needs to one of the NCQA certified medical home clinics that are operated by Harris Health. In addition, the availability of same day primary care appointments will result in fewer emergency room visits for public and private hospitals located in the service area. Early detection, treatment and education regarding wellness and prevention will also help to prevent future downstream inpatient admissions.

Project Option 1.8.6 - The expansion of existing dental clinics, the establishment of additional dental clinics, or the expansion of dental clinic hours: Increase, Expand, and Enhance Oral Health Services: Expansion of Adult Dental Services

Unique RHP Project ID: 133355104.1.15 / Pass 2
Performing Provider Name/TPI: Harris Health System/133355104

Project Summary:

Provider:
Harris Health System is comprised of 16 community health centers, seven school-based clinics, a dental center, dialysis center, five mobile health units, one outpatient specialty services clinic, and three hospitals. With a tax base of $511.6 million, Harris Health System was able to provide more than $1.254 billion in charity care during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 35,343 Births (babies delivered)- 6,643 Emergency visits- 173,263 Outpatient clinic visits- 1,054,770	Self-Pay- 62.6% Medicaid and CHIP- 23.4% Medicare- 8.6% Other Funding- 3.6% Commercial Insurance- 1.8%	Hispanic- 57.4% African American- 26.3% Caucasian- 9.2% Asian- 4.8% Other- 2.2% American Indian- 0.2%

Intervention(s):
This project will expand adult dental services by establishing additional sites and expanding services at current sites. Services will be added or expanded at 7 health centers.

Need for the project:
Health System offers adult dental services at 8 community health centers. A stand-alone dental center provides urgent care, oral surgery, and dentures. However, current access is not sufficient. Bad oral health care increases the risk of heart disease, diabetes and stroke.

Target Population:
Any adult patient within the system who seeks dental care may benefit from this project (Medicaid and CHIP-23.4% / Self-Pay- 62.6%).

Category 1 or 2 expected patient benefits:
Our goals are to increase completed visits at new dental clinics by 20% above baseline in DY4 and 40% in DY5. We estimate an additional 25,000 dental visits by DY5.

Category 3 outcomes:
IT-7.8: Our goal is to increase the percentage of patients with diabetes accessing dental services following referral by their medical provider. We will increase by 5% over baseline in DY4 and 7% in DY5.

Project Option 1.8.6 - The expansion of existing dental clinics, the establishment of additional dental clinics, or the expansion of dental clinic hours: Increase, Expand, and Enhance Oral Health Services: Expansion of Adult Dental Services

Unique RHP Project ID: 133355104.1.15 / Pass 2
Performing Provider Name/TPI: Harris Health System/133355104

Project Description:
Harris Health System proposes to expand adult dental services by establishing additional sites and expanding services at current sites.

Dental services will be added or expanded at 7 health centers. Currently the Harris Health System offers adult dental services at 8 community health centers. A stand-alone dental center provides urgent care, oral surgery, and dentures. We are one of the few public health systems in the nation that offers oral health services to its patient population.

Harris Health System proposes to establish additional adult-focused primary care centers to meet the demand that saturated existing Harris Health System health centers cannot meet. Current and new sites will be assessed for dental services to include 1 FTE dentist and 1 FTE dental assistant.

Goals:
Project Goals:
- Establish and expand adult oral health services at 7 health centers.
- Increase number of adults receiving oral health services.

Regional goals addressed with project:
- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
    - Vulnerable and underserved populations face numerous barriers to accessing oral health care. Access to oral care is critical for overall health for all stages of life. The impact of untreated oral health has been linked to diabetes, heart disease, and stroke. Additionally, poor oral health can affect appearance, self-esteem, and one's ability to chew and digest food properly. This proposal will focus on areas of low-income families who may otherwise not have adequate access to oral health care.

Challenges:
- Harris Health System currently has a waitlist for adult oral health services.
- Our current facilities have space restrictions to expand oral health services.

5-year expected outcome for Performing Provider and patients:
By addressing the challenges for Harris Health System as performing provider, we expect to achieve the overarching goal of increasing access to oral health services in the underserved areas of Harris County.

Starting Point/Baseline:
In FY12 Harris Health System provided 67,144 oral health care visits.. To date for fiscal year 2013, we have provided 38,606 visits. From January 2012-September 2012, the Harris Health System Patient Appointment Center was unable to schedule 30,632 unduplicated patients for oral health care. However, these numbers do not capture the full volume of unmet demand due to the fact that some calls were dropped as patients were placed on hold and some patients who needed care did not attempt to obtain an appointment based on previous difficulties obtaining same day appointments.

Based on historical data, the baseline will be 10 patients per day per provider. By DY5, we plan to reach our goal of 14 patients per day per provider.

Rationale:

There are significant disparities in oral health care between some population groups, including, but not limited to, the uninsured, children, minorities, publically insured, elderly, and low income individuals. Improving access to these vulnerable populations is the first step in reducing disparities and improving oral health care.

Adequate oral health services are a vital and basic component for overall health. Health risks from lack of good dental care reach further than just cavities and gum disease. Bad oral health care increases the risk of heart disease, diabetes and stroke. By adding and expanding dental services to seven sites, we will be increasing access to oral health services for the underserved in Harris County, and thereby helping to reduce disparities.

Project Components:
This project option does not have required project components.

Milestones & Metrics:
Harris Health System has chosen project option 1.8.6: The expansion of existing dental clinics, the establishment of additional dental clinics, or the expansion of dental clinic hours to best fit the scope and goal of this project.

- Process Milestones and Metrics: P-4, P-4.1; P-X1, P-X1.1; P-X2 , P-X2.1; P-X3, P-X3.1
- Improvement Milestones and Metrics: I-X1, I-X1.1

Unique Community Need Identification Numbers:

- CN.1: Inadequate access to primary care
- CN.4: Inadequate access to dental care
- CN.11: High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease, including: Cancer, Diabetes, Obesity, Cardiovascular disease, Asthma, AIDS/HIV

The scope and goals of this project specifically address three of the identified community needs from the regional needs assessment. The project focuses on CN.1, CN.4, and CN.11 by increasing access to oral health services. This aligns with CN.11 by addressing the importance of adequate access for our patients with chronic diseases.

How the project represents a new initiative for Performing Provider or significantly enhances an existing delivery system reform initiative:
There is limited access for oral health, particularly for the low-income, uninsured, and Medicaid populations. Oral health is vital in disease prevention. This project will allow Harris Health System to increase access to the underserved populations through additional facilities. Treating

cavities and other oral health problems has potential cost savings by preventing other chronic diseases.

Related Category 3 Outcome Measure(s):

OD-7 Oral Health

Improvement Target(s):

- IT-7.8 Chronic Disease Patients Accessing Dental Services
  Harris Health System plans to increase oral health access of our adult patients with diabetes following a referral from their provider. We will begin to measure and report in DY4.

Reasons/rationale for selecting the outcome measure(s):

We chose to measure the percentage of patients with diabetes who access our dental services following a referral. It is especially important that diabetic patients receive appropriate oral health services, as high blood sugar has been linked to tooth decay and gum disease.

Relationship to other Projects and Other Performing Providers' Projects in the RHP:

Dental services for both adult and children is a service that is currently underfunded and incomplete in access for the targeted patient base. The dental initiatives represented in the RHP plan are specific to community need and location of the patient to ensure strong access to treatment. The outcome measures focus to the reduction of emergency room utilization, patient satisfaction, as well as increase access to the service line. The Region 3 initiative grid in the addendum directly reflects all relationships of dental initiatives.

Plan for Learning Collaborative:

As performing provider, Harris Health System plans to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

There is limited access for oral health, particularly for the low-income, uninsured, and Medicaid populations. Oral health is vital in disease prevention. Bad oral health care increases the risk of heart disease, diabetes and stroke. By adding and expanding dental services to seven sites, we will be increasing access to oral health services for the underserved in Harris County, and thereby helping to reduce disparities. The expanded services in Harris Health clinics can ultimately address the routine dental care needs of over ten thousand patients, or 25,000 additional visits, annually. Treating cavities and other oral health problems will assist in providing healthcare cost savings by preventing or mitigating the effects of other chronic diseases, with a specific focus on the diabetic population.

Project Option-1.1.4 “Other”: Implement other evidence-based project to expand primary care capacity: House Calls Program

Unique RHP Project Identification Number: 133355104.1.16/ Pass 3
Performing Provider Name/TPI: Harris Health System / 133355104

Project Summary:

Provider:
Harris Health System is comprised of 16 community health centers, seven school-based clinics, a dental center, dialysis center, five mobile health units, one outpatient specialty services clinic, and three hospitals. With a tax base of $511.6 million, Harris Health System was able to provide more than $1.254 billion in charity care during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 35,343 Births (babies delivered)- 6,643 Emergency visits- 173,263 Outpatient clinic visits- 1,054,770	Self-Pay- 62.6% Medicaid and CHIP- 23.4% Medicare- 8.6% Other Funding- 3.6% Commercial Insurance- 1.8%	Hispanic- 57.4% African American- 26.3% Caucasian- 9.2% Asian- 4.8% Other- 2.2% American Indian- 0.2%

Intervention(s):
This project will expand the House Calls Program in order to improve access, maximize independence, and realize cost savings by providing comprehensive, coordinated, multidisciplinary primary care at home to a population of patients that are homebound or have difficulties getting to clinic visits.

Need for the project:
Many Texans with multiple chronic illnesses are housebound, too ill or disabled to easily visit their physician’s office. Instead, they go to the Emergency Center (EC) or hospital, often by ambulance ($600/ Round Trip), for routine care.

Target Population:
The target population for these goals includes any patient who is homebound or has extreme difficulties getting to clinic visits due to their health status. (Medicaid and CHIP-23.4% / Self-Pay- 62.6%).

Category 1 or 2 expected patient benefits:
Our goal is to increase number of homebound patients seen to a total of 1850 patients in DY5.

Category 3 outcomes:
IT-6.1: Our goal is to increase “Patients are getting timely care, appointments, and information” score by 5% above baseline in DY3, 10% in DY4, and 15% in DY5.

Project Option-1.1.4 "Other": Implement other evidence-based project to expand primary care capacity: House Calls Program

Unique RHP Project Identification Number: / Pass 3
Performing Provider Name/TPI: Harris Health System / 133355104

Project Description:
Harris Health System proposes to expand the House Calls Program in order to improve access, maximize independence, and realize cost savings by providing comprehensive, coordinated, multidisciplinary primary care at home to a population of patients that are homebound or have difficulties getting to clinic visits. Many Texans with multiple chronic illnesses (heart disease, strokes, dementia) are housebound, too ill or disabled to easily visit their physician's office for needed care. Instead, they go to the Emergency Center (EC) or hospital, often by ambulance ($600/ Round Trip), for routine care. These patients make up a small percentage of the patient population, but the cost to treat them is disproportionately high. House calls are our proposed solution to help these high-cost, debilitated, home-limited patients get access to care. In Harris Health, the average EC visit cost is $832, so avoiding one EC visit provides a huge cost savings. Savings are even greater for avoided hospitalizations ($12,000/admission). Most importantly, the continuity and quality of care and patient and family satisfaction is markedly increased with house calls. Harris County, the population served by Harris Health System, will be divided into quadrants and established teams distributed through these quadrants to provide home care. Homebound patient's access to care requires ambulance transport and often the EC is used for primary care. We will use house calls to increase access to primary care throughout Harris County by removing obstacles to it and bring primary care to the patient. The geographical challenges of the region will be addressed by a logistics approach using regional cohorting, and the house calls model will create patient-centered, coordinated primary care delivery that improves patient satisfaction and health outcomes, reduces unnecessary services, and builds on the accomplishments of our existing health care system. Care coordination services, across all treatment settings, will be furnished by a physician/nurse practitioner-directed team of health care professionals who are available 24/7 (typically by telephone) to carry out individualized plans of care[9].

We will grow our existing program (0.6 MD FTE and 0.9 NP FTE following 180 patients) to create four full multidisciplinary teams (each team 1.5 MD and 3 NP plus SW, Pharm, etc.); each will have a census of 500 patients, make 2,500 house calls per year, have an active call center to triage and treat to prevent unneeded EC visits and subsequent hospital admissions, and attain an estimable level of patient and caregiver satisfaction. We conservatively estimate from our current experience and the literature that this house calls team will prevent 1 EC visit per year per enrolled patient, 5 round trip non-emergent ambulance rides for routine care per patient per year, 0.3 hospitalizations per year per enrolled patient, and one emergent ambulance ride per patient per year. Even with these conservative estimates, the prevention of these expensive episodes gives significant value of the house calls program. The ultimate impact will be 10,000-12,000 fewer ambulance rides, 2000 fewer EC visits, 670 fewer admissions which adds up to $17 million in cost avoidance and over $10 million in realized savings.

There will also be a significant training mission to fulfill unmet needs. Two thirds of physicians treating patients with multiple chronic conditions believe that their training did not adequately prepare them to coordinate in-home and community health services. Even fewer have

significant experience performing house calls; many have never performed a single house call[15]. While these comments are applicable to physicians (and trainees), they are also broadly applicable to pharmacists, nurse practitioners and all the other members of the health care team managing these complicated house call patients[15]. We will address this issue with technology and training. Active learners will include trainees at Baylor College of Medicine as well as Geriatrics fellows in the Baylor Geriatrics fellowship program and pharmacy students at University of Houston School of Pharmacy (ongoing programs).

Patients will retain freedom of choice and the ability to opt out of the house calls program and enrollment in the program does not force them to forego any existing benefit. Improved technologies and innovation are revolutionizing house calls. We already use point-of-care devices to get blood tests at the bedside. Monitoring and more sophisticated assessment can be performed using various technologies in the patient's home[16], but that is not the focus of this proposal.

Goals and Relationship to Regional Goals:

Project Goals:

- Improve Access
- Maximize independence
- Realize cost savings

The target population for these goals is patients who are homebound or have extreme difficulties getting to clinic visits due to their health status. Right now their access to care requires ambulance transport and often the EC is used for primary care. We will use house calls to improve access to primary care by removing obstacles and bringing the primary care provider to the patient. We will increase independence by working to modify the home environment and realize cost savings by decreasing ambulance use, EC use, and hospitalizations.

This project meets the following regional goals:

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
- Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system

Challenges:

- Geography: The region we hope to serve is over 1,700 square miles. Without logistic support, the time spent driving from one visit to the next can be frustrating. We will utilize computer based models to optimize the scheduling of visits to minimize miles driven and time spent out of patient's homes.
- Insufficient physician training: Professional training in providing care in patient homes is almost non-existent. We will grow our learning relationships to involve medical students and residents (Baylor College of Medicine), pharmacy students (University of Houston),

and nursing students (University of St. Thomas). We will also augment the experiences of our Geriatric fellows to train them to be our next wave of providers.

- Personal safety concerns: Going alone to some of the homes can be harrowing. We plan to diminish risk by having more than one clinician go to the sites.

5-Year Expected Outcome for Provider and Patients:

Our present house calls team is very modest, delivering care to 180 housebound patients. At the end of this proposal, the four interdisciplinary teams including physicians, nurse practitioners, social workers, pharmacists, therapists, and integrated call center and support team will be managing close 2,000 patients in their homes and making 10,000 house calls in the year. The expected impact will be 10,000-12,000 fewer ambulance rides, 2,000 fewer EC visits, 670 fewer admissions, $17 million in cost avoidance and over $10 million in realized savings.

Starting Point/Baseline:

Harris Health System currently has an active house call team headquartered at Quentin Mease Hospital consisting of 2 part-time physicians (total 0.6 FTE) and 2 part-time nurse practitioners (total 0.9 FTE) that cares for 180 housebound patients for a total of 900 house calls in 12 months ending 12/11. Currently, there is capability to perform point of care laboratory studies with the newest technology, (ISTAT-1) and the team is consistently writing progress notes into electronic medical record (EPIC) using the internet.

Rationale:

It has been proven that house call based primary care for home-bound individuals works [1]. For example, the Virginia Commonwealth Medical Center house calls program reduced hospital costs by 60% [2]. Call Doctor Medical Group in San Diego reduced ER visits by 59%[1]. In New York, Mount Sinai Visiting Doctors reduced hospitalizations by 66% [3].

In addition to Home-based programs' potential to save on the most expensive patients, these programs decrease mortality of frail elderly[6] and prevent nursing home placement. House calls slow the progression of disability[7], improve medication management [8] and decrease medication- associated adverse events[9]. House calls identify new medical and safety problems before they cause clinical harm [10], decrease caregiver burden and enhance quality of life for patient and caregiver [9]. House calls improve end-of-life care for patients and have proven to increase physician satisfaction as well[9].

In 2003, the U.S. Department of Transportation reported [12] that, "More than 3.5 million people in this country never leave their homes." While 20% of those over 85 are housebound [13], by calculation almost 1% of those between 25 and 65 also do not leave their homes. Therefore, there is a huge potential population from which to target [14]. Because of our focus and mission, other priority patient populations will be targeted including frequent EC users, especially those using "911" transportation, and those referred from the inpatient units, at high risk for readmission after discharge [8]. Thus, a significant number of our new patient house calls will be "immediately" post-discharge visits[8].

Project Components:

This project option does not include any required core project components. However, we will increase our capacity to provide primary care to more individuals, by: a) adding additional primary care providers, b) adding social workers/case managers, c) adding a logistics expert, and

d) forming multidisciplinary care teams. Additionally, we will use performance improvement principles to modify the selection criteria to increase the efficacy of the house calls intervention. We will compare the resource utilization for the three months prior to enrollment in the house calls program to the months after the house calls begin to start to assess the effects of this effort on resource utilization.

Milestones and Metrics:

Process:

P-5 Milestone: Train/hire additional primary care providers and staff and/or increase the number of primary care clinics for existing providers
P-5.1 Metric: Documentation of increased number of providers and staff and/or clinic sites.
P-X1 Milestone: Establish care management protocols.
P-X1.1 Metric: Documentation of protocols.
P-X2 Milestone: Establish baseline of housebound patients.
P-X2.1 Metric: Establish new baseline from current patients seen
P-X3 Milestone: Establish central call center to provide logistic support to house calls team.
P-X3.1 Metric: Documentation of implementation.

Improvement:

I-X1 Recruit homebound patients to house calls program.
I-X1.1 Increase number of homebound patients seen
I-11 Milestone: Patient satisfaction with primary care services.
I-11.5 Metric: Patient satisfaction scores: Average reported patient satisfaction scores, specific ranges and items to be determined by assessment tool scores. Demonstrate improvement over prior reporting period.

Unique community need identification numbers the project addresses:

CN.1-Inadequate access to primary care; CN.6-Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children, elderly; CN.7-Insufficient access to care coordination practice management and integrated care treatment programs; CN.8-High rates of inappropriate emergency department utilization; CN.9-High rates of preventable hospital readmissions; CN.10-High rates of preventable hospital admissions; and CN.11-High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:

This project will significantly enhance an already successful program by increasing it size, reach and scope of patient. Our 180 patients are mostly elderly and live within Beltway 8, but there are unmet needs in all adult age groups throughout Harris County including rural areas. Additionally, the multidisciplinary team is critical to the best outcomes for the patients and that is less available for the present House Calls program. With the goal to ultimately provide 2,000 of the most challenging patients with improved care that will more closely meet their needs and at a reduced cost, this project will greatly enhance the care delivery in Harris County.

Related Category 3 Outcome Measures:

OD-6

IT-6.1(1) Percent improvement over baseline of patient satisfaction scores

Reasons/rationale for selecting the outcome measures: It would be no challenge to save money by reducing services, and therefore reducing satisfaction. Therefore, while saving money it is critical to assess satisfaction to insure that the patients are not "suffering" from these interventions. This is why the house calls program has chosen to measure patient satisfaction in Category 3.

Relationship to other projects and other performing providers' projects: A primary focus of the waiver as well as our region is ensuring appropriate emergency department utilization for our patient base. The lack of primary care, specialty care, and behavioral health treatment currently creates congestion in the emergency departments thus increasing cost and comprehensive treatment of patients with chronic conditions. The ED initiatives focus to outcomes of readmission rates, appropriate ED utilization, and patient satisfaction and all initiative relationships can be found on the Region 3 initiative grid in the addendum.

Plan for learning collaborative: As performing provider, Harris Health System plans to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: This project will expand the House Calls Program in order to improve access, maximize independence, and realize cost savings by providing comprehensive, coordinated, multidisciplinary primary care at home to a population of patients that are homebound or have difficulties getting to clinic visits. The geographical challenges of the region will be addressed by a logistics approach using regional cohorting, and the house calls model will create patient-centered, coordinated primary care delivery that improves patient satisfaction and health outcomes, reduces unnecessary services, and builds on the accomplishments of our existing health care system. The present house calls team is very modest, delivering care to 180 housebound patients. By the end of the demonstration period, the four interdisciplinary teams including physicians, nurse practitioners, social workers, pharmacists, therapists, and integrated call center and support team are expecting to manage close 2,000 patients in their homes and make approximately 10,000 house calls in the year. The expected impact will be several thousand fewer ambulance rides, 2,000 fewer EC visits, 670 fewer admissions, resulting in millions of dollars in cost avoidance and realized savings.

Project Option 1.8.6- The expansion of existing dental clinics, the establishment of additional dental clinics, or the expansion of dental clinic hours: Expansion of Pediatric Dental Services

Unique ID #: 133355104.1.17/Pass 3
Performing Provider/TPI: Harris Health System/133355104

Project Summary:
Provider:
Harris Health System is comprised of 16 community health centers, seven school-based clinics, a dental center, dialysis center, five mobile health units, one outpatient specialty services clinic, and three hospitals. With a tax base of $511.6 million, Harris Health System was able to provide more than $1.254 billion in charity care during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 35,343 Births (babies delivered)- 6,643 Emergency visits- 173,263 Outpatient clinic visits- 1,054,770	Self-Pay- 62.6% Medicaid and CHIP- 23.4% Medicare- 8.6% Other Funding- 3.6% Commercial Insurance- 1.8%	Hispanic- 57.4% African American- 26.3% Caucasian- 9.2% Asian- 4.8% Other- 2.2% American Indian- 0.2%

Intervention(s):
This project will address the growing need for pediatric oral health services by implementing these services across three facilities within our system.
Need for the project:
Currently, Harris Health System only offers adult oral health care at some of our centers. In fiscal year 2011, fewer than half of the 3.5 million Texas children eligible for dental services through Medicaid received preventive dental treatments. More than 1.38 million children did not receive any dental treatments at all.
Target Population:
Any pediatric patient within the system who seeks dental care may benefit from this project. Data from FY2012 shows that 60% of all pediatric visits in Harris Health System were funded.
Category 1 or 2 expected patient benefits:
Our goal is to increase the number of children accessing dental services. Our DY4 goal is 10% of unduplicated patients and our DY5 goal is 20% unduplicated patients and 18,750 patient visits.
Category 3 outcomes:
IT-7.4: Our goal is to increase the percentage of children, age 6mos-20 years, who received a fluoride varnish application during the measurement period by 5% in DY4 and 10% in DY5.

Project Option 1.8.6- The expansion of existing dental clinics, the establishment of additional dental clinics, or the expansion of dental clinic hours: Expansion of Pediatric Dental Services

Unique ID #: 133355104.1.17/Pass 3

Performing Provider/TPI: Harris Health System/133355104

Project Description

Harris Health System plans to address the growing need for pediatric oral health services by implementing these services across three facilities within our system. Currently, Harris Health System only offers adult oral health care at some of our centers. Harris Health System is one of the few public health systems in the nation that offers oral health services to its patient population. The scope of this project is to increase access to pediatric oral health services in areas of high need in the community, specifically to serve zip codes 77504, 77099, 77093 and their surrounding areas.

Project Goals:

- Increase pediatric oral health workforce by expanding services to the pediatric and adolescent patient population. Harris Health System proposes to expand pediatric dental FTEs to 5.0.
- Establish pediatric and adolescent oral health services/clinics at three sites..
- Increase number of children and adolescents who will utilize the oral health care system.

Regional goals addressed with project:

- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
    - Oral health services are essential in preventing gum disease and cavities, which have been linked to other diseases such as diabetes and heart stroke. Access to oral health services is especially important for children and adolescents, since dental problems may affect quality of life and ability to succeed. Children from lower-income families often do not receive timely treatment for tooth decay, and they are more likely to suffer from chronic conditions (National Center for Chronic Disease Prevention and Health Promotion). Harris Health System will focus on underserved areas of Harris County.

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
    - Providing adequate access to preventive oral health services for children and adolescents at Harris Health System will improve health care outcomes and increase patient satisfaction.

The following challenges/issues are faced by Harris Health System as the performing provider for this project:

- Harris Health System currently does not offer pediatric and adolescent oral health services. The addition of these services will be a new challenge. Currently, there are no existing pediatric and adolescent oral health services offered at Harris Health System. This poses a challenge because we will be diving into a new pediatric service line. However, the system does have experience in operating a dental clinic with its current facility for adults.
- There are current space constraints to offer this service within our system. Our current sites are not built or equipped for pediatric oral health services; therefore, Harris Health will need to modify space available in order to satisfy the proposed service expansion.

5-year expected outcome for Performing Provider and patients:

Harris Health System's primary goal with this project is to increase access to appropriate levels of pediatric and adolescent oral health services in areas of high need. We plan to establish clinics that will increase the overall rate of annual dental visits for children and adolescents by increasing access to providers in these areas of high pediatric volumes. Upon implementation of these services, the proportion of children and adolescents who will utilize the oral health care system will increase, which increases preventive services and has the potential to decrease more costly chronic diseases in the future.

Starting Point/Baseline

Harris Health does not currently provide pediatric and adolescent oral health services at any of our sites; therefore, our baselines for patients and FTEs will be set at 0. In FY12, the system saw 53,359 unduplicated pediatric patients, which will guide us for expected volume. Of those 53,359 patients in FY12, 60% were funded.

Rationale

In fiscal year 2011, fewer than half of the 3.5 million Texas children eligible for dental services through Medicaid received preventive dental treatments. More than 1.38 million children did not receive any dental treatments at all. Such treatments include teeth cleanings, fluoride treatments, and sealants to prevent cavities. Compared to other States, Texas has lower proportions of children with teeth in excellent or very good condition.

Although oral health in Texas has improved over the past several decades, there are still significant disparities in some population groups, which include minorities and lower-income children. (NHANES, 1999-2004) Tooth decay is the most chronic childhood disease and is five times more common than asthma. Research shows that minority children living in poverty are most likely to experience these problems. (Oral Health in Texas, 2008) This same group tends to

have fewer sealants, more cavities, and the most advanced cases of oral disease. It has been demonstrated that adequate funding and targeting of school-based sealant programs can effectively eliminate such disparities as well. (Centers for Disease Control and Prevention, MMWR Morbid Mortal Wkly Rep. 2001) Harris Health System will address this significant disparity in oral health services for children and adolescents by adding oral health services at facilities in areas with high numbers of low-income minorities, including a school-based clinic.

Adequate oral health services are vital for the overall health of children and adolescents. Inadequate oral health can lead to more serious issues that include physical, mental, economic and social adverse effects. By providing oral health services to one of the most vulnerable populations at their early stages of life will improve the overall health of Harris County children and adolescents.

Project Components:

This project option does not include any required core components. However, Harris Health System will monitor quality through continuous improvement measurement. To improve efficiencies and reduce redundancies, we will monitor consistency of workflows between sites. Additionally, we plan to integrate pediatric dental health records into Harris Health's EMR to enhance efforts to improve quality of care and quality assurance in the delivery of dental care.

Milestones and metrics:

Harris Health System has chosen project option 1.8.6: The expansion of existing dental clinics, the establishment of additional dental clinics, or the expansion of dental clinic hours to best fit the scope and goal of this project.

Process Milestones and Metrics: P-4, P-4.1, P-4.2; P-7.1; P-X1, P-X1.1; P-X2 , P-X2.1; P-X3, P-X3.1;

P-X4,P-X4.1

Improvement Milestones and Metrics: I-14, I-14.1

Unique Community Need Identification Numbers:

- CN.1- Inadequate access to primary care
- CN.4- Inadequate access to dental care
- CN.6- Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children, elderly

The project focuses on CN.1, CN.4, and CN.6 by increasing access for pediatric and adolescent patients to oral health services. This aligns with CN.6 by addressing the importance of adequate access and dental treatments for children and potential long term benefits for overall health.

How the project represents a new initiative for Performing Provider or significantly enhances an existing delivery system reform initiative:

There is limited access for pediatric oral health, particularly for the low-income, uninsured, and Medicaid populations. Oral health is vital in disease prevention, and while preventive oral healthcare for children has grown within the past years, oral health problems continue to be an issue for children and adolescents, particularly minorities and low-income children. This project will allow Harris Health System to create a footprint by increasing the number of pediatric dentists in areas of high need. Treating cavities and other oral health problems at an early age has potential cost savings by preventing other chronic diseases that may come later in life.

Category 3

- **Outcome Domain(s):** OD-7 Oral Health

- **Improvement Target(s):**
  - **Stand-Alone Measures:**
    - IT-7.2 Topical Fluoride Application
      This measure focuses on measuring one of the goals for oral health improvement for our targeted population. This is an improvement measure that is important in preventive care and reducing the number of cavities in children. Harris Health System will begin to measure and report in DY4.
    - IT-7.4 Cavities: Percentage of children with untreated dental caries
      - Harris Health System hopes to increase use of preventive dental services and decrease disparities in oral health. We plan to measure and decrease the percent of children that go with untreated dental caries. We will begin to measure and report in DY4.

Relationship to other Projects and Other Performing Providers' Projects in the RHP:
Dental services for both adult and children is a service that is currently underfunded and incomplete in access for the targeted patient base. The dental initiatives represented in the RHP plan are specific to community need and location of the patient to ensure strong access to treatment. The outcome measures focus to the reduction of emergency room utilization, patient satisfaction, as well as increase access to the service line. The Region 3 initiative grid in the addendum directly reflects all relationships of dental initiatives.

Plan for Learning Collaborative:

As performing provider, Harris Health System plans to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: The goal is to increase the number of children accessing dental services. Currently, Harris Health System only offers adult oral health care at some of our centers. Oral health services are essential in preventing gum disease and cavities, which have been linked to other diseases such as diabetes and heart stroke. Access to oral health services is especially important for children and adolescents, since dental problems may affect quality of life and ability to succeed. Children from lower-income families often do not receive timely treatment for tooth decay, and they are more likely to suffer from chronic conditions (National Center for Chronic Disease Prevention and Health Promotion). Treating cavities and other oral health problems at an early age has potential cost savings by preventing other chronic diseases that may come later in life.

Matagorda Regional Medical Center

Pass 1

Project Option 1.9.2 - Improve access to specialty care: Establish a Chronic Disease Clinic to Expand Access to Specialty Care

Unique RHP Project Identification Number: 130959304.1.1
Performing Provider Name/TPI: Matagorda Regional Medical Center/ 130959304

Project Summary:
Provider:
Matagorda Regional Medical Center is a wholly owned part of Matagorda County Hospital District. The District also operates a primary care clinic for patients qualified for the District's Medical Assistance Program. The Hospital is a 58 bed acute care facility with a Level III trauma designation.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 2594 Births - 381 Emergency visits- 18600 Surgeries – 1598 Outpatient visits -18260	Self-Pay- 11.5% Medicaid and CHIP- 12.8% Medicare- 50.1% Commercial Insurance- 22.5% Charity- 3.1%	Hispanic- 31.1% African American- 17.2% Caucasian- 50.1% Other- 1.6%

Intervention(s):
The CDSC will focus on providing access to specialty services and physicians that support care for a number of key chronic conditions identified by community need. Through the establishment of the CDSC, patient compliance with specialty referral visits will improve and the ability to manage chronic disease conditions on an ambulatory basis will improve. The CDSC will collaborate with the primary care community to share information, provide outreach to patients to improve compliance, collect and analyze data to improve systems, and ultimately improve the health of many.
Need for the project:
The chronic conditions as measured by the EHR of the local FQHC (MEHOP) indicates a rate of diabetes in the population of 26%, of hypertension of 46%, hyperlipidemia of 11% and COPD/Asthma at 3%. These rates are far above the rates for Texas and the nation. This clinic will bring resources to the community to improve treatment and compliance and ultimately reduce unnecessary hospital admissions.
Target Population:
All patients within the system with may benefit from this project (Medicaid and CHIP-23.4% / Self-Pay- 62.6%), specifically those with chronic diseases.
Category 1 or 2 expected patient benefits:
Our 5 year goal is an increase of 100 patients from the baseline in active patients in the CDSC system and a reduction in the admission rate for acute care hospitalizations for ambulatory care sensitive conditions for individuals under 75 years of age by 10% from 2013 baseline for those patients of the chronic clinic.
Category 3 outcomes:
IT-2.11: Our goal is to reduce the admission rate for acute care hospitalizations for ambulatory care sensitive conditions for individuals under 75 years of age by 10% from DY2 base for those patients of the chronic clinic.

Project Option 1.9.2 - Improve access to specialty care: Establish a Chronic Disease Clinic to Expand Access to Specialty Care

Unique RHP Project Identification Number: 130959304.1.1

Performing Provider Name/TPI: Matagorda Regional Medical Center/ 130959304

Project Description:
Matagorda Regional Medical Center proposed to expand specialty care for targeted populations with chronic diseases.

Collectively motivated by a Robert Wood Johnson Foundation Report ranking Matagorda County 185 out of 221 Texas counties in key health domains, representatives of the County, hospitals, school districts, physicians, the FQHC, churches, mental health system, social agencies and more – came together as a task force to begin the dialogue on improving the health profile of the community.

A joint planning team was formed with representatives of Matagorda County Hospital District/Matagorda Regional Medical Center, Matagorda Episcopal Health Outreach Program (MEHOP – FQHC), and Palacios Community Medical Center to explore potential models for collaboration. The transformation goals described in the Waiver helped the group crystallize their plans and a new partnership was formed to move the joint planning effort forward. This new organization, Coastal Health Connection, is being incorporated to further the concept of shared infrastructure and shared planning to improve the health of the community. The DSRIP project to establish a Chronic Disease Specialty Clinic (CDSC) is an outgrowth of this shared vision of a healthier community. The chronic conditions as measured by the EHR of the local FQHC (MEHOP) indicates a rate of diabetes in the population of 26%, of hypertension of 46%, hyperlipidemia of 11% and COPD/Asthma at 3%. These rates are far above the rates for Texas and the nation. For example, diabetes in Texas is reported to be 9.7% and 9.3% in the nation.[1] A review of hospital admission data from a 12 month period found a majority of patients had at least one of the targeted chronic disease conditions and that 10% of patients had a targeted chronic disease as a primary admitting diagnosis. Currently, primary care practitioners must often refer patients for specialty care to locations ranging from 45 - 90 minutes away. Most of the specific disease categories driving the poor overall health status of Matagorda County can be positively impacted by transforming care for the targeted population from one of fragmented resources to an organized system of care with the goal of reducing the rate of hospital admission.

The CDSC will focus on providing access to specialty services and physicians that support care for a number of key chronic conditions identified by community need. Through the establishment of the CDSC, patient compliance with specialty referral visits will improve and the ability to manage chronic disease conditions on an ambulatory basis will improve. The CDSC will collaborate with the primary care community to share information, provide outreach to patients to improve compliance, collect and analyze data to improve systems, and ultimately improve the health of many.

The CDSC will create and manage a data base of chronic disease patients to improve navigation through the system of care and to improve compliance and monitoring. This system will utilize the RHIE which is projected to be in place in Year 3 will connect primary care physicians to the chronic clinic. In addition to clinical staffing, care teams will be utilized to serve as a liaison

between referring physicians, specialty physicians, the patients, and other components of the care continuum. These teams will be led by a case manager and utilize community health workers (CHW). Once enrolled, patients will receive follow-up phone calls, appointment reminders, case management services and support from the care coordinator. The Clinic will be located on the Hospital Campus to further the convenience for access to supporting diagnostics and specialized services such as educational programs, wound care, outpatient procedures, etc. Transportation beyond the transportation already provided by local FQHC will be evaluated and added as needed.

The target zip codes include all of those in Matagorda County and it is expected this clinic will receive patients from surrounding counties since the patient panels at MEHOP include patients from Matagorda, Wharton, Jackson, and Brazoria counties.

Target Zip Codes:
77414,77404,77456,77465,77457,77419,77458,77415,77428,77440,77480,77483

Project Goals and Relationship to Regional Goals:
The objectives of this project are to (1) make access to specialty care more convenient and affordable by bringing services to the community and (2) provide care coordination to the chronic disease population in order to improve compliance and early disease intervention.

Project Goals:

- Increase the number of available specialty appointments for target chronic disease management
- Improve care coordination with primary care practitioners and other sectors of the care continuum.
- Decrease avoidable hospital admissions.
- Decrease number of disease related crisis visits to the emergency department.

This project meets the following Region 3 goals:

- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
- Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system.

Challenges:
The specialty physicians needed to collaborate with primary care practitioners in the care of patients with the target chronic diseases are generally not available in the region. Because several of the specialty physicians are not needed on a full-time basis, recruitment will be difficult and costly. Because of the socio-economic status of much of the patient population, physicians have been unable and/or unwilling to come to the area on a part-time basis or open their practice to the lower income population.

Due to the lack of resources available in the area, patients have been accustomed to being referred to a specialist located out of the area based on individual primary care preferences, self-referring, or choosing not to seek additional care. These patterns are long established and often multi-generational. Creating a new resource in the community will require changing the patterns of both the existing medical community and their patients.

Finally, although the Chronic Disease Specialty Clinic will be located in the County's population center, approximately 50% of the residents live in smaller outlying communities – some of which require as much as 30 minutes travel time. Transportation to the clinic will challenge some of the most vulnerable population to receive the specialty intervention.

Because the Chronic Disease Specialty Clinic will be fully staffed and supported on a local level with a clinic location conveniently located on the hospital campus, there is early positive indications of interest from large multi-specialty physician groups (Baylor, Texas Children's) to become a contracted provider of those needed physician services.
The infrastructure to be included in that clinic will provide the platform for the creation of care coordination teams and information systems to facilitate compliance and collaboration with the primary care physicians. The model will build on current successes with diabetes education in the community and include training for educators on other chronic disease categories.
Because this clinic will be a reflection of the mission of Matagorda Regional Medical Center and the partners of Coastal Health Connection, specialty services will be available to the entire community regardless of ability to pay. Coastal Health Connection will play a role in coordinating existing transportation services and develop plans for expansion.

5-Year Expected Outcome for Provider and Patients:
Matagorda Regional Medical Center expects to see a decrease in the admission rate for the specified chronic diseases. By creating a system of care focused on a coordinated, collaborative approach and early intervention, patients will not be as likely to get "lost" and end up in health crises. The expected outcome is to reduce the admission rate for the population of patients managed through the Chronic Disease Specialty Clinic and the care coordination resources associated with the Clinic. Our goal is an increase of 100 patients from the baseline in active patients in the CDSC system and a reduction in the admission rate for acute care hospitalizations for ambulatory care sensitive conditions for individuals under 75 years of age by 10% from 2013 baseline for those patients of the chronic clinic.

Starting Point/Baseline:
A chronic disease specialty clinic does not exist for the Matagorda County region and therefore we have no patients in a system of care for chronic diseases.

Rationale:

The target chronic conditions as measured by the EHR of the local FQHC (MEHOP) indicates a rate of diabetes in the population of 26%, hypertension of 46%, hyperlipidemia of 11% and COPD/Asthma at 3%. These rates are way above the rates for Texas and the nation. For example, Diabetes in Texas is reported to be 9.7% and 9.3% in the nation. Matagorda and Wharton counties are medically underserved, dental health and mental health shortage areas. Matagorda County lists 26% of citizens living in poverty. The percentage of children age 0 to 17 years living under the poverty level is higher at 29.0% for Matagorda County.[2] The largest school districts report nearly 75% of the children economically disadvantaged. In Bay City (county seat) alone this is a 25% increase in 10 years.[3] Matagorda County ranked 185 out of 221 (County Health Rankings, 2011) and 110 out of 221 for Wharton County for health factors. The shortage of health care professionals coupled with high poverty defines a population in dire need of health care. Many patients don't seek care until they can no longer work, or their illness keeps them virtually immobile. At this time they often seek care in the emergency room or at

MEHOP. For many, the emergency room is seen as free care. MRH has worked closely with MEHOP to establish a primary care home for these patients. Once the chronic condition is identified, the condition is critically out of control. There is only one cardiologist in the area and no other specialist for the targeted chronic conditions.

Due to the economic condition of the patients, referral to specialists outside the area is virtually impossible. Specialists won't accept the patient and/or the patient has no transportation. There is not currently a centralized location for determining best practice management of patients with the targeted disease categories. By creating a clinic with the respective specialists, data/information systems, and care coordination, patients and their primary care providers will have ready access to expertise that will reduce issues with non-compliance, reduce out of control health crises, and therefore reduce hospital admission rates and unnecessary visits to the emergency department.

Project Components:

The required core project components include the following:

a) Increase service availability with extended hours
b) Increase number of specialty clinic locations
c) Implement transparent, standardized referrals across the system
d) Conduct quality improvement for project using methods such as rapid cycle improvement

We will meet these project components with the establishment of the chronic disease specialty clinic as follows:

1. Identification of the type of specialists and the time commitment required to impact the chronic conditions/health disparities
   - Estimated cost for gap analysis: $50,000 - $75,000
2. Recruitment of the specialists, clinical support team and care team
   - Recruitment: $25,000/physician = $150,000
   - Staffing: $600,000/year (including physicians)
3. Equipping the facility to meet the needs of the specialists
   - New clinic: $290,000
4. Develop a collaborative model with the primary care community to utilize chronic clinic
   - Informational material, education, etc: $25,000/year
5. Establish of baseline metrics and then continual measurement for improvement while utilizing process techniques such as PDSA cycles for improvement
   - IT (patient tracking, scheduling, referral systems): $50,000 (one time) + $10,000/year
6. Technology – Utilizing RHIE, connect primary care physicians to the chronic clinic.
   - $2500/physician = $25,000/year
7. Communication of success in the county, area and region.
   - Educational material, etc.: $10,000

Milestones & Metrics:

The following milestones and metrics have been chosen for the Chronic Care Clinic project based on the core components and the needs of the target population:

- Process Milestones and Metrics: P-1 (P-1.1); P-3 (P-3.1); P-4 (P-4.1); P-8 (P-8.1); P-9;

P-11 (P-11.1)

- Improvement Milestones and Metrics: I-22 (I-22.1); I-23 (I-23.1); I-29 (I-29.1)

Unique community need identification number the project addresses:
The project addresses the following unique community needs as identified in the community needs assessment:

- CN.1 Access to Specialty Care for Chronic Conditions within Matagorda County
- CN.2 Population Diabetes rate of 26%; Hypertension rate of 45%; Hyperlipidemia of
  - 11%; as well as 3% COPD
- CN.3 Percent Uninsured (29.2%) and Percent Poverty (22%) in Matagorda County
- CN.4 HPSA score of 16

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:
For the key chronic conditions of hypertension, hyperlipidemia, diabetes, COPD and asthma there is one cardiologist and no other specialists in the county or nearby region. A clinic established to focus on the management of these critical chronic diseases in the greater Matagorda County region will reduce ambulatory care sensitive admissions and dramatically improve primary care physician's ability to control these long term diseases.

Related Category 3 Outcome Measure(s):
OD-2 Potentially Preventable Admissions:
IT-2.11 Ambulatory Care Sensitive Conditions Admissions Rate

- Rate of acute care hospitalizations for grand ma status and other epileptic convulsions, Chronic obstructive pulmonary diseases (COPD), asthma, heart failure, pulmonary edema, hypertension, angina, diabetes

Reasons/rationale for selecting the outcome measure(s):
The high percentage of the population as uninsured and high poverty creates a challenging approach for primary care physicians to control these chronic diseases. Frequently, a patient lives with a chronic disease for an extended period before seeking primary care. In many cases, specialty care is required to assist the primary physician in finding appropriate approaches to controlling the disease. With the exception of one cardiologist, there are no specialty care physicians within driving distance (30 miles) for the patient. Preventable hospitalizations for Matagorda County for Hypertension, COPD, Asthma, and short and long term Diabetes increased 44 % from 2008 to 2010.[4] This accounts for increased expenses over this period of over $1,000,000. With the rate of diabetes as measured by MEHOP at 3 times the national average, hospital discharges would be predicted to be at a higher than average rate as well. The establishment of a specialty chronic clinic will enable the primary care physicians to refer these patients for care and subsequently controlling these chronic diseases.

Relationship to Other Projects:
There are no other projects planned.

Relationship to Other Performing Providers' Projects in the RHP:
Healthcare costs are significantly increased within a patient base with such aggressive chronic conditions that have gone untreated. The initiatives focused to chronic disease

management focus to conditions such as asthma, hypertension, and diabetes and are similar in the approach of managing & proactively treating chronic conditions in order to reduce 30-day readmission rates, inappropriate emergency department utilization, and healthcare costs. The Region 3 Initiative grid allows a cross reference of initiatives associated with chronic disease management. (addendum)

The increased access to primary care visits will naturally generate additional need of specialty care visits based on the condition and acuity of the patients served. Understanding that the patient base targeted through this initiative will generate significant specialty care visits due to chronic conditions and lack of previous treatments, this initiative and similar initiatives will focus to 30-day readmission rate reductions, improvement for patient satisfaction scores, and admission rates specific to chronic conditions. Numerous initiatives have been included in the RHP plan and the addendum of the Initiative Grid can directly tie all specialty care projects together by category.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:
Matagorda County has an estimated population of 2850 people with diabetes; 4500 people with hypertension and 1050 with hyperlipidemia who are at poverty or below. Of the general population over 1000 have COPD or asthma. The value of the CDSC will be to control these chronic diseases and thereby improve the quality of life for these individuals. The impact of reduced preventable hospitalizations will be a savings compared to the base year of 2010 of $500,000 in year 4 and additional savings of $100,000 per year for the next 3 years. (This is a reduction of an additional 5 preventable hospitalizations per year. Year 5 savings of $600,000. Year 6 savings of $700,000, etc.)
Although only one project has been selected, the ability to create a comprehensive infrastructure for chronic disease management is critical to success in the desired outcomes. That infrastructure must include at least the following:

- ✓ Identification of the type of specialists and the time commitment required to impact the chronic conditions/health disparities
- ✓ Recruitment of the specialists, clinical support team and care team
- ✓ Equipping the facility to meet the needs of the specialist
- ✓ Develop a collaborative model with the primary care community to utilize chronic clinic
- ✓ Establish of baseline metrics and then continual measurement for improvement while utilizing process techniques such as PDSA cycles for improvement
- ✓ Technology – Utilizing RHIE, connect primary care physicians to the chronic clinic.
- ✓ Communication of success in the county, area and region.

Matagorda Regional Medical Center

Pass 3

Project Option 1.6.1 Expand Urgent Care Services
Unique RHP Project Identification Number: 130959304.3.1
Performing Provider Name/TPI: Matagorda Regional Medical Center/ 130959304

Project Summary:

Provider:
Matagorda Regional Medical Center is a wholly owned part of Matagorda County Hospital District. The District also operates a primary care clinic for patients qualified for the District's Medical Assistance Program. The Hospital is a 58 bed acute care facility with a Level III trauma designation.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital admissions- 2594 Births - 381 Emergency visits- 18600 Surgeries – 1598 Outpatient visits -18260	Self-Pay- 11.5% Medicaid and CHIP- 12.8% Medicare- 50.1% Commercial Insurance- 22.5% Charity- 3.1%	Hispanic- 31.1% African American- 17.2% Caucasian- 50.1% Other- 1.6%

Intervention(s):
To provide an alternative to care at the right time and right setting urgent care services will be expanded to evenings and weekends. An urgent care medical advice call center manned with RN professionals trained in pediatric as well as adult triage will promote the use of the expanded urgent care services.

Need for the project**:**
While there has been positive progress in expanding access to community based care, current data reflects that between 40 and 50% of Matagorda Regional Medical Center Emergency Department visits are for diagnosis that could safely be treated in a clinic setting. An urgent medical advice call center does not exist for the Matagorda County region nor does expanded night and weekend hours for urgent care in a primary care setting for the underserved and uninsured.

Target Population**:**
All patients within the system may benefit from this project (Medicaid and CHIP-23.4% / Self-Pay- 62.6%), specifically those with repetitive unnecessary ED visits.

Category 1 or 2 expected patient benefits**:**
Matagorda Regional Medical Center expects to see a decrease in the number of unnecessary visits to the Emergency Department by patients enrolled in the Navigation Program. Our goal is to have 3000 urgent care visits annually by the end of the project period.

Category 3 outcomes:
IT-9.2: Our goal is a 15% reduction in unnecessary Emergency Department visits.

Project Option 1.6.1- Expand Urgent Care Services: Expand Access to Urgent Care Services and Urgent Medical Advice

Unique RHP Project Identification Number: 130959304.1.2/Pass 3
Performing Provider Name/TPI: Matagorda Regional Medical Center/ 130959304

Project Description:
A joint planning team with representatives of Matagorda County Hospital District/Matagorda Regional Medical Center, Matagorda Episcopal Health Outreach Program (MEHOP – FQHC), and Palacios Community Medical Center has explored potential models to transform access, cost and delivery of health care. The transformation goals described in the Waiver helped the group crystallize their plans and a new partnership was formed to move the joint planning effort forward. This new organization, Coastal Health Connection, is currently being incorporated with these three organizations as the founders to further the concept of shared infrastructure and shared planning to improve the health of the community.

The DSRIP project to expand urgent care services including urgent medical advice is consistent with the goals of a shared vision of a healthier community. While there has been positive progress in expanding access to community based primary care, recent data reflects that between 40 and 50% of Matagorda Regional Medical Center Emergency Department visits are for diagnosis that could safely be treated in a clinic setting. The data further indicates low utilization of inpatient services by pediatric patients. It is proposed that urgent pediatric needs and/or inpatient services are unmet in the county. For underserved/underinsured patients access to care after normal hours is not available. There is no urgent medical advice call center to triage patients seeking primary care services. Expanding urgent care at the site of the FQHC will provide an introduction of patients to a primary care home setting and thereby engage these patients with a holistic approach to healthcare. The continued inappropriate use of the hospital emergency department as a source of non-emergent care underscores the need for a call center to timely triage patients and for a source for expanded hours urgent care.

Transportation beyond the transportation already provided by local FQHC will be evaluated and added as needed.

The target zip codes include all of those in Matagorda County and it is expected this clinic will receive patients from surrounding counties since the patient panels at MEHOP include patients from Matagorda, Wharton, Jackson, and Brazoria counties.

Target Zip Codes:
77414,77404,77456,77465,77457,77419,77458,77415,77428,77440,77480,77483

Project Goal(s) and Relationship to Regional Goal(s):

Project Goals:

- Establish urgent medical advice call center so that patients who need it can access it telephonically
- Provide extended hours of urgent care.
- Provide a point of entry for patients into a primary home setting.
- Decrease inappropriate visits to the hospital emergency department utilizing call center and expanded hours of primary urgent care.

This project meets the following Region 3 goals:

- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
- Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system.
- Develop a regional approach to health care delivery that leverages and improves on existing programs an infrastructure , is responsive to patient needs throughout the entire region and improves health care outcomes and patient satisfaction.

Challenges or Issues Faced:

Data collected by MCHD as well as MEHOP indicates a section of the population continually utilizes the emergency department (ED) as a source of primary care. This illustrates the need for transformation to the approach to healthcare by the community. The belief by individuals and families to care illustrates entrenched patterns that ED care is a minimal cost, primary care choice or urgent care is not available for all. Communication and demonstration of access to high quality care is paramount. Communication and demonstration of the availability of advice and care to a county where 50% of the residents live outside the county seat in remote low density areas will be critical to the success of the transformation. There currently is not any source of call advice for patients and parents to seek direction on appropriate venue for care. Finally, there are limited alternatives to the hospital emergency room for after hours and weekend care and no alternative for the uninsured and underinsured.

How the Project Addresses Challenges/Issues:

The availability of an urgent medical advice call center will enable health concerns to be heard and addressed in an optimum venue of care. Urgent care will be available in a non ED setting for expanded hours and weekends to reduce the number of unnecessary ED visits. Utilization of electronic health records and health information technology will facilitate continuity of care. Because this clinic will be a reflection of the mission of Matagorda Regional Medical Center and the partners of Coastal Health Connection services will be available to the entire community

regardless of ability to pay. Coastal Health Connection will play a role in coordinating existing transportation services and develop plans for expansion.

5-Year Expected Outcome for Provider and Patients:

Matagorda Regional Medical Center expects to see a decrease in the number of unnecessary visits to the ED by patients utilizing the call center and expanded urgent and walk-in care. Through continuity of approach to health care within Coastal Health Connection including formal communication networks between urgent call center and community based navigators it is anticipated that patients will receive the right care in the right setting. Consistent intervention with this collaborative approach will promote primary care in a patient centered home model where the patient receives care for both chronic and acute illnesses and health disparities are reduced. The expected outcome is to reduce the unnecessary ED visits creating a system of care focused on a coordinated, collaborative approach and early intervention, patients will be not be as likely to get "lost" and end up in a health crises. Our goal is to reduce unnecessary ED visits by 15%.

Starting Point/Baseline:

An urgent medical advice call center does not exist for the Matagorda County region nor does expanded night and weekend hours for urgent care in a primary care setting for the underserved and uninsured.

Rationale:
Reasons for selecting the project option:

The county is served by two acute care hospitals, Matagorda Regional Medical Center and Palacios Community Medical Center. In 2010, the facilities reported 19,368 emergency visits. The hospitals provided more than $16 million in uncompensated care, which accounted for 14.9% of total patient revenue, the second highest percentage in the region. Between 40 and 50% of the visits to the MRMC Emergency Department in 2012 could be considered non-emergent and potentially could be cared for in a less costly venue.

Matagorda County includes the towns of Bay City and Palacios, as well as 15 smaller communities spread throughout the county of more than 1,000 square miles. More than 36,000 people live within the county which has a median household income of $39,874. Nearly 20% of the population lives below the poverty level, and the county has the second highest rate of children living in poverty at 28.4%.

No urgent care medical advice is available by phone for the population. The population has demonstrated that care is often either not sought or the ED is used for primary care. A change is required to enable patients to receive advice 24/7 and to receive urgent care in a primary care setting.

Project Components:

The key project components for the enhancement of urgent medical advice and the expansion of urgent care services include:

8. Expand urgent care services at MEHOP from 6pm to 11pm Monday through Friday and Saturday and Sunday from 8am to 6pm
   - Recruitment of providers and support staff: $ 25,000
   - Staffing: $530,000-providers, nurse, insurance verification
   - Supplies: $ 25,000 on going
   - Security: $25,000
   - IT (Computers, licenses) - $50,000
   - Purchased Services - $200,000

9. Establish/expand access to medical advice and direction to the appropriate level of care to reduce Emergency Department use of non-emergent conditions and increase patient access to health care
   - Staffing: $ 200,000
   - Telephone System: $15,000
   - IT (scheduling, referral systems, patient tracking): $20,000 one time and $10,000 per year

10. Establish a process that in a timely manner triages patients seeking primary care services in an ED to an alternate primary care site.
    - Informational Material; $10,000
11. Survey patients who utilize call center and expanded urgent care to ensure patient satisfaction with services received
    - Survey: $10,000
12. Establish linkages between primary care, urgent care and ED in order to increase communication and improve care transitions
    - Staff: $30,000
13. Conduct quality improvement for project using methods such as rapid cycle improvement
    - Staff: $20,000
14. Communication of success in the county, area and region.
    - Educational material, etc.: $10,000

Milestones & Metrics:

The following milestones and metrics have been chosen for enhanced urgent medical advice and expanded urgent car services project based on the core components and the needs of the target population:

Process Milestones and Metrics: P-1 (P-1.1); P-2 (P-2.1);P-3 (P-3.1); P-4 (P-4.1); P-6 (P-6.1); P-8 (P-8.1) ; P-11 (P-11.1); I-14(I-14.1); I-16 (I-16.1); I-17 (I-17.1)

Unique community need identification number the project addresses:

The project addresses the following unique community needs as identified in the community needs assessment:

CN.1 Inadequate access to primary care

CN.8 High rates of inappropriate emergency department utilization
CN.23 Lack of patient navigation, patient and family education and information programs.

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:
The main focus of the hospital district has been acute focused with hospital and emergency department services. This initiative combined with patient navigator system will enable patients to receive the right care in the right setting and will promote the patient centered medical home initiative The project will also enhance another project of creating a system of care for chronic diseases by identifying undetected chronic disease and enabling patients to receive urgent care within the collaborative system.

Related Category 3 Outcome Measure(s):
OD-9 Right Care Right Setting:
IT-9.2 ED Appropriate utilization

- Reduce all ED visits (including ACSC)[71]
- Reduce pediatric Emergency Department visits (CHIPRA Core Measure)[72]
- Reduce Emergency Department visits for target conditions
    - Congestive Heart Failure
    - Diabetes
    - End Stage Renal Disease
    - Cardiovascular Disease /Hypertension
    - Behavioral Health/Substance Abuse
    - Chronic Obstructive Pulmonary Disease
    - Asthma

Reasons/rationale for selecting the outcome measure(s):

A high percentage of the population being uninsured, low income, and under-educated, causes connecting to the right setting for care can be challenging. The barriers created by these factors include economic and communication. Generations of families have come to rely on the emergency department of hospitals as their sole source of health care or avoided care until life was threatened.

While there are many factors involved in calculating actual cost savings available if a patient receives care in the most cost effective setting, the charge associated with the lowest acuity visit for a local hospital ED visit is over double that of the same coded visit in a local community clinic.[73] With over 9000 emergency department visits per year in Matagorda County potentially being eligible for care in a different venue, the impact could be significant.

Relationship to Other Projects:
MCHD is also developing a Chronic Disease Specialty Clinic. Enhanced urgent care medical advice and expanded urgent care will partner with the Patient Care Navigation System that is being developed. All of these projects will overlap with an integrated referral system and have positive impact on appropriate use of the ED and reduce health disparities.

Relationship to Other Performing Providers' Projects in the RHP:
The triage and intake process of patient encounters is the front door to healthcare and an important factor of the success of healthcare transformation. The nurse triage/call center concept is unique in the regional sense of the RHP plan and focuses to outcome measures of ambulatory care sensitive condition readmission rates. The initiative grid attached in the addendum will show similarities with other projects suggested for this region.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:
Matagorda County Regional Medical Center has approximately 20,000 visits to the Emergency Department annually. Records reflect a potential of 40 – 50%[74] of the visits could have been treated in another venue. If the Enhanced and expanded urgent care is successful at reducing unnecessary ED visits by a conservative 15%, a savings of as much as $3,000,000[75] could be realized by the end of the project period (as compared to a standard physician office visit).

Memorial Hermann Hospital

Pass 1

Project Option: 1.1.1 Establish more primary care clinics: Physician Network Development

Performing Provider: Memorial Hermann Hospital/TPI 137805107
Unique Project ID: 137805107.1.1

- Provider: Memorial Hermann Hospital (Memorial) is an 860 bed hospital located in Houston, TX and is part of the Houston-Sugarland-Baytown MSA. The MSA population served by Memorial is approximately 6,000,000 people.

- Intervention(s): Memorial will expand the capacity of primary care through more clinics and available health care professionals to better accommodate the regional patient population and community so that patients have enhanced access to services. Memorial will aim to recruit 60+ new primary care providers and 18 new primary care locations are planned.

- Need for the project: The region has a growing shortage of primary care providers due to the aging population needing primary care services and the decline of new doctors interested in pursuing primary care. Expanding primary care clinics with extended hours will increase access and capacity and help create an organized structure of primary care providers, clinicians and staff.

- Target population: The target population is patients in the Houston Community including Downtown, Katy, the Inner Loop, Clear Lake, North and Northeast Houston. Memorial estimates the expanded primary care capacity will be able to serve an additional 100,000 to 150,000 people, 37.55% of which are anticipated to be Medicaid or uninsured.

- Category 1 or 2 expected patient benefits: Patients with limited primary care access often seek treatment for low acuity conditions at Emergency Departments which have a higher degree of unsatisfactory results and stress to the patient. The additional primary care capacity could decrease unnecessary ER visits by approximately 5% in DY2 and 15% over the DY2 baseline in DY5.

- Category 3 outcomes: IT 6.1 – Percent improvement over baseline of patient satisfaction scores - 10% improvement over baseline by DY5. Specifically, an improvement in patients' rating of whether patients are getting timely care appointments and information.

#96372

Project Option – 1.1.1 Establish more primary care clinics: Physician Network Development

Unique RHP Project Identification Number: 137805107.1.1
Performing Provider Name/TPI: Memorial Hermann Hospital (Memorial)/137805107

Project Description: In this project, Memorial will expand the network of primary care physicians in the community. Texas has a growing shortage of primary care doctors and nurses due to the needs of an aging population, a decline in the number of medical students choosing primary care, and thousands of aging baby boomers who are doctors and nurses looking towards retirement. The shortage of primary care workforce personnel in Texas is a critical problem that can be addressed under this Waiver. The shortage of primary care providers has contributed to increased wait times in hospitals, community clinics, and other care settings. Expanding primary care clinics will increase access and capacity and help create an organized structure of primary care providers, clinicians, and staff. Moreover, this expansion will strengthen an integrated health care system and play a key role in implementing disease management programs. A greater focus on primary care will be crucial to the success of an integrated health care system.

Goal(s) and relationship to Regional goal(s):

Project goals:

Expand the capacity of primary care to better accommodate the needs of the regional patient population and community, as identified by the RHP needs assessment, so that patients have enhanced access to services, allowing them to receive the right care at the right time in the right setting.

This project meets the following Region 3 goals:

This project addresses the RHP's goal to "[i]ncrease access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay."

Challenges and how addressed:

This project faces three key challenges. First, Memorial must raise awareness and change existing patterns for seeking health care services for some patients. A second challenge is to raise awareness for the service delivery model offered by these new sites so that patients who currently don't have access to after-hours care learn that this type of care is available through a physician's clinic rather than turning to emergent or urgent care clinics. And finally, recruiting 60 providers within four years in this competitive environment will be a challenge. Memorial will address these challenges by implementing other projects with reduce inappropriate ED use, educating patients on the benefits of primary care, and aggressively recruiting primary are providers.

5-year expected outcome for provider and patients:

Memorial will aim to recruit 60+ new primary care providers over the course of the Waiver. In addition, eighteen new primary care locations are planned to address patient access issues described above. These locations have been identified to reach people living across the Houston community including Downtown, Katy, the Inner Loop, and Clear Lake as examples. The clinics are scheduled to come on line during the course of the next four years providing easy access with early morning and after hours services along with weekend availability. These sites are estimated to provide new primary care capacity for 150,000 people.

Starting Point/Baseline: Memorial has identified the sites to expand primary care clinics.

Rationale:

Reasons for selecting the project option: In 2010, Texas had 176 patient care physicians per 100,000 population and 70 primary care physicians per 100,000 population with a state ranking of 46 and 47, respectively (comparable ratios for US total are 219.5 and 90.5, respectively). From 2001 to 2011, the Texas physician workforce grew 32.3%, exceeding the population growth of 25.1%. Therefore, there is a significant need to expand primary care in order to facilitate delivery system reform.

In our current system, more often than not, patients receive services in urgent and emergent care settings for conditions that could be managed in a more coordinated manner if provided in the primary care setting. This often results in more costly, less coordinated care and a lack of appropriate follow-up care. Patients may experience barriers in accessing primary care services secondary to transportation, cost, lack of assigned provider, physical disability, inability to receive appointments in a timely manner and a lack of knowledge about what types of services can be provided in the primary care setting. By enhancing access points, available appointment times, patient awareness of available services and overall primary care capacity, patients and their families will align themselves with the primary care system resulting in better health outcomes, patient satisfaction, appropriate utilization and reduced cost of services.

Unique community need identification number the project addresses:

CN1 – Primary Care

How the project represents a new initiative for Performing Provider or significantly enhances an existing delivery system reform initiative:

This project represents a significant improvement in Memorial's ability to deliver primary healthcare; which has a significant deficiency in Regions.

Related Category 3 Outcome Measure(s): OD-6 Patient Satisfaction. IT 6.1 Percent improvement over baseline of patient satisfaction scores.

Reasons/rationale for selecting the outcome measure(s):

If patients are getting timely patient care, appointments, and information then their satisfaction will increase. Therefore, patient satisfaction is an is a reasonable metric by which to judge the effectiveness of this project.

Relationship to Other Projects: This project is part of Memorial's larger plans to expand and develop primary care and specialty care services, while improving access to care. Expanding primary care supports/reinforces several of the Category 1 and 2 projects: Increasing the number of physicians rotating through the primary care residency program will have a direct impact on Expanding Primary Care Capacity (1.1); this project not only will increase the number of available physicians to participate in medical homes (2.1), it will also ensure that they are trained in the medical home concept; finally, the medical home concept of this training program also reinforces the Redesign of Primary Care (2.3), the Redesign to Improve the Patient Experience (2.4).

Relationship to Other Performing Providers' Projects in the RHP: Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative: Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system

Project Valuation: The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

The recruitment and expansion of primary care clinics and physicians will help address a substantial need in the community for increased access to primary care. It will also go a long way towards achieving the Waiver goal of improving outcomes while curbing the risk of healthcare costs, because primary care is one of the most cost effective methods to increase health outcomes.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD: $16,253,190			

Project Option: 1.13.1 Develop and Implement Crisis Stabilization Services
Performing Provider: Memorial Hermann Hospital/TPI 137805107
Unique Project ID: 137805107.1.2

- Provider: Memorial Hermann Hospital (Memorial) is an 860 bed hospital located in Houston, TX and is part of the Houston-Sugarland-Baytown MSA. The MSA population served by Memorial is approximately 6,000,000 people.

- Intervention(s): Memorial will develop a crisis stabilization clinic that would provide rapid access to initial psychiatric treatment and outpatient services. The goal is to identify consumers with behavioral health needs that can be addressed and avoid unnecessary use of emergency departments, hospitalization or incarceration.

- Need for the project: From 20072012, Emergency Psych volumes coming into Memorial's acute care hospitals that could have been treated at a lower level of care was approximately 22,000 patients. Of that number, 11% (7,400) of those patients could have been discharged immediately if an emergency appointment with a psychiatrist or mental health nurse practitioner were rapidly available (within 24 hours).

- Target population: The target population is emergent psychiatric patients coming into Memorial's acute care facility. A crisis clinic would provide rapid access to initial psychiatric treatment and outpatient services to a large volume community jointly in need of investment in mental health services. It is estimated that 20% of people in Harris County suffer from behavioral health issues of which 25% are uninsured and another 18% or 701,559 are covered by Medicaid. Of the 701,559 residents covered by Medicaid, approximately 8% have received some type behavioral health treatment.

- Category 1 or 2 expected patient benefits: The establishment of these behavioral health services will decrease emergency department visits by behavioral health patients through increasing bed availability for acute patients, decrease emergency department wait times which cause emergency department bottleneck; decrease unnecessary admissions to inpatient behavioral programs and/or county juvenile and judicial systems.

- Category 3 outcomes: IT 3.8 – By DY5, Memorial expects to demonstrate an improvement on its Behavioral Health/Substance Abuse 30day readmission rate by at least 10% over baseline measurement.

Project Option-1.13.1 Develop and Implement Crisis Stabilization Services

Unique RHP Project Identification Number: 137805107.1.2

Performing Provider Name/TPI: Memorial Hermann Hospital (Memorial)/TPI 137805107

Project Description:

Memorial's proposal is to develop a crisis stabilization clinic better identifies people with behavioral health needs, responds to those needs and links persons with the most appropriate level of care. Our goal is to keep individuals healthy and safe, develop processes and intervention to manage challenging behaviors, and avoid unnecessary use of emergency departments, hospitalization or incarceration. The clinic will be staffed with a nurse practitioner, social worker and other patient care staff to provide an outpatient emergency appointment for patients with no immediate access for mental health care.

The clinic will use a short-term treatment model to reduce acute symptoms of mental illness provided in a secure and protected clinically staffed, psychiatrically supervised, treatment environment.

The target population will be emergent psychiatric patients coming into Memorial's acute care facility. From 2007-2012, Emergent Psych volumes coming into Memorial Hermann's acute care hospitals that could have been treated at an lower level of care was approximately 22,000 patients. Of that number, 11% (2400) of these patients could have been discharged from the hospitals immediately if an emergency appointment with a psychiatrist or mental health nurse practitioner were rapidly available (within 24 hours). A Crisis Clinic would provide rapid access to initial psychiatric treatment and outpatient services to a large urban community greatly in need of investment in mental health services.

Further analysis will be completed to assess the behavioral health needs of patient currently receiving crisis services in the jails, other area emergency departments or psychiatric hospitals. A gap analysis will be used to develop a data-driven plan for specific community-based crisis stabilization alternatives that will meet the behavioral health needs of the patients. A complete review of potential crisis alternative service models will be explored to determine acceptable and feasible models for implementation of this program. The clinic will develop a setting where access to behavioral healthcare is available to the community beyond the traditional hours of private providers. This setting would most appropriately assess and treat mental health consumers at the moment of crisis. This would remove a layer of emergency services which, in its current state, only provides a referral to appropriate care once the imminent crisis has passed. Providing an appropriate setting and access to care for behavioral health consumers in crisis, staffed with appropriately licensed professionals, provides a community resource that efficiently responds to these crises and reduces the number of visits to emergency departments for behavioral health conditions.

Goal(s) and relationship to Regional goal(s):

Project goals:

Promote better health outcomes for behavioral health patients. Decrease unnecessary ED visits. Decrease unnecessary admissions and readmissions. The goal of this project is to establish a crisis clinic to broaden access to behavioral healthcare that may include the building of a new facility or expansion of operating hours in a select number of clinics capable of treating this particular patient population.

This project meets the following Region 3 goals:

This project addresses the RHP's goal to "[i]ncrease access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay."

Challenges:

Individuals with chronic mental health conditions struggle with non-compliance in prescribed health maintenance activities, including medicine management, follow-up, and Medicaid enrollment active. Memorial also anticipates the challenge of recruiting competent behavioral healthcare staff to work non-traditional hours. Memorial will address these challenges by focusing on patient education and making the patient the center of care decisions to the fullest extent possible. Additionally, Memorial will engage in aggressive recruitment to locate and hire professional staff.

5-year expected outcome for provider and patients:

With the addition of behavioral health crisis services to the current programs offered at Memorial, we expect to decrease emergency department visits by behavioral health patients thus increasing bed availability for acute patients; decrease emergency department wait times which cause emergency department bottlenecks; decrease unnecessary admissions to inpatient behavioral health programs and or county jails/judicial systems. All of these situations will result in a significant cost savings for area hospitals, local mental health authorities and county justice organizations. Most importantly, behavioral health patients will receive necessary treatment in a more efficient and timely manner.

Starting Point/Baseline: Currently, Memorial does not have a crisis clinic available to patients with mental healthcare needs.

Rationale:

A Behavioral Health Crisis Clinic would provide an efficient portal for outpatient stabilization and comprehensive Behavioral Health Social Work services. This would ensure patients with chronic or emergent needs are connected to comprehensive Behavioral Health Services and are provided with an outpatient crisis follow-up resource for future events in place for system acute care hospitals. Patients will meet with a licensed Clinical Social Worker in the Behavioral Health

Crisis Clinic to develop a comprehensive Behavioral Health treatment plan, be educated about navigating the fragmented Behavioral Health/Mental Health care delivery system, and if appropriate set up a case management relationship to address compliance issues with health maintenance activities for a 90 period. After 90 days, patient will be reevaluated for compliance with community providers and/or on-going case management services.

In our current system, more often than not, patients receive services in urgent and emergent care settings for conditions that could be managed in a more coordinated manner if provided in the primary care setting. This often results in more costly, less coordinated care and a lack of appropriate follow-up care. Patients may experience barriers in accessing primary care services secondary to transportation, cost, lack of assigned provider, physical disability, inability to receive appointments in a timely manner and a lack of knowledge about what types of services can be provided in the primary care setting. By enhancing access points, available appointment times, patient awareness of available services and overall primary care capacity, patients and their families will align themselves with the primary care system resulting in better health outcomes, patient satisfaction, appropriate utilization and reduced cost of services.

Project components:

a) Convene community stakeholders who can support the development of crisis stabilization services to conduct a gap analysis of the current community crisis system and develop a specific action plan that identifies specific crisis stabilization services to address identified gaps

- Memorial will conduct baseline focus groups with local Behavioral Health Providers, local planning/advisory councils and county mental health authority.

b) Analyze the current system of crisis stabilization services available in the community including capacity of each service, current utilization patterns, eligibility criteria and discharge criteria for each service.

- Memorial will examine the current service delivery system, determining the availability of persons in need and also determining adequacy or limitations of services for persons in need.

- Memorial will review the current state of the available mental health workforce, including community based and hospital inpatient services.

c) Assess the behavioral health needs of patients currently receiving crisis services in the jails, EDs, or psychiatric hospitals. Determine the types and volume of services needed to resolve crises in community-based settings. Then conduct a gap analysis that will result in a data-driven plan to develop specific community-based crisis stabilization alternatives that will meet the behavioral health needs of the patients.

- Memorial will utilize social indicators and prevalence data on the general population related to mental health risk factors, estimate the need for services.

- Memorial will develop an on-going data collection system/process that Leadership will utilize to update the services currently available and compare with services needed (Gap Analysis.)

d) Explore potential crisis alternative service models and determine acceptable and feasible models for implementation.

- Memorial will analyze the differences in profiles between those receiving services and those not receiving services.

e) Review the intervention(s) impact on access to and quality of behavioral health crisis stabilization services and identify "lessons learned," opportunities to scale all or part of the intervention(s) to a broader patient population, and identify key challenges associated with expansion of the intervention(s), including special considerations for safety-net populations.

- Memorial will develop an on-going data collection system/process that Leadership will utilize to update the services currently available and compare with services needed (Gap Analysis.)

- Memorial will recommend and prioritize steps to strategically enhance services to achieve the greatest impact on mental health service needs and system development on an ongoing basis.

Unique community need identification number the project addresses:

- CN.1 - Primary Care
- CN.8 - High rates of inappropriate emergency department utilization
- CN.9 - High rates of preventable hospital readmissions
- CN.6-Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children, and elderly

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

This project would significantly enhance Memorial's ability to deliver vital healthcare services. Our community does not currently have sufficient resources to deal with the needs of the behavioral healthcare population and this project would directly address that deficiency. The patients at our facilities would demonstrably benefit from such a project. Emergent Psychiatric volumes which entered our acute care facilities from 2007-2012 that potentially could have been managed outpatient from 2007- 2012 was approximately 61%, or over 22,000 patient encounters. Close to 2,500, or 11% of these patient encounters could have been discharged immediately from the system if an emergency appointment with a psychiatrist or nurse practitioner within 24 hours was rapidly available.

Related Category 3 Outcome Measure(s): OD-3 Potentially Preventable Readmissions; IT-3.8 Behavioral Health /Substance Abuse 30 day readmission rate

Reasons/rationale for selecting the outcome measure(s):

When patients with behavioral healthcare needs are receiving the correct treatment in the correct setting this will improve their health outcomes and significantly reduce the amount of potentially preventable readmissions for these patients.

Relationship to other Projects: This project is part of Memorial Hermann's larger vision to expand and develop primary and specialty care services, while improving access to care and implementing delivery improvements targeted to specific populations (in this case, behavioral health patients). In the current state of fragmented healthcare delivery, Behavioral Health consumers are left to navigate primary care systems that do not provide behavioral health treatment and are not staffed with behavioral health professionals trained to meet the needs of this targeted population.

Relationship to Other Performing Providers' Projects in the RHP: Numerous community needs assessments reflect an extreme need for behavioral health services to include outpatient treatment centers, crisis stabilization units, inpatient beds, and much more. The lack of funding as well as complexity of the regions patient base has limited the amount of behavioral health treatments available to our region and continues to drive cost in emergent and inpatient situations. The Crisis Stabilization Unit has a direct correlation to all behavioral health programs recommended in the RHP plan and will be a focus of two of the largest Local Mental Health Authorities of our region. Both CSU's share the outcome measures of mental health admissions & readmissions, and improvement of patient satisfaction scores. The Region 3 Initiative Grid attached in the addendum reflects the direct relationships of this initiative.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

Approach for valuing project: The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

Rationale/justification for valuation: A crisis clinic will significantly reduce unnecessary hospital readmissions and thereby increase the efficient allocation of resources in Region 3. Furthermore, the crisis stabilization center will add a much needed component to the healthcare infrastructure in the community, thus meeting one of the three main goals of the waiver.

Project Option: 1.1.1 - 1.1 Expand Primary Care Capacity: Pediatric Clinic Expansion – North Harris County Pediatric Clinic

Unique Project ID: 137805107.1.3
Performing Provider Name/TPI: Memorial Hermann Hospital/ 137805107

Project Summary:

Provider: Memorial Hermann Hospital (Memorial) is an 860 bed hospital located in Houston, TX and is part of the Houston-Sugarland-Baytown MSA. The MSA population served by Memorial is approximately 6,000,000 people.

Intervention(s): Memorial will establish the North Harris County Pediatric Clinic which will provide primary care for pediatric patients in that area of Harris County. Memorial will contract UTHSC-H to provide physician services to complement Memorial's investment in new technology, equipment and space to better provide pediatric services.

Need for the project: Prospective pediatric patients in the targeted service area described below currently face many roadblocks to adequate primary care including economic burdens, language barriers and lack of knowledge for seeking pediatric care. Due to the shortage of primary care providers in the community, the average wait period for a primary care appointment is 17 days, which results in increased reliance on hospital EDs for primary care and non-emergent care. The project will increase the percentage of patients who receive appropriate primary care including preventative services and regular monitoring for patients with chronic illnesses.

Target population: The target population is uninsured and underinsured children in the area of Harris County that is between Cypress Parkway and FM 1960 to the North, Tomball Parkway to the West, West Road to the South and Hwy. 59N to the East. It is estimated that 38.4% of the patients in the service area for this clinic are either uninsured or underinsured children and rely on Memorial Hermann's and other hospitals' emergency departments for primary care services.

Category 1 or 2 expected patient benefits: The clinic will provide a more appropriate setting for pediatric primary care for the target population. They will benefit primarily from better access to primary care and better management of illness and chronic conditions.

Category 3 outcomes: IT 1.1 – Reduce the average length of time in days between the day a patient requests an appointment and the third available appointment. The goal will be to decrease number of days to third next available appointment to zero days (same day) for primary care by DY5.

Project Option 1.1.1- Establish More Primary Care Clinics: Pediatric Clinic Expansion - North Harris County Pediatric Clinic

Unique RHP Project Identification Number: 137805107.1.3

Performing Provider Name/TPI: Memorial Hermann Hospital (Memorial)/137805107

Project Description: Using the strengths developed during their longstanding partnership, Memorial and The University of Texas Health Science Center at Houston (UTHSC-H) intend to work together to address the shortage of pediatric primary and specialty care in Region 3. In this project, Memorial will establish the North Harris County Pediatric Clinic, which will provide primary care for pediatric patients in an area of Harris County that is between Cypress Pkwy and FM 1960 to the north, Tomball Parkway to the west, West Road to the south, and Highway 59N to the east. Memorial has defined the service area for this clinic as a priority area for pediatric services, because it contains 15 of the 81 census tracts that make up the top 10% of all census tracts in Harris County with the greatest number of people below the age of 18 that are living below the federal poverty level (FPL). (The census tracts are 5511, 5506.03, 5503.02, 5503.01, 5502, 5501, 5338.02, 2415, 2408.01, 2407.01, 2405.02, 2227, 2226, 2225.03, and 2225.01.) The number of children living below the FPL in these 15 census tract areas is estimated to be approximately 15,465. Furthermore, these areas have particularly high numbers of Hispanics (49.9%), for whom language, as well as poverty, may pose a barrier to obtaining primary care for their children. Black/African Americans, another segment of the population that tend to be medically underserved, also make up a significant proportion of the population in these census tracts (35.1%). The service area for this clinic includes large populations with economic, cultural, language, and transportation barriers to receiving primary care. (All population statistics are from the U.S. Census Bureau, 2010 Census. Poverty statistics are from the U.S. Census Bureau, Small Area Estimates Branch. Release date: 11.2011. Table 1: 2010 Poverty and Median Income Estimates - Counties.) In order to address the unique needs of different communities in the greater Houston area, Memorial has chosen to establish a pediatric clinic in this area as an independent DSRIP project.

Using their longstanding partnership to provide quality healthcare as a base, Memorial will contract UTHSC-H to provide physician services to complement Memorial's investment in new technology, equipment and space to better provide pediatric services. Specifically, UTHSC-H will redirect pediatricians already on its staff who have the capacity to care for additional patients, recruit additional pediatricians, or increase residency programs to fill the need for additional pediatric specialists. UTHSC-H is uniquely positioned to attract and retain new physicians due to its accomplishments as a world-class academic and research institution. This additional service line will avoid duplication and draw on the strength of UTHSC-H's academic presence in the field of pediatric medicine, and will also benefit Memorial by increasing the quantity, quality, and scope of services provided at its facilities.

Practically, Memorial will subcontract with UTHSC-H to provide physician and other services needed to implement this project. For example, Memorial will lease additional space to open the North Harris County clinic**.** This space will include additional consulting, exam and procedure rooms. Memorial will also subcontract with UTHSC-H to provide primary care providers and support staff to operationalize the project. For all services in which UTHSC-H is a subcontractor, Memorial will pay an agreed rate that is set in advance and represents fair market value for services negotiated in the ordinary course of business through an arms-length transaction.

Goal(s) and relationship to Regional goal(s):

Project goals:

Expand the capacity of pediatric primary care to better accommodate the needs of the regional patient population and community, as identified by the RHP needs assessment, so that pediatric patients have enhanced access to services, allowing them to receive the right care at the right time in the right setting.

This project meets the following Region 3 goals:

One of the goals of the region is to "Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay". Expansion of primary care capacity certainly relates to this goal as it will make it easier for Memorial to provide care to underserved populations.

Challenges and how addressed:

This project faces three key challenges. First, Memorial must raise awareness and change existing patterns for seeking health care services for some patients. A second challenge is to raise awareness for the service delivery model offered by these new sites so that patients who currently don't have access to after-hours care learn that this type of care is available through a physician's clinic rather than turning to emergent or urgent care clinics. And finally, recruiting additional primary care providers and pediatric specialists in this competitive environment will be a challenge. Memorial will address these challenges by implementing other projects to reduce inappropriate ED use, educating patients on the benefits of primary care, and aggressively recruiting primary care providers by offering competitive salaries and other incentives to practice in the outlying clinics.

5-year expected outcome for provider and patients:

There will be shortening of waiting times for primary pediatric care appointments and increased uptake of primary pediatric care services in this specific service area, which will increase the percentage of patients who receive appropriate primary health care, including preventative services and regular monitoring for those patients with chronic illnesses.

Starting Point/Baseline: Memorial has identified the targeted service area needing increased access to pediatric primary care. Since this will be a new clinic, the baseline will have to be established during DY3.

Rationale:

In 2010, Texas had 176 patient care physicians per 100,000 population and 70 primary care physicians per 100,000 population with a state ranking of 46 and 47, respectively (comparable ratios for US total are 219.5 and 90.5, respectively). From 2001 to 2011, the Texas physician workforce grew 32.3%, exceeding the population growth of 25.1%. Therefore, there is a significant need to expand primary care in order to facilitate delivery system reform.

Research has shown that access to primary care is associated with better health outcomes at less cost. Access to primary care ensures better preventive care and better management of chronic disease, with lack of access often resulting in more expensive care, received in hospitals and emergency departments (ED). For the fiscal year 2010, 10% of all potentially preventable hospitalizations (PPR) were ambulatory care sensitive. In 2009, 41% (390,945) of ED visits in Houston were primary care related (PCR), including non-urgent, primary care treatable, and primary care preventable, and for 26.8% (104,762) of these PCR visits, Medicaid was the payor. Getting more patients into primary care will help to reduce the use of this more costly care. Placing more primary care providers out in the communities will help to address transportation access barriers and the expansion of clinic service hours will provide a greater selection of available appointment times. By increasing primary care capacity, engaging more people in the primary care system, and avoiding inappropriate utilization of costly services, the community will experience better health outcomes and greater patient satisfaction.[76]

In our current system, more often than not, patients receive services in urgent and emergent care settings for conditions that could be managed in a more coordinated manner if provided in the primary care setting. This often results in more costly, less coordinated care and a lack of appropriate follow-up care. Patients may experience barriers in accessing primary care services secondary to transportation, cost, lack of assigned provider, physical disability, inability to receive appointments in a timely manner and a lack of knowledge about what types of services can be provided in the primary care setting. By enhancing access points, available appointment times, patient awareness of available services and overall primary care capacity, patients and their families will align themselves with the primary care system resulting in better health outcomes, patient satisfaction, appropriate utilization and reduced cost of services.

[76] PPR rate was from the Texas Health and Human Services Commission report on Potentially Preventable Readmissions in the Texas Medicaid Population, Fiscal year 2010, published January, 2012. The statistics for ED use were from the Houston Hospitals Emergency Department Use Study (January 1, 2009 through December 31, 2009), Final Report included in the 2010 Harris County Community Needs Assessment for Memorial Hermann.

Because UTHSC-H will IGT on behalf of Memorial for its successful implementation of delivery system improvements under the Waiver, this structure results in a payment from a private hospital to an entity that provides its IGT, which arguably raises questions regarding provider donations. Nonetheless, this collaboration is the most effective and efficient structure to expand access to pediatric services to the community, and ensure overall improvement to the Region 3 delivery system. This collaboration is a natural progression of the existing relationship and the clinical strengths of Memorial and UTHSC-H. Memorial is the largest not-for-profit healthcare system in Texas and serves the greater Houston community through 12 hospitals, a vast network of affiliated physicians and numerous specialty programs and services. With over 4,000 medical staff members, 26 residency programs, 48 fellowship programs, and over 1,300 physicians in training, Memorial is dedicated to providing high quality health services in order to improve the health of the people in Southeast Texas. The mission of UTHSC-H is to educate health science professionals, discover and translate advances in the biomedical and social sciences, and model the best practices in clinical care and public health. UTHSC-H strives to improve the health of the public in the State of Texas through educating future public health practitioners and bringing evidence based public health practices to Texas. UTHSC-H's faculty of over 900 physicians in 80 specialties provide comprehensive care for patients while teaching 800 medical students and over 900 residents in over 60 accredited residency/fellowship programs.

Core Components:

Through the new North Harris County Pediatric Clinic, we propose to:

a) Expand primary care clinic space

-Memorial will identify and lease appropriate space within the defined service area to establish the new clinic that includes reception, consulting, exam and procedure rooms, and will provide the necessary equipment and furnishings.

b) Expand primary care clinic hours

- UT Physicians will be contracted at fair market value to provide primary care physicians, advanced practice providers, and support staff to operate the clinic.

c) Expand primary care clinic staffing

-In addition to regular business hours, the clinic will operate with expanded evening and Saturday hours to increase access for individuals that are not able to leave their jobs for healthcare appointments, and to provide care for those needing urgent care services that can be accommodated in a primary care clinic.

Unique community need identification number the project addresses:

CN1 – Primary Care

CN8 – High rates of inappropriate emergency department utilization

How the project represents a new initiative for Performing Provider or significantly enhances an existing delivery system reform initiative:

This project represents a significant improvement in Memorial's ability to deliver primary healthcare to babies, children, and adolescents. This new initiative proposes to add space, providers, support staff, and extended service hours in a location where economic and cultural barriers to receiving appropriate healthcare are indicative of a need for services that are conveniently located and available when needed. This project is an expansion of services in order to improve access to care.

Related Category 3 Outcome Measure(s):

OD-1 Primary Care and Chronic Disease Management IT-1.19 Antidepressant Medication Management - NQF 0105 (Standalone measure)

The management of antidepressant medication in children ages 6 and over who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis: A) the acute phase treatment period consisting at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive), and B) the continuation phase treatment period consisting of at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive).

OD-1 Primary Care and Chronic Disease Management IT-1.1 Third next available appointment (Non- standalone measure)

Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam.

Reasons/rationale for selecting the outcome measure(s):

This project is specifically geared towards increasing primary care services for pediatric patients. If this population is receiving adequate levels of primary behavioral healthcare then the management of anti-depressant medication is expected to improve. Additionally, the immediate goal of the project is to allow greater access to primary care for pediatric patients—this should directly correlate to reduced wait times for available appointments. Therefore, this outcome measure is a reasonable gauge of the effectiveness of this project.

Relationship to Other Projects: This project is part of Memorial's larger plans to expand and develop primary care and specialty care services, while improving access to care. Expanding primary care supports/reinforces several of the Category 1 and 2 projects: increasing the number of physicians rotating through the primary care residency program will have a direct impact on Expanding Primary Care Capacity (1.2); this project not only will increase the number of available physicians to participate in medical homes (2.1), it will also ensure that they are trained in the medical home concept; this project reinforces the Redesign of Primary Care (2.3), the Redesign to Improve the Patient Experience (2.4).

Relationship to Other Performing Providers' Projects in the RHP: Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Plan for Learning Collaborative: Memorial will participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

The expansion of primary care clinics will help address a substantial need in the community for increased access to primary care. It will also go a long way towards achieving the Waiver goal of improving outcomes while curbing the risk of healthcare costs, because primary care is one of the most cost effective methods to increase health outcomes.

Project Option: 1.1.1 - 1.1 Expand Primary Care Capacity: Pediatric Clinic Expansion – Houston Ship Channel South Pediatric Clinic

Unique Project ID: 137805107.1.4
Performing Provider Name/TPI: Memorial Hermann Hospital/ 137805107

Project Summary:

Provider: Memorial Hermann Hospital (Memorial) is an 860 bed hospital located in Houston, TX and is part of the Houston-Sugarland-Baytown MSA. The MSA population served by Memorial is approximately 6,000,000 people.

Intervention(s): Memorial will establish the Houston Ship Channel South Pediatric Clinic which will provide primary care for pediatric patients in that area of Harris County. Memorial will contract UTHSC-H to provide physician services to complement Memorial's investment in new technology, equipment and space to better provide pediatric services.

Need for the project: Prospective pediatric patients in the targeted service area described below currently face many roadblocks to adequate primary care including economic burdens, language barriers and lack of knowledge for seeking pediatric care. Due to the shortage of primary care providers in the community, the average wait period for a primary care appointment is 17 days, which results in increased reliance on hospital EDs for primary care and non-emergent care. The project will increase the percentage of patients who receive appropriate primary care including preventative services and regular monitoring for patients with chronic illnesses.

Target population: The target population is uninsured and underinsured children in the South area of the Houston Ship Channel that is between the Houston Ship Channel to the North, 610S to the West, Beltway 8S to the South and Beltway 8E to the East. It is estimated that 46.6% of the patients in the service area for this clinic are either uninsured or underinsured children and rely on Memorial Hermann's and other hospitals' emergency departments for primary care services.

Category 1 or 2 expected patient benefits: The clinic will provide a more appropriate setting for pediatric primary care for the target population. They will benefit primarily from better access to primary care and better management of illness and chronic conditions.

Category 3 outcomes: IT 1.1 – Reduce the average length of time in days between the day a patient requests an appointment and the third available appointment. The goal will be to decrease number of days to third next available appointment to zero days (same day) for primary care by DY5.

Project Option 1.1.1- Establish More Primary Care Clinics: Pediatric Clinic Expansion – Houston Ship Channel South Pediatric Clinic

Unique RHP Project Identification Number: 137805107.1.4

Performing Provider Name/TPI: Memorial Hermann Hospital (Memorial)/137805107

Project Description: 1.1/1.1.1: Using the strengths developed during their longstanding partnership, Memorial and The University of Texas Health Science Center at Houston (UTHSC-H) intend to work together to address the shortage of pediatric primary and specialty care in Region 3. In this project, Memorial will establish the Houston Ship Channel South Pediatric Clinic, which will provide primary care for pediatric patients in an area of Harris County that is between the Houston Ship Channel to the north, 610S to the west, Beltway 8S to the south, and Beltway 8E to the east. Memorial has defined the service area for this clinic as a priority area for pediatric services, because it contains 10 of the 81 census tracts that make up the top 10% of all census tracts in Harris County with the greatest number of people below the age of 18 living below the federal poverty level (FPL). (The census tracts included are 3333, 3328, 3235, 3234, 3230, 3220, 3213, 3209, 3208, and 3202.) The number of children living below the FPL in these 10 census tract areas is estimated to be approximately 10,113. Furthermore, these areas have particularly high numbers of Hispanics (69%), for whom language, as well as poverty, may pose a barrier to obtaining primary care for their children. The service area for this clinic includes a large population, for whom there exists economic, cultural, language, and transportation barriers to receiving primary care. (All population statistics are from the U.S. Census Bureau, 2010 Census. Poverty statistics are from the U.S. Census Bureau, Small Area Estimates Branch. Release date: 11.2011. Table 1: 2010 Poverty and Median Income Estimates - Counties.) In order to address the unique needs of different communities in the greater Houston area, Memorial has chosen to establish a pediatric clinic in this area as an independent DSRIP project.

Using their longstanding partnership to provide quality healthcare as a base, Memorial will contract UTHSC-H to provide physician services to complement Memorial's investment in new technology, equipment and space to better provide pediatric services. Specifically, UTHSC-H will redirect pediatricians already on its staff who have the capacity to care for additional patients, recruit additional pediatricians, or increase residency programs to fill the need for additional pediatric specialists. UTHSC-H is uniquely positioned to attract and retain new physicians due to its accomplishments as a world-class academic and research institution. This additional service line will avoid duplication and draw on the strength of UTHSC-H's academic presence in the field of pediatric medicine, and will also benefit Memorial by increasing the quantity, quality, and scope of services provided at its facilities.

Practically, Memorial will subcontract with UTHSC-H to provide physician and other services needed to implement this project. For example, Memorial will lease additional space to open the

North Harris County clinic**.** This space will include additional consulting, exam and procedure rooms. Memorial will also subcontract with UTHSC-H to provide primary care providers and support staff to operationalize the project. For all services in which UTHSC-H is a subcontractor, Memorial will pay an agreed rate that is set in advance and represents fair market value for services negotiated in the ordinary course of business through an arms-length transaction.

Goal(s) and relationship to Regional goal(s):

Project goals:

Expand the capacity of pediatric primary care to better accommodate the needs of the regional patient population and community, as identified by the RHP needs assessment, so that pediatric patients have enhanced access to services, allowing them to receive the right care at the right time in the right setting.

This project meets the following Region 3 goals:

One of the goals of the region is to "Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay". Expansion of primary care capacity certainly relates to this goal as it will make it easier for Memorial to provide care to underserved populations.

Challenges and how addressed:

This project faces three key challenges. First, Memorial must raise awareness and change existing patterns for seeking health care services for some patients. A second challenge is to raise awareness for the service delivery model offered by these new sites so that patients who currently don't have access to after-hours care learn that this type of care is available through a physician's clinic rather than turning to emergent or urgent care clinics. And finally, recruiting additional primary care providers and pediatric specialists in this competitive environment will be a challenge. Memorial will address these challenges by implementing other projects to reduce inappropriate ED use, educating patients on the benefits of primary care, and aggressively recruiting primary care providers by offering competitive salaries and other incentives to practice in the outlying clinics.

5-year expected outcome for provider and patients:

There will be shortening of waiting times for primary pediatric care appointments and increased uptake of primary pediatric care services in this specific service area, which will increase the percentage of patients who receive appropriate primary health care, including preventative services and regular monitoring for those patients with chronic illnesses.

Starting Point/Baseline: Memorial has identified the targeted service area needing increased access to pediatric primary care. Since this will be a new clinic, the baseline will have to be established during DY3.

Rationale:

Reasons for selecting the project option: In 2010, Texas had 176 patient care physicians per 100,000 population and 70 primary care physicians per 100,000 population with a state ranking of 46 and 47, respectively (comparable ratios for US total are 219.5 and 90.5, respectively). From 2001 to 2011, the Texas physician workforce grew 32.3%, exceeding the population growth of 25.1%. Therefore, there is a significant need to expand primary care in order to facilitate delivery system reform.

Research has shown that access to primary care is associated with better health outcomes at less cost. Access to primary care ensures better preventive care and better management of chronic disease, with lack of access often resulting in more expensive care, received in hospitals and emergency departments (ED). For the fiscal year 2010, 10% of all potentially preventable hospitalizations (PPR) were ambulatory care sensitive. In 2009, 41% (390,945) of ED visits in Houston were primary care related (PCR), including non-urgent, primary care treatable, and primary care preventable, and for 26.8% (104,762) of these PCR visits, Medicaid was the payor. Getting more patients into primary care will help to reduce the use of this more costly care. Placing more primary care providers out in the communities will help to address transportation access barriers and the expansion of clinic service hours will provide a greater selection of available appointment times. By increasing primary care capacity, engaging more people in the primary care system, and avoiding inappropriate utilization of costly services, the community will experience better health outcomes and greater patient satisfaction.[77]

In our current system, more often than not, patients receive services in urgent and emergent care settings for conditions that could be managed in a more coordinated manner if provided in the primary care setting. This often results in more costly, less coordinated care and a lack of appropriate follow-up care. Patients may experience barriers in accessing primary care services secondary to transportation, cost, lack of assigned provider, physical disability, inability to receive appointments in a timely manner and a lack of knowledge about what types of services can be provided in the primary care setting. By enhancing access points, available appointment times, patient awareness of available services and overall primary care capacity, patients and their families will align themselves with the primary care system resulting in better health outcomes, patient satisfaction, appropriate utilization and reduced cost of services.

[77] PPR rate was from the Texas Health and Human Services Commission report on Potentially Preventable Readmissions in the Texas Medicaid Population, Fiscal year 2010, published January, 2012. The statistics for ED use were from the Houston Hospitals Emergency Department Use Study (January 1, 2009 through December 31, 2009), Final Report included in the 2010 Harris County Community Needs Assessment for Memorial Hermann.

Because UTHSC-H will IGT on behalf of Memorial for its successful implementation of delivery system improvements under the Waiver, this structure results in a payment from a private hospital to an entity that provides its IGT, which arguably raises questions regarding provider donations. Nonetheless, this collaboration is the most to effective and efficient structure to expand access to pediatric services to the community, and ensure overall improvement to the Region 3 delivery system. This collaboration is a natural progression of the existing relationship and the clinical strengths of Memorial and UTHSC-H. Memorial is the largest not-for-profit healthcare system in Texas and serves the greater Houston community through 12 hospitals, a vast network of affiliated physicians and numerous specialty programs and services. With over 4,000 medical staff members, 26 residency programs, 48 fellowship programs, and over 1,300 physicians in training, Memorial is dedicated to providing high quality health services in order to improve the health of the people in Southeast Texas. The mission of UTHSC-H is to educate health science professionals, discover and translate advances in the biomedical and social sciences, and model the best practices in clinical care and public health. UTHSC-H strives to improve the health of the public in the State of Texas through educating future public health practitioners and bringing evidence based public health practices to Texas. UTHSC-H's faculty of over 900 physicians in 80 specialties provide comprehensive care for patients while teaching 800 medical students and over 900 residents in over 60 accredited residency/fellowship programs.

Core Components:

Through the new Houston Ship Channel South Pediatric Clinic, we propose to:

a) Expand primary care clinics

-Memorial will identify and lease appropriate space within the defined service area to establish the new clinic that includes reception, consulting, exam and procedure rooms, and will provide the necessary equipment and furnishings.

b) Expand primary care clinic hours

- In addition to regular business hours, the clinic will operate with expanded evening and Saturday hours to increase access for individuals that are not able to leave their jobs for healthcare appointments, and to provide care for those needing urgent care services that can be accommodated in a primary care clinic.

c) Expand primary care clinic staffing

- UT Physicians will be contracted at fair market value to provide primary care physicians, advanced practice providers, and support staff to operate the clinic.

Unique community need identification number the project addresses:

CN1 – Primary Care

CN8 – High rates of inappropriate emergency department utilization

How the project represents a new initiative for Performing Provider or significantly enhances an existing delivery system reform initiative:

This project represents a significant improvement in Memorial's ability to deliver primary healthcare to babies, children, and adolescents. This new initiative proposes to add space, providers, support staff, and extended service hours in a location where economic and cultural barriers to receiving appropriate healthcare are indicative of a need for services that are conveniently located and available when needed. This project is an expansion of services in order to improve access to care.

Related Category 3 Outcome Measure(s):

OD-1 Primary Care and Chronic Disease Management IT-1.19 Antidepressant Medication Management - NQF 0105 (Standalone measure)

The management of antidepressant medication in children ages 6 and over who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis: A) the acute phase treatment period consisting at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive), and B) the continuation phase treatment period consisting of at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive).

OD-1 Primary Care and Chronic Disease Management IT-1.1 Third next available appointment (Non- standalone measure)

Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam.

Reasons/rationale for selecting the outcome measure(s):

This project is specifically geared towards increasing primary care services for pediatric patients. If this population is receiving adequate levels of primary behavioral healthcare then the management of anti-depressant medication is expected to improve. Additionally, the immediate goal of the project is to allow greater access to primary care for pediatric patients—this should directly correlate to reduced wait times for available appointments. Therefore, this outcome measure is a reasonable gauge of the effectiveness of this project.

Relationship to Other Projects: This project is part of Memorial's larger plans to expand and develop primary care and specialty care services, while improving access to care. Expanding primary care supports/reinforces several of the Category 1 and 2 projects: increasing the number of physicians rotating through the primary care residency program will have a direct impact on Expanding Primary Care Capacity (1.2); this project not only will increase the number of available physicians to participate in medical homes (2.1), it will also ensure that they are trained in the medical home concept; this project reinforces the Redesign of Primary Care (2.3), the Redesign to Improve the Patient Experience (2.4).

Relationship to Other Performing Providers' Projects in the RHP: Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Plan for Learning Collaborative: Memorial will participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

The expansion of primary care clinics will help address a substantial need in the community for increased access to primary care. It will also go a long way towards achieving the Waiver goal of improving outcomes while curbing the risk of healthcare costs, because primary care is one of the most cost effective methods to increase health outcomes.

Project Option: 1.1.1 - 1.1 Expand Primary Care Capacity: Pediatric Clinic Expansion – Houston Ship Channel North Pediatric Clinic

Unique Project ID: 137805107.1.5
Performing Provider Name/TPI: Memorial Hermann Hospital System/ 020834001

Project Summary:

Provider: Memorial Hermann Hospital System (Memorial Hermann) is a 1,164 bed hospital system consisting of 4 campuses in the Houston-Sugarland-Baytown MSA. The system serves a population of approximately 6,000,000 people.

Intervention(s): Memorial will establish the Houston Ship Channel North Pediatric Clinic which will provide primary care for pediatric patients in that area of Harris County. Memorial will contract UTHSC-H to provide physician services to complement Memorial's investment in new technology, equipment and space to better provide pediatric services.

Need for the project: Prospective pediatric patients in the targeted service area currently face many roadblocks to adequate primary care including economic burdens, language barriers and lack of knowledge for seeking pediatric care. Due to the shortage of primary care providers in the community, the average wait period for a primary care appointment is 17 days, which results in increased reliance on hospital EDs for primary care and non-emergent care. The project will increase the percentage of patients who receive appropriate primary care including preventative services and regular monitoring for patients with chronic illnesses.

Target population: The target population is uninsured and underinsured children in North the area of the Houston Ship Channel that is between Beltway 8 to the North, 610E to the West, the Houston Ship Channel to the South, and Baytown to the East. It is estimated that 41.4% of the patients in the service area for this clinic are either uninsured or underinsured children and rely on Memorial Hermann's and other hospitals' emergency departments for primary care services.

Category 1 or 2 expected patient benefits: The clinic will provide a more appropriate setting for pediatric primary care for the target population. They will benefit primarily from better access to primary care and better management of illness and chronic conditions.

Category 3 outcomes: IT 1.1 – Reduce the average length of time in days between the day a patient requests an appointment and the third available appointment. The goal will be to decrease number of days to third next available appointment to zero days (same day) for primary care by DY5.

Project Option 1.1.1 Establish More Primary Care Clinics: Pediatric Clinic Expansion – Houston Ship Channel North Pediatric Clinic

Unique RHP Project Identification Number: 137805107.1.5

Performing Provider Name/TPI: Memorial Hermann Hospital (Memorial)/137805107

Project Description: 1.1/1.1.1: Using the strengths developed during their longstanding partnership, Memorial and The University of Texas Health Science Center at Houston (UTHSC-H) intend to work together to address the shortage of pediatric primary and specialty care in Region 3. In this project, Memorial will establish the Houston Ship Channel North Pediatric Clinic, which will provide primary care for pediatric patients in an area of Harris County that is between Beltway 8 to the north, 610E to the west, the Houston Ship Channel to the south, and Baytown to the east. Memorial has defined the service area for this clinic as a priority area for pediatric services, because it contains 8 of the 81 census tracts that make up the top 10% of all census tracts in Harris County with the greatest number of people below the age of 18 that are living below the federal poverty level (FPL). (The census tracts included are 2535, 2526, 2523.01, 2335, 2331.02, 2327.01, 2324.03, and 2323.01.) The number of children living below the FPL in these 8 census tract areas is estimated to be approximately 8,054. Furthermore, these areas have particularly high numbers of Hispanics (64%), for whom language, as well as poverty, may pose a barrier to obtaining primary care for their children. Black/African Americans, another segment of the population that tend to be medically underserved, also make up a significant proportion of the population in these census tracts (18.5%). The service area for this clinic includes large populations with economic, cultural, language, and transportation barriers to receiving primary care. (All population statistics are from the U.S. Census Bureau, 2010 Census. Poverty statistics are from the U.S. Census Bureau, Small Area Estimates Branch. Release date: 11.2011. Table 1: 2010 Poverty and Median Income Estimates - Counties.) In order to address the unique needs of different communities in the greater Houston area, Memorial has chosen to establish a pediatric clinic in this area as an independent DSRIP project.

Using their longstanding partnership to provide quality healthcare as a base, Memorial will contract UTHSC-H to provide physician services to complement Memorial's investment in new technology, equipment and space to better provide pediatric services. Specifically, UTHSC-H will redirect pediatricians already on its staff who have the capacity to care for additional patients, recruit additional pediatricians, or increase residency programs to fill the need for additional pediatric specialists. UTHSC-H is uniquely positioned to attract and retain new physicians due to its accomplishments as a world-class academic and research institution. This additional service line will avoid duplication and draw on the strength of UTHSC-H's academic presence in the field of pediatric medicine, and will also benefit Memorial by increasing the quantity, quality, and scope of services provided at its facilities.

Practically, Memorial will subcontract with UTHSC-H to provide physician and other services needed to implement this project. For example, Memorial will lease additional space to open the North Harris County clinic**.** This space will include additional consulting, exam and procedure rooms. Memorial will also subcontract with UTHSC-H to provide primary care providers and support staff to operationalize the project. For all services in which UTHSC-H is a subcontractor, Memorial will pay an agreed rate that is set in advance and represents fair market value for services negotiated in the ordinary course of business through an arms-length transaction.

Goal(s) and relationship to Regional goal(s):

Project goals:

Expand the capacity of pediatric primary care to better accommodate the needs of the regional patient population and community, as identified by the RHP needs assessment, so that pediatric patients have enhanced access to services, allowing them to receive the right care at the right time in the right setting.

This project meets the following Region 3 goals:

One of the goals of the region is to "Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay". Expansion of primary care capacity certainly relates to this goal as it will make it easier for Memorial to provide care to underserved populations.

Challenges and how addressed:

This project faces three key challenges. First, Memorial must raise awareness and change existing patterns for seeking health care services for some patients. A second challenge is to raise awareness for the service delivery model offered by these new sites so that patients who currently don't have access to after-hours care learn that this type of care is available through a physician's clinic rather than turning to emergent or urgent care clinics. And finally, recruiting additional primary care providers and pediatric specialists in this competitive environment will be a challenge. Memorial will address these challenges by implementing other projects to reduce inappropriate ED use, educating patients on the benefits of primary care, and aggressively recruiting primary care providers by offering competitive salaries and other incentives to practice in the outlying clinics.

5-year expected outcome for provider and patients:

There will be shortening of waiting times for primary pediatric care appointments and increased uptake of primary pediatric care services in this specific service area, which will increase the percentage of patients who receive appropriate primary health care, including preventative services and regular monitoring for those patients with chronic illnesses.

Starting Point/Baseline: Memorial has identified the targeted service area needing increased access to pediatric primary care. Since this will be a new clinic, the baseline will have to be established during DY3.

Rationale:

In 2010, Texas had 176 patient care physicians per 100,000 population and 70 primary care physicians per 100,000 population with a state ranking of 46 and 47, respectively (comparable ratios for US total are 219.5 and 90.5, respectively). From 2001 to 2011, the Texas physician workforce grew 32.3%, exceeding the population growth of 25.1%. Therefore, there is a significant need to expand primary care in order to facilitate delivery system reform.

Research has shown that access to primary care is associated with better health outcomes at less cost. Access to primary care ensures better preventive care and better management of chronic disease, with lack of access often resulting in more expensive care, received in hospitals and emergency departments (ED). For the fiscal year 2010, 10% of all potentially preventable hospitalizations (PPR) were ambulatory care sensitive. In 2009, 41% (390,945) of ED visits in Houston were primary care related (PCR), including non-urgent, primary care treatable, and primary care preventable, and for 26.8% (104,762) of these PCR visits, Medicaid was the payor. Getting more patients into primary care will help to reduce the use of this more costly care. Placing more primary care providers out in the communities will help to address transportation access barriers and the expansion of clinic service hours will provide a greater selection of available appointment times. By increasing primary care capacity, engaging more people in the primary care system, and avoiding inappropriate utilization of costly services, the community will experience better health outcomes and greater patient satisfaction.[78]

In our current system, more often than not, patients receive services in urgent and emergent care settings for conditions that could be managed in a more coordinated manner if provided in the primary care setting. This often results in more costly, less coordinated care and a lack of appropriate follow-up care. Patients may experience barriers in accessing primary care services secondary to transportation, cost, lack of assigned provider, physical disability, inability to receive appointments in a timely manner and a lack of knowledge about what types of services can be provided in the primary care setting. By enhancing access points, available appointment times, patient awareness of available services and overall primary care capacity, patients and their families will align themselves with the primary care system resulting in better health outcomes, patient satisfaction, appropriate utilization and reduced cost of services.

[78] PPR rate was from the Texas Health and Human Services Commission report on Potentially Preventable Readmissions in the Texas Medicaid Population, Fiscal year 2010, published January, 2012. The statistics for ED use were from the Houston Hospitals Emergency Department Use Study (January 1, 2009 through December 31, 2009), Final Report included in the 2010 Harris County Community Needs Assessment for Memorial Hermann.

Because UTHSC-H will IGT on behalf of Memorial for its successful implementation of delivery system improvements under the Waiver, this structure results in a payment from a private hospital to an entity that provides its IGT, which arguably raises questions regarding provider donations. Nonetheless, this collaboration is the most to effective and efficient structure to expand access to pediatric services to the community, and ensure overall improvement to the Region 3 delivery system. This collaboration is a natural progression of the existing relationship and the clinical strengths of Memorial and UTHSC-H. Memorial is the largest not-for-profit healthcare system in Texas and serves the greater Houston community through 12 hospitals, a vast network of affiliated physicians and numerous specialty programs and services. With over 4,000 medical staff members, 26 residency programs, 48 fellowship programs, and over 1,300 physicians in training, Memorial is dedicated to providing high quality health services in order to improve the health of the people in Southeast Texas. The mission of UTHSC-H is to educate health science professionals, discover and translate advances in the biomedical and social sciences, and model the best practices in clinical care and public health. UTHSC-H strives to improve the health of the public in the State of Texas through educating future public health practitioners and bringing evidence based public health practices to Texas. UTHSC-H's faculty of over 900 physicians in 80 specialties provide comprehensive care for patients while teaching 800 medical students and over 900 residents in over 60 accredited residency/fellowship programs.

Core Components:

We propose to meet all required project components listed below:

a) Expand primary care clinic space

- Memorial will identify and lease appropriate space within the defined service area to establish the new clinic that includes reception, consulting, exam and procedure rooms, and will provide the necessary equipment and furnishings.

b) Expand primary care clinic hours

- In addition to regular business hours, the clinic will operate with expanded evening and Saturday hours to increase access for individuals that are not able to leave their jobs for healthcare appointments, and to provide care for those needing urgent care services that can be accommodated in a primary care clinic.

c) Expand primary care clinic staffing

- UT Physicians will be contracted at fair market value to provide primary care physicians, advanced practice providers, and support staff to operate the clinic.

Unique community need identification number the project addresses:

CN1 – Primary Care

CN8 – High rates of inappropriate emergency department utilization

How the project represents a new initiative for Performing Provider or significantly enhances an existing delivery system reform initiative:

This project represents a significant improvement in Memorial's ability to deliver primary healthcare to babies, children, and adolescents. This new initiative proposes to add space, providers, support staff, and extended service hours in a location where economic and cultural barriers to receiving appropriate healthcare are indicative of a need for services that are conveniently located and available when needed. This project is an expansion of services in order to improve access to care.

Related Category 3 Outcome Measure(s):

OD-1 Primary Care and Chronic Disease Management IT-1.19 Antidepressant Medication Management - NQF 0105 (Standalone measure)

The management of antidepressant medication in children ages 6 and over who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis: A) the acute phase treatment period consisting at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive), and B) the continuation phase treatment period consisting of at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive).

OD-1 Primary Care and Chronic Disease Management IT-1.1 Third next available appointment (Non- standalone measure)

Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam.

Reasons/rationale for selecting the outcome measure(s):

This project is specifically geared towards increasing primary care services for pediatric patients. If this population is receiving adequate levels of primary behavioral healthcare then the management of anti-depressant medication is expected to improve. Additionally, the immediate goal of the project is to allow greater access to primary care for pediatric patients—this should directly correlate to reduced wait times for available appointments. Therefore, this outcome measure is a reasonable gauge of the effectiveness of this project.

Relationship to Other Projects: This project is part of Memorial's larger plans to expand and develop primary care and specialty care services, while improving access to care. Expanding primary care supports/reinforces several of the Category 1 and 2 projects: increasing the number of physicians rotating through the primary care residency program will have a direct impact on Expanding Primary Care Capacity (1.2); this project not only will increase the number of available physicians to participate in medical homes (2.1), it will also ensure that they are trained in the medical home concept; this project reinforces the Redesign of Primary Care (2.3), the Redesign to Improve the Patient Experience (2.4).

Relationship to Other Performing Providers' Projects in the RHP: Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Plan for Learning Collaborative: Memorial will participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

The expansion of primary care clinics will help address a substantial need in the community for increased access to primary care. It will also go a long way towards achieving the Waiver goal of improving outcomes while curbing the risk of healthcare costs, because primary care is one of the most cost effective methods to increase health outcomes.

Memorial Hermann Northwest Hospital

Pass 1

Project Option: 1.1.1 Establish more primary care clinics: Primary Care Expansion School Based Health

Performing Provider: Memorial Hermann Hospital System/TPI 020834001
Unique Project ID: 020834001.1.1

- Provider: Memorial Hermann Hospital System (Memorial Hermann) is a 1,164 bed hospital system consisting of 4 campuses in the Houston-Sugarland-Baytown MSA. The system serves a population of approximately 6,000,000 people.

- Intervention(s): Memorial Hermann intends to increase the number of school-based primary care sites in low income communities for people with limited access in the community. The project will expand the Memorial Hermann Health Centers for Schools program by 3 health centers and 1 mobile dental van.

- Need for the project: Many low-income children and teens receive services in urgent and emergent care settings for conditions that could be managed in a more coordinated manner if provided in the primary care setting. By enhancing access points by providing care where children and teens are located – at school – students and their families will align themselves with the primary care system resulting in better health outcomes, patient satisfaction, appropriate utilization and reduced cost of services.

- Target population: The target population is children and teens who are uninsured or underinsured and attend school in the following zip codes and school districts: 77506 (Pasadena ISD), 77099 (Alief ISD) and 77032 (Aldine ISD). It is estimated that 35% of the patients in the service area for this clinic are either uninsured or underinsured teens or children and attend schools in the zip codes mentioned above.

- Category 1 or 2 expected patient benefits: The 3 new health centers and 1 mobile dental van will result in serving approximately 18 additional schools, opening access to approximately 15,000 additional students and providing approximately 12,000 visits.

- Category 3 outcomes: IT 7.2 – A baseline will be established in DY3 of children with untreated dental issues. By DY4 a 25% improvement in DY3 repeat patients will be expected and by DY5 an additional 15% improvement will be expected over the baseline.

Project Option - 1.1.1 Establish more primary care clinics: Primary Care Expansion School Based Health

Unique RHP Project Identification Number: 020834001.1.1

Performing Provider Name/TPI: Memorial Hermann Hospital System/TPI 020834001

Project Description: Increase the number of school based primary care sites in low income communities for people with limited access in the community. Memorial initially proposes to offer this service to patients in the following zip codes: 77506, 77099, and 77032.

Memorial Hermann wishes to expand the Memorial Hermann Health Centers for Schools Program, which is designed as a medical home for uninsured children and a secondary access point for insured children. Memorial Hermann Health Centers for Schools exists for many reasons, but its primary purpose is to combat barriers to primary care for school aged children. Schools to be served by this award-winning program have always been selected by identifying students with the highest prevalence of unmet medical and psychosocial needs. Primary medical, dental and mental health care is provided.

The Memorial Hermann Health Centers for Schools are located in schools and school districts that have students with documented barriers to healthcare. Feeder patterns are served, providing students with a medical and dental home from kindergarten through high school. Through transportation from feeder schools provided by the collaborating school districts, the Health Centers offer access to primary medical, mental health, nutritional and dental care services to underserved children. Medicaid is billed for enrolled students for eligible services; however, services are free for the uninsured and under-insured.

The scope of services offered at the six centers includes sick and injury care, general and sports physicals, immunizations, chronic care (asthma, obesity, cholesterol), mental health therapy and social service referrals, nutritional guidance, as well as other specific care to meet students' needs. The Dental Clinics provide services that include periodic oral examinations, diagnostic x-rays, prophylaxis, fluoride treatments, oral hygiene instructions, sealants, amalgam and composite fillings, extractions, stainless steel crowns, pulpotomies, and root canals.

The Health Centers for Schools program provides readily accessible, primary healthcare, mental health, nutritional and dental care services to uninsured and underinsured children. The program does not collect cash, but bills for eligible services for Medicaid enrolled patients. (Mobile Dental Program does not presently bill). Students have a safe place to talk about sensitive issues; practitioners take their time addressing health problems that impede learning; the full spectrum of primary medical/ mental health/ and dental care is provided on site; and students and their families are continually educated on the importance of regular healthcare. The clinic's social worker and navigator also assist students' families in obtaining health, mental health and dental care not offered at the clinic and link families in need of basic services to community agencies.

This request proposes to expand the Memorial Hermann Health Centers for Schools program by health centers and 1 mobile dental van. Memorial initially proposes to offer this service to patients in the following zip codes: 77506 (Pasadena Independent School District), 77099

(Alief Independent School District), and 77032 (Aldine Independent School District). This expansion will result in serving approximately 18 additional schools, opening up access to approximately 15,000 additional students and providing approximately 12,000 visits.

Goal(s) and relationship to Regional goal(s):

Project goals:

The primary goal of this project is to bring increased primary care to school aged children, who will otherwise not obtain it. Furthermore, this care will be provided in school, so as not to disrupt their learning and development. This particular project will increase the number of school-based clinics providing primary medical, mental health, and dental care sites in low-income communities for children.

This project meets the following Region 3 goals:

This project addresses the RHP's goal to "[i]ncrease access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay."

Challenges and how addressed:

This project has two primary challenges: (1) finding qualified professionals to staff the additional clinic; (2) reaching out to children and their parents to educate them about the benefits of the program. In order address these challenges, Memorial will engage in an aggressive strategy to recruit staff for the new clinics at the inception of the project and will prepare simple and effective educational materials to reach children and their parents.

5-year expected outcome for provider and patients:

This request proposes to expand the Memorial Hermann Health Centers for Schools program by 3 health centers and 1 mobile dental van. This expansion will result in serving approximately 18 additional schools, opening up access to approximately 15,000 additional students and providing approximately 12,000 visits. The clinics will operate Monday through Friday, 40 hours a week, twelve months a year. Memorial also expects to see improvement in certain clinical measures for the students engaged in the program such as: asthma exacerbations, emergency room visits, and hospitalizations.

- Asthma exacerbations, emergency room visits, and hospitalizations were reduced by 83% for the asthma population whose care is managed by the clinics. For students in the Healthy Eating and Lifestyle Program (HELP), 77% reduced their BMI. For students in the cholesterol program, 67% reduced their cholesterol. For students in the mobile dental program, 25% of children had caries at recall as compared to Healthy People 2020 Objectives which call for the proportion of children with one or more caries to be no more than 52% among children aged 4-11 and no more than 51% for adolescents aged 12+. Furthermore, .8% of established SBHC patients used an ER for primary care purposes versus the community experience for uninsured patients of 10.5%. This reduction in ER usage equates to $199,005 in ER costs.

Starting Point/Baseline: Presently, Memorial Hermann Health Centers for Schools reside in the Lamar Consolidated School District (2 centers), the Houston Independent School District (3 centers), and the Pasadena Independent School District (1 center). A fully established center will incur 4,000 medical, dental, and mental health therapy visits a year.

Rationale:

In our current system, more often than not, children and teens receive services in urgent and emergent care settings for conditions that could be managed in a more coordinated and comprehensive manner if provided in the primary care setting. This often results in more costly, less coordinated care and a lack of appropriate follow-up care. Families may experience barriers in accessing primary care services secondary to transportation, cost, lack of assigned provider, physical disability, inability to receive appointments in a timely manner and a lack of knowledge about what types of services can be provided in the primary care setting. Care may be foregone and or addressed only after medical and dental conditions have escalated. By enhancing access points by providing care where children and teens are located—at school--students and their families will align themselves with the primary care system resulting in better health outcomes, patient satisfaction, appropriate utilization and reduced cost of services.

Students perform better when they show up for class healthy and ready to learn. School-based health centers (SBHCs) ensure that kindergarteners through high schoolers can get a flu shot, have an annual physical, have their teeth examined and their eyes checked, or speak to a mental health counselor in a safe, nurturing place – without the barriers that families too often face. Memorial already has proven positive results with its existing program, which it wishes to expand upon. For example, in 2011:

- 9,125 children were served in 21,000 visits—84% were able to return to their classroom on the same day. (Schools receive $30 in federal support per child in attendance.)
- Asthma exacerbations, emergency room visits, and hospitalizations were reduced by 83%.
- 0.8% of SBHC patients used an ER for primary care purposes versus 10.5% of the general uninsured population under age 18 (source: Community Tracking Study, Medicaid/SCHIP Cuts and Hospital Emergency Department Use, Peter J. Cunningham).
- 67% of students with high cholesterol reduced their cholesterol; 50% achieved acceptable cholesterol levels.
- Students who received therapy from licensed clinical social workers: improved grade point averages: 2.7 to 3.2; reduced days absent: 1.5 to 1.0 days; and reduced detention/suspension incidents: 1.3 to 0.4 days.
- 25% of students seen in the mobile dental clinic had caries at recall as compared to Healthy People 2020 Objectives which call for the proportion of children with one or more caries to be no more than 52% among children aged 4-11 and no more than 51% for adolescents aged 12+.
- 93.1% of students with 3+ clinic visits for acute or chronic reasons receive a bi-annual physical.

- 93.4% of sexually active youth decreased their high-risk behaviors by abstaining or consistent use of birth control.

The program monitors measurable objectives in eight (8) categories: healthcare access (reduced ER usage, increased time in the classroom); school performance (improved grades, reduced absenteeism, reduced suspensions/detentions); asthma management (exacerbations/ER visits/hospitalizations); cholesterol management (lipid levels); BMI (Body Mass Index); mental health therapy (increased functional status); dental care (reduction of caries at recall); and reproductive health behavior (decrease in at-risk behaviors). As each center beocmes fully operational, each of these outcome measures will be implemented and monitored.

Benchmarks are derived from the National Association of School Based Health Centers, The Academy of Pediatrics, and Healthy People 2020. (Pre-post outcome data is also applied.) Healthy People 2020 provides a framework for prevention for the Nation. It is a statement of national health objectives designed to identify the most significant preventable threats to health and to establish national goals to reduce these threats.

Project components:

The core project components include:
a) Expand primary care clinic space
b) Expand primary care clinic hours
c) Expand primary care clinic staffing

Unique community need identification number the project addresses:

- CN1 – Inadequate access to primary care
- CN.4 - Inadequate access to dental care
- CN.6 - Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children, elderly. **Note: This statement is true only as it applies to children.**

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

Through this project Memorial will significantly enhance its ability to improve the health outcomes of children in the community.

Related Category 3 Outcome Measure(s): OD-7: Oral Health;

IT 7.2 Cavities: Percentage of children with untreated dental caries (Healthy People 2020)

Reasons/rationale for selecting the outcome measure(s):

Rationale/Evidence: Children who have regular access to a dental provider are less likely to suffer from untreated dental caries

Relationship to Other Projects: This project is part of Memorial Hermann's larger plans to expand and develop primary care and specialty care services, while improving access to care. Expanding primary care supports/reinforces several of the Category 1 and 2 projects: Increasing the number of nurse practitioners, licensed clinical social workers, and general dentists will have a direct impact on Expanding Primary Care Capacity (1.1); this project not only will increase the number of available nurse practitioners, licensed clinical social workers, and general dentists to participate in medical homes (2.1), it will also ensure that they are trained in the medical home concept; finally, the medical home concept of this program also reinforces the Redesign of Primary Care (2.3), the Redesign to Improve the Patient Experience (2.4).

Relationship to Other Performing Providers' Projects in the RHP: Memorial Hermann Healthcare System reflects the vision of other Performing Providers' in the RHP by increasing individual and families' access to health, mental health and dental care, improving the quality of healthcare, reducing costly ED usage for primary care treatable issues, educating the community on alternative healthcare resources available to them and the importance of a medical and dental home, and reducing overall healthcare costs.

Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

Approach for valuing project: The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

Rationale/justification for valuation: The expansion of primary care clinics for school aged children help address a substantial need in the community for increased access to primary care for one of the most vulnerable populations. It will also go a long way towards achieving the Waiver goal of improving outcomes while curbing the risk of healthcare costs, because primary care is one of the most cost effective methods to increase health outcomes.

020834001.1.1	*1.1.1*	*A-C*	***Establish more primary care clinics: Primary Care Expansion School Based Health***
Memorial Hermann Hospital System			020834001

Project Option: 1.6.2 24-Hour Nurse Triage Line
Performing Provider: Memorial Hermann Hospital System/TPI 020834001
Unique Project ID: 020834001.1.2

- Provider: Memorial Hermann Hospital System (Memorial Hermann) is a 1,164 bed hospital system consisting of 4 campuses in the Houston-Sugarland-Baytown MSA. The system serves a population of approximately 6,000,000 people.

- Intervention(s): Memorial Hermann will implement a region-wide 24-hour nurse triage line that will assist patients considering an ER visit in determining what level of care they need to access and connect them to an appropriate resource. The goal is to ensure efficient use of the system's ER department and reduce unnecessary visits.

- Need for the project: Over 35% of all emergency room visits in Harris County are primary care treatable. These visits result because patients do not have the clinical knowledge to assess their condition and unnecessarily visit the ER. Once the 24-hour Nurse Triage Line is in place, it is anticipated that the demand for the ER will decline and more significantly, there will be a reduction in inappropriate demand.

- Target population: The target population is any patient in the region that is considering an ER visit. Incoming calls are anticipated to be from uninsured and insured individuals and represent both urgent and non-urgent health care situations. The 24-hour Nurse Triage Line will reduce costs and improve access to care for uninsured and Medicaid populations by recommending to patients the most suitable intensity of care and connecting them to that care through CHWs. This will result in more appropriate utilization of facilities reducing expenditures for uncompensated care and better serving managed care patients within financial limitations.

- Category 1 or 2 expected patient benefits: Memorial Hermann will aim to reach between 50,000 and 100,000 patients in a 12-month period. By DY5, Memorial Hermann expects to increase utilization by 10% over the baseline in DY2.

- Category 3 outcomes: IT 9.4 - In DY5, Memorial Hermann intends to improve the same measurement by at least 15% over baseline.

Project Option- 1.6.2 Establish/expand access to medical advice and direction to the appropriate level of care to reduce Emergency Department use for non-emergent conditions and increase patient access to health care: 24 HOUR NURSE TRIAGE LINE

Unique RHP Project Identification Number: 020834001.1.2
Performing Provider Name/TPI: Memorial Hermann Hospital System/TPI 020834001

Project Description:

Implement a region-wide 24 Hour Nurse Triage Line, seven days a week that will assist patients residing in the region, who are considering an ER visit, in determining what level of care they need to access and connect them to an appropriate resource. Twelve FTE dedicated triage nurses will manage the hotline at all times. Six triage clerks and 5 Community Health Workers ("CHWs") will provide support to the program. Nurses will be added as call volume dictates and adjusted during peak intervals. After listening to a caller's concerns, the nurse will provide guidance on whether or not an ED visit is warranted. If an ED visit is not necessary, the nurse will refer the caller to a CHW who will arrange an appointment at a nearby urgent care center, federally qualified health center (FQHC), or physician's office. CHWs will follow up with all patients within 24 hours to ensure they have attended or plan to attend their scheduled appointments. Bilingual services will be provided as needed.

Memorial Hermann's Nurse Triage Line project is designed to serve the entire region, regardless of callers' current healthcare affiliations, significantly expanding the services offered by the previous Ask Your Nurse line to meet the growing healthcare needs of the region. Incoming calls are anticipated to be from uninsured and insured individuals and represent both urgent and non-urgent healthcare situations. The CHW's will navigate all primary care treatable calls to appropriate private and safety-net providers in the region taking into account a caller's health care needs, insurance status, income level, location and language. Memorial Hermann has a highly, successful ER Navigator program and anticipates applying those best practices to the CHW's processes for this project.

Goal(s) and relationship to Regional goal(s):

Project Goal:

> Provide medical advice to callers and help them determine the appropriate place for them to receive that care. If it is determined that they do not need emergency care, they will be connected to the appropriate resource. Data will be captured on the number of calls redirected from the emergency room, and the number of callers who sought care in the suggested alternative.

This project meets the following Region 3 goals:

This project addresses the RHP's goal to "[i]ncrease access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay."

Challenges and how addressed:

The key challenge in implementing this project will be the hiring and training of staff. To address this challenge, Memorial Hermann will establish training programs in the initial stages of implementing this project.

5-year expected outcome for provider and patients:

Memorial Hermann will aim to significantly expand the use of the nurse call line in order to reach as many as 100,000 patients in a 12 month period.

Starting Point/Baseline:

Memorial Hermann intends to benchmark on the outcomes of the previous community-wide Ask Your Nurse triage line. This service operated from 2003 to 2011 in Harris County.

Rationale:

Over 35% of all emergency room visits in Harris County are primary care treatable. These visits result because people do not have the clinical knowledge to assess the nature of their illness or are unaware that other resources are available in the community. When Harris County had a community nurse triage line, data showed that 1 out of every 4 callers was redirected from an emergency center. This nurse triage line will also be staffed with navigators who can connect the patient to an alternative source for care, thus breaking the ER cycle and the significant costs associated with that care. The line will be a 1-800 number so that it can serve the whole region and be staffed to handle the call volume. Since the service did exist in Harris County, many of the avenues for distribution of the number (such as insert with water bills, posters and cards in ERs and clinics, and many other avenues) can be used again.

Once the 24-hour Nurse Triage Line is in place, it is anticipated that demand for the ED will decline and more significantly, there will be a reduction in inappropriate demand. Based on historical experience, projections indicate that approximately half of the calls will be triaged to lower-level care settings. Routing patients to a lower level of care reduces patient costs. Indirect impact includes reducing bad debt from non-emergent ED patients. This free telephone service will help patients avoid long waits and unnecessary expense at area EDs. Over time, by associating a care coordination and navigation component through the CHWs, it is reasonable to project that the health status of individuals connecting through the system will also result in additional documentable savings related to hospital admissions and readmissions when compared to a stratified sample of patients that match the demographics of those using the service.

Project components:

Required core project components:

a) Develop a process (including a call center) that in a timely manner triages patients seeking primary care services in an ED to an alternate primary care site. Survey patients who use the nurse advice line to ensure patient satisfaction with the services received.

- Memorial Hermann will develop processes and procedures in this call center to triage patients and ensure they are cared for in the most appropriate setting. Memorial Hermann will also encourage patients to participate in surveys to monitor their satisfaction.

b) Enhance linkages between primary care, urgent care, and Emergency Departments in order to increase communication and improve care transitions for patients.

- The staff at the patient call center will be able to directly facilitate transfer and communication between EDs, urgent cares, and primary care sites of service.

c) Conduct quality improvement for project using methods such as rapid cycle improvement. Activities may include, but are not limited to, identifying project impacts, identifying "lessons learned," opportunities to scale all or part of the project to a broader patient population, and identifying key challenges associated with expansion of the project, including special considerations for safety-net populations.

- Memorial Hermann will conduct ongoing quality improvement processes in order to continually and effective manage the program.

Unique community need identification number the project addresses:

- CN1 – Inadequate access to primary care
- CN.7 – Insufficient access to care coordination practice management and integrated care treatment programs

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

By introducing a region-wide, 24 Hour Nurse Triage Line, Memorial Hermann is implementing a new initiative designed to assist all callers regardless of their current insurance status and/or current healthcare affiliations, thus reaching many more patients in need. The project represents a significant benefit to the community both in educating consumers about accessing appropriate healthcare facilities for primary care treatable conditions and reducing healthcare costs across the region. The Memorial Hermann 24 Hour Nurse Triage Line will increase the capacity of the region to provide appropriate, less costly, alternative healthcare solutions that will enhance our current service offerings and impact systemic change across the region as consumers become more informed about their healthcare options.

Related Category 3 Outcome Measure(s):

OD-9: Right Care, Right Setting; IT-9.4: Other Outcome Improvement Project

Reasons/rationale for selecting the outcome measure(s):

The 24 Hour Nurse Triage Line will allow patients to speak with a healthcare professional who can advise them and direct them to seek appropriate care. This will directly reduce the number of patients seeking that advice from the ED or other inappropriate sites of care.

Relationship to other Projects: This project is part of Memorial Hermann's larger plans to expand and develop primary care and specialty care services, while improving access to care and containing the costs of care.

Relationship to Other Performing Providers' Projects in the RHP: Memorial Hermann Healthcare System reflects the vision of other Performing Providers' in the RHP by increasing individual and families' access to healthcare, improving the quality of healthcare, reducing costly ED usage for primary care treatable issues, educating the community on alternative healthcare resources available to them and the importance of a medical home, and reducing overall healthcare costs.

The triage and intake process of patient encounters is the front door to healthcare and an important factor of the success of healthcare transformation. The nurse triage/call center concept is unique in the regional sense of the RHP plan and focuses to outcome measures of ambulatory care sensitive condition readmission rates. The initiative grid attached in the addendum will show similarities with other projects suggested for this region.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

Approach for valuing project: The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served (both number of people and complexity of patient needs), the alignment with community needs, the magnitude of costs avoided or reduced, the degree collaboration involved, and the sustainability of the project.

Rationale/justification for valuation: The Nurse advice line has already proven its ability to lower healthcare costs. In addition, the expansion of the line will increase patient satisfaction and health outcomes as they receive the right care in the right setting. The reduction of costs and the increase in health outcomes are cornerstone issues under the Waiver.

Project Option: 1.12.2 Home Health Psych Services
Performing Provider: Memorial Hermann Hospital System/TPI 020834001
Unique Project ID: 020834001.1.3

- Provider: Memorial Hermann Hospital System (Memorial Hermann) is a 1,164 bed hospital system consisting of 4 campuses in the Houston-Sugarland-Baytown MSA. The system serves a population of approximately 6,000,000 people.

- Intervention(s): Memorial Hermann proposes to expand home health service to include psychiatric services. The program would include specialized training and certifications for nurses and the addition of social work services to link clients to additional community care programs. The goal of the project would be to provide support of those patients with mental health issues, to better manage their care in the home and community, and reduce the number of visits to emergency departments for psychiatric care that could be managed in the home/community environment.

- Need for the project: Texas ranks 49th in state per capita for mental health funding, and Harris County (greater Houston) ranks among the lowest in Texas counties. One of every five Houstonians (665,000) has a mental illness. Of these, 181,690 have a serious mental illness. About 20 percent, or 435,352, of adults aged 18 to 54 will have a mental disorder during a given year. A smaller subgroup of nine percent, or 195,908, of Houstonians will have a mental disorder and will experience at least transitory impairment.

- Target population: The target population is patients who 1) use hospital ERs for non-emergent treatment for psychiatric diagnosis, 2) admit to hospitals for medical and/or psychiatric diagnosis and do not have safe/effective discharge plans so an unnecessary readmission occurs, 3) admit to hospitals are treated and stabilized and stay in a hospital longer than required because a lack of community resources to address psychiatric diagnoses exists.

- Category 1 or 2 expected patient benefits: The psychiatric home health program in year one of operation would be able to admit up to 800 patients on to service. By DY5 patients utilizing the psychiatric home health program will increase by 15% over baseline.

- Category 3 outcomes: IT 3.8 Behavioral Health/Substance Abuse (BH/SA) 30-day readmission rate will experience a 10% reduction in DY5 over the baseline in DY5.

Project Option 1.12.2-Expand the number of community based settings where behavioral health services may be delivered in underserved areas: Home Health Psych Services

Unique RHP Identification Number: 020834001.1.3

Performing Provider Name/TPI: Memorial Hermann Hospital System/TPI 020834001

Project Description: Memorial Hermann proposes to expand home health service to include psychiatric services. The program would include specialized training and certifications for nurses and the addition of social work services to link clients to additional community care programs. Both program additions help to better manage psychiatric patients in the home setting. Memorial has identified a significant need for additional resources in the discharge planning process for individuals with behavior health needs. Currently, these individuals are discharged without appropriate home care services or are linked with home care agencies that do not have expertise and training to care for this specific population.

We are aiming to serve the population of patients who 1) use hospital ER's for non-emergent treatment for psychiatric diagnosis, 2) admit to hospitals for medical and/or psychiatric diagnosis and do not have safe/effective discharge plans so an unnecessary readmissions occurs, 3) admit to hospitals are treated and stabilized, but stay in a hospital setting longer than required because a lack of community resources to address psychiatric diagnosis exists.

Goal(s) and relationship to Regional goal(s):

Project Goals:

Texas proposes to take specific steps to broaden access to care that will include an expansion of community-based service options. The goal of psychiatric home services would be to provide support to those patients with a mental health issue, to better manage their care in the home and community, and reduce the number of visits to emergency departments for psychiatric care that could be managed in the home/community environment.

This project meets the following Region 3 goals:

This project addresses the RHP's goal to "[d]evelop a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes."

Challenges and how addressed:

The challenges in implementing a psychiatric home health program are: 1) the organization's ability to recruit and retain qualified staff to operate the program and provide clinical care to the psychiatric population, 2) the population's payor mix and high volume of uninsured, 3) the organization's ability to develop standard metrics and comparison data specific to the psychiatric population, 4) the organization's ability to educate and gain program support from physicians, 5)

the organization's ability to efficiently obtain industry required documentation and signatures from physicians.

5-year expected outcome for provider and patients:

Memorial Hermann has calculated an assumption that a psychiatric home health program in year one of operation would be able to admit up to 800 patients on to service. Memorial expects that once the project is fully operational, it will be able to admit up to 800 patients to this service every year.

Starting Point/Baseline: Memorial does not currently have a comprehensive service to psychiatric services delivered at home.

Rationale:

Positive healthcare outcomes are contingent on the ability of the patient to obtain both routine examinations and healthcare services as soon as possible after a specific need for care has been identified. However, many Texans are unable to access either routine services or needed care in a timely manner either because they lack transportation or because they are unable to schedule an appointment due to work scheduling conflicts (or school scheduling conflicts in the case of children) or because they have obligations to provide care for children or elderly relatives during normal work hours. While such barriers to access can compromise anyone's ability to make or keep scheduled appointments, individuals with behavioral health needs may be especially negatively affected. Many individuals with behavioral health needs are reticent to seek treatment in the first place and such barriers may be sufficient to prevent access entirely. Others may be easily discouraged by such barriers and may drop out of treatment. Any such delay in accessing services or any break or disruption in services may result in functional loss and the worsening of symptoms. These negative health outcomes come at great personal cost to the individual and also result in increased costs to payers when care is finally obtained.

Project components:
There are no required components for this project option.

Unique community need identification number the project addresses:

- CN.3 -- Inadequate access to behavioral health care

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

This project represents a fundamental change in the manner by which Memorial will delivery behavioral health services. By delivering care in the home Memorial will be increasing efficient in caring for our patients and will increase overall patient satisfaction.

Related Category 3 Outcome Measure(s): OD-3: Potentially Preventable Re-Admissions – 30 day Readmission Rates; Establish Baseline Rates; IT 3.8 Behavioral Health/Substance Abuse 30 day readmission rate.

Reasons/rationale for selecting the outcome measure(s):

The increase in health outcomes, which is a proven result of delivering services in the home, will decrease potentially preventable re-admissions.

Relationship to other Projects: This project is part of Memorial Hermann's larger plans to expand and develop primary care and specialty care services, while improving access to care and implementing delivery improvements targeted to specific populations (in this case, behavioral health patients).

Relationship to Other Performing Providers' Projects in the RHP: The cohabitation of primary care and behavioral health is an important focus of our region in order to treat the patient base with comprehensive physical and behavioral healthcare issues. There are multiple initiatives in our RHP plan that address this need and all can be found on the Region 3 Initiative Grid in the addendums. The outcome measures focused to screening measures and access of the patient base.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

Approach for valuing project: The valuation of each Memorial Hermann project takes into account the transformational impact, the population served (both number of people and complexity of patient needs), the alignment with community needs, the magnitude of costs avoided or reduced, the degree of collaboration involved, and the sustainability of the project.

Rationale/justification for valuation: This project's value is justified by the fact that it directly addresses on of the most fundamental and unmet healthcare needs in Harris County and in Region 3 generally, behavioral health. It also empowers patients by delivering services to them at home.

Project Option: 1.1.2 Expand Existing Primary Care Capacity: Convenient Care Centers
Performing Provider: Memorial Hermann Hospital System/TPI 020834001
Unique Project ID: 020834001.1.4

- Provider: Memorial Hermann Hospital System (Memorial Hermann) is a 1,164 bed hospital system consisting of 4 campuses in the Houston-Sugarland-Baytown MSA. The system serves a population of approximately 6,000,000 people.

- Intervention(s): Memorial Hermann will create neighborhood centers that integrate all ambulatory services in a highly coordinated, efficient and accessible manner for the greater Houston MSA. The goal of the project is to expand the capacity of primary care to better accommodate the needs of the regional patient population and community.

- Need for the project: In the greater Houston MSA, patients often receive services in urgent and emergent care settings for conditions that could be managed in a more coordinated manner if provided in the primary care setting. This often results in more costly, less coordinated care and a lack of appropriate follow-up care.

- Target population: The target population is patients in the greater Houston MSA that would benefit from seeking primary care at an ambulatory facility as opposed to an acute care facility. It is estimated that 37.55% of the patients in Memorial Hermann's service area are either Medicaid eligible or uninsured and rely on Memorial Hermann's and other hospitals emergency department for primary care services.

- Category 1 or 2 expected patient benefits: Memorial Hermann will seek a 5% over baseline improvement in satisfaction scores of patients who take surveys to assess the quality of their care in the primary care centers.

- Category 3 outcomes: IT 6.1 - By DY5, Memorial Hermann intends to improve its patient satisfaction scores by at least 10% over the DY4 measurement in the same area and a 15% improvement over the baseline.

DRAFT

Project Option- 1.1.2 Expand existing primary care capacity: Convenient Care Centers

Unique RHP Project Identification Number: 020834001.1.4

Performing Provider Name/TPI: Memorial Hermann Hospital System Memorial/020834001

Project Description: Create neighborhood centers that integrate all ambulatory services in a highly coordinated, efficient and accessible manner (imaging, emergency care, Primary Care, Specialty Care, Lab, Therapy, and Pharmacy for the Greater Houston Metropolitan Statistical area targeting pediatric and adult primary care patients.

Goal(s) and relationship to Regional goal(s):

Project goals:

Expand the capacity of primary care to better accommodate the needs of the regional patient population and community, as identified by the RHP needs assessment, so that patients have enhanced access to services, allowing them to receive the right care at the right time in the right setting.

This project meets the following Region 3 goals:

This project addresses the RHP's goal to "[i]ncrease access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay."

Challenges and how addressed:

The key challenges facing the implementation of this project are the recruitment and locating appropriate space. Memorial will address these challenges by putting in place an aggressive recruitment effort and identifying possible locations in the early stages of the project.

5-year expected outcome for provider and patients:

Memorial expects that his project will significantly increase access to primary care for pediatric and adult primary care patients in the Greater Houston Metropolitan Statistical Area.

Starting Point/Baseline: The creation of a convenient care center network is a new initiative and as such will require the creation of a baseline as an early milestone for the project.

Rationale:

Reasons for selecting the project option: In our current system, more often than not, patients receive services in urgent and emergent care settings for conditions that could be managed in a more coordinated manner if provided in the primary care setting. This often results in more costly, less coordinated care and a lack of appropriate follow-up care. Patients may experience barriers in accessing primary care services secondary to transportation, cost, lack of assigned provider, physical disability, inability to receive appointments in a timely manner and a lack of

DRAFT

knowledge about what types of services can be provided in the primary care setting. By enhancing access points, available appointment times, patient awareness of available services and overall primary care capacity, patients and their families will align themselves with the primary care system resulting in better health outcomes, patient satisfaction, appropriate utilization, and reduced cost of services.

Project components:

Required core project components:

a) Expand primary care clinic

   -Memorial will increase sites of the primary care network in the Greater Houston Metropolitan Statistical Area.

b) Expand availability of primary care clinic hours

   - Memorial will expand clinic hours in the Greater Houston Metropolitan Statistical Area, eventually moving to 24 hour, 7 day per week primary care availability.

c) Expand primary care provider availability

   – Memorial will recruit additional primary care physicians and clinical extenders (nurse practitioners and physician assistants) to staff the primary care network.

Unique community need identification number the project addresses:

- CN.1 - Inadequate access to primary care
- CN.8 - High rates of inappropriate emergency department utilization
- CN.9 - High rates of preventable hospital readmissions
- CN.6 - Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children, and elderly

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

This project would significantly enhance Memorial's ability to deliver vital healthcare services. Moreover, this is a new initiative for Memorial and, to our knowledge, Harris County. Therefore, this project will be highly contributive to the reform of the delivery system in Region 3.

Related Category 3 Outcome Measure(s): OD-6 Patient Satisfaction; Establish Baseline Rates; IT 6.1 Percent improvement over baseline of patient satisfaction scores. As a new initiative, the creation of a baseline for patient satisfaction related to appointment availability and patient satisfaction will be created as an early milestone for the project to ensure patients are getting timely care, appointments, and information.

DRAFT

Reasons/rationale for selecting the outcome measure(s):

When patients with primary care needs are receiving the correct treatment in the correct setting this will improve their satisfaction with the services being provided.

Relationship to other Projects: This project is part of Memorial Hermann's larger plans to expand and develop primary care and specialty care services, while improving access to care.

Relationship to Other Performing Providers' Projects in the RHP: Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: The valuation of each Memorial Hermann project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

Rationale/justification for valuation: A convenient care center will promote better access to services for many patients who cannot reliably travel between many disparate healthcare providers to receive services. This increased efficiency should lead to better health outcomes in the community which justifies the valuation of this project.

DRAFT

Project Option 1.1.1 - 1.1 Expand Primary Care Capacity: Pediatric Clinic Expansion – Houston Northwest Pediatric Clinic

Unique Project ID: 020834001.1.5
Performing Provider Name/TPI: Memorial Hermann Hospital/ 137805107

Project Summary:

Provider: Memorial Hermann Hospital (Memorial) is an 860 bed hospital located in Houston, TX and is part of the Houston-Sugarland-Baytown MSA. The MSA population served by Memorial is approximately 6,000,000 people.

Intervention(s): Memorial will establish the Houston Northwest Pediatric Clinic which will provide primary care for pediatric patients in that area of Harris County. Memorial will contract UTHSC-H to provide physician services to complement Memorial's investment in new technology, equipment and space to better provide pediatric services.

Need for the project: Prospective pediatric patients in the targeted service area described below currently face many roadblocks to adequate primary care including economic burdens, language barriers and lack of knowledge for seeking pediatric care. Due to the shortage of primary care providers in the community, the average wait period for a primary care appointment is 17 days, which results in increased reliance on hospital EDs for primary care and non-emergent care. The project will increase the percentage of patients who receive appropriate primary care including preventative services and regular monitoring for patients with chronic illnesses.

Target population: The target population is uninsured and underinsured children in the area of Harris County that is between Halls Bayou to the North, Beltway 8 to the West, I-10W and I-610NW to the South, and the Hardy Toll Road to the East. It is estimated that 39.8% of the patients in the service area for this clinic are either uninsured or underinsured children and rely on Memorial Hermann's and other hospitals' emergency departments for primary care services.

Category 1 or 2 expected patient benefits: The clinic will provide a more appropriate setting for pediatric primary care for the target population. They will benefit primarily from better access to primary care and better management of illness and chronic conditions.

Category 3 outcomes: IT 1.1 – Reduce the average length of time in days between the day a patient requests an appointment and the third available appointment. The goal will be to decrease number of days to third next available appointment to zero days (same day) for primary care by DY5.

DRAFT

Project Option 1.1.1- Establish More Primary Care Clinics: Pediatric Clinic Expansion - Northwest Houston Pediatric Clinic

Unique RHP Project Identification Number: 020834001.1.5

Performing Provider Name/TPI: Memorial Hermann Northwest Hospital/020834001

Project Description: 1.1/1.1.1: Using the strengths developed during their longstanding partnership, Memorial and The University of Texas Health Science Center at Houston (UTHSC-H) intend to work together to address the shortage of pediatric primary and specialty care in Region 3. In this project, Memorial will establish the Northwest Houston Pediatric Clinic, which will provide primary care for pediatric patients in an area of Harris County that is between Halls Bayou to the north, Beltway 8 to the west, I-10W and 610NW to the south, and the Hardy Toll Road to the east. Memorial has defined the service area for this clinic as a priority area for pediatric services, because it contains 14 of the 81 census tracts that make up the top 10% of all census tracts in Harris County with the greatest number of people below the age of 18 that are living below the federal poverty level (FPL). (The census tracts are 5333, 5331, 5321, 5320.01, 5307, 5223.01, 5221, 5214, 5206.02, 2217, 2216, 2215, 2214, and 2213.) The number of children living below the FPL in these 14 census tract areas is estimated to be approximately 15,415. Furthermore, these areas have particularly high numbers of Hispanics (64.6%), for whom language, as well as poverty, may pose a barrier to obtaining primary care for their children. Black/African Americans, another segment of the population that tend to be medically underserved, also make up a significant proportion of the population in these census tracts (20.4%). The service area for this clinic includes large populations with economic, cultural, language, and transportation barriers to receiving primary care. (All population statistics are from the U.S. Census Bureau, 2010 Census. Poverty statistics are from the U.S. Census Bureau, Small Area Estimates Branch. Release date: 11.2011. Table 1: 2010 Poverty and Median Income Estimates - Counties.) In order to address the unique needs of different communities in the greater Houston area, Memorial has chosen to establish a pediatric clinic in this area as an independent DSRIP project.

Using their longstanding partnership to provide quality healthcare as a base, Memorial will contract UTHSC-H to provide physician services to complement Memorial's investment in new technology, equipment and space to better provide pediatric services. Specifically, UTHSC-H will redirect pediatricians already on its staff who have the capacity to care for additional patients, recruit additional pediatricians, or increase residency programs to fill the need for additional pediatric specialists. UTHSC-H is uniquely positioned to attract and retain new physicians due to its accomplishments as a world-class academic and research institution. This additional service line will avoid duplication and draw on the strength of UTHSC-H's academic presence in the field of pediatric medicine, and will also benefit Memorial by increasing the quantity, quality, and scope of services provided at its facilities.

DRAFT

Practically, Memorial will subcontract with UTHSC-H to provide physician and other services needed to implement this project. For example, Memorial will lease additional space to open the North Harris County clinic**.** This space will include additional consulting, exam and procedure rooms. Memorial will also subcontract with UTHSC-H to provide primary care providers and support staff to operationalize the project. For all services in which UTHSC-H is a subcontractor, Memorial will pay an agreed rate that is set in advance and represents fair market value for services negotiated in the ordinary course of business through an arms-length transaction.

Goal(s) and relationship to Regional goal(s):

Project goals:

Expand the capacity of pediatric primary care to better accommodate the needs of the regional patient population and community, as identified by the RHP needs assessment, so that pediatric patients have enhanced access to services, allowing them to receive the right care at the right time in the right setting.

This project meets the following Region 3 goals:

One of the goals of the region is to "Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay". Expansion of primary care capacity certainly relates to this goal as it will make it easier for Memorial to provide care to underserved populations.

Challenges and how addressed:

This project faces three key challenges. First, Memorial must raise awareness and change existing patterns for seeking health care services for some patients. A second challenge is to raise awareness for the service delivery model offered by these new sites so that patients who currently don't have access to after-hours care learn that this type of care is available through a physician's clinic rather than turning to emergent or urgent care clinics. And finally, recruiting additional primary care providers and pediatric specialists in this competitive environment will be a challenge. Memorial will address these challenges by implementing other projects to reduce inappropriate ED use, educating patients on the benefits of primary care, and aggressively recruiting primary care providers by offering competitive salaries and other incentives to practice in the outlying clinics.

5-year expected outcome for provider and patients:

There will be shortening of waiting times for primary pediatric care appointments and increased uptake of primary pediatric care services in this specific service area, which will increase the percentage of patients who receive appropriate primary health care, including preventative services and regular monitoring for those patients with chronic illnesses.

DRAFT

Starting Point/Baseline: Memorial has identified the targeted service area needing increased access to pediatric primary care. Since this will be a new clinic, the baseline will have to be established during DY3.

Rationale:

Reasons for selecting the project option: In 2010, Texas had 176 patient care physicians per 100,000 population and 70 primary care physicians per 100,000 population with a state ranking of 46 and 47, respectively (comparable ratios for US total are 219.5 and 90.5, respectively). From 2001 to 2011, the Texas physician workforce grew 32.3%, exceeding the population growth of 25.1%. Therefore, there is a significant need to expand primary care in order to facilitate delivery system reform.

Research has shown that access to primary care is associated with better health outcomes at less cost. Access to primary care ensures better preventive care and better management of chronic disease, with lack of access often resulting in more expensive care, received in hospitals and emergency departments (ED). For the fiscal year 2010, 10% of all potentially preventable hospitalizations (PPR) were ambulatory care sensitive. In 2009, 41% (390,945) of ED visits in Houston were primary care related (PCR), including non-urgent, primary care treatable, and primary care preventable, and for 26.8% (104,762) of these PCR visits, Medicaid was the payor. Getting more patients into primary care will help to reduce the use of this more costly care. Placing more primary care providers out in the communities will help to address transportation access barriers and the expansion of clinic service hours will provide a greater selection of available appointment times. By increasing primary care capacity, engaging more people in the primary care system, and avoiding inappropriate utilization of costly services, the community will experience better health outcomes and greater patient satisfaction.[79]

In our current system, more often than not, patients receive services in urgent and emergent care settings for conditions that could be managed in a more coordinated manner if provided in the primary care setting. This often results in more costly, less coordinated care and a lack of appropriate follow-up care. Patients may experience barriers in accessing primary care services secondary to transportation, cost, lack of assigned provider, physical disability, inability to receive appointments in a timely manner and a lack of knowledge about what types of services can be provided in the primary care setting. By enhancing access points, available appointment times, patient awareness of available services and overall primary care capacity, patients and their families will align themselves with the primary care system resulting in better health outcomes, patient satisfaction, appropriate utilization and reduced cost of services.

[79] PPR rate was from the Texas Health and Human Services Commission report on Potentially Preventable Readmissions in the Texas Medicaid Population, Fiscal year 2010, published January, 2012. The statistics for ED use were from the Houston Hospitals Emergency Department Use Study (January 1, 2009 through December 31, 2009), Final Report included in the 2010 Harris County Community Needs Assessment for Memorial Hermann.

Because UTHSC-H will IGT on behalf of Memorial for its successful implementation of delivery system improvements under the Waiver, this structure results in a payment from a private hospital to an entity that provides its IGT, which arguably raises questions regarding provider donations. Nonetheless, this collaboration is the most to effective and efficient structure to expand access to pediatric services to the community, and ensure overall improvement to the Region 3 delivery system. This collaboration is a natural progression of the existing relationship and the clinical strengths of Memorial and UTHSC-H. Memorial is the largest not-for-profit healthcare system in Texas and serves the greater Houston community through 12 hospitals, a vast network of affiliated physicians and numerous specialty programs and services. With over 4,000 medical staff members, 26 residency programs, 48 fellowship programs, and over 1,300 physicians in training, Memorial is dedicated to providing high quality health services in order to improve the health of the people in Southeast Texas. The mission of UTHSC-H is to educate health science professionals, discover and translate advances in the biomedical and social sciences, and model the best practices in clinical care and public health. UTHSC-H strives to improve the health of the public in the State of Texas through educating future public health practitioners and bringing evidence based public health practices to Texas. UTHSC-H's faculty of over 900 physicians in 80 specialties provide comprehensive care for patients while teaching 800 medical students and over 900 residents in over 60 accredited residency/fellowship programs.

Core Components:

Through the new North Houston Pediatric Clinic, we propose to:

a) Expand primary care clinic space

-Memorial will identify and lease appropriate space within the defined service area to establish the new clinic that includes reception, consulting, exam and procedure rooms, and will provide the necessary equipment and furnishings.

b) Expand primary care clinic hours

-UT Physicians will be contracted at fair market value to provide primary care physicians, advanced practice providers, and support staff to operate the clinic.

c) Expand primary care clinic staffing

-In addition to regular business hours, the clinic will operate with expanded evening and Saturday hours to increase access for individuals that are not able to leave their jobs for healthcare appointments, and to provide care for those needing urgent care services that can be accommodated in a primary care clinic.

DRAFT

Unique community need identification number the project addresses:

CN1 – Primary Care

CN8 – High rates of inappropriate emergency department utilization

How the project represents a new initiative for Performing Provider or significantly enhances an existing delivery system reform initiative:

This project represents a significant improvement in Memorial's ability to deliver primary healthcare to babies, children, and adolescents. This new initiative proposes to add space, providers, support staff, and extended service hours in a location where economic and cultural barriers to receiving appropriate healthcare are indicative of a need for services that are conveniently located and available when needed. This project is an expansion of services in order to improve access to care.

Related Category 3 Outcome Measure(s):

OD-1 Primary Care and Chronic Disease Management IT-1.19 Antidepressant Medication Management - NQF 0105 (Standalone measure)

The management of antidepressant medication in children ages 6 and over who were discharged alive) from an acute inpatient setting (including acute care psychiatric facilities) with a principal mental health diagnosis: A) the acute phase treatment period consisting at least 84 days (12 weeks) of continuous treatment with antidepressant medication during the 114-day period following the IPSD (inclusive), and B) the continuation phase treatment period consisting of at least 180 days (6 months) of continuous treatment with antidepressant medication (Table AMM-D) during the 231-day period following the IPSD (inclusive).

OD-1 Primary Care and Chronic Disease Management IT-1.1 Third next available appointment (Non- standalone measure)

Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam.

Reasons/rationale for selecting the outcome measure(s):

This project is specifically geared towards increasing primary care services for pediatric patients. If this population is receiving adequate levels of primary behavioral healthcare then the management of anti-depressant medication is expected to improve. Additionally, the immediate goal of the project is to allow greater access to primary care for pediatric patients—this should directly correlate to reduced wait times for available appointments. Therefore, this outcome measure is a reasonable gauge of the effectiveness of this project.

Relationship to Other Projects: This project is part of Memorial's larger plans to expand and develop primary care and specialty care services, while improving access to care. Expanding primary care supports/reinforces several of the Category 1 and 2 projects: increasing the number of physicians rotating through the primary care residency program will have a direct impact on Expanding Primary Care Capacity (1.2); this project not only will increase the number of available physicians to participate in medical homes (2.1), it will also ensure that they are trained in the medical home concept; this project reinforces the Redesign of Primary Care (2.3), the Redesign to Improve the Patient Experience (2.4).

Relationship to Other Performing Providers' Projects in the RHP: Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Plan for Learning Collaborative: Memorial will participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: The valuation of each Memorial project takes into account the transformational impact of the project, the population served by the project (both number of people and complexity of patient needs), the alignment of the project with community needs, the magnitude of costs avoided or reduced by the project, the degree of collaboration involved in the project, and the sustainability of the project.

The expansion of primary care clinics will help address a substantial need in the community for increased access to primary care. It will also go a long way towards achieving the Waiver goal of improving outcomes while curbing the risk of healthcare costs, because primary care is one of the most cost effective methods to increase health outcomes.

Memorial Medical Center

Pass 1

DRAFT

Project Option 1.1.1, 1.1.2 and 1.9.2- Hospital Based Clinic – Improving Access to Care
Unique RHP Project ID: 137909111.1.1
Performing Provider Name/TPI: Memorial Medical Center / 137909111
Project Summary:
Provider:
Memorial Medical Center is a county-owned, 25 bed Critical Access Hospital and serves as the only hospital for Calhoun County. Located on the Gulf Coast, Memorial Medical Center serves 60% of the 21,382 County residents. With a tax base of $13,972,000, Memorial Medical Center was able to provide more than $8 million in charity care (includes uncompensated) during FY 2012.

Volume Statistics – 11 months Year to date 2011 - 2012	Patient Payer Mix	Patient/Community Demographics
Hospital admissions- 1056 Births (babies delivered)- 98 Emergency visits- 9084 Outpatient visits- 13,430 Laboratory procedures- 224,562	Medicaid and CHIP- 16.4% Medicare- 33.6% Commercial Insurance- 31.1% Uninsured, Charity, Indigent Care- 18.9%	Hispanic- 47.1% African American- 3.3% Caucasian- 44.4% Asian- 4.5% American Indian- 0.7%

Intervention(s):
This project will expand primary and specialty care services through a hospital-based clinic to a medically underserved area of rural Texas.

Need for the project:
The purpose is to provide access to both primary and specialty care services in an area where two-thirds of the population travels outside the service area for health care. Patients requiring specialty care must often drive long distances to see a provider, and may not receive services until the condition becomes critical. Patients needing primary care are unable to get appointments, delay care until it is more critical, and use the emergency room department for care that could have been provided in a physician's office.

Target Population:
All patients within the system with may benefit from this project (Medicaid and CHIP-16.4% / Medicare- 33.6%), specifically those with chronic diseases.

Category 1 or 2 expected patient benefits:
Over the course of this project, we will increase the total number of encounters for both primary care and specialty care services by 15% each by the end of DY 5. By doing so, we will improve the health of our clients by providing more timely access to care and coordinating treatment and follow-up care that isn't available when patients seek treatment through the Emergency Department.

Category 3 outcomes:
OD-6: Because the community we serve has an insufficient number of providers and patients are often unable to obtain appointments in a timely manner, the priority goal for this project is ensuring patients receive care when they need it and without significant delays, which will result in improved health outcomes and patient satisfaction. In DY5, patient experience at the Hospital Based Clinic shall have improved in deficient areas of timely care, appointments and information by 10% by the end of the waiver.

Project Options 1.1.4 – Other project option: Hospital based clinic improving access to primary and specialty care

Unique RHP Project Identification Number: 137909111.1.1
Performing Provider Name/TPI: Memorial Medical Center / 137909111

Project Description:

To increase the ability of Memorial Medical Center (MMC) to provide the "right care at the right time in the right setting," this project will expand access to primary and specialty care services through the establishment of a hospital-based clinic.

This initiative will provide critically needed services to a medically underserved area of rural Texas as identified in our Region's community needs assessment. To ensure patients have access to services at times that are convenient for them, are able to secure appointments with appropriate providers, and to reduce the inappropriate use of the hospital emergency department for non-urgent and primary care services, the clinic will offer extended and non-traditional hours of care.

Currently, the Region faces challenges providing both primary care and specialty care services to the community population. Every county in the region, including Calhoun County (the home of MMC) faces shortages of primary care, behavioral health care, and other specialty care providers, causing delays in care until medical care becomes an urgent need. Patients requiring specialty care must often drive long distances to see a provider, and may not receive services until the condition becomes critical. Patients needing primary care are unable to get appointments, delay care until it is more critical, and use the emergency room department for care that could have been provided in a physician's office. This creates unnecessary costs and burdens on the existing health care system, and may contribute to less healthy outcomes in patients. Attracting additional providers to the area is a challenge given the lack of clinical space, or access to specialty providers to whom they may refer their patients.

The operation of a hospital-based primary and specialty care clinic significantly enhances our existing delivery system by allowing us to meet a critical community need. Because these services will be provided by a clinic affiliated with the hospital, we also will be able to coordinate services provided to patients discharged from the hospital, improve our ability to ensure compliance with out-patient care instructions, and reduce readmissions. Studies have shown that integrating hospital and outpatient care is key to reducing readmissions and that strong relationships between hospitals and primary care providers improve patient outcomes.[80]

While we recognize this is an ambitious project, it is an important initiative that will significantly improve access to care for the patients in this Region MMC currently is unable to provide these critical services and has long recognized the need for a clinic. By creating a hospital-based clinic, patients will have access to a full-range of services not available in a stand-alone facility. Our plans will build on our existing experience in delivering high-quality health care, and will leverage the existing infrastructure and administrative services provided by MMC to provide a full-service clinic.

Goals and Relationship to Regional Goals:

---

[80] Silow-Carroll, Sharon, Edwards, Jennifer N., Lashbrook, Aimee, *Reducing Hospital Readmissions: Lessons from Top Performing Hospitals.* The Commonwealth Fund, April 2011.

Through the creation and operation of a hospital-based clinic and hiring of primary and specialty care providers, this project will enable MMC to better meet the community and Region needs for health care services. The goals of this project are:

- Improve access to primary care providers and services;
- Improve access to specialty care providers and services;
- Reduce the need for clients to travel excessive distances for health care services;
- Increase the number of health care providers and services available to community residents;
- Reduce the inappropriate use of emergency rooms for non-urgent care;
- Provide access to care during non-traditional hours for patients who work, care for children, do not have transportation, or face other challenges that make it difficult for them to seek care during typical business hours;
- Improve health care outcomes by providing health care services that might not otherwise be available to residents and enabling patients to obtain more timely care before conditions become more serious and costly to treat;
- Reduce hospital readmissions by providing care coordination and patient follow-up when discharged from the hospital;
- Improve patient satisfaction by providing care in a more appropriate setting and reducing the wait time that typically accompanies visits to the emergency department.

While the Region has many specific objectives and improvement targets based on stakeholder input and community needs assessments, the over-arching goals that have guided many of our decisions include the following:

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
- Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system, and
- Develop a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes.

5-Year Expected Outcome for Provider and Patients:

Over the course of this project, we will establish a clinic that will provide both primary and specialty care services, and gradually increase the number of primary care and specialty care encounters so that the total number of encounters for both primary care and specialty services increase by 15% each by the end of Demonstration Year (DY) 5. By doing so, we will improve the health of our clients by providing more timely access to care and coordinating treatment and follow-up care that is not available when patients seek treatment through the emergency department. We also will improve patient satisfaction as patients will have a regular source for care that is less costly, more efficient, and better meets their health care needs. The project supports the Region's goals of ensuring residents have timely access to necessary health care

DRAFT

services from an appropriate setting, within a reasonable distance, and receive the most cost-effective and appropriate treatment that enhances their ability to live healthy, productive lives.

Starting Point/Baseline:

No space currently exists for primary or specialty care providers. Therefore, the baseline for the number of patients and the number of clinics and participating providers begins at 0 in DY 2.

Rationale:

Memorial Medical Center (MMC) is located in Port Lavaca, Texas, which is located on the Gulf of Mexico between Corpus Christi and Houston. The city is in Calhoun County. Port Lavaca's population is approximately 11,500 and includes about 60% of the 21,381 county residents.[81] Memorial Medical Center is a county-owned, 25 bed Critical Access Hospital and serves as the only hospital for Calhoun County. Port Lavaca Clinic and Coastal Medical Clinic serve as the primary providers for outpatient services.

Like other counties in our Region, Calhoun County is a designated Medically Underserved Area for Primary Care, Mental Health Care, and Dental Care.[82] Due to further shortage of providers, an application was submitted in September 2012 for designation as a Health Professional Shortage Area. The most recent data from the Texas Medical Board shows Calhoun County has a total of 18 physicians, including seven in General Practice or Family Medicine, one Pediatrician, five who practice Internal Medicine, and two OB/GYNs.[83] However, since the study, five physicians have left the service area due to retirement, relocation and/or contract elimination.

MMC's primary service area is almost exclusive to the Port Lavaca zip code. The secondary service area includes the remainder of Calhoun County and the southwestern portion of adjacent Matagorda County. To better understand the community's needs and determine the steps MMC needs to take to adequately serve the region's patients, in 2010 MMC contracted with BR Healthcare Services, Inc. (BRHS) to conduct an analysis of MMC's current market, the primary and secondary service area, demographics, and outmigration.[84] The study found that 73% of patients served by MMC lived in the Port Lavaca zip code area, while 18% of patients lived in Calhoun County and Palacios. During the time period of the study, the patient population included 33.6% who are covered by Medicare; 16.4% who are covered by Medicaid; 31.1% who are insured by a commercial plan; and 18.9% who are uninsured, charity and indigent care patients.

At the time of the study, the MMC medical staff included 13 physicians. Twelve hold active statuses and one is Sr. Active.[85] Another 26 providers are "courtesy" or "consulting" staff. Of the 13 Active Staff physicians in 2010, all provided direct patient care or have full time offices in the area. The average age is 48 years. One Active Staff physician is over 60 years and is listed as Sr. Active.[86] Approximately 70% of the MMC physicians are concentrated in the age 45-60 range.

[83] Texas Medical Board, Physician Demographics by County and Specialty, January 2012. Note: the remaining 2 physician specialties are not noted in the Texas Medical Board data; Further, five physicians left service area since publication.

[84] BR Healthcare Services, Inc., Memorial Medical Center Market & Service Area Development Report, October, 2010.

[85] Since the time of the study, two primary care physicians have left the service area.

[86] BR Healthcare Services, Inc., 2010.

Using these current physician supply information and other data, the BRHS study conducted a Physician Needs Assessment utilizing four separate mathematical methodologies.[87] Three indexed physician demand for services and the fourth utilized National supply numbers. In assessing the physician supply needs for the community, the BRHS analysis reviewed various data and considered both current and future population needs. The results of the analysis concluded that community need currently exists for additional physicians in the following areas of care: 1) Family Practice; 2) Internal Medicine; 3) Pediatrics; 4) Cardiology (Non-invasive); 5) General Surgery; 6) Obstetrics/Gynecology; and 7) Orthopedic Surgery.

Due to various methodologies and data resources used in each of the studies, the range of providers needed varied, and is demonstrated in the following table.

Memorial Medical Center Physician Need Assessment							
		Need Assessment Methodology					
Specialty	**Current Number**	**GMENAC**	**Hicks & Glenn**	**Group Health**	**AMA**	**Need Avg.**	**Additional Physicians Needed**
Family Practice	6	7.04	6.93	8.72	5.7	7.1	1.1

Pediatrics	1	3.08	2.65	3.18	3.74	3.2	2.2
Cardiology	0	0.65	0.79	1.02	1.38	1.0	1.0
General Surgery	0	1.99	2.8	1.79	3.02	2.4	2.4
OB/GYN	1	2.03	2.28	2.31	2.82	2.4	1.4
Orthopedics	0	1.28	1.12	1.31	1.67	1.3	1.3

Project Components:

~~Through the establishment of a new clinic, we propose to meet all required core project components of 1.1.2 as described below.~~ Project option 1.1.4 does not have any core components. However, this project will meet the primary objectives, which is to establish more primary care clinics and improve access to specialty care. ~~For Project 1.1.2, we will meet all three components: a) Expand primary care clinic space; b) expand primary care clinic hours; and c) expand primary care clinic staffing.~~

Our clinic will provide both primary care and specialty care providers based on the needs identified for our community. The clinic will a) provide additional clinic space for primary care providers and patients; b) provide expanded clinic hours to ensure patients have access to care that fits within their schedule; and c) provide clinic staffing, including both providers and necessary administrative staff.

~~The operation of a hospital-based primary and specialty care clinic significantly enhances our existing delivery system by allowing us to meet a critical community need. Because these services will be provided by a clinic affiliated with the hospital, we also will be able to coordinate services provided to patients discharged from the hospital, improve our ability to ensure compliance with out-patient care instructions, and reduce readmissions. Studies have shown that integrating hospital and outpatient care is key to reducing readmissions and that strong relationships between hospitals and primary care providers improve patient outcomes.[88]~~

~~While we recognize this is an ambitious project, it is an important initiative that will significantly improve access to care for the patients in this Region MMC currently is unable to provide these critical services and has long recognized the need for a clinic. By creating a hospital-based clinic, patients will have access to a full-range of services not available in a stand-~~

[87] The physician demand was calculated based on the following studies: GMENAC, Hicks & Glenn, Group Health and U.S. Supply, *AMA Physician Characteristics and Distribution in the U.S.*

DRAFT

~~alone facility. Our plans will build on our existing experience in delivering high-quality health care, and will leverage the existing infrastructure and administrative services provided by MMC to provide a full-service clinic.~~

Unique community need for identification numbers the project addresses:

- CN.1 – Inadequate access to primary care
- CN.2 – Inadequate access to specialty care

Challenges:

MMC has identified several challenges in developing this initiative, but is prepared to fully address each one of these in our implementation plan. One of the key challenges we face is attracting physicians to the clinic. To address this, our plan will include an outreach and marketing strategy to reach interested providers. Based on recommendations from BRHS, our expenditures in this area will be strategically prioritized to initially focus on the most critical physician needs. We will work with the local and state medical societies to publicize the new positions, as well as work with our Regional partners to identify potential candidates.

Another challenge will be educating clients to ensure they are aware of and utilize the new services. We will develop an education and outreach plan for the community, and will coordinate with local area providers to be sure residents are aware of the availability of the clinic. We will emphasize the availability of extended hours and will coordinate outreach with our emergency department and MMC administrative offices to inform and direct patients to the clinic when appropriate.

The population we serve also struggles with multiple chronic illnesses, including diabetes, chronic heart disease, COPD, and asthma, and has a high occurrence of behavioral health issues.[89] The creation of a new clinic will provide many of these underserved patients with access to care in a more timely manner, and will provide them with a local, accessible medical home. Studies have shown that obtaining primary care through a medical home reduces the number of hospital admissions, provides lower outpatient costs, reduces pharmaceutical costs, and improves health care outcomes.[90] To address the challenges of treating a wide range of medical problems and minimize potential complications, we will implement a process for ensuring our primary and specialty care providers work together to provide a coordinated approach to patient care. Clinic staff will also work closely with hospital staff to coordinate patient discharge planning and after-care, resulting in a reduction in hospital readmissions.[91] For services that may not be available from our specialists, we will utilize existing partnerships and develop new ones with providers in other counties for patient referrals.

We also know that the population we serve includes a large number of industrial shift workers, many of whom work non-traditional schedules that prevents them from obtaining care during normal clinic hours. This project will enable us to better serve this particular population by providing appointments during the extended hours. We will continually monitor the adequacy of those hours through patient surveys. If the client responses indicate changes are needed in clinic hours, we will reassess our options and, to the extent possible, adjust hours as necessary.

New Initiative for Provider:

DRAFT

---

[89] County Health Rankings and Roadmaps, County Health Rankings 2012.

[90] Patient Centered Primary Care Collaborative. *Benefits of Implementing the Primary Care Patient-Centered Medical Home: A Review of Cost and Quality Results, 2012*.

[91] Silow-Carrol, et.al.

MMC currently operates a hospital that provides acute care, but does not provide access to primary and specialty care services. The operation of a hospital-based primary and specialty care clinic significantly enhances our existing delivery system by allowing us to meet a critical community need for care. Because these services will be provided by a clinic affiliated with the hospital, we will be able to coordinate services provided to patients discharged from the hospital, improve our ability to ensure compliance with out-patient care instructions, and reduce readmissions.

Related Category 3 Outcome Measure(s):

OD-6 Patient Satisfaction is the selected Category 3 Outcome Measure for this project. We intend to use the CG-CAHPS survey to improve our performance as measured by whether patients are (1) getting timely care, appointments and information. Obtaining patient feedback on our ability to provide the right care at the right time is critical to the success of this project and the internal operations of the clinic. This data will provide us with meaningful and objective information that will be used to determine whether our clinic has met patient expectations related to obtaining timely care and information, and will identify areas where we need to improve. Because the community we serve has an insufficient number of providers and patients are often unable to obtain appointments in a timely manner, the priority goal for this project is ensuring patients receive care when they need it and without significant delays, which will result in improved health outcomes and patient satisfaction. The CG-CAHPS survey is an effective tool for measuring our progress and will provide valuable information and feedback on our performance and areas where improvement is needed.

Plan for Learning Collaborative:

We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system. The learning collaborative meets our quality improvement milestone [P-1.1 and P-1.2].

Relationship to other Projects and other Performing Provider's Projects:

Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

This project will support and coordinate with other projects designed to improve access to primary and specialty care (Projects 1.1 and 1.9), enhance service availability (1.12), redesign to improve patient experience (2.4), and enhance medical homes (2.1) Our participation in the Learning Collaborative will allow us to share information and promote the use of best practices.

Project Valuation:

When determining a value for expanding access to primary and specialty care through a hospital based clinic in Calhoun County, we first determined the priority of this initiative to our

community. Utilizing the Office of Extramural Research, National Institute of Health model, we identified the impact of this project as a high level. The insufficient access to these services in our area, results in patients' inability to locate a medical home; delayed diagnoses and treatment which leads to more serious health care conditions and higher costs; inappropriate utilization of emergency room facilities and higher costs; lack of care coordination and patient education. Further, in a 2010 BR Healthcare Services conducted a Market and Service Area Analysis that identified over 60% of Calhoun County residents sought medical treatment outside of the county. By providing access to care locally, an undue tax burden shall be offset reducing costs to local businesses and industry. Lower tax rates lend to business recruitment and workforce development adding to quality of life. Finally, we calculated the tangible expenses of space, utilities, technology, supplies, equipment, physician recruitment and staffing to determine the total project value. Living in rural Texas, we are painfully aware of the challenges to attract physicians to our area. Therefore, recruitment and salary packages must be competitive and access to health care resources plentiful to grow programs and patient satisfaction

Mental Health and Mental Retardation Authority of Harris County

Pass 1

DRAFT

Project Option 1.12 ENHANCE SERVICE AVAILABILITY OF APPROPRIATE LEVELS OF BEHAVIORAL HEALTH CARE: EXPANSION OF OUTPATIENT BEHAVIORAL HEALTH SERVICES FOR ADULTS WITH

SEVERE PSYCHIATRIC CONDITIONS (Northwest)

Unique RHP Project ID: 113180703.1.1

Performing Provider Name/TPI: MHMRA of Harris County / 113180703

Project Summary:

Provider: The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is a public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA provides inpatient, residential and outpatient treatments, including psycho-therapy, case management and medication management for individuals. MHMRA serves more than 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those individuals who received any agency service in FY12, 36.5% were medically indigent and 51.9% had Medicaid. Of those who received mental health services in FY12, such as those being proposed in this project, 55% were medically indigent and 34.9% had Medicaid.

Intervention(s): MHMRA will place one new treatment team which can serve about 500 consumers on an outpatient basis in the Northwest region of the city.

Need for the project: Estimates place approximately 78,000 adults with severe mental illness unable to access treatment from the public or private mental health systems in Harris County. The gap between service needs of seriously mentally ill adults in the county and available public service capacity is most evident in the current waiting list of 1,695 for ongoing outpatient service. MHMRA of Harris County routinely operates at or above its state mandated, contracted service capacity, averaging about 8,800 adult consumers served each month. At this level, however, access is inadequate for many who apply for service.

Target population: Seriously mentally ill adults in the Northwest region of Harris County currently unable to access mental health services. It is anticipated the program will provide service for about 500 patients.

Category 1 or 2 expected patient benefits:

- Increase utilization of services to 500 patients more than baseline by DY 5
- A 10% decrease from baseline in PES/HCPC admissions by DY5

Category 3 outcomes: MHMRA expects to increase one domain of patient satisfaction (TBD) by 10% from baseline by DY5.

DRAFT

1.12 Enhance service availability of appropriate level of behavioral health care: Expansion of outpatient behavioral health services for adults with severe psychiatric conditions (Northwest)

RHP Project Number: 113180703.1.1
Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/ 113180703

Project Description:
The Mental Health and Mental Retardation Authority (MHMRA) of Harris County proposes to increase outpatient capacity to potentially eliminate the current wait list for services in this geographic area.

The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is a public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA serves more than 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those who received mental health services in FY12, such as those being proposed in this project, 55% were medically indigent and 34.9% had Medicaid. In an effort to provide needed services to the most critically ill population, MHMRA proposes to increase outpatient capacity by approximately 500 individuals potentially eliminating the current wait list for services in this geographic area. In order to address this issue we will choose to focus on project option 1.12.2: Expand the number of community based settings where behavioral health services may be delivered in underserved areas.

It is important to note that we are proposing four similar projects, each under the 1.12.2 umbrella, which would expand outpatient behavioral health services for adults in each of our existing clinics. Because the goals and rationale are identical, the narratives will be repetitive; however, each of the expansion programs serve unique geographical needs, and therefore, each of the projects are critical to addressing the community needs.

Goals and Relationship to Regional Goals:
Goals include improving access to community mental health services by establishing additional service providers (e.g., an additional treatment team) among existing MHMRA community clinics in Harris County. Specifically, we aspire to place one new treatment team in the Northwest region. Each treatment team can serve roughly 500 consumers.
The proposed project directly meets broad goals identified by the regional needs assessment. First, it improves and builds upon an existing program, which has shown positive gains in providing best-practices for patient-centered care. Furthermore, by providing enhanced, evidence-based services to patients the program will meet the regional goal set out above. Moreover, the program supports the regional goal of developing a culture of patient-centered care whereby the patient/consumer plays a more active role as a stakeholder.

Challenges:

Workforce limitations may provide staff recruitment challenges requiring significant lead time and advanced planning. Clinic managers will work closely with human resources and administration to ensure timely staffing of the proposed treatment teams.

Expected 5-year Outcomes:

1) Staffing of the new team: 1 Psychiatrist, 1 Nurse, 1 Clinical Team Leader, 4 Licensed Practitioners of the Healing Arts, 12 Rehabilitation Clinicians, 1 Administrative Assistant, 1 Clerical Support Staff, 1 Business Office Coordinator, and 1 HIT Staff.
2) Additional need is anticipated as initiatives to reduce 30-day re-hospitalizations, preventable emergency department visits, and jail recidivism, may create additional demand.
3) Provision of outpatient mental health service has been locally documented to reduce emergency psychiatric center visits by .37 visits per person per year; it has also has been shown to reduce public psychiatric hospital use by 1.66 bed days per person per year in a sample of 25,000 outpatients (served between the years 2005 and 2012).
4) Elimination of wait lists and improved geographic access can be expected to increase access to services, improved satisfaction, and decreased intensive service use. Reductions in intensive service (#3 and #4 above) use are firmly in line with regional project goals.

In order to measure the progress towards the stated goals, we have selected improvement metrics that measure increased utilization of behavioral health (I-11.1) and decreased emergency psychiatric service use (I-X).

Starting Point/Baseline:

As mentioned previously, 8,800 consumers are served among the four existing outpatient clinics. We seek to expand the provision of services by 1 team per current location, which would serve roughly 500 people per site, and add one additional team where the most need is determined. Current clinical space will be used in addition to redesigning available MHMRA space or seeking additional space as needed to house additional staff over the DSRIP period.

Rationale:

The community mental health system in Harris County has a limited capacity for service that is insufficient to the needs of its residents. The Mental Health Needs Council of Harris County has estimated that 153,000 of the 552,000 Harris County adults with mental illness have a severe mental illness (Depression, Bipolar Disorder, and Schizophrenia). These individuals are among the 96,200 Harris County adults who have no public (Medicaid or Medicare) or private health insurance and therefore, are totally dependent on the public mental health service system for treatment. In 2007, approximately 27,000 adults received services from the public mental health system; 18,200 of these were uninsured (a number representing only 19% of estimated need). By deduction, one can conclude that approximately 78,000 adults with severe mental illness failed to access treatment from the public or private mental health systems.

The gap between service needs of seriously mentally ill adults in the county and available public service capacity is most evident in the waiting list for ongoing outpatient service. MHMRA of Harris County routinely operates at or above its state mandated, contracted service

capacity, averaging about 8,800 adult consumers served each month. At this level, however, access is inadequate for many who apply for service.

On August 31 (2012), the MHMRA waitlist for adult mental health outpatient services rested at 1,695, a level that has persisted for several years. Further, tenure on the waiting list approached five months, an average of 149.16 days. The Northwest Clinic has the second highest proportion of patients in need, comprising 28.8% of consumers waiting for services.

The rationale for requesting funding for each project is based on the aforementioned need for additional mental health services in the county, and the existing waitlist. If MHMRA were to expand only one or two of the clinics, only 400-800 new consumers could be served and the waitlist would remain in effect. Additionally, it is expected that the need for mental health services will continue to grow, and therefore, limited expansion will simply not address the current needs of those on the waitlist or the community needs of those who initiated services with MHMRA.

Unique Community Need Identification numbers:

Specific community needs are also addressed through the proposed program:

- CN3-Inadequate access to Behavioral Health
- CN6- Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children and elderly
- CN9- High rates of preventable hospital readmissions

Expansion of outpatient behavioral health services will address the community needs above by providing greater access to behavioral health care, thereby offsetting the increased use of medical and psychiatric emergency services. Furthermore, a larger behavioral health workforce within MHMRA will provide more opportunities for collaboration between providers and for patient education. MHMRA clinicians already engage in a variety of community collaborations and education activities, despite their tremendous workload. With the addition of qualified behavioral health personnel, more services can be provided.

DRAFT

<u>Related Category 3 Outcome Measure(s):</u>

IT-6.1: Percent improvement over baseline of patient satisfaction scores

Reasons/rationale for selecting the outcome measures:

We believe patient satisfaction that addresses involvement in shared decision making, access to providers, and better communication with providers, will reduce chronic over-use of psychiatric emergency services and in general reduce cost and improve efficiency.

Relationship to other Projects:

The proposed project is similar to several MHMRA DSRIP proposals, including the expansion of outpatient behavioral health services within other clinics (113180703.1.4, 113180703.1.5, 113180703.1.6 and 113180703.1.7) and a project which enhances the intensity of behavioral outpatient services (113180703.1.2). Extending outpatient behavioral health specialty service and increasing the intensity of these services will together ultimately provide responsive, appropriate levels of care.

The behavioral health crisis in Region 3 is considerable and the proposed initiatives in our RHP plan will only imply a small impression into the overall community need for treatment, but is a good start. The outpatient focus of many RHP Plan initiatives will help numerous facilities focus to treating the patients in an ambulatory setting as well as continued navigation of services with a focus to keeping patients from the inpatient unit. This initiative is similar to many others in the

sense of the category of behavioral health. The Region 3 Initiative Grid attached in the addendum will show the relationship to other programs.

Relationship to Other Performing Providers' Projects in the RHP: TBD

Plan for Learning Collaborative:

Consumer satisfaction with access outcomes will be assessed with input from consumer groups involving both patients and family members in the quality improvement loop. Similarly, rates of public psychiatric hospitalization will be presented to public psychiatric hospital representatives with an invitation for them to provide input on the improvement process.

Project Valuation:

In the effort to value the proposed project accurately, assistance was sought from H. Shelton Brown, Ph.D. of the UT Houston School of Public Health and Thomas Bohman, Ph.D. of the UT Austin Center for Social Work Research. Their consultation was limited to only the valuation section of this document. The primary valuation method uses cost-utility analysis (a type of cost-effectiveness research) and additional information is reported on potential, future costs saved. The value of each of the above delivery systems will be reviewed separately. The total valuation will be the sum of the individual component valuations.

Valuations should be based on economic evaluation principles that identify, measure, and value the relevant costs and consequences of two or more alternatives. Typically, one alternative is a new program while the second is treatment as usual. Cost-utility analysis (CUA) measures the cost of the program in dollars and the health consequences in utility-weighted units. This valuation uses a quality-adjusted life-years (QALYs) analysis that combines health quality (utility) with length of time in a particular health state.

Cost-utility analysis is a useful tool for assessing the value of new health service interventions due to the fact that it provides a standard way of valuing multiple types of interventions and programs. The valuation also incorporates costs averted when known (e.g., emergency room visits that are avoided). In order to make the valuations fair across potentially different types of interventions the common health goal, or outcome, is the number of life-years added. The benefits of the proposed program are valued based on assigning a monetary value of $50,000 per life-year gained due to the intervention. This threshold has been a standard way of valuing life-years in terms of whether the cost of the intervention exceeds this standard. The number of life-years added is based on a review of the scientific literature.

Cost-Utility Analysis: The Texas Recommended Assessment Guidelines (Texas Department of State Health Services, 2011) established a utilization management scheme for matching patient need to service packages of varying intensities. To provide an approximation of the value of an outpatient behavioral health program, we will review studies related to each of the four service packages described below as "levels of care."

Level One: Medication only

Individuals receiving Service Package One (SP1) have been assessed to have relatively less severe symptomatology and functional impairment. Therefore, they receive medications only accompanied by service coordination. A study by Chouinard and Albright (1997) found that individuals receiving medications versus a placebo gained 7 times the quality-adjusted years than without medications (QALY = .125). The proportion of individuals recommended to Level One at MHMRA is 56.5%. Assuming the program would serve 100 persons in a year, the following formula shows the total valuation:

100	(persons served)
0.125	(QALY gained)
.565	(proportion of patients recommended to Level One)
× $50,000	(life year value)
= $353,125	Level 1 QALY Value

Level Two: Medication plus therapy

About 18.5% of patients at MHMRA are recommended to Level Two services based on moderately severe need accompanied by diagnoses of major depression. This service package includes cognitive psychotherapy for depressive disorders in addition to medications. Pyne et al. (2003) compared the cost-effectiveness of medication services to medication plus CBT for depression. Their randomized controlled trial yielded an incremental QALY of 0.041 for the addition of CBT. Assuming the program would serve 100 persons in a year, the following formula shows the total valuation:

100	(persons served)
0.041	(QALY gained)
.185	(proportion of patients recommended to Level 2)
× $50,000	(life year value)
= $37,925	Level 2 QALY Valuation

Level Three: Medications and skills training

About 24% of patients at MHMRA are recommended to Level Three services, based on higher severity symptom and functional skill impairment. This package includes medications and skills training. Barton and colleagues (2009) compared social recovery oriented cognitive behavioral therapy (SRCBT) for people diagnosed with psychosis compared to case management alone (CMA); they reported a mean incremental QALY gain of 0.035. Assuming the program would serve 100 persons in a year; the following formula shows the valuation:

100	(persons served)
0.035	(QALY gained)
0.24	(proportion of patients recommended to Level 3)
× $50,000	(life year value)
= $42,000	Level 3 QALY Value

Level Four: Assertive Community Treatment (ACT) for Persons with Serious Mental Illness

Of consumers referred for services, about 4.1% are recommended for ACT Team treatment. This level of care represents the highest intensity service intervention. A 2012 study reported the cost-effectiveness of assertive community treatment as part of integrated care versus standard care in patients with schizophrenia (Karow, Reimer, König, Heider, Bock & Huber 2012). Results indicated the ACT intervention yielded a QALY of 0.76, whereas the treatment as usual groups resulted in a QALY of 0.66. Since the treatment is being contrasted with wait list or not treatment, the full QALY (0.76) applies. The incremental QALY for the ACT group was 0.10. Assuming the program would serve 100 persons in a year the following formula shows the valuation:

100	(persons served)
0.76	(QALY gained)
0.041	Proportion of patients recommended to Level Four
× $50,000	(life year value)
= $155,800	Level 4 QALY Value

Hospitalizations
When compared to the year prior to outpatient treatment admission, MHMRA patients have averaged 1.66 fewer public psychiatric hospital bed days per person. Cost savings from these individuals from averting hospital services can be calculated as follows:

100	(persons served)
1.66	(average hospital bed days per person per year averted)
X$700	(cost of hospital day)
= $116,200	Costs saved from averted hospitalizations

Public Psychiatric Emergency Visits
When compared to the year prior to outpatient treatment admission, MHMRA patients have averaged 0.212 fewer public psychiatric emergency room visits per person. Cost savings from these individuals from averting these emergency services can be calculated as follows:

100	(persons served)
.212	(average emergency service visits per person per year averted)
X$705	(cost of hospital day)
= $14,946	Costs saved from averted hospitalizations

Mental Health Services in the County Jail
When compared to the year prior to outpatient treatment admission, MHMRA patients have averaged 0.05 fewer county jail incarcerations per person. Cost savings from averting these jail bookings can be calculated as follows:

100	(persons served)
.05	(average county jail incarcerations per person per year averted)
40.6	Average days incarcerated
X$130	(cost of jail day with mental health service)
= $26,390	Costs saved from averted hospitalizations

Valuation Summary: This valuation analysis shows that the intervention will have a positive value for participants who receive the intervention(s). Summing the estimated utilities of all four levels of care above, the expected value of this proposal is $746,386 per 100 people served per year.

Project Option 1.12 ENHANCE SERVICE AVAILABILITY OF APPROPRIATE LEVELS OF BEHAVIORAL HEALTH CARE: ENHANCING THE INTENSITY OF OUTPATIENT BEHAVIORAL HEALTH SERVICES FOR ADULTS WITH SEVERE PSYCHIATRIC CONDITIONS

Unique RHP Project ID: 113180703.1.2

Performing Provider Name/TPI: MHMRA of Harris County / 113180703

Project Summary:
Provider**:** The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is a public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA provides inpatient, residential and outpatient treatments, including psycho-therapy, case management and medication management for individuals. MHMRA serves more than 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those individuals who received any agency service in FY12, 36.5% were medically indigent and 51.9% had Medicaid. Of those who received mental health services in FY12, such as those being proposed in this project, 55% were medically indigent and 34.9% had Medicaid.

Intervention(s): The program will increase the number of available providers and treatment teams to address each of the under-resourced levels of care designated by the TRAG.

Need for the project: Currently, many individuals who are recommended for higher levels of service intensity (levels two, three, and four) are served at lower levels due to lack of resources. MHMRA is not sufficiently funded to serve its customers at the assessed levels of need. This project would aim to raise the level of care for these underserved individuals to the recommended appropriate levels indicated by the TRAG algorithm.

Target population: Currently there are 1,532 individuals who are underserved due to resource limitations. The overall project goal is to provide appropriate, recommended levels of behavioral health care to all MHMRA of Harris County patients who wish to receive this optimal level of care. In numerical terms, the project will reduce the number of patients who are underserved due to resource limitations from about 17% to 0% over the course of the proposed program expansion.

Category 1 or 2 expected patient benefits: By DY 5 MHMRA expects to:

- increase utilization up to 10% over baseline
- reduce canceled appointments or no shows by 10% from baseline.

Category 3 outcomes: MHMRA expects to increase one domain of patient satisfaction (TBD) by 10% from baseline by DY5.

DRAFT

1.12 Enhance service availability of appropriate levels of behavioral health care: Enhancing the intensity of outpatient behavioral health services for adults with severe psychiatric conditions

<u>RHP Project Number:</u> 113180703.1.2
<u>Performing Provider/TPI:</u> Mental Health and Mental Retardation Authority of Harris County/ 113180703

Project Description:
The Mental Health and Mental Retardation Authority (MHMRA) of Harris County will enhance the intensity of outpatient behavioral health services for adults with severe psychiatric conditions by increasing the number of available providers and treatment teams to address each of the under-resourced levels of care.

The MHMRA of Harris County is a community mental health treatment organization in Houston, Texas. As the local mental health authority, the agency serves primarily indigent patients. Public mental health services for adults in Texas are provided within the structure of a state-wide utilization management scheme. This scheme is intended to provide the right type of service to the right person in the right amount. A pre-designed set of service packages, referred to as "levels of care", is matched to the consumer's rated level of functional and symptom severity. Using the assessment algorithm the Texas Recommended Assessment Guidelines (Department of State Health Services, 2011) MHMRA consumers are designated as falling into one of four levels of service. Due to resource limitations, MHMRA of Harris County currently under serves a number of its adult consumers, providing fewer services than recommended by the state guidelines.
In order to address the gap between recommended services and available resources we will choose a project option 1.12.4 "Other": Implement other evidence-based project to enhance service availability of appropriate levels of behavioral health care in an innovative manner not described in the project options above. Specifically, the program will increase the number of available providers and treatment teams to address each of the under-resourced levels of care designated by the TRAG.

Goals and Relationship to Regional Goals:
The overall project goal is to provide appropriate, recommended levels of behavioral health care to all MHMRA of Harris County patients who wish to receive this optimal level of care. In numerical terms, the project will reduce the number of patients who are underserved due to resource limitations from about 17% to 0% over the course of the proposed program expansion. The proposed project directly meets broad goals identified by the regional needs assessment. First, it improves and builds upon an existing program that has shown positive gains in providing best-practices for patient-centered care. Furthermore, by providing enhanced evidence-based services to patients, the program will meet the regional goal of improving responsiveness to the needs of the patient and increasing access to specialty behavioral health care. Moreover, the program supports the regional goal of developing a culture of patient-centered care whereby the patient/consumer plays a more active role as a stakeholder.

Challenges:
Workforce limitations may provide staff recruitment challenges which we will address by allowing significant lead time and advance planning.

5-Year Expected Outcome:
The 5 year outcomes of the proposed program include:
1) Reduction in intensive service use by individuals not receiving adequate care at a lower level
2) Increased functional improvement and satisfaction with services reported by patients
3) Increased access to specialty care for the underserved of Houston

Starting Point/Baseline:
Currently there are 1,532 individuals who are underserved due to resource limitations. Current clinical space will be used in addition to redesigning available MHMRA space or seeking additional space as needed to house additional staff over the DSRIP period.

Rationale:
Currently, many individuals who are recommended for higher levels of service intensity (levels two, three, and four) are served at lower levels due to lack of resources. MHMRA is not sufficiently funded to serve its customers at the assessed levels of need. This project would aim to raise the level of care for these underserved individuals to the recommended appropriate levels indicated by the TRAG algorithm. The five–year goals of this service enhancement would include reducing public emergency psychiatric center visits, reducing public psychiatric hospital admissions, reducing 30-day re-admissions, and reducing costs as reflected in in-patient bed days. These enhancements would be implemented at the four adult mental health outpatient clinics, each located within a geographic quadrant of Harris County.

Schnapp, Burruss, Hickey, Mortensen and Raffoul (2011) have demonstrated that under serving clients have negative consequences. In a study of over 5,300 MHMRA outpatients served in 2010 and 2011, those served at recommended levels averaged 0.68 fewer public emergency psychiatric center visits per person per year than their underserved counterparts; these customers were underserved due to resource limitations. This is an avoidable cost of $476 per year for each underserved patient.

A more recent analysis of 7,250 adult mental health outpatients, 27% of whom were underserved due to resource limitations, indicated a similar effect on public psychiatric hospitalizations. Those served at recommended appropriate levels logged 0.57 fewer public psychiatric hospital admissions per person per year, and averaged a reduction of more than seven hospital bed days per person per year. At $700 per bed day, savings amounted to $4,900 per person per year.

An estimate of need is based on a count of currently underserved individuals. At present, 1,532 adult mental health outpatients are underserved: 295 are recommended to Level Two, 1,132 recommended to Level Three, and 105 are recommended to Level Four. We propose to serve these individuals at recommended levels with the addition of 41 new staff FTE's (30 Rehab Techs, 8 Therapists and 3 Clinical Team Leaders).

DRAFT

Milestones and Metrics:
In order to measure the progress towards the stated goals, we have chosen to focus on I-11 (I-11.1) increased utilization of community behavioral health care and I-13 (I-13.1) adherence to scheduled appointments - percent decrease in the number of canceled or no-show appointments as our improvement targets. If these metrics are met then it is a good indication that behavioral health services are being utilized by those in need.

Unique community need identification number the project addresses:
Specific community needs are also addressed through the proposed program:

- CN3-Inadequate access to Behavioral Health
- CN6- Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children and elderly
- CN9- High rates of preventable hospital readmissions

Related Category 3 Outcome Measure(s):
IT-6.1 Percent improvement over baseline of patient satisfaction scores
Expansion of outpatient behavioral health services will address the community needs above by providing greater access to behavioral health care, thereby offsetting the increased use of ER services. Furthermore, a larger behavioral health workforce within MHMRA will provide more opportunities for collaboration between providers and for patient education which will also be demonstrated by increased patient satisfaction. MHMRA clinicians already engage in a variety of community collaborations and education activities, despite their tremendous workload. With the addition of qualified behavioral health personnel, more services can be provided which will result in greater patient satisfaction.

Relationship to other Projects:
This project will interface with the expansion of the collaborative primary medical and behavioral health care and with integrating substance abuse treatment services into mental health services by referring individuals into the appropriate ongoing care alternative. The enhancement of services will also be augmented by the proposed expansion of behavioral health outpatient services intended to eliminate MHMRA's front-door wait list.

The behavioral health crisis in Region 3 is considerable and the proposed initiatives in our RHP plan will only imply a small impression into the overall community need for treatment, but is a good start. The outpatient focus of many RHP Plan initiatives will help numerous facilities focus to treating the patients in an ambulatory setting as well as continued navigation of services with a focus to keeping patients from the inpatient unit. This initiative is similar to many others in the sense of the category of behavioral health. The Region 3 Initiative Grid attached in the addendum will show the relationship to other programs.

Plan for Learning Collaborative:
We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and

DRAFT

testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

In the effort to value the proposed project accurately, assistance was sought from H. Shelton Brown, Ph.D. of the UT Houston School of Public Health and Thomas Bohman, Ph.D. of the UT Austin Center for Social Work Research. Their consultation was limited to only the valuation section of this document. The primary valuation method uses cost-utility analysis (a type of cost-effectiveness research) and additional information is reported on potential, future costs saved. The value of each of the above delivery systems will be reviewed separately. The total valuation will be the sum of the individual component valuations.

Valuations should be based on economic evaluation principles that identify, measure, and value the relevant costs and consequences of two or more alternatives. Typically, one alternative is a new program while the second is treatment as usual. Cost-utility analysis (CUA) measures the cost of the program in dollars and the health consequences in utility-weighted units. This valuation uses quality-adjusted life-years (QALYs) analysis that combines health quality (utility) with length of time in a particular health state.

Cost-utility analysis is a useful tool for assessing the value of new health service interventions due to the fact that it provides a standard way of valuing multiple types of interventions and programs. The valuation also incorporates costs averted when known (e.g., emergency room visits that are avoided). In order to make the valuations fair across potentially different types of interventions, the common health goal, or outcome, is the number of life-years added.

The benefits of the proposed program are valued based on assigning a monetary value of $50,000 per life-year gained due to the intervention. This threshold has been a standard way of valuing life-years in terms of whether the cost of the intervention exceeds this standard. The number of life-years added is based on a review of the scientific literature.

Cost-Utility Analysis: Public mental health services for adults in Texas are provided within the structure of a state-wide utilization management scheme. This scheme is intended to provide the right type of service to the right person for the right amount. A pre-designed set of service packages, referred to as "levels of care," is matched to the consumer's rated level of functional and symptom severity. All MHMRA consumers are designated as falling into one of four levels of service. Due to resource limitations, MHMRA of Harris County currently underserves a number of its adult consumers, providing fewer services than recommended. Currently, individuals who are recommended for Levels Two, Three, and Four are underserved due to lack of resources. MHMRA is not funded at la level sufficient to the assessed needs of its customers. We will address consumers in these service levels one-by-one:

Level Two: Cognitive Behavior Therapy and Medication for Major Depression

At present, 295 MHMRA consumers with major depression are underserved due to resource limitations, receiving only medication and service coordination when cognitive behavior therapy (CBT) is a recommended service.

Schoenbaum et al. (2001) compared the cost-effectiveness of medication services to medication plus CBT for depression. Their randomized controlled trial yielded an incremental QALY of 0.0226 for the addition of CBT. Applying this estimate to the current population the value of enhancing services for these underserved individuals from Level Two can be calculated as follows:

295 (persons served)
0.0226 (QALY gained)
× $50,000 (life year value)
= $333,350 Level 2 QALY Value

Level Three: Skills Training with Optional Best Practice Services for Persons with Moderately Severe Schizophrenic and Manic Depressive Disorders

There are currently 1,132 MHMRA consumers receiving medication and service coordination services *without* recommended skills training services due to agency resource limitations. Barton and colleagues (2009) compared social recovery oriented cognitive behavioral therapy for people diagnosed with psychosis compared to case management alone (CMA). They reported a mean incremental QALY gain of 0.035. Applying this estimate to the current population the value of enhancing services for these underserved individuals from Level Three can be calculated as follows:

1,132 (persons served)
0.035 (QALY gained)
× $50,000 (life year value)
= $1,981,000 Level 3 QALY Value

Levels Two and Three Hospital Costs Averted

Local data indicate that "underserved" individuals require higher levels of public psychiatric hospital care. In a sample of 6,275 consumers studied over seven years, underserved consumers logged 0.819 additional hospital bed days per year. The increment in costs that could be averted with these interventions can be calculated as:

1,427 (persons served)
0.819 (psychiatric bed days gained)
× $700 (local bed day value)
= $818,099 Cost Savings- hospitalizations averted

Level Four: Assertive Community Treatment (ACT) for Persons with Serious Mental Illness

Of the MHMRA consumers who have been recommended for ACT Team treatment, 105 are currently served at lower levels of service intensity.

1) QALYs

A 2012 reported the cost-effectiveness of assertive community treatment as part of integrated care versus standard care in patients with schizophrenia (Karow, Reimer, König, Heider, Bock & Huber ...2012). Results indicated the ACT intervention yielded a QALY of 0.76, whereas the treatment as usual groups resulted in a QALY of 0.66. The incremental QALY for the ACT group was 0.10. Applying this estimate to the current population the value of enhancing services for these underserved individuals from Level Four can be calculated as follows:

105	(persons served)
0.10	(QALY gained)

DRAFT

× $50,000	(life year value)
= $525,000	Level 4 QALY Value

2) Cost Effectiveness and Cost Savings

Cost-effectiveness analysis (CEA) is similar to CUA, except that the cost averted is compared to a common health outcome, such as cost per depression-free day. We identified several relevant cost-effectiveness studies. Essock and colleagues (1998) found that societal costs for participants who joined the study when they were out of the hospital were $29,013 (2012 US dollars) per year compared to the comparison group ($24,581; Essock and colleagues reported costs over 18 months; they are pro-rated to 12 here.) However, for participants who joined the study while in the hospital, ACT participants had lower costs of $57,743 compared with standard treatment participants ($84,959). The net gain assuming equal patients of each type would be $27,216.

Latimer (2005) reviewed the effectiveness literature on ACTs and reported that a high-fidelity ACT team can reduce number of hospital days by about 78%. Latimer (2005) found the direct ACT services costs of about $12,291 (2012 US dollars) per client per year in 1999/2000, while the direct cost for an inpatient day in the adult psychiatry ward was $296. Based on these assumptions, for a patient spending on 60 days annually in a psychiatric hospital per year, a 78% reduction would yield a saving of 46.8 (days) × $296 = $13,852. The net difference between ACT and treatment as usual was $1,562. These calculations do not factor in any other potential cost saving from reduction in emergency department usage or social costs such as criminal justice encounters.

Lehman (1999) examined the cost-effectiveness of ACT versus standard care and found that the overall average cost per ACT client was $24,385 (2012 US dollars) less than the cost per client per year for treatment as usual ($78,659 cost per ACT client versus $103,044 cost per client for treatment as usual).

The average gain across all studies was $17,721. If we were to value the program based on cost saving the total valuation would be:

105	(persons served)
× $17,721	(cost savings)
= $1,860,705	Level 4 Cost Savings

Total Value

Combining the estimates for each of the three service packages and for averted hospital costs, one arrives at a total as follows:

$333,350	Level 2 QALY Value
$1,981,000	Level 3 QALY Value
$818,099	Levels 2 & 3 Cost Savings
$525,000	Level 4 QALY
+ $1,860,705	Level 4 Cost Savings
$5,518,154	**Total Estimated Value**

DRAFT

Project Option 1.9 EXPAND SPECIALTY CARE CAPACITY:
IDD SPECIALIZED TREATMENT AND REHABILITATIVE SERVICES (STARS)

Unique RHP Project ID: 113180703.1.3

Performing Provider Name/TPI: MHMRA of Harris County / 113180703

Provider: The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA provides inpatient, residential and outpatient treatments, including psycho-therapy, case management and medication management for individuals. MHMRA serves about 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those individuals who received services in FY12, 60.0% were medically indigent and 32% had Medicaid.

Intervention(s): The primary goal of the project is to expand capacity for the current specialized behavioral health services provided to people with Intellectual and Developmental Disabilities (IDD) and/or Autism Spectrum Disorders (ASD) and co-occurring mental illness by adding additional staff.

Need for the project: Approximately 106,494 Harris County residents are diagnosed with an intellectual and developmental disability; 24,000 with autism spectrum disorder; and of people in these groups, 38,700 are dually diagnosed with co-occurring mental illness. Like the rest of the state, a behavioral health service for these individuals is a specialty that is lacking in Harris County. In response to this service gap, MHMRA developed a specialty outpatient clinic for people with co-occurring disorders; however, the need far exceeds the capacity of the current clinic.

Target population: The target population for this service will be the waiting list of over 900 people for clinic services in addition to any other referrals for individuals with co-morbid mental health and IDD diagnoses. It is anticipated the program will provide service for about 477 patients.

Category 1 or 2 expected patient benefits: Increase specialty care clinic volume to 30% more over baseline by DY5 (I-23.1).

Category 3 outcomes: MHMRA expects to increase one domain of patient satisfaction (TBD) by 10% from baseline by DY5.

DRAFT

1.9 Expand Specialty Care Capacity: 1.9.2 - IDD Specialized Treatment and Rehabilitation Services (STARS)

RHP Project Number: 113180703.1.3
Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/ 113180703

Project Description:
The Mental Health and Mental Retardation Authority (MHMRA) proposes to improve access to specialty care for children and adults with co-occurring psychiatric/behavioral and Intellectual and Development Disabilities (IDD) by expanding services and staffing.

MHMRA is a community mental health treatment organization in Houston, Texas. As the local mental health authority, the agency serves primarily indigent patients. The proposed project seeks to expand outpatient specialty services for children and adults with complex co-occurring psychiatric/behavioral and Intellectual and Developmental Disabilities (IDD) or Autism Spectrum Disorders (ASD). This project meets the Delivery System Incentive Reform Payment (DSRIP) Pool 1115(a) waiver component 1.9, Enhance service availability to appropriate levels of care— option 1.9.2 Improve access to specialty care.

Goals and Relationship to Regional Goals:
The primary goal of the project is to expand capacity for specialized behavioral health services to people with Intellectual and Developmental Disabilities (IDD) and/or Autism Spectrum Disorders (ASD) and co-occurring mental illness. Additionally, it is hoped patient satisfaction will improve. These goals are consistent with the regional goals and community needs discussed below.
Regional Goals:
The project will increase access to specialty care in Harris County and will transform behavioral healthcare for the target population by providing timely, coordinated clinical care. When the behavioral health needs of people with IDD/ASD and mental illness are not treated until a crisis occurs, resulting interventions focus on episodic, emergent care without adequate coordination of aftercare. The project will provide coordinated care to prevent crises or resolve them with successful transition into stable maintenance. Furthermore, by increasing training capacity for new professionals, this project will develop a skilled workforce to multiply community options and improve access to treatment while improving satisfaction and behavioral health outcomes for the target population.

Challenges:
One of the challenges will be hiring and training the appropriate level of staff to provide increased access and service to the targeted population. The proposed project will develop the workforce of clinicians who are competent to work with the target population and are comfortable doing so. MHMRA will continue to build upon existing partnerships with local universities, medical schools, public and private Medicaid providers and other agencies to develop clinicians who are skilled and willing to treat people with IDD/ASD, thereby growing an ever-expanding pool of competent community providers. The contractual agreements between MHMRA and medical schools and universities are already in place to provide internships and

DRAFT

practicum opportunities to students and residents in child psychiatry, psychology, nursing, and social work. The results of pre/post surveys of training for child psychiatry residents show that there is a consistent increase in both content knowledge related to IDD and subjective comfort level with evaluation/treatment of persons with co-morbid IDD and psychiatric illness following the training rotation offered by MHMRA's IDD Division. Expansion of the clinic will allow MHMRA to reach a larger pool of clinicians and provide training stipends to encourage greater participation.

5-Year Expected Outcome for Provider and Patients:
MHMRA expects to see an increase in utilization of specialty care services for as many as 550 patients in DY4 to 622 patients by DY5.

Starting Point/Baseline:
The STARS clinic serves approximately 400 people with IDD/ASD and co-occurring mental illness are annually through outpatient clinic services. In an analysis conducted in 2006, the agency noted a 97% reduction in hospitalization rate, which represents a cost savings for the community and provides patient care in less restrictive settings. The clinic is staffed with one Psychiatrist, two Licensed Clinical Psychologists, one LCSW, one LVN, one RN, one Board Certified Behavior Analyst and one LPC/Director. All of these clinicians specialize in co-occurring mental illness and developmental disabilities. Current clinical space will be used in addition to redesigning available MHMRA space or seeking additional space as needed to house additional staff over the DSRIP period.

Rationale:
The existence of co-occurring mental illness in people with IDD/ASD has been widely recognized; however, treatment of psychiatric conditions in this population is still in its infancy, with unremarkable treatment outcomes. Poor treatment outcomes include more frequent psychiatric hospitalizations; longer admissions and later identification in the psychiatric event, resulting in higher levels of care. Furthermore, studies examining the treatment of co-occurring disorders report that mental health clinicians, including psychiatrists, psychologists, social workers, nurses and other disciplines, are rarely formally trained to treat people with IDD/ASD and MI. Lack of exposure to people with developmental disabilities causes clinicians to shy away from these patients; and when they do become involved, they intervene later in the course of the disease process and tend to use medication for sedating purposes and not in accordance with the person's mental illness.

Texas has documented similar concerns. In May 2011, the directors of IDD programs in MHMRs across Texas were queried about the resources in their areas for responding to behavioral crises. Across the state they reported a lack of skilled clinicians and also noted psychiatric hospitals often refused inpatient services to individuals with co-morbid IDD and psychiatric illness in crisis because they lacked expertise in the population. Conversely, when admitted, they had extended inpatient stays with little improvement in behavioral functioning. With no other alternative in Texas, communities turn to institutional care in State Supported Living Centers (formerly called State Schools) to manage and treat these individuals. This is an expensive choice. The current annual cost for a person with IDD in a state supported living center is $177,624.

DRAFT

Harris County also has documented similar needs. Approximately 106,494 Harris County residents are diagnosed with an intellectual and developmental disability; 24,000 with autism spectrum disorder; and of people in these groups, 38,700 are dually diagnosed with co-occurring mental illness. Like the rest of the state, a behavioral health service for these individuals is a specialty that is lacking in Harris County. In response to this service gap, MHMRA developed a specialty outpatient clinic for people with co-occurring disorders; however, the need far exceeds the capacity of the current clinic. MHMRA has a waiting list of over 900 people for clinic services, yet the current capacity remains at 400. MHMRA of Harris County proposes to expand an innovative outpatient option, the Specialized Treatment and Rehabilitative Services (STARS) clinic, to provide behavioral medicine and behavioral support services to create a safety net for people with IDD/ASD and co-occurring mental illness who reside in Harris County. The existing STARS clinic has been in operation for over 20 years with outpatient services that include assessment, parent/caregiver training, casework, medication management and education, and skills training to address the behavioral health needs of persons with dual diagnoses of IDD/ASD and mental illness, and whose needs exceed the capacity and expertise of the existing mental health system. However, the demand for services far exceeds the clinic's capacity.

STARS is a unique clinic with highly skilled clinicians and IDD/ASD specialists who work together to achieve positive outcomes for people with serious behavioral and/or mental health problems. Clinicians and specialty paraprofessionals provide traditional therapies adapted for people with IDD/ASD and mental illness, family interventions and in-home applied behavior analysis training for families. The proposed expansion would add one psychiatrist, two clinical psychologists, two behavior analysts, one RN, two team leaders and clerical supports to extend the safety net to private providers who are unable to find expertise among available clinicians in Harris County.

Project Components:

Through the expansion of specialty care services project, we propose to meet all required project components listed below and believe that the selected milestones and metrics relate to the project components.

a) Increase service availability with extended hours
b) Increase number of specialty clinic locations
c) Implement transparent, standardized referrals across the system
d) Conduct quality improvement for project using methods such as rapid cycle improvement

Milestones and Metrics:

The goals are consistent with the regional goals and community needs discussed above. Furthermore, the improvement metrics chosen for this project (I-23.1: Increase specialty care clinic volume of visits and evidence of improved access for patients seeking services) will determine the progress MHMRA is making to meet our stated goals.

Unique community need identification number the project addresses:

Expansion of the STARS clinic will address the following community needs:

- CN3-Inadequate access to Behavioral Health
- CN6- Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children and elderly
- CN9- High rates of preventable hospital readmissions

- CN18- Insufficient access to integrated care programs for behavioral health and physical health conditions

Related Category 3 Outcome Measure(s):
IT 6.1 Percent improvement over baseline of patient satisfaction scores for one domain of patient satisfaction.

Rationale for selecting the outcome measures:
Harris County MHMRA proposes to expand an innovative outpatient option, the Specialized Treatment and Rehabilitative Services (STARS) clinic, to provide behavioral medicine and behavioral support services to create a safety net for people with IDD/ASD and co-occurring mental illness who reside in Harris County. This program is a unique clinic with highly skilled clinicians and IDD/ASD specialists who work together to achieve positive outcomes for people with serious behavioral and/or mental health problems. Clinicians and specialty paraprofessionals provide traditional therapies adapted for people with IDD/ASD and mental illness, family interventions and in-home applied behavior analysis training for families. These services allow for the best opportunity for patient satisfaction as they provide the appropriate level of care for this critical population.

Relationship to Other Projects:
This proposed project has activities related to the following MHMRA proposals: IDD Consultation and Liaison Service and IDD/ASD Wrap-around and In-home Services.

The behavioral health crisis in Region 3 is considerable and the proposed initiatives in our RHP plan will only imply a small impression into the overall community need for treatment, but is a good start. The outpatient focus of many RHP Plan initiatives will help numerous facilities focus to treating the patients in an ambulatory setting as well as continued navigation of services with a focus to keeping patients from the inpatient unit. This initiative is similar to many others in the sense of the category of behavioral health. The Region 3 Initiative Grid attached in the addendum will show the relationship to other programs.

Plan for Learning Collaborative:
We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:
In the effort to value the proposed project accurately, assistance was sought from H. Shelton Brown, Ph.D. of the UT Houston School of Public Health and Thomas Bohman, Ph.D. of the UT Austin Center for Social Work Research. Their consultation was limited to only the valuation section of this document. The primary valuation method uses cost-utility analysis (a type of cost-effectiveness research) and additional information is reported on potential, future costs saved. The value of each of the above delivery systems will be reviewed separately. The total valuation will be the sum of the individual component valuations.

Valuations should be based on economic evaluation principles that identify, measure, and value the relevant costs and consequences of two or more alternatives. Typically, one alternative

DRAFT

is a new program while the second is treatment as usual. Cost-utility analysis (CUA) measures the cost of the program in dollars and the health consequences in utility-weighted units. This valuation uses quality-adjusted life-years (QALYs) analysis that combines health quality (utility) with length of time in a particular health state.

Cost-utility analysis is a useful tool for assessing the value of new health service interventions due to the fact that it provides a standard way of valuing multiple types of interventions and programs. The valuation also incorporates costs averted when known (e.g., emergency room visits that are avoided). In order to make the valuations fair across potentially different types of interventions, the common health goal, or outcome, is the number of life-years added.

The benefits of the proposed program are valued based on assigning a monetary value of $50,000 per life-year gained due to the intervention. This threshold has been a standard way of valuing life-years in terms of whether the cost of the intervention exceeds this standard. The number of life-years added is based on a review of the scientific literature.

Cost-Utility Analysis: Expansion of the current STARS-ABA program will provide resources for the 900 currently awaiting services. About 40% of the average population of IDD/ASD patients has a comorbid psychiatric diagnosis, most commonly depression, psychosis or ADHD. Many dually diagnosed individuals are within the mild to moderate range of intellectual impairment, making CBT a viable treatment. Due to resource limitations, many are receiving only medication and service coordination when cognitive behavior therapy (CBT) is a recommended service.

Schoenbaum et al. (2001) compared the cost-effectiveness of medication services to medication plus CBT for depression. Their randomized controlled trial yielded an incremental QALY of 0.0226 for the addition of CBT. Applying this estimate to the current population the value of enhancing services for these underserved individuals can be calculated as follows:

100	(persons served)
0.40	(percent with comorbid disorders)
0.0226	(QALY gained)
x $50,000	(life year value)
$45,200	**QALY Value**

Cost Savings: Cost-effectiveness analysis (CEA) is similar to CUA, except that the cost averted is compared to a common health outcome, such as cost per depression-free day. We did identify a benefit-cost study that is related.

MHMRA's existing STARS clinic sees approximately 400 people with IDD/ASD and co-occurring mental illness annually through outpatient clinic services. Estimates have put the rate of co-occurring mental health problems, such as depression and schizophrenia among this population as high as 40% making the treatment of these individuals more complex and costly (Lai, Hung, Lin, Chien & Lin, 2011; Tsakanikos, Sturmey, Costello, Holt & Bouras, 2007). After the implementation of this service in 1999, the inpatient hospitalization rate was 97% lower for individuals who received services in the following fiscal year. The average cost of inpatient hospitalization in the Harris County Hospital District is $700 per day, with an average length of

stay for IDD/AS patients of 11.89 days (SD=8.13, N=524). Based on these findings the cost savings can be calculated as follows:

.05	(percent hospitalized prior to treatment)
100	(persons served)
0.97	(percent of hospital reduction)
11.89	(average IDD patient length of stay)
x $700	(average inpatient cost per diem)
$40,366	Cost Savings: Hospitalization

Since hospital costs are included in the alternative method presented below, these costs are not separately claimed in the valuation.

Alternative Cost Offset Estimation

An additional study provides evidence that additional costs will be reduced by the implementation of specific behavioral treatments, such as ABA to the IDD/ASD population. The effectiveness of ABA has been well documented. By using a randomized, single-blind controlled study that compared treatment as usual with the use of a specialized team, similar to the proposed STARS program, in addition to treatment as usual, significant cost savings and improvements were noted on the Lethargy and Hyperactivity subscales (p<.008) of the Aberrant Behavior Checklist (Hassiotis, Robotham, Canagasabey, Romeo, Langridge, Blizard, Murad & .King, 2009). This study also found that at the end of a 6 month trial the costs for the treatment group were £2200 UK ($3,525 US) less than for the control when cost offset was calculated for increased community supports by the control group. When applied to 100 served individuals, a savings of **$352,500 per 100 served.**

Summary and Total Valuation: This valuation analysis shows that the intervention will have a positive value for participants who receive the intervention(s). **The total valuation is ($45,200 QALY-based estimate plus $352,500 cost offset estimation) $397,700 per 100 people served per year.**

DRAFT

Project Option 1.12 ENHANCE SERVICE AVAILABILITY OF APPROPRIATE LEVELS OF BEHAVIORAL HEALTH CARE: EXPANSION OF OUTPATIENT BEHAVIORAL HEALTH SERVICES FOR ADULTS WITH SEVERE PSYCHIATRIC CONDITIONS (Northeast)

Unique RHP Project ID: 113180703.1.4

Performing Provider Name/TPI: MHMRA of Harris County / 113180703

Provider**:** The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is a public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA provides inpatient, residential and outpatient treatments, including psycho-therapy, case management and medication management for individuals. MHMRA serves more than 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those individuals who received any agency service in FY12, 36.5% were medically indigent and 51.9% had Medicaid. Of those who received mental health services in FY12, such as those being proposed in this project, 55% were medically indigent and 34.9% had Medicaid.

Intervention(s): MHMRA will place one new treatment team which can serve about 500 consumers on an outpatient basis in the Northeast region of the city.

Need for the project: Estimates place approximately 78,000 adults with severe mental illness unable to access treatment from the public or private mental health systems in Harris County. The gap between service needs of seriously mentally ill adults in the county and available public service capacity is most evident in the current waiting list of 1,695 for ongoing outpatient service. MHMRA of Harris County routinely operates at or above its state mandated, contracted service capacity, averaging about 8,800 adult consumers served each month. At this level, however, access is inadequate for many who apply for service.

Target population: Seriously mentally ill adults in the Northeast region of Harris County currently unable to access mental health services. It is anticipated the program will provide service for about 500 patients.

Category 1 or 2 expected patient benefits:

- Increase utilization of services to 500 patients more than baseline by DY 5
- A 10% decrease from baseline in PES/HCPC admissions by DY5

Category 3 outcomes: MHMRA expects to increase one domain of patient satisfaction (TBD) by 10% from baseline by DY5.

1.12 Enhance service availability of appropriate level of behavioral health care: Expansion of outpatient behavioral health services for adults with severe psychiatric conditions (Northeast)

RHP Project Number: 113180703.1.4
Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/ 113180703

Project Description:
The Mental Health and Mental Retardation Authority (MHMRA) of Harris County proposes to increase outpatient capacity to potentially eliminate the current wait list for services in this geographic area.

The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is a public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA serves more than 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those who received mental health services in FY12, such as those being proposed in this project, 55% were medically indigent and 34.9% had Medicaid. In an effort to provide needed services to the most critically ill population, MHMRA proposes to increase outpatient capacity by approximately 500 individuals potentially eliminating the current wait list for services in this geographic area. In order to address this issue we will choose to focus on project option 1.12.2: Expand the number of community based settings where behavioral health services may be delivered in underserved areas.

It is important to note that we are proposing four similar projects, each under the 1.12.2 umbrella, which would expand outpatient behavioral health services for adults in each of our existing clinics. Because the goals and rationale are identical, the narratives will be repetitive; however, each of the expansion programs serve unique geographical needs, and therefore, each of the projects are critical to addressing the community needs.

Goals and Relationship to Regional Goals:
Goals include improving access to community mental health services by establishing additional service providers (e.g., an additional treatment team) among existing MHMRA community clinics in Harris County. Specifically, we aspire to place one new treatment team in the Northeast region. Each treatment team can serve roughly 500 consumers.
The proposed project directly meets broad goals identified by the regional needs assessment. First, it improves and builds upon an existing program, which has shown positive gains in providing best-practices for patient-centered care. Furthermore, by providing enhanced, evidence-based services to patients the program will meet the regional goal set out above. Moreover, the program supports the regional goal of developing a culture of patient-centered care whereby the patient/consumer plays a more active role as a stakeholder.

Challenges:

Workforce limitations may provide staff recruitment challenges requiring significant lead time and advanced planning. Clinic managers will work closely with human resources and administration to ensure timely staffing of the proposed treatment teams.

Expected 5-year Outcomes:

5) Staffing of the new team: 1 Psychiatrist, 1 Nurse, 1 Clinical Team Leader, 4 Licensed Practitioners of the Healing Arts, 12 Rehabilitation Clinicians, 1 Administrative Assistant, 1 Clerical Support Staff, 1 Business Office Coordinator, and 1 HIT Staff.
6) Additional need is anticipated as initiatives to reduce 30-day re-hospitalizations, preventable emergency department visits, and jail recidivism, may create additional demand.
7) Provision of outpatient mental health service has been locally documented to reduce emergency psychiatric center visits by .37 visits per person per year; it has also has been shown to reduce public psychiatric hospital use by 1.66 bed days per person per year in a sample of 25,000 outpatients (served between the years 2005 and 2012).
8) Elimination of wait lists and improved geographic access can be expected to increase access to services, improved satisfaction, and decreased intensive service use. Reductions in intensive service (#3 and #4 above) use are firmly in line with regional project goals.

In order to measure the progress towards the stated goals, we have selected improvement metrics that measure increased utilization of behavioral health (I-11.1) and decreased emergency psychiatric service use (I-X).

Starting Point/Baseline:

As mentioned previously, 8,800 consumers are served among the four existing outpatient clinics. We seek to expand the provision of services by 1 team per current location, which would serve roughly 500 people per site, and add one additional team where the most need is determined. Current clinical space will be used in addition to redesigning available MHMRA space or seeking additional space as needed to house additional staff over the DSRIP period.

Rationale:

The community mental health system in Harris County has a limited capacity for service that is insufficient to the needs of its residents. The Mental Health Needs Council of Harris County has estimated that 153,000 of the 552,000 Harris County adults with mental illness have a severe mental illness (Depression, Bipolar Disorder, and Schizophrenia). These individuals are among the 96,200 Harris County adults who have no public (Medicaid or Medicare) or private health insurance and therefore, are totally dependent on the public mental health service system for treatment. In 2007, approximately 27,000 adults received services from the public mental health system; 18,200 of these were uninsured (a number representing only 19% of estimated need). By deduction, one can conclude that approximately 78,000 adults with severe mental illness failed to access treatment from the public or private mental health systems.

The gap between service needs of seriously mentally ill adults in the county and available public service capacity is most evident in the waiting list for ongoing outpatient service. MHMRA of Harris County routinely operates at or above its state mandated, contracted service

capacity, averaging about 8,800 adult consumers served each month. At this level, however, access is inadequate for many who apply for service.

On August 31 (2012), the MHMRA waitlist for adult mental health outpatient services rested at 1,695, a level that has persisted for several years. Further, tenure on the waiting list approached five months, an average of 149.16 days. The majority of consumers on the MHMRA waitlist (31.1%) reside in the Northeast section of town.

The rationale for requesting funding for each project is based on the aforementioned need for additional mental health services in the county, and the existing waitlist. If MHMRA were to expand only one or two of the clinics, only 400-800 new consumers could be served and the waitlist would remain in effect. Additionally, it is expected that the need for mental health services will continue to grow, and therefore, limited expansion will simply not address the current needs of those on the waitlist or the community needs of those who initiated services with MHMRA.

Unique Community Need Identification numbers:

Specific community needs are also addressed through the proposed program:

- CN3-Inadequate access to Behavioral Health
- CN6- Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children and elderly
- CN9- High rates of preventable hospital readmissions

Expansion of outpatient behavioral health services will address the community needs above by providing greater access to behavioral health care, thereby offsetting the increased use of medical and psychiatric emergency services. Furthermore, a larger behavioral health workforce within MHMRA will provide more opportunities for collaboration between providers and for patient education. MHMRA clinicians already engage in a variety of community collaborations and education activities, despite their tremendous workload. With the addition of qualified behavioral health personnel, more services can be provided.

<u>Related Category 3 Outcome Measure(s):</u>

IT-6.1: Percent improvement over baseline of patient satisfaction scores

Reasons/rationale for selecting the outcome measures:

We believe patient satisfaction that addresses involvement in shared decision making, access to providers, and better communication with providers, will reduce chronic over-use of psychiatric emergency services and in general reduce cost and improve efficiency.

By enhancing service availability of appropriate levels of outpatient behavioral health care we will address the community needs. Also providing greater access to behavioral health care and the addition of qualified behavioral health care professionals will allow for the provision of more services, great patient satisfaction and improved patient outcomes.

Relationship to other Projects:

The proposed project is similar to several MHMRA DSRIP proposals, including the expansion of outpatient behavioral health services within other clinics (113180703.1.1, 113180703.1.5, 113180703.1.6 and 113180703.1.7) and a project which enhances the intensity of behavioral outpatient services (113180703.1.2). Extending outpatient behavioral health specialty service and increasing the intensity of these services will together ultimately provide responsive, appropriate levels of care.

The behavioral health crisis in Region 3 is considerable and the proposed initiatives in our RHP plan will only imply a small impression into the overall community need for treatment, but is a good start. The outpatient focus of many RHP Plan initiatives will help numerous facilities focus to treating the patients in an ambulatory setting as well as continued navigation of services with a focus to keeping patients from the inpatient unit. This initiative is similar to many others in the sense of the category of behavioral health. The Region 3 Initiative Grid attached in the addendum will show the relationship to other programs.

Relationship to Other Performing Providers' Projects in the RHP: TBD

Plan for Learning Collaborative:

Consumer satisfaction with access outcomes will be assessed with input from consumer groups involving both patients and family members in the quality improvement loop. Similarly, rates of public psychiatric hospitalization will be presented to public psychiatric hospital representatives with an invitation for them to provide input on the improvement process.

Project Valuation:

In the effort to value the proposed project accurately, assistance was sought from H. Shelton Brown, Ph.D. of the UT Houston School of Public Health and Thomas Bohman, Ph.D. of the UT Austin Center for Social Work Research. Their consultation was limited to only the valuation section of this document. The primary valuation method uses cost-utility analysis (a type of cost-effectiveness research) and additional information is reported on potential, future costs saved. The value of each of the above delivery systems will be reviewed separately. The total valuation will be the sum of the individual component valuations.

Valuations should be based on economic evaluation principles that identify, measure, and value the relevant costs and consequences of two or more alternatives. Typically, one alternative is a new program while the second is treatment as usual. Cost-utility analysis (CUA) measures the cost of the program in dollars and the health consequences in utility-weighted units. This valuation uses a quality-adjusted life-years (QALYs) analysis that combines health quality (utility) with length of time in a particular health state.

Cost-utility analysis is a useful tool for assessing the value of new health service interventions due to the fact that it provides a standard way of valuing multiple types of interventions and programs. The valuation also incorporates costs averted when known (e.g., emergency room visits that are avoided). In order to make the valuations fair across potentially different types of interventions the common health goal, or outcome, is the number of life-years added. The benefits of the proposed program are valued based on assigning a monetary value of $50,000 per life-year gained due to the intervention. This threshold has been a standard way of valuing life-years in terms of whether the cost of the intervention exceeds this standard. The number of life-years added is based on a review of the scientific literature.

Cost-Utility Analysis: The Texas Recommended Assessment Guidelines (Texas Department of State Health Services, 2011) established a utilization management scheme for matching patient need to service packages of varying intensities. To provide an approximation of the value of an outpatient behavioral health program, we will review studies related to each of the four service packages described below as "levels of care."

Level One: Medication only

Individuals receiving Service Package One (SP1) have been assessed to have relatively less severe symptomatology and functional impairment. Therefore, they receive medications only accompanied by service coordination. A study by Chouinard and Albright (1997) found that individuals receiving medications versus a placebo gained 7 times the quality-adjusted years than without medications (QALY = .125). The proportion of individuals recommended to Level One at MHMRA is 56.5%. Assuming the program would serve 100 persons in a year, the following formula shows the total valuation:

100	(persons served)
0.125	(QALY gained)
.565	(proportion of patients recommended to Level One)
× $50,000	(life year value)
= $353,125	Level 1 QALY Value

Level Two: Medication plus therapy

About 18.5% of patients at MHMRA are recommended to Level Two services based on moderately severe need accompanied by diagnoses of major depression. This service package includes cognitive psychotherapy for depressive disorders in addition to medications. Pyne et al. (2003) compared the cost-effectiveness of medication services to medication plus CBT for depression. Their randomized controlled trial yielded an incremental QALY of 0.041 for the addition of CBT. Assuming the program would serve 100 persons in a year, the following formula shows the total valuation:

100	(persons served)
0.041	(QALY gained)
.185	(proportion of patients recommended to Level 2)
× $50,000	(life year value)
= $37,925	Level 2 QALY Valuation

Level Three: Medications and skills training

About 24% of patients at MHMRA are recommended to Level Three services, based on higher severity symptom and functional skill impairment. This package includes medications and skills training. Barton and colleagues (2009) compared social recovery oriented cognitive behavioral therapy (SRCBT) for people diagnosed with psychosis compared to case management alone (CMA); they reported a mean incremental QALY gain of 0.035. Assuming the program would serve 100 persons in a year; the following formula shows the valuation:

100	(persons served)
0.035	(QALY gained)
0.24	(proportion of patients recommended to Level 3)
× $50,000	(life year value)
= $42,000	Level 3 QALY Value

Level Four: Assertive Community Treatment (ACT) for Persons with Serious Mental Illness

Of consumers referred for services, about 4.1% are recommended for ACT Team treatment. This level of care represents the highest intensity service intervention. A 2012 study reported the cost-effectiveness of assertive community treatment as part of integrated care versus standard care in patients with schizophrenia (Karow, Reimer, König, Heider, Bock & Huber 2012). Results indicated the ACT intervention yielded a QALY of 0.76, whereas the treatment as usual groups resulted in a QALY of 0.66. Since the treatment is being contrasted with wait list or not treatment, the full QALY (0.76) applies. The incremental QALY for the ACT group was

0.10. Assuming the program would serve 100 persons in a year the following formula shows the valuation:

100	(persons served)
0.76	(QALY gained)
0.041	Proportion of patients recommended to Level Four
× $50,000	(life year value)
= $155,800	Level 4 QALY Value

Hospitalizations
When compared to the year prior to outpatient treatment admission, MHMRA patients have averaged 1.66 fewer public psychiatric hospital bed days per person. Cost savings from these individuals from averting hospital services can be calculated as follows:

100	(persons served)
1.66	(average hospital bed days per person per year averted)
X$700	(cost of hospital day)
= $116,200	Costs saved from averted hospitalizations

Public Psychiatric Emergency Visits
When compared to the year prior to outpatient treatment admission, MHMRA patients have averaged 0.212 fewer public psychiatric emergency room visits per person. Cost savings from these individuals from averting these emergency services can be calculated as follows:

100	(persons served)
.212	(average emergency service visits per person per year averted)
X$705	(cost of hospital day)
= $14,946	Costs saved from averted hospitalizations

Mental Health Services in the County Jail
When compared to the year prior to outpatient treatment admission, MHMRA patients have averaged 0.05 fewer county jail incarcerations per person. Cost savings from averting these jail bookings can be calculated as follows:

100	(persons served)
.05	(average county jail incarcerations per person per year averted)
40.6	Average days incarcerated
X$130	(cost of jail day with mental health service)
= $26,390	Costs saved from averted hospitalizations

Valuation Summary: This valuation analysis shows that the intervention will have a positive value for participants who receive the intervention(s). Summing the estimated utilities of all four levels of care above, the expected value of this proposal is $746,386 per 100 people served per year.

Project Option 1.12 ENHANCE SERVICE AVAILABILITY OF APPROPRIATE LEVELS OF BEHAVIORAL HEALTH CARE: EXPANSION OF OUTPATIENT BEHAVIORAL HEALTH SERVICES FOR ADULTS WITH SEVERE PSYCHIATRIC CONDITIONS (Southwest)
Unique RHP Project ID: 113180703.1.5

Performing Provider Name/TPI: MHMRA of Harris County / 113180703

Provider: The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is a public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA provides inpatient, residential and outpatient treatments, including psycho-therapy, case management and medication management for individuals. MHMRA serves more than 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those individuals who received any agency service in FY12, 36.5% were medically indigent and 51.9% had Medicaid. Of those who received mental health services in FY12, such as those being proposed in this project, 55% were medically indigent and 34.9% had Medicaid.

Intervention(s): MHMRA will place one new treatment team which can serve about 500 consumers on an outpatient basis in the Southwest region of the city.

Need for the project: Estimates place approximately 78,000 adults with severe mental illness unable to access treatment from the public or private mental health systems in Harris County. The gap between service needs of seriously mentally ill adults in the county and available public service capacity is most evident in the current waiting list of 1,695 for ongoing outpatient service. MHMRA of Harris County routinely operates at or above its state mandated, contracted service capacity, averaging about 8,800 adult consumers served each month. At this level, however, access is inadequate for many who apply for service.

Target population: Seriously mentally ill adults in the Southwest region of Harris County currently unable to access mental health services. It is anticipated the program will provide service for about 500 patients.

Category 1 or 2 expected patient benefits:

- Increase utilization of services to 500 patients more than baseline by DY 5
- A 10% decrease from baseline in PES/HCPC admissions by DY5

Category 3 outcomes: MHMRA expects to increase one domain of patient satisfaction (TBD) by 10% from baseline by DY5.

DRAFT

1.12 Enhance service availability of appropriate level of behavioral health care: Expansion of outpatient behavioral health services for adults with severe psychiatric conditions (Southwest)

RHP Project Number: 113180703.1.5
Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/ 113180703

Project Description:
The Mental Health and Mental Retardation Authority (MHMRA) of Harris County proposes to increase outpatient capacity to potentially eliminate the current wait list for services in this geographic area.

The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is a public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA serves more than 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those who received mental health services in FY12, such as those being proposed in this project, 55% were medically indigent and 34.9% had Medicaid. In an effort to provide needed services to the most critically ill population, MHMRA proposes to increase outpatient capacity by approximately 500 individuals potentially eliminating the current wait list for services in this geographic area. In order to address this issue we will choose to focus on project option 1.12.2: Expand the number of community based settings where behavioral health services may be delivered in underserved areas.

It is important to note that we are proposing four similar projects, each under the 1.12.2 umbrella, which would expand outpatient behavioral health services for adults in each of our existing clinics. Because the goals and rationale are identical, the narratives will be repetitive; however, each of the expansion programs serve unique geographical needs, and therefore, each of the projects are critical to addressing the community needs.

Goals and Relationship to Regional Goals:
Goals include improving access to community mental health services by establishing additional service providers (e.g., an additional treatment team) among existing MHMRA community clinics in Harris County. Specifically, we aspire to place one new treatment team in the Southwest region. Each treatment team can serve roughly 500 consumers.
The proposed project directly meets broad goals identified by the regional needs assessment. First, it improves and builds upon an existing program, which has shown positive gains in providing best-practices for patient-centered care. Furthermore, by providing enhanced, evidence-based services to patients the program will meet the regional goal set out above. Moreover, the program supports the regional goal of developing a culture of patient-centered care whereby the patient/consumer plays a more active role as a stakeholder.

Challenges:

Workforce limitations may provide staff recruitment challenges requiring significant lead time and advanced planning. Clinic managers will work closely with human resources and administration to ensure timely staffing of the proposed treatment teams.

Expected 5-year Outcomes:

9) Staffing of the new team: 1 Psychiatrist, 1 Nurse, 1 Clinical Team Leader, 4 Licensed Practitioners of the Healing Arts, 12 Rehabilitation Clinicians, 1 Administrative Assistant, 1 Clerical Support Staff, 1 Business Office Coordinator, and 1 HIT Staff.
10) Additional need is anticipated as initiatives to reduce 30-day re-hospitalizations, preventable emergency department visits, and jail recidivism, may create additional demand.
11) Provision of outpatient mental health service has been locally documented to reduce emergency psychiatric center visits by .37 visits per person per year; it has also has been shown to reduce public psychiatric hospital use by 1.66 bed days per person per year in a sample of 25,000 outpatients (served between the years 2005 and 2012).
12) Elimination of wait lists and improved geographic access can be expected to increase access to services, improved satisfaction, and decreased intensive service use. Reductions in intensive service (#3 and #4 above) use are firmly in line with regional project goals.

In order to measure the progress towards the stated goals, we have selected improvement metrics that measure increased utilization of behavioral health (I-11.1) and decreased emergency psychiatric service use (I-X).

Starting Point/Baseline:
As mentioned previously, 8,800 consumers are served among the four existing outpatient clinics. We seek to expand the provision of services by 1 team per current location, which would serve roughly 500 people per site, and add one additional team where the most need is determined. Current clinical space will be used in addition to redesigning available MHMRA space or seeking additional space as needed to house additional staff over the DSRIP period.

Rationale:
The community mental health system in Harris County has a limited capacity for service that is insufficient to the needs of its residents. The Mental Health Needs Council of Harris County has estimated that 153,000 of the 552,000 Harris County adults with mental illness have a severe mental illness (Depression, Bipolar Disorder, and Schizophrenia). These individuals are among the 96,200 Harris County adults who have no public (Medicaid or Medicare) or private health insurance and therefore, are totally dependent on the public mental health service system for treatment. In 2007, approximately 27,000 adults received services from the public mental health system; 18,200 of these were uninsured (a number representing only 19% of estimated need). By deduction, one can conclude that approximately 78,000 adults with severe mental illness failed to access treatment from the public or private mental health systems.

The gap between service needs of seriously mentally ill adults in the county and available public service capacity is most evident in the waiting list for ongoing outpatient service. MHMRA of Harris County routinely operates at or above its state mandated, contracted service

DRAFT

capacity, averaging about 8,800 adult consumers served each month. At this level, however, access is inadequate for many who apply for service.

On August 31 (2012), the MHMRA waitlist for adult mental health outpatient services rested at 1,695, a level that has persisted for several years. Further, tenure on the waiting list approached five months, an average of 149.16 days. The Southwest clinic has 17.9% of the waitlist. The rationale for requesting funding for each project is based on the aforementioned need for additional mental health services in the county, and the existing waitlist. If MHMRA were to expand only one or two of the clinics, only 400-800 new consumers could be served and the waitlist would remain in effect. Additionally, it is expected that the need for mental health services will continue to grow, and therefore, limited expansion will simply not address the current needs of those on the waitlist or the community needs of those who initiated services with MHMRA.

Unique Community Need Identification numbers:

Specific community needs are also addressed through the proposed program:

- CN3-Inadequate access to Behavioral Health
- CN6- Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children and elderly
- CN9- High rates of preventable hospital readmissions

Expansion of outpatient behavioral health services will address the community needs above by providing greater access to behavioral health care, thereby offsetting the increased use of medical and psychiatric emergency services. Furthermore, a larger behavioral health workforce within MHMRA will provide more opportunities for collaboration between providers and for patient education. MHMRA clinicians already engage in a variety of community collaborations and education activities, despite their tremendous workload. With the addition of qualified behavioral health personnel, more services can be provided.

Related Category 3 Outcome Measure(s):

IT-6.1: Percent improvement over baseline of patient satisfaction scores

Reasons/rationale for selecting the outcome measures:

We believe patient satisfaction that addresses involvement in shared decision making, access to providers, and better communication with providers, will reduce chronic over-use of psychiatric emergency services and in general reduce cost and improve efficiency.

Relationship to other Projects:

The proposed project is similar to several MHMRA DSRIP proposals, including the expansion of outpatient behavioral health services within other clinics (113180703.1.1, 113180703.1.4, 113180703.1.6 and 113180703.1.7) and a project which enhances the intensity of behavioral outpatient services (113180703.1.2). Extending outpatient behavioral health specialty service and increasing the intensity of these services will together ultimately provide responsive, appropriate levels of care.

The behavioral health crisis in Region 3 is considerable and the proposed initiatives in our RHP plan will only imply a small impression into the overall community need for treatment, but is a good start. The outpatient focus of many RHP Plan initiatives will help numerous facilities focus to treating the patients in an ambulatory setting as well as continued navigation of services with a focus to keeping patients from the inpatient unit. This initiative is similar to

DRAFT

many others in the sense of the category of behavioral health. The Region 3 Initiative Grid attached in the addendum will show the relationship to other programs.

Relationship to Other Performing Providers' Projects in the RHP: TBD

Plan for Learning Collaborative:

Consumer satisfaction with access outcomes will be assessed with input from consumer groups involving both patients and family members in the quality improvement loop. Similarly, rates of public psychiatric hospitalization will be presented to public psychiatric hospital representatives with an invitation for them to provide input on the improvement process.

Project Valuation:

In the effort to value the proposed project accurately, assistance was sought from H. Shelton Brown, Ph.D. of the UT Houston School of Public Health and Thomas Bohman, Ph.D. of the UT Austin Center for Social Work Research. Their consultation was limited to only the valuation section of this document. The primary valuation method uses cost-utility analysis (a type of cost-effectiveness research) and additional information is reported on potential, future costs saved. The value of each of the above delivery systems will be reviewed separately. The total valuation will be the sum of the individual component valuations.

Valuations should be based on economic evaluation principles that identify, measure, and value the relevant costs and consequences of two or more alternatives. Typically, one alternative is a new program while the second is treatment as usual. Cost-utility analysis (CUA) measures the cost of the program in dollars and the health consequences in utility-weighted units. This valuation uses a quality-adjusted life-years (QALYs) analysis that combines health quality (utility) with length of time in a particular health state.

Cost-utility analysis is a useful tool for assessing the value of new health service interventions due to the fact that it provides a standard way of valuing multiple types of interventions and programs. The valuation also incorporates costs averted when known (e.g., emergency room visits that are avoided). In order to make the valuations fair across potentially different types of interventions the common health goal, or outcome, is the number of life-years added. The benefits of the proposed program are valued based on assigning a monetary value of $50,000 per life-year gained due to the intervention. This threshold has been a standard way of valuing life-years in terms of whether the cost of the intervention exceeds this standard. The number of life-years added is based on a review of the scientific literature.

Cost-Utility Analysis: The Texas Recommended Assessment Guidelines (Texas Department of State Health Services, 2011) established a utilization management scheme for matching patient need to service packages of varying intensities. To provide an approximation of the value of an outpatient behavioral health program, we will review studies related to each of the four service packages described below as "levels of care."

Level One: Medication only

Individuals receiving Service Package One (SP1) have been assessed to have relatively less severe symptomatology and functional impairment. Therefore, they receive medications only accompanied by service coordination. A study by Chouinard and Albright (1997) found that individuals receiving medications versus a placebo gained 7 times the quality-adjusted years than without medications (QALY = .125). The proportion of individuals recommended to Level One at MHMRA is 56.5%. Assuming the program would serve 100 persons in a year, the following formula shows the total valuation:

DRAFT

100 (persons served)
0.125 (QALY gained)
.565 (proportion of patients recommended to Level One)
× $50,000 (life year value)
= $353,125 Level 1 QALY Value

Level Two: Medication plus therapy

About 18.5% of patients at MHMRA are recommended to Level Two services based on moderately severe need accompanied by diagnoses of major depression. This service package includes cognitive psychotherapy for depressive disorders in addition to medications. Pyne et al. (2003) compared the cost-effectiveness of medication services to medication plus CBT for depression. Their randomized controlled trial yielded an incremental QALY of 0.041 for the addition of CBT. Assuming the program would serve 100 persons in a year, the following formula shows the total valuation:

100 (persons served)
0.041 (QALY gained)
.185 (proportion of patients recommended to Level 2)
× $50,000 (life year value)
= $37,925 Level 2 QALY Valuation

Level Three: Medications and skills training

About 24% of patients at MHMRA are recommended to Level Three services, based on higher severity symptom and functional skill impairment. This package includes medications and skills training. Barton and colleagues (2009) compared social recovery oriented cognitive behavioral therapy (SRCBT) for people diagnosed with psychosis compared to case management alone (CMA); they reported a mean incremental QALY gain of 0.035. Assuming the program would serve 100 persons in a year; the following formula shows the valuation:

100 (persons served)
0.035 (QALY gained)
0.24 (proportion of patients recommended to Level 3)
× $50,000 (life year value)
= $42,000 Level 3 QALY Value

Level Four: Assertive Community Treatment (ACT) for Persons with Serious Mental Illness

Of consumers referred for services, about 4.1% are recommended for ACT Team treatment. This level of care represents the highest intensity service intervention. A 2012 study reported the cost-effectiveness of assertive community treatment as part of integrated care versus standard care in patients with schizophrenia (Karow, Reimer, König, Heider, Bock & Huber 2012). Results indicated the ACT intervention yielded a QALY of 0.76, whereas the treatment as usual groups resulted in a QALY of 0.66. Since the treatment is being contrasted with wait list or not treatment, the full QALY (0.76) applies. The incremental QALY for the ACT group was 0.10. Assuming the program would serve 100 persons in a year the following formula shows the valuation:

DRAFT

100	(persons served)
0.76	(QALY gained)
0.041	Proportion of patients recommended to Level Four
× $50,000	(life year value)
= $155,800	Level 4 QALY Value

Hospitalizations
When compared to the year prior to outpatient treatment admission, MHMRA patients have averaged 1.66 fewer public psychiatric hospital bed days per person. Cost savings from these individuals from averting hospital services can be calculated as follows:

100	(persons served)
1.66	(average hospital bed days per person per year averted)
X$700	(cost of hospital day)
= $116,200	Costs saved from averted hospitalizations

Public Psychiatric Emergency Visits
When compared to the year prior to outpatient treatment admission, MHMRA patients have averaged 0.212 fewer public psychiatric emergency room visits per person. Cost savings from these individuals from averting these emergency services can be calculated as follows:

100	(persons served)
.212	(average emergency service visits per person per year averted)
X$705	(cost of hospital day)
= $14,946	Costs saved from averted hospitalizations

Mental Health Services in the County Jail
When compared to the year prior to outpatient treatment admission, MHMRA patients have averaged 0.05 fewer county jail incarcerations per person. Cost savings from averting these jail bookings can be calculated as follows:

100	(persons served)
.05	(average county jail incarcerations per person per year averted)
40.6	Average days incarcerated
X$130	(cost of jail day with mental health service)
= $26,390	Costs saved from averted hospitalizations

Valuation Summary: This valuation analysis shows that the intervention will have a positive value for participants who receive the intervention(s). Summing the estimated utilities of all four levels of care above, the expected value of this proposal is $746,386 per 100 people served per year.

Project Option 1.12 ENHANCE SERVICE AVAILABILITY OF APPROPRIATE LEVELS OF BEHAVIORAL HEALTH CARE: EXPANSION OF OUTPATIENT BEHAVIORAL HEALTH SERVICES FOR ADULTS WITH SEVERE PSYCHIATRIC CONDITIONS (Southeast)

Unique RHP Project ID: 113180703.1.6

Performing Provider Name/TPI: MHMRA of Harris County / 113180703

Provider**:** The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is a public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA provides inpatient, residential and outpatient treatments, including psycho-therapy, case management and medication management for individuals. MHMRA serves more than 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those individuals who received any agency service in FY12, 36.5% were medically indigent and 51.9% had Medicaid. Of those who received mental health services in FY12, such as those being proposed in this project, 55% were medically indigent and 34.9% had Medicaid.

Intervention(s): MHMRA will place one new treatment team which can serve about 500 consumers on an outpatient basis in the Southeast region of the city.

Need for the project: Estimates place approximately 78,000 adults with severe mental illness unable to access treatment from the public or private mental health systems in Harris County. The gap between service needs of seriously mentally ill adults in the county and available public service capacity is most evident in the current waiting list of 1,695 for ongoing outpatient service. MHMRA of Harris County routinely operates at or above its state mandated, contracted service capacity, averaging about 8,800 adult consumers served each month. At this level, however, access is inadequate for many who apply for service.

Target population: Seriously mentally ill adults in the Southeast region of Harris County currently unable to access mental health services. It is anticipated the program will provide service for about 500 patients.

Category 1 or 2 expected patient benefits:

- Increase utilization of services to 500 patients more than baseline by DY 5
- A 10% decrease from baseline in PES/HCPC admissions by DY5

Category 3 outcomes: MHMRA expects to increase one domain of patient satisfaction (TBD) by 10% from baseline by DY5.

1.12 Enhance service availability of appropriate level of behavioral health care: Expansion of outpatient behavioral health services for adults with severe psychiatric conditions (Southeast)

RHP Project Number: 113180703.1.6
Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/ 113180703

Project Description:
The Mental Health and Mental Retardation Authority (MHMRA) of Harris County proposes to increase outpatient capacity to potentially eliminate the current wait list for services in this geographic area.

The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is a public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA serves more than 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those who received mental health services in FY12, such as those being proposed in this project, 55% were medically indigent and 34.9% had Medicaid. In an effort to provide needed services to the most critically ill population, MHMRA proposes to increase outpatient capacity by approximately 500 individuals potentially eliminating the current wait list for services in this geographic area. In order to address this issue we will choose to focus on project option 1.12.2: Expand the number of community based settings where behavioral health services may be delivered in underserved areas.

It is important to note that we are proposing four similar projects, each under the 1.12.2 umbrella, which would expand outpatient behavioral health services for adults in each of our existing clinics. Because the goals and rationale are identical, the narratives will be repetitive; however, each of the expansion programs serve unique geographical needs, and therefore, each of the projects are critical to addressing the community needs.

Goals and Relationship to Regional Goals:
Goals include improving access to community mental health services by establishing additional service providers (e.g., an additional treatment team) among existing MHMRA community clinics in Harris County. Specifically, we aspire to place one new treatment team in the Southeast region. Each treatment team can serve roughly 500 consumers.
The proposed project directly meets broad goals identified by the regional needs assessment. First, it improves and builds upon an existing program, which has shown positive gains in providing best-practices for patient-centered care. Furthermore, by providing enhanced, evidence-based services to patients the program will meet the regional goal set out above. Moreover, the program supports the regional goal of developing a culture of patient-centered care whereby the patient/consumer plays a more active role as a stakeholder.

Challenges:

Workforce limitations may provide staff recruitment challenges requiring significant lead time and advanced planning. Clinic managers will work closely with human resources and administration to ensure timely staffing of the proposed treatment teams.

Expected 5-year Outcomes:

13) Staffing of the new team: 1 Psychiatrist, 1 Nurse, 1 Clinical Team Leader, 4 Licensed Practitioners of the Healing Arts, 12 Rehabilitation Clinicians, 1 Administrative Assistant, 1 Clerical Support Staff, 1 Business Office Coordinator, and 1 HIT Staff.
14) Additional need is anticipated as initiatives to reduce 30-day re-hospitalizations, preventable emergency department visits, and jail recidivism, may create additional demand.
15) Provision of outpatient mental health service has been locally documented to reduce emergency psychiatric center visits by .37 visits per person per year; it has also has been shown to reduce public psychiatric hospital use by 1.66 bed days per person per year in a sample of 25,000 outpatients (served between the years 2005 and 2012).
16) Elimination of wait lists and improved geographic access can be expected to increase access to services, improved satisfaction, and decreased intensive service use. Reductions in intensive service (#3 and #4 above) use are firmly in line with regional project goals.

In order to measure the progress towards the stated goals, we have selected improvement metrics that measure increased utilization of behavioral health (I-11.1) and decreased emergency psychiatric service use (I-X).

Starting Point/Baseline:

As mentioned previously, 8,800 consumers are served among the four existing outpatient clinics. We seek to expand the provision of services by 1 team per current location, which would serve roughly 500 people per site, and add one additional team where the most need is determined. Current clinical space will be used in addition to redesigning available MHMRA space or seeking additional space as needed to house additional staff over the DSRIP period.

Rationale:

The community mental health system in Harris County has a limited capacity for service that is insufficient to the needs of its residents. The Mental Health Needs Council of Harris County has estimated that 153,000 of the 552,000 Harris County adults with mental illness have a severe mental illness (Depression, Bipolar Disorder, and Schizophrenia). These individuals are among the 96,200 Harris County adults who have no public (Medicaid or Medicare) or private health insurance and therefore, are totally dependent on the public mental health service system for treatment. In 2007, approximately 27,000 adults received services from the public mental health system; 18,200 of these were uninsured (a number representing only 19% of estimated need). By deduction, one can conclude that approximately 78,000 adults with severe mental illness failed to access treatment from the public or private mental health systems.

The gap between service needs of seriously mentally ill adults in the county and available public service capacity is most evident in the waiting list for ongoing outpatient service. MHMRA of Harris County routinely operates at or above its state mandated, contracted service

capacity, averaging about 8,800 adult consumers served each month. At this level, however, access is inadequate for many who apply for service.

On August 31 (2012), the MHMRA waitlist for adult mental health outpatient services rested at 1,695, a level that has persisted for several years. Further, tenure on the waiting list approached five months, an average of 149.16 days. The Southeast clinic accounts for 21.3% of the current waitlist. The rationale for requesting funding for each project is based on the aforementioned need for additional mental health services in the county, and the existing waitlist. If MHMRA were to expand only one or two of the clinics, only 400-800 new consumers could be served and the waitlist would remain in effect. Additionally, it is expected that the need for mental health services will continue to grow, and therefore, limited expansion will simply not address the current needs of those on the waitlist or the community needs of those who initiated services with MHMRA.

Unique Community Need Identification numbers:

Specific community needs are also addressed through the proposed program:

- CN3-Inadequate access to Behavioral Health
- CN6- Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children and elderly
- CN9- High rates of preventable hospital readmissions

Expansion of outpatient behavioral health services will address the community needs above by providing greater access to behavioral health care, thereby offsetting the increased use of medical and psychiatric emergency services. Furthermore, a larger behavioral health workforce within MHMRA will provide more opportunities for collaboration between providers and for patient education. MHMRA clinicians already engage in a variety of community collaborations and education activities, despite their tremendous workload. With the addition of qualified behavioral health personnel, more services can be provided.

Related Category 3 Outcome Measure(s):

IT-6.1: Percent improvement over baseline of patient satisfaction scores

Reasons/rationale for selecting the outcome measures:

We believe patient satisfaction that addresses involvement in shared decision making, access to providers, and better communication with providers, will reduce chronic over-use of psychiatric emergency services and in general reduce cost and improve efficiency.

Relationship to other Projects:

The proposed project is similar to several MHMRA DSRIP proposals, including the expansion of outpatient behavioral health services within other clinics (113180703.1.1, 113180703.1.4, 113180703.1.5 and 113180703.1.7) and a project which enhances the intensity of behavioral outpatient services (113180703.1.2). Extending outpatient behavioral health specialty service and increasing the intensity of these services will together ultimately provide responsive, appropriate levels of care.

The behavioral health crisis in Region 3 is considerable and the proposed initiatives in our RHP plan will only imply a small impression into the overall community need for treatment, but is a good start. The outpatient focus of many RHP Plan initiatives will help numerous facilities focus to treating the patients in an ambulatory setting as well as continued navigation of services with a focus to keeping patients from the inpatient unit. This initiative is similar to many others in the

DRAFT

sense of the category of behavioral health. The Region 3 Initiative Grid attached in the addendum will show the relationship to other programs.

Relationship to Other Performing Providers' Projects in the RHP: TBD

Plan for Learning Collaborative:

Consumer satisfaction with access outcomes will be assessed with input from consumer groups involving both patients and family members in the quality improvement loop. Similarly, rates of public psychiatric hospitalization will be presented to public psychiatric hospital representatives with an invitation for them to provide input on the improvement process.

Project Valuation:

In the effort to value the proposed project accurately, assistance was sought from H. Shelton Brown, Ph.D. of the UT Houston School of Public Health and Thomas Bohman, Ph.D. of the UT Austin Center for Social Work Research. Their consultation was limited to only the valuation section of this document. The primary valuation method uses cost-utility analysis (a type of cost-effectiveness research) and additional information is reported on potential, future costs saved. The value of each of the above delivery systems will be reviewed separately. The total valuation will be the sum of the individual component valuations.

Valuations should be based on economic evaluation principles that identify, measure, and value the relevant costs and consequences of two or more alternatives. Typically, one alternative is a new program while the second is treatment as usual. Cost-utility analysis (CUA) measures the cost of the program in dollars and the health consequences in utility-weighted units. This valuation uses a quality-adjusted life-years (QALYs) analysis that combines health quality (utility) with length of time in a particular health state.

Cost-utility analysis is a useful tool for assessing the value of new health service interventions due to the fact that it provides a standard way of valuing multiple types of interventions and programs. The valuation also incorporates costs averted when known (e.g., emergency room visits that are avoided). In order to make the valuations fair across potentially different types of interventions the common health goal, or outcome, is the number of life-years added. The benefits of the proposed program are valued based on assigning a monetary value of $50,000 per life-year gained due to the intervention. This threshold has been a standard way of valuing life-years in terms of whether the cost of the intervention exceeds this standard. The number of life-years added is based on a review of the scientific literature.

Cost-Utility Analysis: The Texas Recommended Assessment Guidelines (Texas Department of State Health Services, 2011) established a utilization management scheme for matching patient need to service packages of varying intensities. To provide an approximation of the value of an outpatient behavioral health program, we will review studies related to each of the four service packages described below as "levels of care."

Level One: Medication only

Individuals receiving Service Package One (SP1) have been assessed to have relatively less severe symptomatology and functional impairment. Therefore, they receive medications only accompanied by service coordination. A study by Chouinard and Albright (1997) found that individuals receiving medications versus a placebo gained 7 times the quality-adjusted years than without medications (QALY = .125). The proportion of individuals recommended to Level One at MHMRA is 56.5%. Assuming the program would serve 100 persons in a year, the following formula shows the total valuation:

100	(persons served)
0.125	(QALY gained)
.565	(proportion of patients recommended to Level One)
× $50,000	(life year value)
= $353,125	Level 1 QALY Value

Level Two: Medication plus therapy

About 18.5% of patients at MHMRA are recommended to Level Two services based on moderately severe need accompanied by diagnoses of major depression. This service package includes cognitive psychotherapy for depressive disorders in addition to medications. Pyne et al. (2003) compared the cost-effectiveness of medication services to medication plus CBT for depression. Their randomized controlled trial yielded an incremental QALY of 0.041 for the addition of CBT. Assuming the program would serve 100 persons in a year, the following formula shows the total valuation:

100	(persons served)
0.041	(QALY gained)
.185	(proportion of patients recommended to Level 2)
× $50,000	(life year value)
= $37,925	Level 2 QALY Valuation

Level Three: Medications and skills training

About 24% of patients at MHMRA are recommended to Level Three services, based on higher severity symptom and functional skill impairment. This package includes medications and skills training. Barton and colleagues (2009) compared social recovery oriented cognitive behavioral therapy (SRCBT) for people diagnosed with psychosis compared to case management alone (CMA); they reported a mean incremental QALY gain of 0.035. Assuming the program would serve 100 persons in a year; the following formula shows the valuation:

100	(persons served)
0.035	(QALY gained)
0.24	(proportion of patients recommended to Level 3)
× $50,000	(life year value)
= $42,000	Level 3 QALY Value

Level Four: Assertive Community Treatment (ACT) for Persons with Serious Mental Illness

Of consumers referred for services, about 4.1% are recommended for ACT Team treatment. This level of care represents the highest intensity service intervention. A 2012 study reported the cost-effectiveness of assertive community treatment as part of integrated care versus standard care in patients with schizophrenia (Karow, Reimer, König, Heider, Bock & Huber 2012). Results indicated the ACT intervention yielded a QALY of 0.76, whereas the treatment as usual groups resulted in a QALY of 0.66. Since the treatment is being contrasted with wait list or not treatment, the full QALY (0.76) applies. The incremental QALY for the ACT group was 0.10. Assuming the program would serve 100 persons in a year the following formula shows the valuation:

100	(persons served)
0.76	(QALY gained)
0.041	Proportion of patients recommended to Level Four
× $50,000	(life year value)
= $155,800	Level 4 QALY Value

Hospitalizations
When compared to the year prior to outpatient treatment admission, MHMRA patients have averaged 1.66 fewer public psychiatric hospital bed days per person. Cost savings from these individuals from averting hospital services can be calculated as follows:

100	(persons served)
1.66	(average hospital bed days per person per year averted)
X$700	(cost of hospital day)
= $116,200	Costs saved from averted hospitalizations

Public Psychiatric Emergency Visits
When compared to the year prior to outpatient treatment admission, MHMRA patients have averaged 0.212 fewer public psychiatric emergency room visits per person. Cost savings from these individuals from averting these emergency services can be calculated as follows:

100	(persons served)
.212	(average emergency service visits per person per year averted)
X$705	(cost of hospital day)
= $14,946	Costs saved from averted hospitalizations

Mental Health Services in the County Jail
When compared to the year prior to outpatient treatment admission, MHMRA patients have averaged 0.05 fewer county jail incarcerations per person. Cost savings from averting these jail bookings can be calculated as follows:

100	(persons served)
.05	(average county jail incarcerations per person per year averted)
40.6	Average days incarcerated
X$130	(cost of jail day with mental health service)
= $26,390	Costs saved from averted hospitalizations

Valuation Summary: This valuation analysis shows that the intervention will have a positive value for participants who receive the intervention(s). Summing the estimated utilities of all four levels of care above, the expected value of this proposal is $746,386 per 100 people served per year.

Project Option 1.12 ENHANCE SERVICE AVAILABILITY OF APPROPRIATE LEVELS OF BEHAVIORAL HEALTH CARE: EXPANSION OF OUTPATIENT BEHAVIORAL HEALTH SERVICES FOR ADULTS WITH SEVERE PSYCHIATRIC CONDITIONS (Need based)

Unique RHP Project ID: 113180703.1.7

Performing Provider Name/TPI: MHMRA of Harris County / 113180703

Project Summary:

Provider**:** The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA provides inpatient, residential and outpatient treatments, including psycho-therapy, case management and medication management for individuals. MHMRA serves about 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those individuals who received services in FY12, 60.0% were medically indigent and 32% had Medicaid.

Intervention(s): MHMRA aspires to place one new treatment team in the region of the city in the most need of additional services. Each treatment team can serve roughly 500 consumers.

Need for the project: Estimates place approximately 78,000 adults with severe mental illness unable to access treatment from the public or private mental health systems in Harris County. The gap between service needs of seriously mentally ill adults in the county and available public service capacity is most evident in the current waiting list of 1,641 for ongoing outpatient service. MHMRA of Harris County routinely operates at or above its state mandated, contracted service capacity, averaging about 8,800 adult consumers served each month. At this level, however, access is inadequate for many who apply for service.

Target population: Seriously mentally ill adults in an area of Harris County to be determined who are currently unable to access mental health services. It is anticipated the program will provide service for about 500 patients.

Category 1 or 2 expected patient benefits:

- Increase utilization of services to 500 patients more than baseline by DY5.
- A 10% decrease from baseline in psychiatric emergency service admissions (e.g., PES/HCPC) by DY5.

Category 3 outcomes: MHMRA expects to increase one domain of patient satisfaction (TBD) by 10% from baseline by DY5.

1.12 Enhance service availability of appropriate level of behavioral health care: Expansion of outpatient behavioral health services for adults with severe psychiatric conditions (region to be determined according to need)

RHP Project Number: 113180703.1.7
Performing Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/ 113180703

Project Description:
The Mental Health and Mental Retardation Authority (MHMRA) of Harris County proposes to increase outpatient capacity to potentially eliminate the current wait list for services in this geographic area. (Region to be determined according to need)

The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is a public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA serves more than 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those who received mental health services in FY12, such as those being proposed in this project, 55% were medically indigent and 34.9% had Medicaid. In an effort to provide needed services to the most critically ill population, MHMRA proposes to increase outpatient capacity by approximately 500 individuals potentially eliminating the current wait list for services in this geographic area. In order to address this issue we will choose to focus on project option 1.12.2: Expand the number of community based settings where behavioral health services may be delivered in underserved areas.

It is important to note that we are proposing four similar projects, each under the 1.12.2 umbrella, which would expand outpatient behavioral health services for adults in each of our existing clinics. Because the goals and rationale are identical, the narratives will be repetitive; however, each of the expansion programs serve unique geographical needs, and therefore, each of the projects are critical to addressing the community needs.

Goals and Relationship to Regional Goals:
Goals include improving access to community mental health services by establishing additional service providers (e.g., an additional treatment team) among existing MHMRA community clinics in Harris County. Specifically, we aspire to place one new treatment team in a location to be determined based on need. Each treatment team can serve roughly 500 consumers.
The proposed project directly meets broad goals identified by the regional needs assessment. First, it improves and builds upon an existing program, which has shown positive gains in providing best-practices for patient-centered care. Furthermore, by providing enhanced, evidence-based services to patients the program will meet the regional goal set out above. Moreover, the program supports the regional goal of developing a culture of patient-centered care whereby the patient/consumer plays a more active role as a stakeholder.

Challenges:

DRAFT

Workforce limitations may provide staff recruitment challenges requiring significant lead time and advanced planning. Clinic managers will work closely with human resources and administration to ensure timely staffing of the proposed treatment teams.

Expected 5-year Outcomes:

17) Staffing of the new team: 1 Psychiatrist, 1 Nurse, 1 Clinical Team Leader, 4 Licensed Practitioners of the Healing Arts, 12 Rehabilitation Clinicians, 1 Administrative Assistant, 1 Clerical Support Staff, 1 Business Office Coordinator, and 1 HIT Staff.
18) Additional need is anticipated as initiatives to reduce 30-day re-hospitalizations, preventable emergency department visits, and jail recidivism, may create additional demand.
19) Provision of outpatient mental health service has been locally documented to reduce emergency psychiatric center visits by .37 visits per person per year; it has also has been shown to reduce public psychiatric hospital use by 1.66 bed days per person per year in a sample of 25,000 outpatients (served between the years 2005 and 2012).
20) Elimination of wait lists and improved geographic access can be expected to increase access to services, improved satisfaction, and decreased intensive service use. Reductions in intensive service (#3 and #4 above) use are firmly in line with regional project goals.

In order to measure the progress towards the stated goals, we have selected improvement metrics that measure increased utilization of behavioral health (I-11.1) and decreased emergency psychiatric service use (I-X).

Starting Point/Baseline:

As mentioned previously, 8,800 consumers are served among the four existing outpatient clinics. We seek to expand the provision of services by 1 team per current location, which would serve roughly 500 people per site, and add one additional team where the most need is determined. Current clinical space will be used in addition to redesigning available MHMRA space or seeking additional space as needed to house additional staff over the DSRIP period.

Rationale:

The community mental health system in Harris County has a limited capacity for service that is insufficient to the needs of its residents. The Mental Health Needs Council of Harris County has estimated that 153,000 of the 552,000 Harris County adults with mental illness have a severe mental illness (Depression, Bipolar Disorder, and Schizophrenia). These individuals are among the 96,200 Harris County adults who have no public (Medicaid or Medicare) or private health insurance and therefore, are totally dependent on the public mental health service system for treatment. In 2007, approximately 27,000 adults received services from the public mental health system; 18,200 of these were uninsured (a number representing only 19% of estimated need). By deduction, one can conclude that approximately 78,000 adults with severe mental illness failed to access treatment from the public or private mental health systems.

The gap between service needs of seriously mentally ill adults in the county and available public service capacity is most evident in the waiting list for ongoing outpatient service. MHMRA of Harris County routinely operates at or above its state mandated, contracted service

capacity, averaging about 8,800 adult consumers served each month. At this level, however, access is inadequate for many who apply for service.

On August 31 (2012), the MHMRA waitlist for adult mental health outpatient services rested at 1,695, a level that has persisted for several years. Further, tenure on the waiting list approached five months, an average of 149.16 days. At this time, MHMRA is proposing four separate DSRIP projects that will provide additional services in each of the existing outpatient clinics and one project that will determine the area of greatest need to establish an additional team. The fifth clinic will be opened based on the regional needs of MHMRA consumers.

The rationale for requesting funding for each project is based on the aforementioned need for additional mental health services in the county, and the existing waitlist. If MHMRA were to expand only one or two of the clinics, only 400-800 new consumers could be served and the waitlist would remain in effect. Additionally, it is expected that the need for mental health services will continue to grow, and therefore, limited expansion will simply not address the current needs of those on the waitlist or the community needs of those who initiated services with MHMRA.

Unique Community Need Identification numbers:

Specific community needs are also addressed through the proposed program:

- CN3-Inadequate access to Behavioral Health
- CN6- Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children and elderly
- CN9- High rates of preventable hospital readmissions

Expansion of outpatient behavioral health services will address the community needs above by providing greater access to behavioral health care, thereby offsetting the increased use of medical and psychiatric emergency services. Furthermore, a larger behavioral health workforce within MHMRA will provide more opportunities for collaboration between providers and for patient education. MHMRA clinicians already engage in a variety of community collaborations and education activities, despite their tremendous workload. With the addition of qualified behavioral health personnel, more services can be provided.

Related Category 3 Outcome Measure(s):

IT-6.1: Percent improvement over baseline of patient satisfaction scores

Reasons/rationale for selecting the outcome measures:

We believe patient satisfaction that addresses involvement in shared decision making, access to providers, and better communication with providers, will reduce chronic over-use of psychiatric emergency services and in general reduce cost and improve efficiency.

Relationship to other Projects:

The proposed project is similar to several MHMRA DSRIP proposals, including the expansion of outpatient behavioral health services within other clinics (113180703.1.1, 113180703.1.4, 113180703.1.5 and 113180703.1.6) and a project which enhances the intensity of behavioral outpatient services (113180703.1.2). Extending outpatient behavioral health specialty service and increasing the intensity of these services will together ultimately provide responsive, appropriate levels of care.

The behavioral health crisis in Region 3 is considerable and the proposed initiatives in our RHP plan will only imply a small impression into the overall community need for treatment,

DRAFT

but is a good start. The outpatient focus of many RHP Plan initiatives will help numerous facilities focus to treating the patients in an ambulatory setting as well as continued navigation of services with a focus to keeping patients from the inpatient unit. This initiative is similar to many others in the sense of the category of behavioral health. The Region 3 Initiative Grid attached in the addendum will show the relationship to other programs.

Relationship to Other Performing Providers' Projects in the RHP: TBD

Plan for Learning Collaborative:

Consumer satisfaction with access outcomes will be assessed with input from consumer groups involving both patients and family members in the quality improvement loop. Similarly, rates of public psychiatric hospitalization will be presented to public psychiatric hospital representatives with an invitation for them to provide input on the improvement process.

Project Valuation:

In the effort to value the proposed project accurately, assistance was sought from H. Shelton Brown, Ph.D. of the UT Houston School of Public Health and Thomas Bohman, Ph.D. of the UT Austin Center for Social Work Research. Their consultation was limited to only the valuation section of this document. The primary valuation method uses cost-utility analysis (a type of cost-effectiveness research) and additional information is reported on potential, future costs saved. The value of each of the above delivery systems will be reviewed separately. The total valuation will be the sum of the individual component valuations.

Valuations should be based on economic evaluation principles that identify, measure, and value the relevant costs and consequences of two or more alternatives. Typically, one alternative is a new program while the second is treatment as usual. Cost-utility analysis (CUA) measures the cost of the program in dollars and the health consequences in utility-weighted units. This valuation uses a quality-adjusted life-years (QALYs) analysis that combines health quality (utility) with length of time in a particular health state.

Cost-utility analysis is a useful tool for assessing the value of new health service interventions due to the fact that it provides a standard way of valuing multiple types of interventions and programs. The valuation also incorporates costs averted when known (e.g., emergency room visits that are avoided). In order to make the valuations fair across potentially different types of interventions the common health goal, or outcome, is the number of life-years added. The benefits of the proposed program are valued based on assigning a monetary value of $50,000 per life-year gained due to the intervention. This threshold has been a standard way of valuing life-years in terms of whether the cost of the intervention exceeds this standard. The number of life-years added is based on a review of the scientific literature.

Cost-Utility Analysis: The Texas Recommended Assessment Guidelines (Texas Department of State Health Services, 2011) established a utilization management scheme for matching patient need to service packages of varying intensities. To provide an approximation of the value of an outpatient behavioral health program, we will review studies related to each of the four service packages described below as "levels of care."

Level One: Medication only

Individuals receiving Service Package One (SP1) have been assessed to have relatively less severe symptomatology and functional impairment. Therefore, they receive medications only accompanied by service coordination. A study by Chouinard and Albright (1997) found that individuals receiving medications versus a placebo gained 7 times the quality-adjusted years than

without medications (QALY = .125). The proportion of individuals recommended to Level One at MHMRA is 56.5%. Assuming the program would serve 100 persons in a year, the following formula shows the total valuation:

100	(persons served)
0.125	(QALY gained)
.565	(proportion of patients recommended to Level One)
× $50,000	(life year value)
= $353,125	Level 1 QALY Value

Level Two: Medication plus therapy

About 18.5% of patients at MHMRA are recommended to Level Two services based on moderately severe need accompanied by diagnoses of major depression. This service package includes cognitive psychotherapy for depressive disorders in addition to medications. Pyne et al. (2003) compared the cost-effectiveness of medication services to medication plus CBT for depression. Their randomized controlled trial yielded an incremental QALY of 0.041 for the addition of CBT. Assuming the program would serve 100 persons in a year, the following formula shows the total valuation:

100	(persons served)
0.041	(QALY gained)
.185	(proportion of patients recommended to Level 2)
× $50,000	(life year value)
= $37,925	Level 2 QALY Valuation

Level Three: Medications and skills training

About 24% of patients at MHMRA are recommended to Level Three services, based on higher severity symptom and functional skill impairment. This package includes medications and skills training. Barton and colleagues (2009) compared social recovery oriented cognitive behavioral therapy (SRCBT) for people diagnosed with psychosis compared to case management alone (CMA); they reported a mean incremental QALY gain of 0.035. Assuming the program would serve 100 persons in a year; the following formula shows the valuation:

100	(persons served)
0.035	(QALY gained)
0.24	(proportion of patients recommended to Level 3)
× $50,000	(life year value)
= $42,000	Level 3 QALY Value

Level Four: Assertive Community Treatment (ACT) for Persons with Serious Mental Illness

Of consumers referred for services, about 4.1% are recommended for ACT Team treatment. This level of care represents the highest intensity service intervention. A 2012 study reported the cost-effectiveness of assertive community treatment as part of integrated care versus standard care in patients with schizophrenia (Karow, Reimer, König, Heider, Bock & Huber 2012). Results indicated the ACT intervention yielded a QALY of 0.76, whereas the treatment as usual groups resulted in a QALY of 0.66. Since the treatment is being contrasted with wait list or

DRAFT

not treatment, the full QALY (0.76) applies. The incremental QALY for the ACT group was 0.10. Assuming the program would serve 100 persons in a year the following formula shows the valuation:

100 (persons served)
0.76 (QALY gained)
0.041 Proportion of patients recommended to Level Four
× $50,000 (life year value)
= $155,800 Level 4 QALY Value

Hospitalizations

When compared to the year prior to outpatient treatment admission, MHMRA patients have averaged 1.66 fewer public psychiatric hospital bed days per person. Cost savings from these individuals from averting hospital services can be calculated as follows:

100 (persons served)
1.66 (average hospital bed days per person per year averted)
X$700 (cost of hospital day)
= $116,200 Costs saved from averted hospitalizations

Public Psychiatric Emergency Visits

When compared to the year prior to outpatient treatment admission, MHMRA patients have averaged 0.212 fewer public psychiatric emergency room visits per person. Cost savings from these individuals from averting these emergency services can be calculated as follows:

100 (persons served)
.212 (average emergency service visits per person per year averted)
X$705 (cost of hospital day)
= $14,946 Costs saved from averted hospitalizations

Mental Health Services in the County Jail

When compared to the year prior to outpatient treatment admission, MHMRA patients have averaged 0.05 fewer county jail incarcerations per person. Cost savings from averting these jail bookings can be calculated as follows:

100 (persons served)
.05 (average county jail incarcerations per person per year averted)
40.6 Average days incarcerated
X$130 (cost of jail day with mental health service)
= $26,390 Costs saved from averted hospitalizations

Valuation Summary: This valuation analysis shows that the intervention will have a positive value for participants who receive the intervention(s). Summing the estimated utilities of all four levels of care above, the expected value of this proposal is $746,386 per 100 people served per year.

Mental Health and Mental Retardation Authority of Harris County

Pass 2

DRAFT

Project Option 1.13.1: Develop and implement crisis stabilization services to address the identified gaps in the current community crisis system- Interim Care Clinic

RHP Project ID: 113180703.1.8 / Pass 2
Provider / TPI: Mental Health and Mental Retardation Authority of Harris County / 113180703

Project Summary:

Provider:
The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA provides inpatient, residential and outpatient treatments, including psycho-therapy, case management and medication management for individuals. MHMRA serves more than 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those individuals who received any agency service in FY12, 36.5% were medically indigent and 51.9% had Medicaid. Of those who received psychiatric emergency services in FY12, such as those being proposed in this project, 59.3% were medically indigent and 28.7% had Medicaid.

Intervention(s):
The Interim Care Clinic (ICC) is designed to provide initial evaluation and treatment in a single visit. The clinic will include extended evening hours and availability seven days a week.

Need for the project:
Although MHMRA routinely operates at or above its state mandated, contracted service capacity, averaging about 8,800 adult consumers served each month, there remains a significant waiting list for services. As of August 31, 2012 the waitlist for adult mental health outpatient services rested at 1,695, a level that has persisted for several years. Furthermore, tenure on the waiting list approached five months, an average of 149.16 days.

Target population:
The program targets individuals presenting at the MHMRA Psychiatric Emergency Service (PES) voluntarily, who are not in acute crisis, but who are in urgent need of assessment and treatment to avoid further deterioration of their psychiatric condition. It is anticipated the program will provide service for about 1100 patients.

Category 1 or 2 expected patient benefits:
MHMRA will:

- decrease inpatient admissions by 10% from baseline
- increase cost savings amount by amount TBD

Category 3 outcomes:
MHMRA expects to increase one domain of patient satisfaction (TBD) by 10% from baseline by DY5.

DRAFT

1.13.1- Develop and implement crisis stabilization services to address the identified gaps in the current community crisis system: Interim Care Clinic

RHP Project Number: 113180703.1.8 / Pass 2

Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/ 113180703

The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA provides inpatient, residential and outpatient treatments, including psycho-therapy, case management and medication management for individuals. MHMRA serves more than 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those individuals who received any agency service in FY12, 36.5% were medically indigent and 51.9% had Medicaid. Of those who received psychiatric emergency services in FY12, such as those being proposed in this project, 59.3% were medically indigent and 28.7% had Medicaid. With regard to income, 88% report family size and annual income placing them at or below 133% of 2012 Federal Poverty Level Guidelines. Only 5.2% of the agency's clientele report incomes above 100% of FPL. Harris County's ethnic diversity is reflected in the population served. Agency consumers self-describe the following ethnic backgrounds: African-Americans (34.5%), Anglos (27.1%), persons of Hispanic heritage (26.6%), Asian-Americans (2.8%) and those reporting other ethnicities (0.4%).

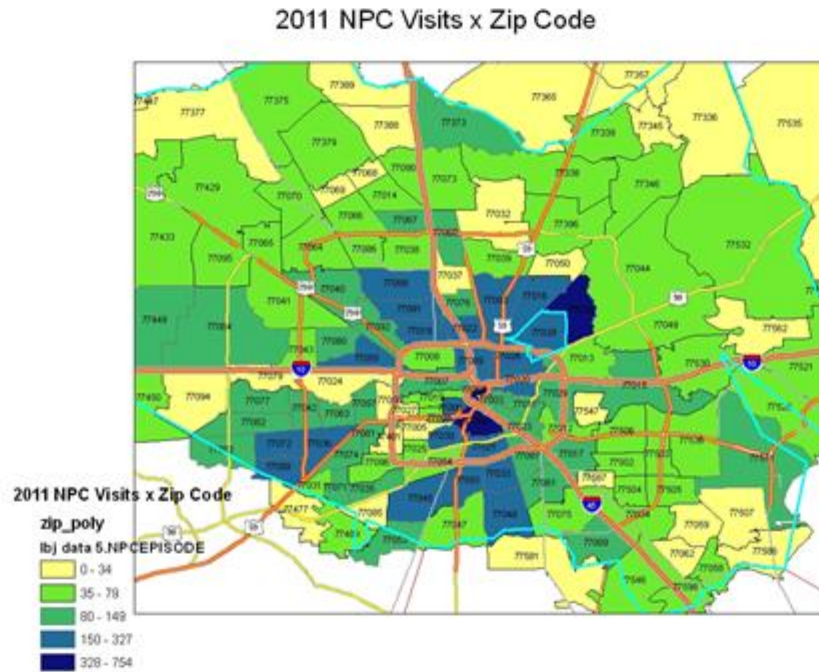
Project Description: The Interim Care Clinic (ICC) is designed to provide initial evaluation and treatment to individuals presenting at the MHMRA Psychiatric Emergency Service (PES) voluntarily, who are not in acute crisis, but who are in urgent need of assessment and treatment to avoid further deterioration of their psychiatric condition. These individuals are diverted from admission to the PES and offered a same day evaluation with an interim care clinic psychiatrist. The clinic is designed to be a single visit clinic and no return or follow-up appointments are given, although patients my return if needed. The project proposes to have the clinic available seven days a week, including extended evening hours.

Project Goals: The goals are to provide a community-based alternative for urgent psychiatric care, reduce unnecessary inpatient hospitalizations, reduce general hospital emergency room admissions for behavioral health emergencies, improve access to treatment for individuals in crisis, and utilize the least restrictive means of stabilizing and treating consumers.

Anticipated Challenges: The primary challenge is linkage to ongoing care. This challenge will be addressed through stakeholder meetings with other behavioral health care providers and expansion of outpatient behavioral health services. Additionally, linkage is addressed in other MHMRA DSRIP proposals.

The 5-year expected outcome(s): The expected 5 year outcome is to have a fully functional interim care clinic capable of serving up to 300 patients a month. Additionally, we expect to see a decrease in crisis services for patients receiving ICC services. Although they may be in urgent need, they may be stabilized prior to an emergent episode, and thus remain in the community. These goals are consistent with the regional and community needs as discussed below.

Table 1. Neuropsychiatric (Emergency) Center Visits by Zip Code of Residence



<u>Baseline:</u> There is currently no publicly funded interim care service provided through MHMRA of Harris County. Individuals who are in urgent need of psychiatric assessment and treatment are treated in the MHMRA Psychiatric Emergency Service (PES) located at Neuropsychiatric Center (NPC). Due to the overwhelming need for these services, the current PES has often been forced for health and safety reasons and elevated risk, to delay registration of those seeking voluntary admission to the program, or to divert law enforcement to other scarce psychiatric resources in the community. An interim care clinic would allow a portion of those seeking voluntary treatment to be directed to a less expense and restrictive alternative.

<u>Rationale:</u> While MHMRA has implemented several crisis alternatives, there is still an overwhelming need to provide psychiatric evaluation and treatment for those in urgent need. The current MHMRA Psychiatric Emergency Services has seen a marked increase in admissions since 2008. In 2008 there were 10,998 admissions; in 2011 that number rose to 16,334 admissions, an increase of 49%. The number brought to the unit by law enforcement also increased by 42% during that same time frame. The only other public hospital psychiatric crisis access is through Ben Taub Hospital. For a population of 4.2 million people, two access points are not adequate to fill the need to address both urgent and emergent crisis services.

Below is a map of the visits to the MHMRA Psychiatric Emergency Service located at NPC. The gap between service needs of seriously mentally ill adults in the county and available public service capacity is most evident in the waiting list for ongoing outpatient service. MHMRA of Harris County routinely operates at or above its state mandated, contracted service capacity, averaging about 8,800 adult consumers served each month. At this level, however, access is poor for many who apply for service. On August 31, the waitlist for adult mental health outpatient services rested at 1,695, a level that has persisted for several years. Further, tenure on the waiting list approached five months, an average of 149.16 days.

1.13.1 Core Components

In order to develop such a program, the following option (1.13.1) and core components were chosen:

a) Convene community stakeholders who can support the development of psychiatric urgent care services to update the gap analysis of the current community crisis system and revise a specific action plan to address identified gaps.
   - In progress. MHMRA convenes regularly with Harris County Psychiatric Center in a Joint Quality Council. MHMRA is also a member of the Harris County Mental Health Needs Council, where issues pertaining to gaps and needs of the community are discussed. Also, a pilot project resulted in outcomes that indicate an Interim Care Clinic can have a significant impact on reduction of penetration further into costly emergency services. .

b) Analyze the current system of crisis stabilization services available in the community including capacity of each service, current utilization patterns, eligibility criteria and discharge criteria for each service.
   - Already completed. MHMRA produces monthly reports on crisis stabilization services available within the agency, and has eligibility criteria and discharge criteria for each service.

c) Assess the behavioral health needs of patients currently receiving crisis services in the jails, EDs, or psychiatric hospitals. Determine the types and volume of services needed to resolve crises in community-based settings. Then update the gap analysis that will result in a data-driven plan to further refine the crisis stabilization initiative of interim care clinics that will meet the behavioral health needs of the patients. This will build upon the DSHS Crisis Redesign process.
   - A recent pilot project resulted in outcomes that indicate an Interim Care Clinic can have a significant impact on reduction of penetration further into costly emergency services.

d) Explore potential crisis alternative service models and determine an acceptable and feasible program design for implementation.

- This has already been done through DSHS Crisis Redesign and through a pilot project that resulted in positive outcomes on hospital diversion by utilizing an Interim Care model.

e) Review the intervention(s) impact on access to and quality of behavioral health crisis stabilization services and identify "lessons learned," opportunities to scale all or part of the intervention(s) to a broader patient population, and identify key challenges associated with expansion of the intervention(s), including special considerations for safety-net populations
   - To be completed. MHMRA will work with the outcomes department and key stakeholders to review impact and access, identify challenges and refine the intervention strategies.

Regional and Community Needs: This project directly meets broad goals identified by the regional needs assessment. First, it improves on existing programs and infrastructure by filling a void that is unmet by existing psychiatric outpatient clinics and psychiatric emergency services. Second, it increases access to specialty care services by providing treatment in an additional Houston location. The program also offers a preventative, patient-centered approach that provides brief psychiatric care to those in urgent need. The proposed program will also complement the regional need to develop a culture of "best practices" whereby the patient plays a more active role as a stakeholder by completing patient satisfaction surveys.

Unique Community Need Identification numbers: The Interim Care Clinic will address the following community needs:

- CN2-Insuffcient Access to Behavioral Health
- CN5- Integrated Care for Behavioral Health
- CN12- Improved Access to Patient Education
- CN14-Reduction of ER Services

The metrics chosen to assess our progress toward meeting our overall goals were specifically designed to measure the reduction in PES/HCPC use and the costs associated with meeting such a goal (see Milestone and Metrics chart).

<u>Related Category 3 Outcome Measure(s):</u>

IT-6.1 Percent improvement over baseline of patient satisfaction scores

Reasons/rationale for selecting the outcome measure:

Measurement of patient satisfaction is a key indicator of patient-centered care and has been targeted as a quality indicator by national organizations dedicated to improvement in patient outcomes, e.g. the National Council for Quality Assurance. Furthermore, if patients and their family are satisfied with services then we can assume they are being provided for adequately. On

DRAFT

the other hand, if patients are dissatisfied having an avenue to express their concerns is important to empowering our clients.

Relationship to other Projects: At this time there is not enough information available from the RHP to describe how this project may or may not be related to other RHP DSRIP proposals. However, the proposed project is similar to several MHMRA DSRIP proposals, including the expansion of the Crisis Residential Unit, expansion of the Chronic Consumer Stabilization Initiative. All three proposals seek to expand psychiatric stabilization while reducing inpatient admissions. It is hoped that many of the Interim Care patients could access these less restrictive and more appropriate care levels in lieu of hospitalization. Also, this project will interface with the expansion of outpatient mental health clinic services, the collaborative primary medical and behavioral health care, and with integrating substance abuse treatment services into mental health services by referring individuals into the appropriate ongoing care alternative.

Relationship to other Projects in the RHP: Numerous community needs assessments reflect an extreme need for behavioral health services to include outpatient treatment centers, crisis stabilization units, inpatient beds, and much more. The lack of funding as well as complexity of the regions patient base has limited the amount of behavioral health treatments available to our region and continues to drive cost in emergent and inpatient situations. The Crisis Stabilization Unit has a direct correlation to all behavioral health programs recommended in the RHP plan and will be a focus of two of the largest Local Mental Health Authorities of our region. Both CSU's share the outcome measures of mental health admissions & readmissions, and improvement of patient satisfaction scores. The Region 3 Initiative Grid attached in the addendum reflects the direct relationships of this initiative.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region’s healthcare system.

Project Valuation: In the effort to value the proposed project accurately, assistance was sought from H. Shelton Brown, Ph.D. of the UT Houston School of Public Health and Thomas Bohman, Ph.D. of the UT Austin Center for Social Work Research. Their consultation was limited to only the valuation section of this document. The primary valuation method uses cost-utility analysis (a type of cost-effectiveness research) and additional information is reported on potential, future costs saved. The value of each of the above delivery systems will be reviewed separately. The total valuation will be the sum of the individual component valuations.

Valuations should be based on economic evaluation principles that identify, measure, and value the relevant costs and consequences of two or more alternatives. Typically, one alternative is a new program while the second is treatment as usual. Cost-utility analysis (CUA) measures the

DRAFT

cost of the program in dollars and the health consequences in utility-weighted units. This valuation uses quality-adjusted life-years (QALYs) analysis that combines health quality (utility) with length of time in a particular health state.

Cost-utility analysis is a useful tool for assessing the value of new health service interventions due to the fact that it provides a standard way of valuing multiple types of interventions and programs. The valuation also incorporates costs averted when known (e.g., emergency room visits that are avoided). In order to make the valuations fair across potentially different types of interventions, the common health goal, or outcome, is the number of life-years added.

The benefits of the proposed program are valued based on assigning a monetary value of $50,000 per life-year gained due to the intervention. This threshold has been a standard way of valuing life-years in terms of whether the cost of the intervention exceeds this standard. The number of life-years added is based on a review of the scientific literature.

Cost-Utility Analysis: When comparing this expansion of Interim Care Clinic capacity to current service strategies, the project can best be likened to an innovative model for delivering medication only services, a strategy most similar to Level One of the current utilization management scheme. Individuals receiving service package one care are often prescribed psychotropic medication, but do not receive therapy. One QALY-related study (Chouinard & Albright, 1997) found individuals with schizophrenia receiving medications versus a placebo gained, on average, seven times the quality-adjusted years than without medications (QALY = .087). Furthermore, Schoenbaum, M., Miranda, J., Sherbourne, C., Duan, N., & Wells, K. (2004 found depressed patients who received medications improved to an average QALY of .0148 compared to those with no medications. Averaging these QALYs together results in a QALY of .0509 for receiving medications compared to not receiving medications.

Assuming the program would serve 100 patients a year:

100	(persons served)
0.0509	(QALY gained)
× $50,000	(life year value)
= $254,500	**Level 1 QALY Value**

Cost-Effectiveness and Cost Savings: Cost-effectiveness analysis (CEA) is similar to CUA, except that the cost averted is compared to a common health outcome, such as cost per depression-free day. We used local information to describe cost-savings. In the year prior to contact with the interim clinic there were a total of 52 hospitalizations at HCPC and 453 individuals admitted to NPC. After the first interim clinic visit, no HCPC or NPC visits were logged by this sample. Care at the Interim Care Clinic produced a reduction in hospitalizations at

DRAFT

HCPC by 4.7% and NPC visits by 50.8%. Based on this information we can calculate the cost savings as follows:

100	Number of Consumers Served
.047	Percent of Reduction in Hospitalization
10.25	Average length of stay at HCPC
x $700	Per diem cost of HCPC
$33,722.50	**Hospital Savings 1**

100	Number of Emergency Psychiatric Visits
0.508	Percent of Reduction in Emergency Psychiatric Visits
x $700	Per visit cost: Psychiatric Emergency Care
$35,560.00	**Hospital Savings 2**

Summary and Total Valuation: This valuation analysis shows that the intervention will have a positive value for participants who receive the intervention(s). The total valuation is **$323,783** per 100 patients served based on the QALY estimate and cost savings (**$254,500+ 33,722.50** + **$35,560.00**). This concludes the valuation for the proposed project.

Mental Health and Mental Retardation Authority of Harris County

Pass 3

Project Option 1.12 ENHANCE SERVICE AVAILABILITY OF APPROPRIATE LEVELS OF BEHAVIORAL HEALTH CARE: Clubhouse

RHP Project ID: 113180703.1.9 / Pass 3
Provider / TPI: Mental Health and Mental Retardation Authority of Harris County / 113180703

Project Summary:
Provider: The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. We will be contracting St. Joseph's House to provide psychosocial rehabilitative services. St Joseph House is an accredited Clubhouse and adheres to the standards of the International Center for Clubhouse Development (ICCD).

Intervention(s): The intervention is the ICCD Clubhouse Model, which is a day treatment program for psychosocial rehabilitation of adults diagnosed with a serious and persistent, chronically disabling mental health problem.

Need for the project: Estimates place approximately 78,000 adults with severe mental illness unable to access treatment from the public or private mental health systems in Harris County. The gap between service needs of seriously mentally ill adults in the county and available public service capacity is most evident in the current waiting list of 1,641 for ongoing outpatient service. MHMRA of Harris County routinely operates at or above its state mandated, contracted service capacity, averaging about 8,800 adult consumers served each month. At this level, however, access is inadequate for many who apply for service. At present, St. Joseph House is the sole provider of service of this type in Harris County. The current St. Joseph House capacity is limited to 60 active members.

Target population: Seriously mentally ill adults in Harris County with social and vocational functional impairments.

Category 1 or 2 expected patient benefits:

- Increase utilization of services to 209 patients more than baseline by DY5.
- A 10% decrease from baseline in intensive psychiatric and jail service admissions/bookings (i.e. psychiatric hospital, psychiatric emergency department, jail) by DY5.

Category 3 outcomes: MHMRA expects to increase one domain of patient satisfaction (TBD) by 10% from baseline by DY5.

Project Option 1.12.2- Expand the number of community based settings where behavioral health services may be delivered in underserved areas: Clubhouse Expansion

RHP Project Number: 113180703.1.9/Pass 3

Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/ 113180703

Project Description:

The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA provides inpatient, residential and outpatient treatments, including psycho-therapy, case management and medication management for individuals. MHMRA serves more than 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those individuals who received any agency service in FY12, 36.5% were medically indigent and 51.9% had Medicaid. Of those who received psychiatric emergency services in FY12, such as those being proposed in this project, 59.3% were medically indigent and 28.7% had Medicaid. With regard to income, 88% report family size and annual income placing them at or below 133% of 2012 Federal Poverty Level Guidelines. Only 5.2% of the agency's clientele report incomes above 100% of FPL. Harris County's ethnic diversity is reflected in the population served. Agency consumers self-describe the following ethnic backgrounds: African-Americans (34.5%), Anglos (27.1%), persons of Hispanic heritage (26.6%), Asian-Americans (2.8%) and those reporting other ethnicities (0.4%).

MHMRA will be contracting with St. Joseph House to provide psychosocial rehab services. St Joseph House is an accredited Clubhouse and adheres to the standards of the International Center for Clubhouse Development (ICCD). The ICCD Clubhouse Model is a day treatment program for rehabilitating adults diagnosed with a serious and persistent mental health problem. The goal of the program is to contribute to the recovery of individuals through use of a therapeutic environment that includes responsibilities within the Clubhouse (e.g., clerical duties, reception, food service, transportation, financial services), as well as through outside employment, education, meaningful relationships, housing, and an overall improved quality of life. Individuals who participate in the Clubhouse are called "members." Fundamental elements of their participation include openness and choice in type of work activities, choice in staff, and a lifetime right of reentry and access to all Clubhouse services.

Each individual is welcomed, wanted, needed, and expected each day and is considered a critical part of a community engaged in important work. A core component of the program is the "work-ordered day," the structure around which daily activity is organized. The day-to-day operation of the Clubhouse is the responsibility of members and staff, who work side by side in a rehabilitative environment. Other core components include transitional, supported, and independent employment through which members can secure jobs at prevailing wages in the

wider community; access to community support, such as housing and medical services; assistance in accessing educational resources; "reach-out" to maintain contact with all active members; participation in program decision-making and governance; and evening, weekend, and holiday social programs.

St Joseph House staff who function as generalists maintain a caseload including managing employment placements, housing issues, and access to community supports. They also are responsible for the ongoing work of the Clubhouse and help organize and participate in social activities. Staff have diverse life experiences and backgrounds in a variety of disciplines, including psychology, counseling, social work, and education. Clubhouse members do not pay dues or membership fees. Their attendance is voluntary, and they can participate as little or as much as they choose. Because the membership of the St. Joseph's House is fluid there are three methods for describing service output. First, there are daily attendees whose numbers are limited by the number of available staff, as reflected in average daily visits. Second, there are active members who have attended services within the past 3 months. Generally, there are twice as many active members as attend on an average day. And last, there are permanent members who have been active within the past year, a number generally several times the active membership. St Joseph House is the only program in Houston accredited by the ICCD.

The current proposal has two ways in which it will expand psycho-social rehabilitation for the mental health community in Harris County. First, the current St. Joseph House will add 4 additional staff in order to expand current service capability from 60 daily attendees to 90. Second, a new location will be opened that will have a service capacity of 30 daily member visits. In order to address this issue we will choose to focus on **project option 1.12.2:** Expand the number of community based settings where behavioral health services may be delivered in underserved areas.

Goals and Relationship to Regional Goals:

Project Goals**:**

The goals of the program will be to help individuals who have a chronic mental illness, and many of whom are homeless, develop vocational skills, engage in employment related activities, develop linkages to assist with housing, and medical and dental care. The hope is to enable individuals with chronic mental illness to become productive members of the community.

Related to the following Regional Goals:

The proposed project directly meets broad goals identified by the regional needs assessment. First, it improves and builds upon an existing program, which has shown positive gains in providing best-practices for patient-centered care. Furthermore, by providing enhanced, evidence-based services to patients the program will meet the regional goal set out above. Moreover, the program supports the regional goal of developing a culture of patient-centered care whereby the patient/consumer plays a more active role as a stakeholder.

Expected 5-year Outcomes: The five year goal is to enhance service availability at the original location and open a second location of the ICCD model Clubhouse program tailored to serve at least a combined 209 permanent members per year with chronic mental illness. The milestones

we selected to measure our progress toward this goal are to reduce unnecessary inpatient hospitalizations, reduce criminal recidivism, and to increase employment among participants.

Rationale:
The "Clubhouse" model of rehabilitation is well-researched method of psychiatric rehabilitation, successfully implemented for more than sixty years (Fountain House, 1999, Bond et al. 1984, Bond et al. 1995). The model provides vocationally oriented rehabilitation opportunities for its members in a normalized social setting where members with serious mental illness may pursue recovery-oriented goals. These programs have proven effective in reducing the demoralization typically attendant to serious and persistent mental illness and have been found to reduce member's use of intensive services such as psychiatric hospitalization and jail bookings (Johnson & Hickey, 1999). Psychosocial rehabilitation and vocational rehabilitation using the ICCD Clubhouse Model, including work-oriented programs in-house and opportunities to work for money in the community. A major goal of this model is also to help consumers reach their highest level of independence.

The community mental health system in Harris County has a limited capacity for service that is insufficient to the needs of its residents. The Mental Health Needs Council of Harris County has estimated that 153,000 of the 552,000 Harris County adults with mental illness have a *severe* mental illness (Depression, Bipolar Disorder, and Schizophrenia). These individuals are among the 96,200 Harris County adults who have no public (Medicaid or Medicare) or private health insurance and therefore, are totally dependent on the public mental health service system for treatment. In 2007, approximately 27,000 adults received services from the public mental health system; 18,200 of these were uninsured (a number representing only 19% of estimated need). By deduction, one can conclude that approximately 78,000 adults with severe mental illness failed to access treatment from the public or private mental health systems. The rate of unemployment among MHMRA adult clients with serious mental illness is estimated at 81%.

St. Joseph House is currently the only Harris County provider of clubhouse model psychosocial rehabilitation services.

Baseline/Starting Point: Currently, MHMRA does not have a psychosocial rehabilitation program. However, the St. Joseph House currently has one location that serves 120 permanent members, and about 60 individuals who attend daily. A site for the second location of the St. Joseph's House program has not been identified yet.

Anticipated Challenges: Locating a site and establishing a new location is a challenge due to the needs of the program; however, modifications can be made to the facility as needed.

Unique Community Need Identification numbers: Specific community needs are also addressed through the proposed program:

- CN3-Inadequate access to Behavioral Health Care
- CN6- Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children and elderly
- CN9- High rates of preventable hospital readmissions

Relation between Project Choices and Community Needs: Expansion of outpatient behavioral health services will address the community needs above by providing greater access to behavioral health care, thereby offsetting the increased use of costly, intensive medical and psychiatric emergency services. Furthermore, a larger behavioral health workforce within MHMRA will provide more opportunities for collaboration between providers and for patient education. MHMRA clinicians already engage in a variety of community collaborations and education activities, despite their tremendous workload. With the addition of qualified behavioral health personnel, more services can be provided.

Relationship to other Projects: The proposed project is similar to several MHMRA DSRIP proposals in its goals, including the expansion of outpatient behavioral health services within adult outpatient clinics and the project intended to enhance the intensity of behavioral outpatient services. Extending outpatient behavioral health specialty service and increasing the intensity of these services will together ultimately provide more responsive, appropriate levels of care. Outcomes of such services provided are expected to have an impact on patient satisfaction, preventable hospital admissions, and re-admissions; and will likely reduce costs by replacing high-intensity, high-cost services with routine outpatient mental health care. In addition, a proposed project to improve continuity of care for discharged psychiatrically hospitalized patients will capitalize on the expansion of outpatient services.

Relationship to other Projects in the RHP: The behavioral health crisis in Region 3 is considerable and the proposed initiatives in our RHP plan will only imply a small impression into the overall community need for treatment, but is a good start. The outpatient focus of many RHP Plan initiatives will help numerous facilities focus to treating the patients in an ambulatory setting as well as continued navigation of services with a focus to keeping patients from the inpatient unit. This initiative is similar to many others in the sense of the category of behavioral health. The Region 3 Initiative Grid attached in the addendum will show the relationship to other programs.

Plan for Learning Collaborative: Consumer satisfaction with access to services, an outcome to be assessed with input from consumer groups, patients and family members will involve all in the quality improvement loop. Similarly, rates of public psychiatric hospitalization will be presented to public psychiatric hospital representatives with an invitation for them to provide input on the improvement process.

We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: In the effort to value the proposed project accurately, assistance was sought from H. Shelton Brown, Ph.D. of the UT Houston School of Public Health and Thomas Bohman, Ph.D. of the UT Austin Center for Social Work Research. Their consultation was limited to only the valuation section of this document. The primary valuation method uses cost-utility analysis (a type of cost-effectiveness research) and additional information is reported on potential, future

costs saved. The value of each of the above delivery systems will be reviewed separately. The total valuation will be the sum of the individual component valuations.

Valuations should be based on economic evaluation principles that identify, measure, and value the relevant costs and consequences of two or more alternatives. Typically, one alternative is a new program while the second is treatment as usual. Cost-utility analysis (CUA) measures the cost of the program in dollars and the health consequences in utility-weighted units. This valuation uses a quality-adjusted life-years (QALYs) analysis that combines health quality (utility) with length of time in a particular health state.

Cost-utility analysis is a useful tool for assessing the value of new health service interventions due to the fact that it provides a standard way of valuing multiple types of interventions and programs. The valuation also incorporates costs averted when known (e.g., emergency room visits that are avoided). In order to make the valuations fair across potentially different types of interventions the common health goal, or outcome, is the number of life-years added.
The benefits of the proposed program are valued based on assigning a monetary value of $50,000 per life-year gained due to the intervention. This threshold has been a standard way of valuing life-years in terms of whether the cost of the intervention exceeds this standard.
The number of life-years added is based on a review of the scientific literature.

Cost-Utility Analyses

A review of the scientific literature failed to produce QALY-based studies of cost utility of psychosocial clubhouse model rehabilitative services.

Cost-effectiveness and Cost Savings

Cost-effectiveness analysis (CEA) is similar to CUA, except that the cost averted is compared to a common health outcome, such as cost per depression-free day. We did identify benefit-cost studies that were related.

DiMasso and colleagues (2001) performed an outcome study of the clubhouse model, contrasting vocational and hospital outcomes for engaged vs. poor attenders. They reported average reductions of 4.31 psychiatric hospitalizations during the 18 months following clubhouse program admission. This rate converts to an annual reduction of 2.87 hospital admissions per person. Given a local average length of stay of 10.25 days at a cost of $705/day, a savings of $20,739/person/year (2012, US dollars) can be calculated.

Bond (1984) estimated a savings of $7,282 in reduced psychiatric hospital care for clubhouse participants over the 9 months studied. Annualizing the rate ($7,282 x 1.33=$9,685) and converting to 2012 dollars yields an estimate of $21,474.68 savings per person per year for clubhouse participants.

Averaging the two estimates ($20,739 and $21,474.68) yields a single estimated value of $21,107 per person served.

100 (persons served)
× $21,107 (cost savings per person served)

= $2,110,700   QALY valuation

Additional Savings
Current research indicates additional savings in the form of improved vocational outcomes and reduced jail costs using this treatment model with this population.

Total Valuation

This valuation analysis shows that the intervention will have a positive value for participants who receive the intervention(s). **The total valuation is $2,110,700 per 100 people served per year.**

Project Option 1.9 EXPAND SPECIALTY CARE CAPACITY: Lighthouse Mental Health Clinic

RHP Project ID: 113180703.1.10 / Pass 3
Provider / TPI: Mental Health and Mental Retardation Authority of Harris County / 113180703

Project Summary:
Provider: The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA provides inpatient, residential and outpatient treatments, including psycho-therapy, case management and medication management for individuals. MHMRA serves about 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those individuals who received services in FY12, 60.0% were medically indigent and 32% had Medicaid. MHMRA plans to partner with The Lighthouse of Houston for this project. The Lighthouse, established in 1939, serves approximately 11,000 people each year and is a member agency of the United Way of Greater Houston. The primary goal of the Lighthouse is providing direct service to the individual.

Intervention(s): MHMRA proposes to establish behavioral healthcare clinic within the Lighthouse facility in order to provide mental health treatment capacity for persons with visual impairment to include identification of behavioral health needs, interventions, case management, patient and family education and coordination with primary care. The team (to include a director, 2 therapists, 1 intake counselor, a part-time nurse and psychiatrist) will develop services to address the specialized needs of persons with visual impairment with a mental health disorder to support wellness and independent functioning in the community.

Need for the project: Persons affected with blindness and visual impairment often experience difficulties in several life domains, including the development of behavioral health problems. The loss of independence associated with visual impairment can be a significant risk factor for depression and substance abuse disorders. Depression, a common and significant problem in and of itself, frequently also leads to negative functional outcomes in rehabilitation services for the visually impaired. Too often individuals with comorbid vision loss and depression do not seek services, and when they do, services are limited in scope, focusing exclusively on mental health issues to the exclusion of comorbid vision loss. Considering these consequences and the additional barriers faced by visually impaired persons in accessing mental health services, it seems advisable to integrate behavioral health services into the vision rehabilitation system.

Target population: The target population for this service will be individuals with visual impairment in need of behavioral health (mental health and substance abuse) services.

Category 1 or 2 expected patient benefits: Increase specialty care clinic volume from current state (no services) to 110 service recipient per year by DY5.

Category 3 outcomes: MHMRA expects to increase one domain of patient satisfaction (TBD) by 10% from baseline by DY5.

DRAFT

Project Option 1.9.2- Expand Specialty Care Capacity: Lighthouse

RHP Project Number: 113180703.1.10/Pass 3

Provider/TPI: Mental Health and Mental Retardation Authority of Harris County/113180703

Project Description:
The Mental Health and Mental Retardation Authority (MHMRA) of Harris County is a public agency serving as the safety net provider for adults with serious mental illnesses, for children and adolescents with serious emotional disorders, for the developmentally delayed and for individuals experiencing acute psychiatric distress. MHMRA provides inpatient, residential and outpatient treatments, including psycho-therapy, case management and medication management for individuals. MHMRA serves more than 49,000 Harris County residents out of a culturally and ethnically diverse population of over 4.1 million. Of those individuals who received any agency service in FY12, 36.5% were medically indigent and 51.9% had Medicaid. Of those who received IDD services in FY12, such as those being proposed in this project, 34.1% were medically indigent and 57.1% had Medicaid. With regard to income, 88% report family size and annual income placing them at or below 133% of 2012 Federal Poverty Level Guidelines. Only 5.2% of the agency's clientele report incomes above 100% of FPL. Harris County's ethnic diversity is reflected in the population served. Agency consumers self-describe the following ethnic backgrounds: African-Americans (34.5%), Anglos (27.1%), persons of Hispanic heritage (26.6%), Asian-Americans (2.8%) and those reporting other ethnicities (0.4%).

MHMRA plans to partner with The Lighthouse of Houston for this project. The Lighthouse, established in 1939, serves approximately 11,000 people each year and is a member agency of the United Way of Greater Houston. The primary goal of the Lighthouse is providing direct service to the individual. This includes not only providing direct service, but also a continual commitment to improving the quality and relevance of this service. All other organizational activities and functions are in support of this primary focus and have as their goal the development and dissemination of better service designs and interventions in order to enhance the optimal functioning of the individual.

Along with the Lighthouse, MHMRA proposes to expand behavioral healthcare capacity for persons with visual impairment to include identification of behavioral health needs, interventions, case management, patient and family education and coordination with primary care. The proposed site for this project is a recently purchased facility by the Lighthouse of Houston, adjacent to The Lighthouse of Houston and MHMRA on West Dallas in Houston. The proposed project will develop a specialized behavioral health team consisting of mental health, physical health, case management services, wraparound supports and adaptive technology. The team will develop services to address the specialized needs of persons with visual impairment with a mental health disorder to support wellness and independent functioning in the community. This project meets the Delivery System Incentive Reform Payment (DSRIP) Pool 1115(a) waiver component 1.9, Enhance service availability to appropriate levels of care— option 1.9.2 Improve access to specialty care.

Goals and Relationship to Regional Goals:

Project Goals:
The project will focus on the development of specialized mental health services for persons with visual impairment. Specialized services will include: (1) assessment of behavioral health needs in children and adults with visual impairment and (2) development and implementation of interventions for this population, including cognitive behavioral interventions, pharmacological interventions, case management support, patient and family education. These goals are consistent with the regional goals and community needs discussed below.

Regional Goals:
The project will increase access to specialty care in Harris County and will transform behavioral healthcare for the target population by providing timely, coordinated clinical care. When the behavioral health needs of people with impaired vision and mental illness are not treated until a crisis occurs interventions focus on episodic, emergent care without adequate coordination of aftercare. The project will provide coordinated care to prevent crises or resolve them with successful transition into stable maintenance. Furthermore, by increasing training capacity for new professionals, this project will develop a skilled workforce to multiply community options and improve access to treatment while improving satisfaction and behavioral health outcomes for the target population.

Challenges: One of the challenges will be hiring and training the appropriate level of staff to provide increased access and service to the targeted population. The proposed project will develop the workforce of clinicians who are competent to work with the target population and are comfortable doing so. MHMRA will continue to build upon existing partnerships with local universities, medical schools, public and private Medicaid providers and other agencies to develop clinicians who are skilled and willing to treat people with impaired vision, thereby growing an ever-expanding pool of competent community providers. The contractual agreements between MHMRA and medical schools and universities are already in place to provide internships and practicum opportunities to students and residents in child psychiatry, psychology, nursing, and social work. The Lighthouse of Houston also has well established partnerships with the medical community which will facilitate collaboration, development of specialized workforce and integration of care.

5-Year Expected Outcome for Provider and Patients: MHMRA expects to see an increase in utilization of specialty care services for as many as 300 patients over the DSRIP period.

Starting Point/Baseline: Currently, there are no specialized behavioral health services for persons with visual impairment as the one being proposed.

Rationale:
Persons affected with blindness and visual impairment often experience difficulties in several areas of functioning, including behavioral health. The loss of independence associated with visual impairment can be a significant risk factor for depression and substance abuse disorders. Depression is a common mental health problem among individuals who are visually impaired. A recent study found that 7% of the person applying for vision rehab services (over the age of 65) met the criteria for depression and an additional 27% had sub threshold depression. The prevalence of depression and other mental disorders may be even greater in young children and

middle age adults (40-45% has clinical significant depressive symptoms and 20% exhibit moderate to severe anxiety).

The consequences of mental health disorders for adults with visual impairment are far reaching. They have greater functional disability, morbidity and mortality. Too often individuals with comorbid vision loss and depression do not seek services, and when they do, services are limited and often do not address the comorbid vision loss. Depression is also likely to limit rehabilitation outcomes. Given these consequences and the additional barriers faced by visually impaired persons in accessing mental services, it seems imperative to integrate behavioral health services into the vision rehabilitation system.

In the greater Houston area, there are an estimated 74,538 persons who are blind or severely visually impaired. If we assume that 6% of them have a SPMI, that would imply that 4,472 persons with visual impairment also have a serious and persistent mental illness that interferes with their functioning. This does not include all of the others persons struggling with adjustment disorders, anxiety disorders and depression that, unless treated, will most likely exacerbate. Given the barriers to accessing care, it is assumed that most of these persons only seek help when in crisis and through the emergency room/hospital system. Persons with visual impairment also have higher rates of co-morbid medical conditions. For example, diabetes is prevalent in 15% of persons with visual impairment.

Project Components: Through the expansion of specialty care services project, we propose to meet all required project components listed below and believe that the selected milestones and metrics relate to the project components.

e) Increase service availability with extended hours
f) Increase number of specialty clinic locations
g) Implement transparent, standardized referrals across the system
h) Conduct quality improvement for project using methods such as rapid cycle improvement

Milestones and Metrics: The goals are consistent with the regional goals and community needs discussed above. Furthermore, the improvement metrics chosen for this project (I-23.1: Increase specialty care clinic volume of visits and evidence of improved access for patients seeking services) will determine the progress MHMRA is making to meet our stated goals.

Unique community need identification number the project addresses: Expansion of the Lighthouse clinic will address the following community needs:

- CN3-Inadequate access to Behavioral Health
- CN6- Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children and elderly
- CN9- High rates of preventable hospital readmissions
- CN0- High rates of preventable hospital admissions
- CN18- Insufficient access to integrated care programs for behavioral health and physical health conditions

Related Category 3 Outcome Measure(s): IT 6.1 Percent improvement over baseline of patient satisfaction scores for one domain of patient satisfaction.

Reasons/rationale for selecting the outcome measure: Measurement of patient satisfaction is a key indicator of patient-centered care and has been targeted as a quality indicator by national organizations dedicated to improvement in patient outcomes, e.g. the National Council for Quality Assurance. Furthermore, if patients and their family are satisfied with services then we can assume they are being provided for adequately. On the other hand, if patients are dissatisfied having an avenue to express their concerns is important to empowering our clients.

Rationale for selecting the outcome measures: Harris County MHMRA proposes to expand an innovative outpatient option, the Lighthouse clinic, to provide behavioral medicine and behavioral support services to create a safety net for people with impaired vision and co-occurring mental illness who reside in Harris County. This program is a unique clinic with highly skilled clinicians and impaired vision specialists who work together to achieve positive outcomes for people with serious behavioral and/or mental health problems. These services allow for the best opportunity for patient satisfaction as they provide the appropriate level of care for this population.

Relationship to Other Projects: This proposed project has activities related to the MHMRA proposal 113180703.2.1 Collaborative Primary and Behavioral Health which also addresses both physical and mental health needs of patients. Several other MHMRA proposed projects are similar to this one in way of provided outpatient behavioral health.

Relationship to Other Performing Providers' Projects in the RHP: The behavioral health crisis in Region 3 is considerable and the proposed initiatives in our RHP plan will only imply a small impression into the overall community need for treatment, but is a good start. The outpatient focus of many RHP Plan initiatives will help numerous facilities focus to treating the patients in an ambulatory setting as well as continued navigation of services with a focus to keeping patients from the inpatient unit. This initiative is similar to many others in the sense of the category of behavioral health. The Region 3 Initiative Grid attached in the addendum will show the relationship to other programs.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: In the effort to value the proposed project accurately, assistance was sought from H. Shelton Brown, Ph.D. of the UT Houston School of Public Health and Thomas Bohman, Ph.D. of the UT Austin Center for Social Work Research. Their consultation was limited to only the valuation section of this document. The primary valuation method uses cost-utility analysis (a type of cost-effectiveness research) and additional information is reported on potential, future costs saved. The value of each of the above delivery systems will be reviewed separately. The total valuation will be the sum of the individual component valuations.

Valuations should be based on economic evaluation principles that identify, measure, and value the relevant costs and consequences of two or more alternatives. Typically, one alternative is a new program while the second is treatment as usual. Cost-utility analysis (CUA) measures the cost of the program in dollars and the health consequences in utility-weighted units. This valuation uses quality-adjusted life-years (QALYs) analysis that combines health quality (utility) with length of time in a particular health state.

Cost-utility analysis is a useful tool for assessing the value of new health service interventions due to the fact that it provides a standard way of valuing multiple types of interventions and programs. The valuation also incorporates costs averted when known (e.g., emergency room visits that are avoided). In order to make the valuations fair across potentially different types of interventions, the common health goal, or outcome, is the number of life-years added.

The benefits of the proposed program are valued based on assigning a monetary value of $50,000 per life-year gained due to the intervention. This threshold has been a standard way of valuing life-years in terms of whether the cost of the intervention exceeds this standard. The number of life-years added is based on a review of the scientific literature.

Cost-Utility Analysis:

Our literature review did not reveal QALY estimates specifically for the integration of mental health services and visual impairment. However, we believe there is a close parallel to the integration of mental health and medical care. A review of the scientific literature identified several QALY-based estimates of the cost utility of providing collaborative mental health care in medical settings. We believe there is a parallel in that co-location is not only convenient, it is possible that collaboration among those providing services for the visually impaired and mental health.

One study examined collaborative care intervention for multi-symptom patients including depression, diabetes, and coronary heart disease (Katon, Russo, Lin, Schmittdiel, Ciechanowski, Ludman & Von Korff, 2012). In this study the effect of the intervention was 0.335 QALYs gained.

A second study focusing exclusively on treatment of major depression in the primary practice setting reported an incremental QALY of 0.049 (Rost, Pyne, Dickinson & LoSasso, 2005). In addition, Pyne, Smith, Fortney, Zhang, Williams, & Rost (2003) reported the cost utility of collaborative care for major depression. Their estimates yielded a 0.123 QALY increment over treatment as usual for females and an estimate of a slight, non-significant loss for males (-0.073 QALYs).

An average increment across the three reports can be calculated as (0.335, 0.049, 0.123, and -0.073) yields 0.1085 QALYs gained.

Assuming the program would serve 100 persons in a year, the following formula shows the total valuation:

100	(persons served)
0.1085	(QALY gained)
× $50,000	(life year value)

$542,500	**Valuation**

Cost-effectiveness and Cost Savings: Cost-effectiveness analysis (CEA) is similar to CUA, except that the cost averted is compared to a common health outcome, such as cost per depression-free day. We did identify benefit-cost studies that were related.
Rost and colleagues (2005) reported that their collaborative intervention for major depression produced a significant increment in days free of depression, resulting in 13.4 days between the first and second years of their study; whereas, Simon and colleagues (2012) reported a value of 47.7 additional depression-free days. Rost also reported health plan costs decreased $777.20 (2012 dollars) per treated person. Additional value can be calculated as:

100	(persons served)
x $777.2	(health plan cost savings)
= $77,720	**Cost Savings: Health Plan**

Similarly, Dewa et al. (2009) found that collaborative care saved $545 (2012 US Dollars) per patient in disability benefits. Additional value can be calculated as:

100	(persons served)
x $545	(disability benefit savings)
= $54,500	**Cost Savings: Disability**

Summary and Total Valuation

The total value per 100 people served per year can be calculated as:

$542,500	Incremental QALYs
$77,720	Health Plan Savings
+ $54,500	Disability Benefit Savings
= **$674,720**	**Total Valuation**

OakBend Medical Center

Pass 1

DRAFT

Project Option 1.3.1 : Implement and Utilize Disease Management Registry Functionality
Performing Provider: OakBend Medical Center (OBMC)/127303903
Unique Project ID: 127303903.1.1

- Provider: OakBend Medical Center is a stand-alone hospital authority that was established in October 1947 under the original name of Polly Ryon Memorial Hospital. OakBend Medical Center has grown to a hospital system, still governed by a hospital authority. It has expanded to two hospital locations, two diagnostic imaging centers, an outpatient surgical center, a free-standing Emergency Room and a Medical Group with 7 clinic locations. The Medical Group consists of Family Practice, OB/Gyn, Infectious Disease, Podiatry, Orthopedic, Cardiology and Interventional Cardiology. OakBend was able to provide more than $29,412,325 in charity care through September during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix– YTD 9/12	Patient Demographics
Hospital admissions- 5,453 Births (babies delivered)- 1,080 Emergency visits- 23, 433	Self-Pay- 13.8% Medicaid and CHIP- 19.5% Medicare- 40.1% Other Funding- N/A Commercial Insurance- 26.6	Hispanic- 39.6% African American- 16.7 Caucasian- 34.6 Asian- 2.0 Other- 6.7 American Indian- 0.4

- Intervention(s): This project will develop a chronic disease registry to use county wide to ensure providers and clinical staff with access to determine clinical outcomes and to identify physician, psychological and emotional needs of the chronically ill patients that we care for each day.

- Need for the project: The purpose of this project, as well as the other Category one (1) and two (2) projects, is to identify and target the at risk chronic disease(s) population and to move towards decreasing their inappropriate utilization patterns. Once identified, we plan to educate and encourage them to self-manage their healthcare, thus improving their quality of life as well as their inappropriate utilization of healthcare services.

- Target population: All patients that seek their medical care through any of the OakBend Medical Center system entities, who will benefit from this and other projects. We plan to target patients with Medicaid, CHIP and Self-Pay, especially those with chronic disease(s).

- Category 1 or 2 expected patient benefits: Our DY3 goal is to expand the Registry functionality to 30% of the Performing Provider's sites with increases in enrollment in DY4 and DY5.

- Category 3 outcomes: IT 3.2 – Our goal is to reduce CHF 30 day readmissions by 2% of baseline in DY4 and 5% of baseline by DY5.

Title: Implement and Utilize Disease Management Registry Functionality

Unique RHP Project Identification Number: *127303903.1.1*

Performing Provider Name/TPI: OakBend Medical Center (OBMC) / 127303903

Project Description: 1.3 / 1.3.1

Providers in the OakBend Medical Group (OMG) and the Fort Bend Family Health Care Center (FBFHC) will receive monthly registry reports on their patients with CHF, COPD, Diabetes and ESRD. OBMC will develop and implement a registry in conjunction with FBFHC and specific home health providers. The Home Health (HH) providers will be selected based on quality outcome measures and hospital readmission indicators.

OBMC will develop curriculum and educational training in conjunction with FBFHC in the use of a disease management registry. In addition, OBMC will develop curriculum and educational training in conjunction with the specific HH companies that have disease management programs, as well as develop curriculum and educational training in conjunction with the OBMC nephrologists and dialysis centers to provide education to all pre-renal and current dialysis patients on a quarterly basis, at a minimum. OBMC will provide a meeting space for any educational offerings that are provided in collaboration with selected community-based HH agencies, nephrologists, dialysis centers or the FBFHC in conjunction with Community Health Workers (CHWs). The personal contact and encouragement of the CHW may assist in influencing and promoting the patients' willingness to become more involved in the management of their health care through the utilization of available resources.

Goal(s) and relationship to Regional goal(s):

Project goals:

OBMC will create, expand and/or integrate longitudinal databases and population registry of health care utilization and services for patients with common chronic diseases of Congestive Heart Failure (CHF), Chronic Obstructive Pulmonary Disease (COPD), Diabetes and End Stage Renal Disease (ESRD) to decrease the number of readmissions to the hospital.

This project meets the following Region 3 goals:

This project addresses the RHP's goal to "[d]evelop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction."

DRAFT

Challenges and how addressed:

Working through time constraints allowed for each patient/physician interaction when caring for the chronic disease population; development and implementation of a disease-specific registry; developing a well-planned-out information support system with the ability for a robust data monitoring and outcomes management component; promoting and incentivizing the patient population to utilize available services; hiring and training of staff; managing non-compliant patients; space allocation for CHW; establishing a more focused coordination between the hospital and FBFHC with the CHW and other entities to achieve the shared goal of decreased readmissions. OBMC will address these challenges on a case-by-case basis, in large part by developing and providing education for patients in conjunction with the disease registry. The CHW will work in collaboration with each patient and their PCP / SCP to implement data entry and follow through of patients with disease specific diagnosis

5-year expected outcome for provider and patients:

Improved health outcomes for patients with common chronic diseases targeted by the disease management registry, including CHF, COPD, diabetes, and ESRD, as measured by this project's Category 1 improvement milestones and Category 3 improvement targets. We plan to track all patients registered in the data base to assist with forming a relationship with their PCP/SCP. We will also add and track new patients with any of the above chronic diseases as they are identified. We will monitor these patients for improved compliance thus improved chronic disease outcomes.

Starting Point/Baseline:

Baseline data:

OBMC does not currently have a disease management registry and has no patients enrolled.

Time period for baseline:

1/1/12 to 6/30/12

Rationale:

Reasons for selecting the project option:

One of the biggest issues facing appropriate management of chronic care conditions is the lack of coordination of care. By implementing a disease management registry OBMC can monitor the care utilization of patients with chronic diseases to determine whether they have had adequate follow-up and preventative care. CHWs can contact patients who are not receiving adequate care and work with partners like FBFHC to coordinate care delivery and ensure there is no duplication of services. Additionally, having this information will allow OBMC to track the

DRAFT

long-term clinical success of tertiary care vendors HH and refer patients to those vendors who have demonstrated success in helping patients manage their chronic conditions. This will ultimately allow for better health outcomes and an increased quality of life for these patients.

Project components:

The core components of this project will be:

a) Enter patient data into unique chronic disease registry.

b) Use registry data to proactively contact, educate, and track patients by disease status, risk status, self-management status, community and family need.

c) Use registry reports to develop and implement targeted QI plan. Conduct quality improvement for project using methods such as rapid cycle improvement. Activities may include, but are not limited to, identifying project impacts, identifying "lessons learned," opportunities to scale all or part of the project to a broader patient population, and identifying key challenges associated with expansion of the project, including special considerations for safety-net populations

d) Conduct quality improvement for project using methods such as rapid cycle improvement. Activities may include, but are not limited to, identifying project impacts, identifying "lessons learned," opportunities to scale all or part of the project to a broader patient population, and identifying key challenges associated with expansion of the project, including special considerations for safety-net populations.

- One of OakBend's milestones in Year 4 is to implement a continuous quality improvement plan by establishing meetings with other RHP providers.

Unique community need identification number the project addresses:

CN.9: High rates of preventable hospital readmissions

CN-11: High rates of chronic disease and inadequate access to treatment programs and services for illnesses associated with chronic disease

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

The ability to track the clinical utilization of patients with certain diagnosis codes and specific chronic conditions will be a new and significant tool for OBMC to both coordinate the delivery of care with its clinical partners and monitor the long-term effectiveness of its treatments. The result will be a collaboration that improves the health outcomes for OBMC's patients and reduces the cost of care by delivering services in an efficient and coordinated

DRAFT

manner. Furthermore, a better coordination of care will result in a better patient experience and more informed autonomous patient decisions.

Related Category 3 Outcome Measure(s):

IT-3.2 Congestive Heart Failure 30-Day Readmission Rate (Standalone Measure)

Reasons/rationale for selecting the outcome measure(s):

If the project is successful, then it will result in more effective management of chronic conditions, which in turn will result in the reduction of unnecessary readmissions. Congestive heart failure is an exemplar diagnosis for which effective disease management has been shown to reduce unnecessary hospital admissions. Therefore, the reduction in CHF admissions will be a reasonable metric by which to judge the effectiveness of this project.

Relationship to Other Projects:

How project supports, reinforces, and enables other projects:

This project will lay a foundation for, and reinforce the clinical effectiveness of OBMC's other DSRIP projects, including:

127303903.2.1: Redesign to Improve Patient Experience—Implement Consumer Assessment System

127303903.2.2: Establish Patient Care Navigation Program

127303903.1.3: Expand Specialty Care Capacity

127303903.1.2: Increase Training of Primary Care Workforce

Relationship to Other Performing Providers' Projects in the RHP:

The sheer volume of population as well as the complexity of patient conditions dictates the need of numerous disease registries in our region to properly identify and manage chronic conditions. The concept is utilized consistently throughout our region in order to help achieve milestones and outcomes specific to patient conditions. All disease registries presented have a similarity in concept but are unique in the sense of condition or patient population focus. The Region 3 initiative grid in the addendum reflects direct relations between all projects.

Plan for Learning Collaborative:

We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our

Region's healthcare system. Specifically relating to this project, we plan to use these learning collaboratives to discuss with other providers in the region methods of ensuring that overall regional CHF admission and readmission rates are decreased, rather than CHF patient populations merely being diverted from one provider to another.

Project Valuation:

Approach for valuing project:

OBMC values each project based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, and the time, effort, and clinical resources necessary to implement each project.

In valuing this project, OBMC took into account the extent to which the implementation of a disease management registry would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to implement the project.

Rationale/justification for valuation:

The implementation of a disease management registry will significantly improve health outcomes for patients with chronic diseases, improve patient experience, and ultimately result in the reduction of healthcare costs; therefore, OBMC took these factors into account when considering the appropriate incentive payment value for this project.

Project Option: 1.2.2 Increase the number of primary care providers (PCP's)
Performing Provider: OakBend Medical Center (OBMC)/127303903
Unique Project ID: 127303903.1.2

- Provider: OakBend Medical Center is a stand alone hospital authority that was established in October 1947 under the original name of Polly Ryon Memorial Hospital. OakBend Medical Center has grown to a hospital system, still governed by a hospital authority. It has expanded to two hospital locations, two diagnostic imaging centers, an outpatient surgical center, a free-standing Emergency Room and a Medical Group with 7 clinic locations. The Medical Group consists of Family Practice, OB/Gyn, Infectious Disease, Podiatry, Orthopedic, Cardiology and Interventional Cardiology. OakBend was able to provide more than $29,412,325 in charity care through September during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix– YTD 9/12	Patient Demographics
Hospital admissions- 5,453 Births (babies delivered)- 1,080 Emergency visits- 23, 433	Self-Pay- 13.8% Medicaid and CHIP- 19.5% Medicare- 40.1% Other Funding- N/A Commercial Insurance- 26.6	Hispanic- 39.6% African American- 16.7 Caucasian- 34.6 Asian- 2.0 Other- 6.7 American Indian- 0.4

- Intervention(s): The shortage of PCP's has contributed to increased wait times in hospitals, community clinics, and other care settings. This we feel discourages some individuals from seeking care due to the limited resources. This will increase access and capacity and help create an organized structure of PCP's, clinicians, and staff.

- Need for the project: The expansion of PCP's will promote and encourage patients to access appropriate level of care leading to better clinical outcomes for the community. The purpose of this project, and other Category one (1) and two (2) projects, is to increase availability of PCP's to improve quality of life as well as decrease inappropriate utilization of healthcare services.

- Target population: This project addresses the RHP's goal to increase access to primary and specialty care services, with a focus on underserved populations. To ensure patients receive the most appropriate care for their condition. We plan to target patients with Medicaid, CHIP and Self-Pay, especially those with chronic disease(s).

- Category 1 or 2 expected patient benefits: OBMC will expand the number of Primary Care Physicians (PCPs) on our current physician panel by two physicians in the Third (3rd) year and by a total of four (4) by year five (5).

- Category 3 outcomes: IT 3.2 – The increase in access to primary care physician services will decrease the number of admissions for diseases like CHF, that can be adequately managed on an outpatient basis.

Title: Increase Training of Primary Care Workforce

Unique RHP Project Identification Number: 127303903.1.2

Performing Provider Name/TPI: OakBend Medical Center (OBMC) / 127303903

Project Description: 1.2 / 1.2.2

Texas has a growing shortage of primary care doctors and nurses due to the needs of an aging population, a decline in the number of medical students choosing primary care, and thousands of aging baby boomers who are doctors and nurses looking towards retirement. The shortage of primary care workforce personnel in Texas is a critical problem that we have the opportunity to begin addressing under this Waiver. It is difficult to recruit and hire primary care physicians. The shortage of primary care providers has contributed to increased wait times in hospitals, community clinics, and other care settings. Expanding the primary care workforce will increase access and capacity and help create an organized structure of primary care providers, clinicians, and staff. Moreover, this expansion will strengthen an integrated health care system and play a key role in implementing disease management programs. A greater focus on primary care will be crucial to the success of an integrated health care system.

Goal(s) and relationship to Regional goal(s):

Project goals:

OBMC will expand the number of Primary Care Physicians (PCPs) on our current physician panel by two physicians in the second (2nd) year and by a total of four (4) by year five (5). We will also plan to increase the support staff to compliment the additional physicians. In addition, OBMC will provide training to these new physicians to integrate them into the community.

This project meets the following Region 3 goals:

This project addresses the RHP's goal to "[i]ncrease access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay."

Challenges and how addressed:

- Recruiting primary care physicians OBMC will address this challenge by emphasizing to potential providers the benefits of living and working in a vibrant and growing area such as Fort Bend County. The cost of living is lower than many places in the nations with low crime and no drastic seasonal changes. The shortage of PCP's has contributed to increased wait times in hospitals, community clinics, and other care settings. This we feel discourages

some individuals from seeking care due to the limited resources. This will increase access and capacity and help create an organized structure of PCP's, clinicians, and staff.

5-year expected outcome for provider and patients:

Increased access to primary health care services for patients in the community.

Starting Point/Baseline:

Baseline data:

OBMC currently has 15 primary care physicians in the community, but will need at least four more over the next five years in order to meet the demand for primary care services in the community.

Time period for baseline:

1/1/12 to 6/30/12

Rationale:

Reasons for selecting the project option:

Currently OBMC provides high-quality, affordable care to residents of Fort Bend County regardless of their ability to pay. However, access to primary care appointments is limited. As a result, many patients are cared for exclusively in the Emergency Department (ED). This setting is not designed to provide comprehensive assessment, disease-specific education, preventative care and coordination. Therefore OBMC chose to implement this project in order to address the need for primary care in the community.

Unique community need identification number the project addresses:

CN.1: Inadequate access to primary care

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

This will considerably improve OBMC's primary care capacity, as evidenced by a 25% increase in primary care encounters for OakBend Medical Group (OMG) and clinic sites compared to the current baseline. Additionally, this project will increase OBMC's ability to provide appropriate care in a timely manner and in the correct setting. This will enable OBMC to treat more patients in this type of setting, where they will receive education including disease-specific, as well as preventative care and screenings.

Related Category 3 Outcome Measure(s):

IT-2.1 Congestive Heart Failure Admission Rate (CHF)

Reasons/rationale for selecting the outcome measure(s):

The increase in access to primary care physician services will decrease the number of admissions for diseases that can be adequately managed like CHF.

Relationship to Other Projects:

How project supports, reinforces, and enables other projects:

This project will lay a foundation for, and reinforce the clinical effectiveness of, OBMC's other DSRIP projects, including:

127303903.1.3: Expand Specialty Care Capacity

127303903.1.1:Implement and Utilize Disease Management Registry Functionality

127303903.2.2: Establish Patient Care Navigation Program

Relationship to Other Performing Providers' Projects in the RHP:

Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative:

We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

DRAFT

Project Valuation:

Approach for valuing project:

OBMC values each project based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, and the time, effort, and clinical resources necessary to implement each project.

In valuing this project, OBMC took into account the extent to which the expansion of primary care providers would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to implement the project.

Rationale/justification for valuation:

The expansion of primary care providers will promote and encourage patients to access care which will lead to better clinical outcomes for the community. OBMC took these potential effects into account when considering the appropriate incentive payment value for this project.

Project Option: 1.9.1 Expand Specialty Care Capacity
Performing Provider: OakBend Medical Center (OBMC) / 127303903
Unique Project ID: 127303903.1.3

- Provider: OakBend Medical Center is a stand-alone hospital authority that was established in October 1947 under the original name of Polly Ryon Memorial Hospital. OakBend Medical Center has grown to a hospital system, still governed by a hospital authority. It has expanded to two hospital locations, two diagnostic imaging centers, an outpatient surgical center, a free-standing Emergency Room and a Medical Group with 7 clinic locations. The Medical Group consists of Family Practice, OB/Gyn, Infectious Disease, Podiatry, Orthopedic, Cardiology and Intervential Cardiology. OakBend was able to provide more than $29,412,325 in charity care through September during FY 2012.

Volume Statistics - FY2012	Patient Payor Mix–YTD 9/12	Patient Demographics
Hospital admissions- 5,453 Births (babies delivered)- 1,080 Emergency visits- 23, 433	Self-Pay- 13.8% Medicaid and CHIP- 19.5% Medicare- 40.1% Other Funding- N/A Commercial Insurance- 26.6	Hispanic- 39.6% African American- 16.7 Caucasian- 34.6 Asian- 2.0 Other- 6.7 American Indian- 0.4

- Intervention(s): OBMC will expand the number of Specialty Care Physicians (SCPs) on our current physician panel by the addition of Obstetrics and Gynecology, Cardiology/Interventional Cardiology, Otolaryngology and Orthopedic specialty services.

- Need for the project: The increase in access to specialty physician services across a wide range of clinical specialties will result in a decrease in preventable readmissions because effective disease management and access to care reduce the incidence of acute conditions. The purpose of this project, and other Category one (1) and two (2) projects, is to increase availability of SCP's to improve quality of life as well as decrease inappropriate utilization of healthcare services.

- Target population: This project addresses the RHP's goal to increase access to primary and specialty care services, with a focus on underserved populations. To ensure patients receive the most appropriate care for their condition. We plan to target patients with Medicaid, CHIP and Self-Pay, especially those with chronic disease(s).

- Category 1 or 2 expected patient benefits: Our goal is to increase our current referral pattern in each disease-specific category by five (5%) percent in the third (3rd) year and by a total of fifteen (15%) percent by year five (5).

- Category 3 outcomes: IT 3.2 – Increase the number of specialty providers, clinic hours and/or procedure hours available for the most highly impacted medical specialties.

Title: Expand Specialty Care Capacity

Unique RHP Project Identification Number: 127303903.1.3

Performing Provider Name/TPI: OakBend Medical Center (OBMC) / 127303903

Project Description: 1.9 / 1.9.1

OBMC will expand the number of Specialty Care Physicians (SCPs) on our current physician panel by the addition of Obstetrics and Gynecology, Cardiology/Interventional Cardiology, Otolaryngology and Orthopedic specialty services. In order to assist in appropriate utilization of the additional physician specialists, OBMC will implement an electronic specialty referral process and train its providers on its use.

OBMC wishes to implement this project to increase the capacity to provide specialty care services and the availability of targeted specialty providers to better accommodate the high demand for specialty care services so that patients have increased access to specialty services. Federal funding (Medicare Direct Graduate Medical Education or DGME) for residency training is capped at 1996 levels for the direct support of graduate medical education. The cap only supports a third of the costs of 4,056 of the 4,598 actual positions in Texas, leaving the residency programs to cover the cost of two-thirds of the 4,056 positions and the full cost of 542 positions. Texas is currently over its Medicare cap by 13%. Residency programs require 3 to 8 years of training, depending on the specialty. Medicare funding only covers years 1 through 3. In 2011, Texas had more than 550 residency programs, offering a total of 6,788 positions. Only 22% (1,494) of these were first-year residency positions. According to the Coordinating Board, conservative estimates indicate that the cost to educate a resident physician for one year is $150,000. Hence the State and the Fort Bend Community specifically, has a need for specialists.

Goal(s) and relationship to Regional goal(s):

Project goals:

Our goal is to increase our current referral pattern in each disease-specific category by five (5%) percent in the second (2nd) year and by a total of fifteen (15%) percent by year five (5).

This project meets the following Region 3 goals:

This project addresses the RHP's goal to "[i]ncrease access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay."

Challenges and how addressed:

Recruitment of physician specialists; training staff on new referral procedures. OBMC will address the challenge of physician recruitment by emphasizing to potential specialist providers the benefits of living and working in a vibrant and growing area such as Fort Bend County. The cost of living is lower than many places in the nations with low crime and no drastic seasonal changes. The shortage of PCP's and SCP's has contributed to increased wait times in hospitals, community clinics, and other care settings. This we feel discourages some individuals from seeking care due to the limited resources. This will increase access and capacity and help create an organized structure of PCP's, SCP's, clinicians, and staff..

5-year expected outcome for provider and patients:

Increase access to specialty care, as measured by project milestones and metrics. We plan to accomplish this by use of a Community Health Worker and a Community Health Coordinator. These two positions will assist patients as they access the ECC (Emergency Care Center) either for outpatient treatment in an ECC setting or upon discharge from an observation or inpatient hospitalization. They will help these patients via coordination and establishment of referral patterns to PCP's and SCP's as indicated and medically appropriate.

Starting Point/Baseline:

Baseline data:

OBMC has begun the review of referral patterns to determine the clinical areas where specialists are needed.

Time period for baseline:

1/1/12 to 6/30/12

Rationale:

Reasons for selecting the project option:

This will increase OBMC's ability to provide appropriate care in a timely manner and in the correct setting. This will enable OBMC to treat more patients in this type of setting, where they will receive education including disease-specific, as well as preventative care and screenings. In addition, the project will considerably improve OBMC's communication between the primary care and other healthcare consultants, through improvement of our physician referral line and electronic specialty referral process.

Project components:

We will meet the core components of this project which include::

a) Organizational integration and prioritization of patient experience.
b) Identify high impact/most impacted specialty services and gaps in care and coordination.
c) Increase the number of residents/trainees choosing targeted shortage specialties.
d) Design workforce enhancement initiatives to support access to specialty providers in underserved markets and areas (recruitment and retention).
e) Conduct quality improvement for project using methods such as rapid cycle improvement. Activities may include, but are not limited to, identifying project impacts, identifying "lessons learned," opportunities to scale all or part of the project to a broader patient population, and identifying key challenges associated with expansion of the project, including special considerations for safety-net populations.

Milestones and Metrics:

The following milestones and metrics were chosen for the OakBend Expand Specialty Care Capacity Project based on the core components and the needs of the target population:
Process Milestones and Metrics: P-1 (P-1.1); P-2 (P-2.1); P-20 (P-20.1)

Improvement Milestones and Metrics: I-22 (I-22.1)

Unique community need identification number the project addresses:

CN.2: Inadequate access to specialty care

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

This project would represent a new initiative for OBMC to streamline the delivery of care by recruiting targeted physician specialists in the community rather than referring to specialists in neighboring areas. This provides increased access for patients in the community and allows for better and more efficient coordination of care.

Related Category 3 Outcome Measure(s):

IT-3.1 All Cause 30-Day Readmission Rate

Reasons/rationale for selecting the outcome measure(s):

The increase in access to specialty physician services across a wide range of clinical specialties will result in a decrease in preventable readmissions because effective disease management and access to care reduce the incidence of acute conditions.

Relationship to Other Projects:

How project supports, reinforces, and enables other projects:

This project will lay a foundation for, and reinforce the clinical effectiveness of, OBMC's other DSRIP projects, including:

1.10 Enhance Performance Improvement and Reporting Capacity

2.2 Expand Chronic Care Management Models

2.4 Redesign to Improve Patient Experience

2.5 Redesign for Cost Containment

127303903.1.1: Implement and Utilize Disease Management Functionality

127303903.1.2: Training of Primary Care Workforce

Relationship to Other Performing Providers' Projects in the RHP:

The increased access to primary care visits will naturally generate additional need of specialty care visits based on the condition and acuity of the patients served. Understanding that the patient base targeted through this initiative will generate significant specialty care visits due to chronic conditions and lack of previous treatments, this initiative and similar initiatives will focus to 30-day readmission rate reductions, improvement for patient satisfaction scores, and admission rates specific to chronic conditions. Numerous initiatives have been included in the RHP plan and the addendum of the Initiative Grid can directly tie all specialty care projects together by category.

Plan for Learning Collaborative:

We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

Approach for valuing project:

OBMC values each project based on the specific needs of the community, the projected impact on the health outcomes of the community, the level of advancement to the healthcare delivery system, and the time, effort, and clinical resources necessary to implement each project.

In valuing this project, OBMC took into account the extent to which the expansion of specialty care capacity would potentially meet the goals of the Waiver (support the development of a coordinated care delivery system, improve outcomes while containing costs, improve the healthcare infrastructure), the extent to which it will address the community needs, the population served, and the resources and cost necessary to implement the project.

Rationale/justification for valuation:

The expansion of specialty care capacity will promote and encourage patients to access care which will lead to better clinical outcomes for the community. OBMC took these potential effects into account when considering the appropriate incentive payment value for this project.

Rice Medical Center

Pass 1

Project Option 1.1.2: Expand existing primary care capacity

Unique RHP Project ID: 212060201.1.1
Performing Provider Name/TPI: Rice / 212060201

Project Summary:

Provider: Rice Medical Center is a 25-bed critical access hospital with Trauma IV designation in Eagle Lake, Texas serving a, 1100 square mile area and a population of approximately 20,000.

Intervention(s): Rice intends to expand the availability of family practice obstetric services in the East Bernard Rural Health Clinic ("RHC") and Rice Medical Center service areas by hiring a family practice obstetrician ("FP/OB") to work in the clinic. This project will entail identifying a larger space for the East Bernard RHC in which the FP/OB will practice and scheduling the FP/OB to provide after-hours services (noon-8pm shifts) during the week.

Need for the project: Wharton County, where the East Bernard Clinic is located, is populated by 10,964 women, 3,874 of which are between the ages of 15 and 44 years old (reproductive age). Approximately 30-40% of those women reside within the service area of the East Bernard clinic. The service area does not currently provide local FP/OB women's health coverage, requiring women in need of services to travel significant distances to access care.

Target population: The target population includes female patients who reside within the East Bernard Clinic's service area and currently have very limited access to OB services in the community (one part-time FP/OB and one family practice physician). The East Bernard Clinic treats approximately 8,000-10,000 patients per year and 18-22% of those patients are Medicaid eligible or uninsured. Approximately 50% of those patients are women, and are expected to benefit from the local availability of an FP/OB.

Category 1 or 2 expected patient benefits: The project seeks to provide local access to a family practice physician specializing in OB/Gyn services in DY3, and extended after-hours access to the FP/OB in DY4, allowing working women and school-age girls the opportunity to access the FP/OB in the evenings. Between DY4 and DY5, Rice seeks to increase the number of unique patients (women of reproductive age) treated by the FP/OB by 10%.

Category 3 outcomes: IT-6.1 – By DY4, Rice will improve East Bernard Clinic's patient satisfaction scores in the domain of timely access to care, appointments, and information by 5% over the baseline established in DY3 through the addition of the FP/OB to the East Bernard Clinic. By DY5, Rice seeks a 10% improvement in the same domain of patient satisfaction scores over baseline.

Project Option 1.1.2 - Expand existing primary care capacity

Unique RHP Project Identification number: 212060201.1.1
Performing Provider/TPI: Rice/212060201

Project Description:
Rice proposes to expand the availability of family practice obstetric services.

We intend to expand the availability of family practice obstetric services in the East Bernard RHC and Rice service areas by hiring a physician to provide these services. With increased access to women's family practice and OB services, the health outcomes for women and their infants will improve in the short- and long-term, as will the delivery system costs of providing care.

Specifically, Rice is going to build a new clinic in East Bernard to replace the existing RHC, as the current lease is up and Rice is no longer able to maintain the space. The East Bernard clinic is the only source of primary care in the East Bernard area. In conjunction with opening the new (and improved) East Bernard clinic, Rice intends to hire an FP/OB to provide services to women, and will pilot having the FP/OB to work after-hours (noon-8pm shifts) in order to allow working women and school-age girls to receive care.

Goals and Relationship to Regional Goals:
Expand the existing capacity of primary care in the East Bernard community to better accommodate the needs and increase the availability of care for this patient population allowing them to receive the right care at the right time in the right setting.

While the Region has many specific objectives and improvement targets based on stakeholder input and community needs assessments, the over-arching goals that have guided many of our decisions include the following:
Project Goals:

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
- Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system, and
- Develop a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes.

Challenges:

Rice expects the biggest challenge of this project to be recruiting the appropriate candidate willing and able to provide this type of care to an underserved community. Rice intends to approach this challenge with innovative solutions, including creating attractive benefits for a provider to relocate to this rural area.

5-Year Expected Outcome for Provider and Patients:
Rice expects women's overall health screening, treatment, and management to improve with the addition of the FP/OB primary care physician to the new East Bernard clinic. Patients will enjoy improved access to appointments and specialty care in the area of obstetrics. These improvements should yield longer-term benefits, including a reduction in low birth weights, earlier detection of breast, cervical, and other types of cancers affecting women, and reproductive education and control for women under the FP/OB's care.

Starting Point/Baseline:
The women of (northern) Wharton County do not currently have access to a full-time FP/OB in the (East Bernard) area, and have only access to a primary care physician providing those services in the RHC that the East Bernard Clinic will replace.

Rationale:
Wharton County is a federally designated Health Professional Shortage Area when it comes to primary care for low income residents. The low-income community members residing in East Bernard and the boundaries of the Rice Hospital District are underserved by physicians providing OB services as well, on top of which population growth trends and the recent 33% reduction in local OB providers support the need for an additional OB provider in the area.

Wharton County is populated by 10,964 women, 3,874 of which are between the ages of 15 and 44 years old. A percentage of those women reside within the service area of the East Bernard clinic. The service area currently is without FP/OB women's health coverage without significant travel.

Wharton County has a lower rate of mammography screening than the statewide average, which is one of many issues this project seeks to address. More than 8% of infants born in Wharton County suffer from low birth weight, which is another condition that can be positively affected by access to an FP/OB. Finally, Wharton County's teen birth rate is higher than the statewide rate, which an FP/OB can address through sex education and preventative measures for teens in the community. Increasing access to this type of primary care is imperative to preserving and improving women's health in the community.

Project Components:
This project will address the core requirements of this project option in the following ways:

a) Expand primary care clinic space:
    - The new East Bernard clinic will have expanded square footage, allowing the FP/OB his or her own space out of which to practice women's health care.

b) Expand primary care clinic hours:
    - The East Bernard clinic will operate after-hours for FP/OB services during the week, in order to provide care to working women and school-age children.

c) Expand primary care clinic staffing:
   - The East Bernard clinic will enjoy expanded staffing, in that the FP/OB will be a new addition, and equipped to handle specialty and primary care for women and girls in the community.

Milestones and Metrics:
The following milestones and metrics were chosen for the expansion of the existing primary care capacity project based on the core components and the needs of the target population:
Process Milestones and Metrics: P-1 (P-1.1); P-4 (P-4.1); P-5 (P-5.1)
Improvement Milestones and Metrics: I-12 (I-12.1, I-12.2)
Unique community needs identification numbers:
Ties to Region 3 unique community needs: CN.1, CN.3, CN.7, CN.8, CN.9, CN.12
Related Category 3 Outcome Measure(s):
OD-6 Patient Satisfaction, IT-6.1(1) - Patient satisfaction with getting timely care, appointments, and information

Reasons/rationale for selecting the outcome measures:
Rice chose this Category 3 Outcome domain because one of the main goals in recruiting the new FP/OB to the area is to improve patient satisfaction with their access to primary and specialty care. If patients feel they are able to receive timely care, appointments, and information, they are more likely to seek treatment and maintain best health practices under the supervision of their physician.

Relationship to other Projects:
This project relates to the following projects that Rice is submitting: Reduce Inappropriate Use of the ED and Chronic Disease Outreach. This project will tie in with giving patients improved access to primary care so they will be less inclined to use the ED for non-emergent treatment, and will allow additional patient touches that are always beneficial to patients at risk for or managing chronic diseases.

Relationship to Other Performing Providers' Projects in the RHP:
Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative:

We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and

testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. This project was valued Rice's most valuable because it most clearly accomplishes the goals of the Waiver by increasing access to primary and specialty care through additional staffing, hours, and space) and a reduction in expensive use of the ED and preventable hospital admissions for treatment.

This provider will be available to all women of reproductive age in the Region and can provide education, screening, diagnosis, and treatment for reproductive issues. The project will take significant investment in recruiting, training, and paying the new provider, as well as providing additional perks or benefits to incentivize a provider to relocate to a rural area like Colorado County and work after-hours during the week.

Rice Medical Center

Pass 3

Project Option 1.7.1: Implement telemedicine program to provide or expand specialist referral services in an area identified as needed to the region- Implement Telehealth & Telemedicine in Colorado County
Unique RHP Project Identification Number: 212060201.1.2
Performing Provider Name/TPI: Rice TPI/212060201

- Provider: Rice Medical Center is a critical access hospital located in Eagle Lake, Colorado County, TX. The county population served by Rice is approximately 21,000. Rice also serves East Bernard in Wharton County, home to approximately 2,000 residents.
- Intervention(s): Rice intends to develop the use of telemedicine in its Colorado County facilities and in schools to increase and improve access to specialty care services for community stakeholders. Rice intends to use this program in 4 distinct ways: (1) to increase local patients' access to specialty consultations without having to travel to Houston; (2) to obtain tele-psychiatric consults to aid in the timely transfer of psychiatric patients presenting in Rice's ED to the appropriate care settings; (3) to attract businesses to Colorado County by using the telemedicine project to engage in the practice of occupational medicine; and (4) to aid school nurses in treating children by linking them electronically with primary care providers in the community.
- Need for the project: The availability of telemedicine services allows community members access to specialties they may not otherwise access. Many residents of the County cannot afford to travel for healthcare, do not have access to transportation, or cannot afford to take time off from work or school. According to the Region's County Health Rankings, Colorado County has a higher rate of premature death, poor physical health days, low birth weight, and adult obesity than the statewide average. Each of these statistics can be tied to conditions requiring specialty care that may not be available in Colorado County, supporting Rice's initiative to increase access to needed care and decrease the burden on patients by implementing a telemedicine program.
- Target population: The target population of this project is patients in Colorado County who have needs for specialty care but currently have difficulty accessing it. Rice treats approximately 8,000-10,000 patients per year, 28-32% of which are Medicaid or uninsured, all of whom can benefit from the telemedicine program (depending on the specialist participants Rice is able to recruit).
- Category 1 or 2 expected patient benefits: Rice expects an increase in Colorado County residents' access to and use of specialty care because distance will no longer be a limiting factor. Additionally, Rice expects the transfer time for psychiatric patients presenting in the ED to be significantly reduced and Rice's occupational medicine capabilities to increase. Rice will implement telehealth and telemedicine capabilities in DY3, and will improve the volume of patient access by 15% between DY3 and DY5.
- Category 3 outcomes: IT 6.1 Rice chose the patient satisfaction outcome measure because it ties in directly with the goal of this project, which is to allow patients and their PCPs to have access to specialists for consultations and referrals.

Project Option 1.7.1: Implement telemedicine program to provide or expand specialist referral services in an area identified as needed to the region- Implement Telehealth & Telemedicine in Colorado County

Unique RHP Project ID: 212060201.1.2 / Pass 3
Performing Provider Name/TPI: Rice / 212060201

Project Description:

Rice intends to develop the use of telemedicine in its Colorado County facilities and in schools to increase and improve access to specialty care services for community stakeholders. Rice intends to use this program in 4 distinct ways: (1) to increase local patients' access to specialty consultations without having to travel to Houston; (2) to obtain tele-psychiatric consults to aid in the timely transfer of psychiatric patients presenting in Rice's ED to the appropriate care settings; (3) to attract businesses to Colorado County by using the telemedicine project to engage in the practice of occupational medicine; and (4) to aid school nurses in treating children by linking them electronically with primary care providers in the community. While patients in Colorado County have identified needs for specialty care, there is not enough demand to support recruitment of specialists. In the absence of the telemedicine services, patients must either wait until their conditions become chronic necessitating hospitalizations or spend long hours commuting to Houston for such care.

Goals and Relationship to Regional Goals:

While the Region has many specific objectives and improvement targets based on stakeholder input and community needs assessments, the over-arching goals that have guided many of our decisions include the following:

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
- Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system, and
- Develop a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes.

Challenges:

Expected challenges include: (1) educating providers and patients to embrace technological advantages of telemedicine; (2) training providers to use the technology; (3) establishing a

network of specialists willing to work with Rice's providers (including psychiatrists); and, (4) implementing the necessary technology to make the program possible in the clinics. The project will address these challenges by using DYs 2-3 to plan and deploy the infrastructure for the program, and then proceeding in DY 4-5 to make the best use of the new telemedicine services.

5 year expected outcome:

Rice expects an increase in Colorado County residents' access to and use of specialty care because distance will no longer be a limiting factor. Specifically, Rice expects to set a baseline of telemedicine visits in DY3 when it establishes the program, and then to increase the number of visits by a total of 20% by the end of DY5.

Additionally, Rice expects the transfer time for psychiatric patients presenting in the ED to be significantly reduced and Rice's occupational medicine capabilities to increase.

Starting Point/Baseline:

Patients in the Colorado County community do not currently have access to telemedicine services, and have to travel to Houston to access many specialty services, which involves at least an hour of travel each way for patients and/or their families.

Rationale:

Telemedicine is currently unavailable in the Rice Hospital District service area. The availability of telemedicine services allows community members access to specialties they may not otherwise access. Many residents of the County cannot afford to travel for healthcare, do not have access to transportation, or cannot afford to take time off from work or school.

According to the Region's County Health Rankings, Colorado County has a higher rate of premature death, poor physical health days, low birth weight, and adult obesity than the statewide average. Each of these statistics can be tied to conditions requiring specialty care that may not be available in Colorado County, supporting Rice's initiative to increase access to needed care and decrease the burden on patients by DY5 through implementing a telemedicine program.

Project Components:

This project will address the following core requirements in the following ways:

- Rice will enable Colorado County residents through the hospital and its clinics to access consultations with medical and surgical specialists, as well as other practitioners when needed. This will entail creating a network of providers and establishing a system for consultations and referrals out of the system. Specialties and/or conditions targeted by this program are likely to include Family Practice, Psychiatry, Cardiology, Neurology, Pediatrics, and/or Obstetrics.

- Rice will engage in quality improvement with regard to its telemedicine project by measuring the project's efficacy and impact on the Colorado County community in

DY4, assessing where improvements can be made going forward. Quality improvements over the life of the project may include: targeting new and/or different specialties, reaching out to the patient community to expand the use of the services, or expanding the use of telemedicine beyond Colorado County.

Ties to unique Region community needs:

CN.1- Inadequate access to primary care

CN.2- Inadequate access to specialty care

CN.3- Inadequate access to behavioral health care

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

This is an entirely new initiative for Rice Medical Center and the surrounding community.

Related Category 3 Outcome Measure(s):

OD-6 Patient Satisfaction, P1 – Project planning, P2 – Establish baseline rates

IT 6.1(3), Percent improvement over baseline of patient satisfaction in patient's rating of doctor access to specialist

Reasons/Rational for selecting the outcome measure:

This outcome measure ties in directly with the goal of this project, which is to allow patients and their primary care physicians to have access to specialists for consultations and referrals.

Relationship to other Projects:

This project relates to the following projects that Rice is submitting: Increasing access to health care, primary and specialty, This project will tie in with giving patients improved access to primary health care and a variety of special health care services so they will be less inclined to use the ED for non-emergent treatment and will allow patient access to beneficial services, especially those patients without access to healthcare for any variety of reasons and those patients at risk for managing chronic diseases.

Relationship to Other Performing Providers' Projects in the RHP:

An innovative approach to increasing access to primary care and specialty care has been created by the miracles of the internet and computer systems. Telemedicine is leading edge for those communities who cannot easily access behavioral health or specialty care due to remote locations, lack of physicians, or urgency of encounter needs. Numerous telemedicine projects have been proposed, as seen in the Region 3 Initiative grid in the addendum, and all focus to outcomes such as appropriate emergency department utilization, 30-day readmission rates, and patient satisfaction scores.

Plan for Learning Collaborative:

We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. The value of this project derives from the investment necessary to implement it (equipment, provider training, outreach to specialists in Texas), its expected impact on the community (increased access to specialists with reduced effort, more efficient transfer of psychiatric patients out of the ED, and increased occupational medicine capabilities), and its expected impact on the institutional cost of providing care (earlier intervention by appropriate practitioner should lead to better outcomes and lower costs). Psychiatric patients often languish in EDs or other inappropriate care settings, so this project will impact a traditionally underserved population of patients. Rural patients requiring specialist consults in order to receive treatment also face barriers in accessing care, which this project seeks to bridge. Assuming that Rice is successful in recruiting a comprehensive group of specialists to participate in the telemedicine program, this project will touch a broad base on Rice's patient community and completely redesign the care delivery system in Colorado and neighboring counties. For these reasons, this project is very valuable to Rice.

212060201.1.2	1.7.1	1.7.1(A-B)	IMPLEMENT TELEHEALTH	
		Rice		212060201
Related Category 3 Outcome Measure(s):	212060201.3.5	IT-6.1(3)	Percent improvement over baseline of patient satisfaction in patient's rating of doctor access to specialist

Milestone 1 [P-1]: Conduct needs assessment to identify needed specialties that can be provided via telemedicine. Metric 1 [P-1.1]: Needs assessment to identify the types of personnel needed to implement the program and hiring of the respective personnel. Goal: Rice will use its access to patient records and community data to assess which specialty services are most needed in the community, and work on creating a network of those specialists. Rice will additionally seek psychiatrists to participate in the telemedicine program in the hospital's ED. Data source: Documentation of the assessment Milestone 1 Estimated Incentive Payment: $469,403	**Milestone 2** [P-4]: Implement or expand telehealth program for targeted health services, based upon regional and local community need. Metric 1 [P-4.1]: Documentation of the program materials, including implementation plan, vendor agreements/contracts, staff training, and HR documents. Goal: Rice will implement a telemedicine program in its hospital that uses a network of specialty providers for conditions/services identified in the specialty needs assessment as lacking in the community. Data Source: Program materials Milestone 2 Estimated Incentive Payment: $220,895.50 **Milestone 3** [P-4]: Implement or expand telehealth program for targeted health services, based upon regional and local community need. Metric 1 [P-4.1]: Documentation of the program materials, including implementation plan, vendor agreements/contracts, staff training, and HR documents. Goal: Rice will create a telehealth	**Milestone 4** [P-X]: Assess efficacy of processes in place and recommend process improvements to implement, if necessary. Metric 1 [P-X.1]: Review data about the rate and volume of consults by specialty to determine if changes need to be made (i.e. wider network of specialists, targeting different specialties, etc.) Data source: Report of findings and recommendations Milestone 4 Estimated Incentive Payment: $207,089.50 **Milestone 5** [I-12]: Increase number of telemedicine visits for each specialty identified as high need. Metric 1 [I-12.1]: Number of telemedicine visits Goal: Increased number of telemedicine visits over the DY3 baseline by 5%. Rice will increase the number of telemedicine visits for its patients needing consultations in the identified specialty areas. Numerator: Numbers of visits in which Rice patients are seen using telemedicine services for each type of medical or surgical subspecialty	**Milestone 6** [I-12]: Increase number of telemedicine visits for each specialty identified as high need. Metric 1 [I-12.1]: Number of telemedicine visits Goal: Increased number of telemedicine visits over the DY3 baseline by 15%. Rice will increase the number of telemedicine visits for its patients needing consultations in the identified specialty areas. Numerator: Numbers of visits in which Rice patients are seen using telemedicine services for each type of medical or surgical subspecialty during the demonstration year. Denominator: number of patients referred to medical specialties. Data Source: Rice EHR Milestone 6 Estimated Incentive Payment: $314,776

Project Option 1.1.1: Establish more primary care clinics- Expand primary care clinics
Unique RHP Project Identification Number: 212060201.1.3
Performing Provider Name/TPI: Rice TPI/212060201

- Provider: Rice Medical Center is a critical access hospital located in Eagle Lake, Colorado County, TX. The county population served by Rice is approximately 21,000. Rice also serves the town of East Bernard in Wharton County with a population of approximately 2,000.
- Intervention(s): Rice will establish a primary care clinic in Wallis, Texas. This clinic will be operated by a mid-level provider supervised by a physician. Rice believes that this clinic will allow patients in the Wallis area to receive care appropriate to the medical conditions they experience.
- Need for the project: The residents of Wallis have no local primary care services. Wallis is located in Austin County (neighbor to Colorado County, where Rice Medical Center is located), and its ratio of patients to primary care physicians is over 4 times that of the statewide average (4505:1 and 1050:1, respectively). The population of Austin County, including Wallis, suffers from a higher rate of poor physical and mental health days and preventable hospitals stays than the statewide average. There is logically a connection between the paucity of primary care providers in Austin County and the high incidence of poor health in the community. Rice believes that opening a local clinic will go far towards improving the health of the Wallis community.
- Target population: The target population of this project is the residents of Wallis, Texas and other patients within a ten-mile radius who have no local primary care services. In Austin County, where Wallis is located, 1 in 4 residents are uninsured. The clinic will be especially tailored to treat patients with no third party source of payment and with inadequate funding to self-pay for their primary care services.
- Category 1 or 2 expected patient benefits: Rice expects this project to result in improved patient health outcomes due to easier access to primary care that is geographically proximate to the patients who need this care. Specifically, Rice expects the clinic to be open to treat patients in DY3, and to increase the volume of patients treated by 5% over DY3 (when the clinic is opened), and another 5% increase in DY5 over the volume of patients treated in DY4.
- Category 3 outcomes: IT 6.1 – Rice chose the patient satisfaction outcome measure because it ties in directly with the goal of this project, which is to increase the overall health of residents of the Wallis community by making primary care services available in their community. Specifically, Rice seeks to improve Wallis patients' satisfaction with their access to care, appointments, and information during the Waiver by a percentage that will be determined in DY3.

Project Option 1.1.1: Establish more primary care clinics- Expand primary care clinics

Unique Project ID: 212060201.1.3 / Pass 3
Performing Provider Name/TPI: Rice Medical Center / 212060201

Project Description:
Rice Medical Center proposes to expand primary care access in the greater Colorado County area by establishing a clinic in Wallis, Texas.

In an effort to improve access to primary care in the greater Colorado County area, Rice will establish a primary care clinic in Wallis, Texas. This clinic will be operated by a mid-level provider supervised by a physician. Rice believes that this clinic will allow patients in the Wallis area to receive care appropriate to the medical conditions they experience.

Goals and Relationship to Regional Goals:

The goal of this project is to improve access to specialty care in the greater Colorado County area, and in particular the Wallis area.

Project Goals:

- Increase the availability of primary care services for patient populations in the Wallis area.

This project meets the following regional goals:

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

This project will improve patient outcomes and patient satisfaction by allowing patients to receive better and more effective primary care than that which is currently available to them.

Furthermore, this project will increase primary care services for the underserved population of the Wallis, Texas area.

Challenges:

Expected challenges include: (1) recruiting staff for the clinic; and (2) negotiating space for the clinic location.

5-Year Expected Outcome for Provider and Patients:

DRAFT

Rice expects this project to result in improved patient health outcomes due to easier access to primary care that is geographically proximate to the patients who need this care. Rice expects patient satisfaction to increase as a result of increased access to primary care and the attendant better outcomes.

Starting Point/Baseline:

The residents of Wallis, Texas do not have any access to local primary care services and must travel outside of their local community in order to obtain such services.

Rationale:

The residents of Wallis have no local primary care services. The clinic will serve this population and receive a patient flow from within a ten-mile radius. Wallis is located in Austin County (neighbor to Colorado County, where Rice Medical Center is located), and its ratio of patients to primary care physicians is over 4 times that of the statewide average (4505:1 and 1050:1, respectively). The population of Austin County, including Wallis, suffers from a higher rate of poor physical and mental health days and preventable hospitals stays than the statewide average. There is logically a connection between the paucity of primary care providers in Austin County and the high incidence of poor health in the community. Rice believes that opening a local clinic will go far towards improving the health of the Wallis community.

Project Components:

This project will address the core requirements of this project option in the following ways:

- Rice will establish a new primary care clinic in Wallis, Texas.

Unique community need identification numbers the project addresses:

- CN-1: Inadequate access to primary care
  - Consequences include: patients' inability to locate a medical home; delayed diagnoses and treatment which leads to more serious health care conditions and higher costs; inappropriate utilization of emergency room facilities and higher costs; lack of care coordination and patient education. Community needs include: increased access through more clinics/providers/facilities; expansion of clinic hours and appointment times; improved transportation options for patients who have problems getting to a provider; expansion of provider training and recruitment programs; improved care coordination and patient education to ensure patients receive the right care at the right time.
- CN-8: High rates of inappropriate emergency department utilization

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:

This project is a significant new initiative because it will result in the provision of primary care services that are currently unavailable in the Wallis community.

DRAFT

Related Category 3 Outcome Measures:

OD-6: Patient Satisfaction; IT 6.1(5): Percent improvement over baseline of patient satisfaction—patient's overall health status; 212060201.3.6

Reasons/rationale for selecting the outcome measures:

This outcome measure ties in directly with the goal of this project, which is to increase the overall health of residents of the Wallis community by making primary care services available in their community.

Relationship to other Projects: This project relates to the following projects that Rice is submitting in RHP Region 3: Increase Access to Specialty Care, Chronic disease management.

Relationship to Other Performing Providers' Projects and Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for RHP Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Project Valuation: The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. The value of this project derives from the investment necessary to implement the new clinic, its expected impact on the community (in particular, increased and easier access to essential primary care for Wallis residents), and its expected impact on the institutional cost of providing care (earlier intervention through primary care services should lead to better outcomes and lower costs). It is generally understood in the medical community that regular access to and use of primary care services improves patient overall health outcomes, disease management, and quality of life. Rural patients are especially likely to have difficulty accessing primary care in their communities, thus this project meets a critical community need in the Wallis community.

TOTAL ESTIMATED INCENTIVE PAYMENTS FOR 4-YEAR PERIOD: $2,296,209			

Project Option 1.6.1 – Expand urgent care services- Enhance urgent medical advice.
Unique RHP Project Identification Number: 212060201.1.4
Performing Provider Name/TPI: Rice TPI/212060201

- Provider: Rice Medical Center is a critical access hospital located in Eagle Lake, Colorado County, TX. The county population served by Rice is approximately 21,000. Rice also serves the town of East Bernard in Wharton County with a population of approximately 2,000.
- Intervention(s): In an effort to enhance the urgent medical advice resources available to patient populations in Colorado County, Rice Medical Center will establish a new urgent care clinic. This new clinic will be an outpatient clinic and will be physically located in Rice's hospital facility. Non-emergent patients who present at Rice's Emergency Department will be directed to this new urgent care clinic and given the option of seeking urgent care at the clinic instead of emergent care at the Emergency Department, making it easier for patients to make a real and informed choice to utilize the most appropriate level of care for their particular medical conditions and reducing the costs of non-emergent care.
- Need for the project: Rice has experienced an overutilization of its Emergency Department, due to patients not seeking the appropriate level of care. The urgent care clinic to be implemented by this project will provide a convenient alternative for these patients, redirecting them from Rice's Emergency Department and reducing the costs associated with treating them, while also improving the quality of their care.
- Target population: The target population of this project is non-emergent patients who are currently using Rice's Emergency Department even though it is not the appropriate level of care given their particular conditions. Approximately 40-50% of patients presenting at Rice's ED are non-emergent cases, and approximately 28-32% of the patients treated at Rice are Medicaid-eligible or uninsured patients.
- Category 1 or 2 expected patient benefits: The goal of this project is to enhance urgent medical advice in Colorado County. Specifically, in DYs 2-3 Rice will establish a baseline of ED encounters and train nurses in protocols for redirecting patients; in DYs 4-5 Rice will increase the volume of patients electing to receive treatment in the new clinic by 20% over DY3s volume, which benefits patients who will receive the right care in the right setting.
- Category 3 outcomes: IT 9.2 - Rice chose this outcome measure because it ties in directly with the goal of this project, which is to provide patients with the opportunity to choose the most appropriate level of care for their urgent conditions, rather than seeking treatment for non-emergent conditions at Rice's Emergency Department.

DRAFT

Project Option 1.6.1 – Expand urgent care services- Enhance urgent medical advice.

Unique Project ID: 212060201.1.4 / Pass 3
Performing Provider Name/TPI: Rice Medical Center / 212060201

Project Description:
Rice Medical Center proposes to enhance urgent medical advice in Colorado County by establishing an outpatient urgent care clinic in its hospital facility.

In an effort to enhance the urgent medical advice resources available to patient populations in Colorado County, Rice Medical Center will establish a new urgent care clinic. This new clinic will be an outpatient clinic and will be physically located in Rice's hospital facility. Non-emergent patients who present at Rice's Emergency Department will be directed to this new urgent care clinic and given the option of seeking urgent care at the clinic instead of emergent care at the Emergency Department, making it more possible for patients to make a real and informed choice to utilize the most appropriate level of care for their particular medical conditions and reducing the costs of non-emergent care. More than 40% of the patients who utilize Emergency Department services at Rice's hospital facility are Medicaid or uninsured.

Goals and Relationship to Regional Goals:

The goal of this project is to enhance urgent medical advice in Colorado County.

Project Goals:

- Establish an urgent care center in the Rice hospital facility.
- Direct non-emergent patients presenting at the Emergency Department to the urgent care center when appropriate, allowing such patients to voluntarily choose the most appropriate level of care.

This project meets the following regional goals:

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

This project will leverage existing infrastructure in that the new urgent care services will be provided in Rice's existing hospital facility; it will also improve patient outcomes and patient satisfaction.

Furthermore, this project will increase urgent care services for an underserved population, regardless of where they live, allowing residents of Colorado County to receive the care most appropriate to their particular medical conditions.

Challenges:

Expected challenges include: (1) staffing the urgent care clinic; (2) informing patients of the availability of urgent care services at the urgent care clinic.

5-Year Expected Outcome for Provider and Patients:

Rice expects this project to result in improved patient health outcomes due to easier access to the most appropriate level of care for each patient's condition. Rice also expects a reduction in improper Emergency Department utilization.

Starting Point/Baseline:

There is currently no urgent care clinic in Rice's hospital facility. Urgent patients have few alternatives other than presenting at Rice's Emergency Department and seeking emergent care. Rice records approximately 225 Emergency Department visits per month, of which only 40% are truly emergent.

Rationale:

When patients receive the level of care most appropriate to their particular conditions, better patient outcomes will result. Additionally, Rice has experienced an overutilization of its Emergency Department, due to patients not seeking the appropriate level of care. The urgent care clinic to be implemented by this project will provide a convenient alternative for these patients, redirecting them from Rice's Emergency Department and reducing the costs associated with treating them, while also improving the quality of their care.

Project Components:

This project will address the core requirements of this project option in the following ways:

- Rice will establish an outpatient urgent care clinic in its hospital facility.
- Once this clinic is established, Rice will refine the operations of the clinic by conducting quality improvement for the project using methods such as rapid cycle improvement.

Unique community need identification numbers the project addresses:

- CN-1: Insufficient access to primary and specialty health care providers and facilities (increase number of providers, expansion of clinic hours, service locations). Consequences include: patients' inability to locate a medical home; delayed diagnoses and treatment which leads to more serious health care conditions and higher costs; inappropriate utilization of emergency room facilities and higher costs; lack of care coordination and patient education. Community needs include: increased access through more clinics/providers/facilities; expansion of clinic hours and appointment times; improved transportation options for patients who have problems getting to a provider;

DRAFT

expansion of provider training and recruitment programs; improved care coordination and patient education to ensure patients receive the right care at the right time.

- CN-8: High rates of inappropriate emergency department utilization

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:

This project is a significant new initiative because it will result in the provision of urgent care services that are currently unavailable in Colorado County.

Related Category 3 Outcome Measures:

OD-9: Right Care, Right Setting; IT-9.2: ED appropriate utilization; 212060201.3.7

Reasons/rationale for selecting the outcome measures:

This outcome measure ties in directly with the goal of this project, which is to provide patients with the opportunity to choose the most appropriate level of care for their urgent conditions, rather than seeking treatment for non-emergent conditions at Rice's Emergency Department.

Relationship to other Projects: This project relates to the following projects that Rice is submitting in RHP Region 3: Chronic disease management; Expand Primary Care Access (East Bernard and Wallis clinics).

Relationship to Other Performing Providers' Projects and Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for RHP Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

A primary focus of the waiver as well as our region is ensuring appropriate emergency department utilization for our patient base. The lack of primary care, specialty care, and behavioral health treatment currently creates congestion in the emergency departments thus increasing cost and comprehensive treatment of patients with chronic conditions. The ED initiatives focus to outcomes of readmission rates, appropriate ED utilization, and patient satisfaction and all initiative relationships can be found on the Region 3 initiative grid in the addendum.

Project Valuation: The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. The value of this project derives from the investment necessary to implement the hospital-based urgent care clinic, its expected impact on the community (in particular, increased and easier access to urgent care for Colorado County residents), and its expected impact on the institutional cost of providing care (i.e., a reduction of inappropriate Emergency Department utilization by directing patients to more appropriate and less costly sites

of care). This project represents an innovative solution to problems faced in the community – ideally, patients will access primary care outside of the hospital setting, but until bad habits are changed, patients can access urgent care services onsite at the hospital instead of being admitted to the ED. This project will have a broad impact on the community, including on the 1 in 5 patients Rice treats who are completely uninsured, and for that reason it is a valuable project.

DRAFT

Project Option 1.9.2: Improve access to specialty care- Improve access to specialty care in Colorado County
Unique RHP Project Identification Number: 212060201.1.5
Performing Provider Name/TPI: Rice TPI/212060201

- Provider: Rice Medical Center is a critical access hospital located in Eagle Lake, Colorado County, TX. The county population served by Rice is approximately 21,000. Rice also serves the town of East Bernard in Wharton County with a population of approximately 2,000.
- Intervention(s): In an effort to improve access to specialty care in Colorado County, Rice will recruit an otolaryngologist (ENT physician) to provide patient testing, treatment, and, when necessary, referrals to appropriate facilities within RHP Region 3. Rice intends for this ENT physician to provide an additional 4 hours per week of clinic hours. Rice will also improve access to specialty care in Colorado County by recruiting a qualified orthopedic provider to provide patient testing, treatment, and, when necessary, referrals to appropriate facilities within RHP Region 3. Rice also intends for this orthopedic provider to provide an additional 4 hours per week of clinic hours.
- Need for the project: ENT and orthopedic specialty healthcare services are currently unavailable in the Rice Hospital District service area. The rural nature of this area makes it very difficult for patients to obtain the specialty care they need, often requiring them to travel hundreds of miles to see specialist providers. According to the Region's County Health Rankings, Colorado County has a higher rate of premature death, poor physical health days, and adult obesity than the statewide average. Each of these statistics can be tied to conditions requiring specialty care that the new specialists may be able to treat more effectively than a PCP.
- Target population: The target population of this project is patients in Colorado County who have needs for ENT and orthopedic specialty healthcare services but currently do not have access. Specifically, these specialists will be willing and able to provide services to the 30% of Colorado County residents who are uninsured and may seek care in at Rice Medical Center for ENT or orthopedic conditions (which treats 8-10,000 patients per year).
- Category 1 or 2 expected patient benefits: Rice expects this project to result in improved patient health outcomes due to easier access to these specialists for the purposes of diagnosis, treatment and referrals. Specifically, Rice will recruit the specialists and launch the specialty clinic in DYs 2-3, and will improve the patient volume treated by the specialists by 5% over DY3 in DY4, and by another 5% in DY5 over DY4.
- Category 3 outcomes: IT 6.1 - Rice chose the patient satisfaction outcome measure because it ties in directly with the goal of this project, which is to allow patients and their primary care physicians to have access to specialists for consultations and referrals.

DRAFT

Project Option 1.9.2: Improve access to specialty care - Improve access to specialty care in Colorado County

Unique Project ID: 212060201.1.5 / Pass 3
Performing Provider Name/TPI: Rice Medical Center / 212060201

Project Description:
Rice Medical Center proposes to improve access to specialty care in Colorado County

In an effort to improve access to specialty care in Colorado County, Rice will recruit an otolaryngologist (ENT physician) to provide services at least once a week in its specialty clinic. This clinic is located next to the hospital, making it particularly accessible to the Colorado County community and the patient population which the project is intended to serve. This ENT physician will provide patient testing, treatment, and, when necessary, referrals to appropriate facilities within RHP Region 3. Rice intends for this ENT physician to provide an additional 4 hours per week of clinic hours at Rice's clinic.

Rice will also improve access to specialty care in Colorado County by recruiting a qualified orthopedic provider to provide services at least once a week in its specialty clinic located next to the hospital. This orthopedic provider will provide patient testing, treatment, and, when necessary, referrals to appropriate facilities within RHP Region 3. Rice intends for this orthopedic provider to provide an additional 4 hours per week of clinic hours at Rice's clinic.

Goals and Relationship to Regional Goals:

The goal of this project is to improve access to specialty care in Colorado County, for those services most needed by Rice's patient population. Providing local access to specialty care at Rice's clinic will decrease delayed referrals to Houston hospitals for costly and potentially preventable services.

Project Goals:

- Increase the volume of patient testing, treatment, and referrals in the community by recruiting an ENT physician.
- Increase the volume of patient testing, treatment, and referrals in the community by recruiting an orthopedic provider.

This project meets the following regional goals:

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.

DRAFT

This project will leverage existing infrastructure in that the new specialty care services will be provided in an existing clinic located in Rice's existing hospital facility; it will also improve patient outcomes and patient satisfaction.

Furthermore, this project will increase specialty care services for an underserved population, regardless of where they live.

Challenges:

Expected challenges include: (1) locating and recruiting the appropriate candidates willing and able to provide specialty care to an underserved community; and (2) patient education about the increased availability of services.

5-Year Expected Outcome for Provider and Patients:

Rice expects this project to result in improved patient health outcomes due to easier access to these specialists for the purposes of diagnosis, treatment and referrals. Rice also expects a reduction in the cost of obtaining this care for patients; one particular area in which these costs will be reduced is travel costs, as orthopedic and ENT patients will no longer need to travel to larger healthcare markets in order to obtain their needed care.

Starting Point/Baseline:

Patients in the Colorado County community currently have limited access to orthopedic specialists or ENT specialists in their community. The easiest way for these patients to obtain the care they need is to travel to Houston, but many are unable to do so.

Rationale:

ENT and orthopedic specialty healthcare services are currently unavailable in the Rice Hospital District service area. The rural nature of this area (and of Colorado County in general) makes it very difficult for patients to obtain the specialty care they need, often requiring them to travel hundreds of miles to see specialist providers. According to the Region's County Health Rankings, Colorado County has a higher rate of premature death, poor physical health days, low birth weight, and adult obesity than the statewide average. Each of these statistics can be tied to conditions requiring specialty care that may not be available in Colorado County, supporting Rice's initiative to increase access to needed care and decrease the burden on patients through expanding specialty services at its in-hospital specialty clinic.

Project Components:

This project will address the core requirements of this project option in the following ways:

- Rice will increase specialty service availability by extending clinic hours for orthopedic and ENT specialty services. Rice intends that each provider will provide these additional services for an additional 4 hours per week at the hospital's specialty clinic.

DRAFT

- Rice will increase the number of specialty clinic locations in Colorado County providing ENT and orthopedic services by recruiting these providers. Currently there are no clinics in Colorado County providing ENT or orthopedic specialty services.

- Rice will increase specialty service availability by implementing standardized specialty referrals throughout its system; these particular referrals will be made by the ENT and orthopedic specialty providers who will provide services under this project.

- Rice will continue to develop this project by conducting quality improvement for the project using methods such as rapid cycle improvement.

Unique community need identification numbers the project addresses:

- CN-1: Insufficient access to primary care
- CN-2: Insufficient access to specialty health care
    - Consequences include: patients' inability to locate a medical home; delayed diagnoses and treatment which leads to more serious health care conditions and higher costs; inappropriate utilization of emergency room facilities and higher costs; lack of care coordination and patient education. Community needs include: increased access through more clinics/providers/facilities; expansion of clinic hours and appointment times; improved transportation options for patients who have problems getting to a provider; expansion of provider training and recruitment programs; improved care coordination and patient education to ensure patients receive the right care at the right time.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:

This project is a significant new initiative because it will result in the provision of specialty services that are currently unavailable in Colorado County.

Related Category 3 Outcome Measures:

OD-6: Patient Satisfaction; IT 6.1(3): Percent improvement over baseline of patient satisfaction—patient's rating of doctor access to specialist; 212060201.3.#

Reasons/rationale for selecting the outcome measures:

This outcome measure ties in directly with the goal of this project, which is to allow patients and their primary care physicians to have access to specialists for consultations and referrals.

Relationship to other Projects: This project relates to the following projects that Rice is submitting in RHP Region 3: Increase access to primary care (East Bernard and Wallis).

Relationship to Other Performing Providers' Projects and Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for RHP Region 3, Harris Health System. Our participation in this

DRAFT

collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

The increased access to primary care visits will naturally generate additional need of specialty care visits based on the condition and acuity of the patients served. Understanding that the patient base targeted through this initiative will generate significant specialty care visits due to chronic conditions and lack of previous treatments, this initiative and similar initiatives will focus to 30-day readmission rate reductions, improvement for patient satisfaction scores, and admission rates specific to chronic conditions. Numerous initiatives have been included in the RHP plan and the addendum of the Initiative Grid can directly tie all specialty care projects together by category.

Project Valuation: The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aim of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. The value of this project derives from the investment necessary to implement it (recruiting and retaining qualified physicians willing to work in a rural county, training and integrating the new physicians), its expected impact on the community (in particular, increased and easier access to specialists for Colorado County residents), and its expected impact on the institutional cost of providing care (earlier intervention by an appropriate specialist should lead to better outcomes and lower costs for patients with relevant ailments). Regional transformation of the healthcare delivery system must include increasing the access to the full continuum of care for rural residents, and especially for those residents who have financial or mobility difficulties. This project will address this goal of the Waiver head-on.

DRAFT

Project Option 1.1.2: Expand existing primary care capacity- Expand the East Bernard Clinic
Unique RHP Project Identification Number: 212060201.1.6
Performing Provider Name/TPI: Rice TPI/212060201

- Provider: Rice Medical Center is a critical access hospital located in Eagle Lake, Colorado County, TX. The county population served by Rice is approximately 21,000. Rice also serves the town of East Bernard in Wharton County with a population of approximately 2,000.
- Intervention(s): Rice intends to relocate and improve the existing Rural Health Clinic ("RHC") in East Bernard in order to expand access to primary care services in this community and a surrounding radius of at least 10 miles outside the city limits. Additionally, the new clinic will have updated equipment and will be a more welcoming environment for patients than the existing clinic space, which is quite old and outdated. Rice will provide more clinic hours through the expanded East Bernard Clinic than the current RHC provides so that working residents and the school-age children of East Bernard and the surrounding community have access to this primary care source. Rice will also expand the East Bernard Clinic staffing from its current level by at least one provider (physician or mid-level) by the end of the Waiver (DY5).
- Need for the project: Like the rest of Wharton County, East Bernard suffers from a higher rate of poor physical and mental health days and preventable hospital stays than the Statewide average; access to primary care may reduce these local trends, through improving the health of the community.
- Target population: The target population of this project is children, adults and seniors in need of primary care services. In particular, the members of this population who do not receive regular services but instead wait until the situation is acute and requires hospitalization. The project will specifically target the 28% of Wharton County residents who are uninsured and the 27% of children who live in poverty. Currently, the East Bernard Clinic treats 8,000-10,000 patients per year, 18-22% of which are Medicaid or uninsured.
- Category 1 or 2 expected patient benefits: The goal of this project is to establish a primary care clinic that will increase the availability of preventative care, including child, adult, geriatric and women's health services. Rice expects that this expansion will result in increased patient volume for the East Bernard Clinic by at least 15% over the life of the Waiver.
- Category 3 outcomes: IT 6.1 - Rice chose the patient satisfaction outcome because one of the goals of expanding the East Bernard Clinic is to improve patients' access to primary care services. Thus, it is important that patients perceive that they can access appointments and information; if they do not, then Rice will need to adjust its outreach to the community to assure that residents are aware of the services available to them and/or make internal changes to increase access.

DRAFT

Project Option 1.1.2: Expand existing primary care capacity- Expand the East Bernard Clinic

Unique RHP Project ID: 212060201.1.6 / Pass 3
Performing Provider Name/TPI: Rice / 212060201

Project Description:

The East Bernard community lacks adequate primary care services and, as a result, its population relies on hospital services rather than preventive care. Complicating the situation is the fact that residents do not receive regular services so they wait until the situation is acute and requires hospitalization. As such, Rice intends to relocate and improve the existing Rural Health Clinic ("RHC") in East Bernard in order to expand access to primary care services in this community and a surrounding radius of at least 10 miles outside the city limits.

Goals and Relationship to Regional Goals:

While the Region has many specific objectives and improvement targets based on stakeholder input and community needs assessments, the over-arching goals that have guided many of our decisions include the following:

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
- Transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system, and
- Develop a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes.

Challenges:

Expected challenges include: (1) recruiting staff for the clinic, (2) coordinating the hours of the clinic so that patients use the clinic in lieu of emergency departments for low acuity services, and (3) locating, designing, equipping, and opening the new space.

5-Year Expected Outcome:

The goal of this project is to establish a primary care clinic that will increase the availability of preventative care, including child, adult, geriatric and women's health services. Rice expects that

DRAFT

this expansion will result in increased patient volume for the East Bernard Clinic by at least 15% over the life of the Waiver.

Starting Point/Baseline:

Currently, the East Bernard RHC has 1.5 practitioners on staff, is open 35 hours per week, and has 2247 square feet of space. The clinic sees an average of 125-150 patients per week.

Rationale:

Like the rest of Wharton County, East Bernard suffers from a higher rate of poor physical and mental health days and preventable hospital stays than the Statewide average; access to primary care may reduce these local trends, through improving the health of the community. Additionally, 28% of Wharton County residents are uninsured and 27% of children live in poverty, thus it is crucial to improving patient health outcomes and the cost of providing care that these residents have access to primary care in the community without having to visit the hospital ED.

Project Components:

Rice will meet the core requirements of this project in the following manner:

1. Rice is expanding the primary care clinic space in East Bernard. The new clinic facility will have more square footage than the existing clinic, which only occupies 2247 square feet. The new clinic will occupy 5810 square feet. Additionally, the new clinic will have updated equipment and will be a more welcoming environment for patients than the existing clinic space, which is quite old and outdated.

2. Rice will provide more clinic hours through the expanded East Bernard Clinic than the current RHC provides (which is approximately 35 hours per week). Specifically, the clinic will provide service availability at least 9 more hours per week than it currently provides. Additionally, the clinic's hours will be structured to allow for some availability after hours and/or on weekends, so that working residents and the school-age children of East Bernard and the surrounding community have access to this primary care source.

3. Rice will expand the East Bernard Clinic staffing from its current level by at least one provider (physician or mid-level) by the end of the Waiver (DY5).

Ties to unique Region community needs:

CN.1- Inadequate access to primary care

CN.3- Inadequate access to behavioral health care

CN.10- High rates of preventable hospital admissions

CN.12- High rates of tobacco use and excessive alcohol use

CN.13- High teen birth rates

CN.14- High rates of poor birth outcomes and low birth-weight babies

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

The East Bernard clinic is currently in operation, but the relocation to a larger space with increased capacity is a new initiative for Rice.

Related Category 3 Outcome Measure(s):

OD-6 Patient Satisfaction, IT 6.1 Percent improvement over baseline of patient satisfaction scores: (1) patients are getting timely care, appointments, and information

Reasons/Rationale for selecting the outcome measure:

Rice chose this Outcome because one of the goals of expanding the East Bernard Clinic is to improve patients' access to primary care services. Thus, it is important that patients perceive that they can access appointments and information; if they do not, then Rice will need to adjust its outreach to the community to assure that residents are aware of the services available to them and/or make internal changes to increase access.

Relationship to other Projects: This project is related to the Reducing Inappropriate Use of the ED project. These initiatives are intended to work alongside each other to create better patient outcomes and reduced costs of providing healthcare.

Relationship to Other Performing Providers' Projects in the RHP:

Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have

DRAFT

similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation: The valuation of each Rice project takes into account the degree to which the project accomplishes the triple-aims of the Waiver, community needs, the population served by the project (both number of people and complexity of patient needs), and investment required to implement the project. Access to primary care is essential to improving the short- and long-term health outcomes for East Bernard's residents, and for reducing the cost of health care delivery in the County. Primary and preventative care can lead to reduced rates of chronic disease, better management of chronic conditions, and improved patient education about best-practices for maintaining a healthy lifestyle, which is invaluable to for the overall health of the community. Patients in rural areas like Wharton County already have difficulty accessing primary care (due to a shortage of providers), and the high uninsured rate in the community exacerbates this problem significantly. Patients without access to primary care are more likely to use the ED for primary care needs, which is a behavior this project seeks to address. Thus, this project is high value for Rice. The project will require significant investment in recruiting, identifying, obtaining, and equipping the increased space, and working with providers to increase the hours of availability and the volume of patients treated per week.

DRAFT

Spindletop Center

Pass 2

DRAFT

Project Option 1.7.7: Implement other project to expand/establish telehealth services--client health information access portal- Client Health Information Access Portal

Unique RHP Project ID: 096166602.1.1 / Pass 2
RHP Performing Provider / TPI: Spindletop Center / 096166602

Project Summary:

Provider: Spindletop Center is a public entity community center that provides services for approximately 2900 adult, child, and adolescent behavioral health clients, 1070 substance abuse clients, 980 adult and child individuals with intellectual and developmental disabilities, and 800 children in the early childhood intervention program. With locations in Beaumont, Orange, Port Arthur, Lumberton, and Silsbee, Spindletop serves a population of more than 400,000 in Jefferson, Orange, Hardin, and Chambers counties.

Intervention: Spindletop will develop a web-based portal where secure client-focused health information can be accessed by users with only basic computer skills. Select clients will be provided Wi-Fi enabled tablets to for the implementation of the new client information portal.

Need for project: To improve client access to healthcare, healthcare providers are providing systems for electronic distribution of client health information via email or websites, but clients of intensive Medicaid services often have little or no access to the electronic devices that help them find and use healthcare information being provided via the internet. As more services and health information are available online, this project would help our clients take charge of their own health and use resources that may have been out of reach to them.

Target: This project program is targeted primarily to the behavioral health population that Spindletop serves. 54% of these adults and 88% of the child and adolescent clients are on Medicaid, with most of the remainder being indigent. Therefore, almost all of the individuals who participate in this program will be either indigent or enrolled in Medicaid.

Expected benefits: The expected outcome of this program by the end of demonstration year 5 is to increase client access to health care information through the development of the client portal and distributing internet-ready devices to 50% of all outpatient consumers and necessary staff.

- For demonstration year 2, the process milestone is to hire a project manager, purchase initial hardware/software, and contract with professional vendors to install software and deploy hardware. In DY3, the improvement milestone will be to continue development of the portal, test equipment, create training materials, and develop portal content. In DY 4-5, the improvement milestones will be to deploy tablets to and train 50% of Spindletop's behavioral health outpatient consumers by the end of year 5.

Category 3 outcomes:

- The Category 3 outcome measure is IT-6.2, percent improvement over baseline of patient satisfaction scores, patients getting timely health information. The survey will be designed to produce comparable data on the patient's perspective on care that will allow objective and meaningful assessment of the program in meeting the needs of the clients.

Project Option 1.7.7: Implement other project to expand/establish telehealth services--client health information access portal- Client Health Information Access Portal

<u>Unique RHP Project ID:</u> 096166602.1.1 / Pass 2
<u>RHP Performing Provider / TPI:</u> Spindletop Center / 096166602

<u>Description:</u>

<u>Goal:</u> The goal of this project is to support client health care, health-related education, public health and health administration by using the internet for clients to obtain specialized health information and on-line discussion groups to provide peer-to-peer support.

<u>Description:</u> Spindletop will develop a web-based portal where client-focused health information can be securely housed and easily accessed by users with only basic computer skills. Further, select clients will be provided Wi-Fi enabled tablets to facilitate the successful adoption and improvement of the new client information portal, thus eliminating the need to purchase expensive equipment on their own and ensure better access to care. The client web portal will be designed to provide immediate access to client-centered information, services, discussion groups, and alerts. Over time the portal will improve as recommendations by the user groups are adopted and the site content grows. Specifically the client portal will offer and improve access to the following:

1. Electronic Access to Client-Centered Information
    a. Healthcare summary (Continuity of Care document) updated regularly
    b. Summary of services and treatment plans
    c. Secured site to update client profile/ healthcare information for providers
    d. Peer-created discussion forums
2. Access to Information and Electronic Communication Tools
    a. Request official medical record
    b. Clients Rights Handbook
    c. Links to additional service providers and resource sites
    d. 800 numbers for information or complaints
    e. Links to Center message boards Like Twitter and Facebook
3. Alerts and Notifications
    a. Link to request email notices
        i. Appointment reminders
        ii. Emergency contact
    b. Spindletop holiday schedule or emergency closings
    c. New services and current events
    d. Satisfaction surveys

Relation to regional goals: This project relates to the Region 2 goal of improving the health of our region by expanding and coordinating access to patient-centered primary care and behavioral health care services that includes health promotion and disease prevention.

Challenges: Developing the client access portal will require the expertise of numerous outside vendors and will take up to one year to purchase and install equipment and configure the

DRAFT

software. By using industry standard software like MS-SharePoint and contracting with qualified partners and consultants, we will ensure that the platform is developed expeditiously and securely.

Training service providers and clients to use an internet-ready device (tablet pc) to access the client portal will require hands-on instruction in a structured classroom environment. To meet this challenge, one full-time project manager will be hired to provide comprehensive training to staff and clients, act as the liaison between the center's clinical and IT staff, develop and maintain the client portal, and be the site's webmaster.

5-Year Expected Outcomes: The expected outcome of this program by the end of demonstration year 5 is to increase client access to health care information through the development of the client portal and distributing internet-ready devices (tablet pc) to 50% of all outpatient consumers as well as necessary staff.

Starting Point/Baseline:

Spindletop currently has an external website with information that remains fairly static. We also have a Facebook and Twitter presence, but we do little to publicize this for client use. Although we have experience with SharePoint, this is limited to employee secure information and is not client-directed or accessible. Some staff use tablet pc's but are able to share what they know on a limited basis. Client email addresses are collected when available, but we do not currently push information out via this mechanism.

Rationale:

In an effort to improve client access to healthcare, numerous recent initiatives have been mandated that encourage the use of technology. Healthcare providers have begun to provide systems for electronic distribution of client health information via email or websites; however, one key factor limiting the success of these programs is the assumption that all clients have ready access to a web enabled device or computer. Clients of intensive Medicaid services are often those who have little or no access to the devices (laptops, tablets, or smartphones) that are able to help them find and use healthcare information being provided via the internet. As more and more services and health information are available online, this project would help our clients take charge of their own health and use resources that may have been out of reach to them.

Access to client information in the current healthcare system is fragmented, requires the acquisition of health information to be completed in person, and often limits timely self-directed interventions. Through the use of a client-centered web portal, information can be shared in a secure and timely manner, thus improving care and reducing costs. Moreover, the training and equipment we provide through this project will be utilized to access other providers and resources both online and in the community which creates additional opportunities for improved outcomes and a better integrated healthcare delivery system.

Project Components:

- Hiring a project manager to coordinate the project, train staff and clients, and be the webmaster

DRAFT

- Developing the project plan
- Contracting with outside consultants for website development and hardware installation
- Purchasing equipment for staff and clients
- Training staff and clients on the use of the new tablets to access the client portal, to setup and use email accounts, and on basic use of the internet.
- For ongoing quality improvement, Spindletop will conduct client satisfaction surveys routinely and publish the results utilizing an industry standard electronic survey tool. Comments will be reviewed and used to improve the quality of site content and client satisfaction.

Milestones:

For demonstration year 2, the process milestone is to hire the project manager, purchase initial hardware and software, and contract with various professional vendors to install and deploy hardware and software for the client access portal.

In demonstration year 3, the improvement milestones will be to continue development of the portal and purchase additional equipment. Once the site is operational, the project manager will organize a pilot group of staff and clients to help test all equipment, create training materials, and develop portal content.

In demonstration year 4, the improvement milestones will be to deploy tablets to and train 25% of Spindletop's behavioral health outpatient consumers on the client portal as well as necessary staff. In demonstration year 5, the improvement milestones will be to deploy tablets to and train 50% of our behavioral health outpatient consumers on the client portal.

Unique community needs the project addresses:

The Client Access Portal project proposed in this plan relates to community needs CN.1, CN.16, and CN.17.

How the project represents a new initiative for the Performing Provider or significantly enhances an existing delivery system reform initiative:

This client health information access portal would be a new service for Spindletop. No U.S. Department of Health and Human Services funding is received for this program.

<u>Related Category 3 Outcome Measure:</u>

Spindletop has selected improvement outcome measure IT-6.2, Other: percent improvement over baseline of patient satisfaction scores, patients getting timely health information. One of the purposes of this project is for clients to have access to their healthcare information and learn skills that allow them to become more self-sufficient and have more control over their physical and behavioral health. The survey will be designed to produce comparable data on the patient's perspective on care that will allow objective and meaningful assessment of the program in

DRAFT

meeting the needs of the clients. Public reporting of survey results will serve to enhance accountability in health care by increasing the transparency of the quality of care provided in return for the public investment.

Relationship to Other Projects:

This project relates to Spindletop's projects to integrate primary care with behavioral health #096166602.2.1 as physical health information would be available to clients on the web portal; to enhance behavioral health training #096166602.2.3 as providers are trained on using the client portal to support health care; and to utilize peer-to-peer support services #096166602.2.7 as group discussions related to health care are developed.

Relationship to Other Performing Providers' Projects: An innovative approach to increasing access to primary care and specialty care has been created by the miracles of the internet and computer systems. Telemedicine is leading edge for those communities who cannot easily access behavioral health or specialty care due to remote locations, lack of physicians, or urgency of encounter needs. Numerous telemedicine projects have been proposed, as seen in the Region 3 Initiative grid in the addendum, and all focus to outcomes such as appropriate emergency department utilization, 30-day readmission rates, and patient satisfaction scores.

Project Valuation:

Spindletop considered several factors in valuing this project including reductions in costs associated with hospitalizations for behavioral and developmental disorders and emergency room visits. Another valuation factor used for this project is the monetary value for a collaborative primary/behavioral health intervention as measured by quality adjusted life-years multiplied by a life year value. This valuation methodology uses health economic studies to assign a life year value associated with the health intervention. Since behavioral health clients have a high incidence of severe illnesses that shorten their life spans by 25 years compared to the general public, any programs that improve their mental and physical health should increase both the length and quality of their lives.

Texana Center

Pass 1

DRAFT

Project Option 1.12.2 - Expand the number of community based settings where behavioral health services may be delivered in underserved areas: Enhance service availability of appropriate levels of behavioral health care (applied behavior analysis and speech-language pathology for children diagnosed with autism spectrum disorders)

Unique RHP Project Identification Number: 081522701.1.1
Performing Provider Name/TPI: Texana Center / 081522701

Project Summary:
Enhance service availability of appropriate levels of behavioral health care (applied behavior analysis and speech-language pathology for children diagnosed with autism spectrum disorders) to expand the number of community based settings where behavioral health services may be delivered in underserved areas.
Provider Description:
Texana Center is the Local Authority for Behavioral Healthcare and Intellectual Developmental Disabilities Services for 6 counties within the RHP 3 area: Austin, Colorado, Fort Bend, Matagorda, Waller and Wharton. Texana Center serves approximately 9,800 people annually (an estimated 7,000 in BH services and 3,000 in IDD services), employs 742, and has an annual operating budget of $39,211,988.
Intervention(s):
This project will develop and implement evidence-based interventions of applied behavior analysis (ABA) and speech-language pathology (SLP) in an additional location for children with a diagnosis of autism spectrum disorder. Interventions include assessment, treatment development, and intervention overseen by Board Certified Behavior Analyst and Speech Language Pathologists, as well as training care givers using Applied Behavior Analysis.
Need for the Project:
There are increasing numbers of children diagnosed with ASD as evidenced by the latest statistics from the Center for Disease Control indicating 1:88 children have an ASD diagnosis. The Texana Children's Center for Autism only has 1 setting, currently serving 42 children diagnosed with ASD. Waiting lists in the area range from 30 to 200 per clinic and waits can be up to 2 years or until the child ages out of eligibility.
Target population:
Children with ASD diagnosis or related condition from the age of diagnosis through the age of 10.
Category 1 expected patient benefits:
Our goal is to increase utilization of community behavioral healthcare (i.e., ABA and SLP services for ASD). Capacity in DY1 was 42 at current site, in DY2 goal is to add 1 additional site and serve 7 children, DY3 17 children, DY4 up to 20 children, and DY5 up to 22 children at the second site. Children will exhaust the 24 month treatment cap and additional children will be admitted to the program, thus resulting in a projected 39 children served by the 1115 waiver through DY5.
Category 3 Outcomes:
The project seeks to increase the quality of life for individuals served specifically these treatments are designed to increase functional skills, language/communication, social interactions, pre-academic achievement, as well as decrease problem behaviors as measured by an evidence-based and validated assessment tool for children diagnosed with ASD.

DRAFT

Project Option 1.12.2 - Expand the number of community based settings where behavioral health services may be delivered in underserved areas: Enhance service availability of appropriate levels of behavioral health care (applied behavior analysis and speech-language pathology for children diagnosed with autism spectrum disorders)

Unique RHP Project Identification Number: 081522701.1.1
Performing Provider Name/TPI: Texana Center / 081522701

Project Description:
This category 1 project, 1.12.2, will provide specialized behavioral health care services to the complex behavioral health population of children with diagnoses of autism spectrum disorders and related conditions.

Texana Children's Center for Autism will add a second location to provide access to Applied Behavior Analysis (ABA) and Speech Language Pathology (SLP) interventions to serve 22 additional children at a time (from a current level of approximately 40 children at a time). This will result in a minimum of 39 additional children to receive this type of service through year 5. These children require 1:1 intensive services for 25-40 hours per week for at least 2 years. Treatment is most effective if initiated before the age of 4 but it is effective for all ages. The proposed age group includes age of diagnosis through age 10. Treatment will be provided in a clinic/day treatment, community, or home setting. Treatment will be limited to up to 24 months per child so that more children can benefit from the program.

The population of children with an autism diagnosis often has key health challenges and multiple issues such as lack of daily living skills, cognitive challenges, and limited support in the community. The State's mental health system provides some minimal services, but can only serve a fraction of the population. The existing behavioral healthcare environment does not provide the necessary range of specialized therapies needed to address the complex needs of a child with autism. Positive healthcare outcomes are contingent on the ability of the patients to obtain services as soon as possible after diagnosis. However, many Texas children are unable to access these much needed services.

There are increasing numbers of individuals diagnosed with Autism Spectrum Disorders (ASD). The latest statistics from the Center for Disease Control (CDC) indicate that 1 in 88 children have a diagnosis of autism. Repeated studies by special tasks forces and others such as the US Surgeon General and the National Autism Standards Project have consistently found that Applied Behavior Analysis (ABA) intervention is the most effective intervention for children with ASD. In fact, research indicates that approximately 50% of children that receive 1:1 intensive ABA before the age of 4 for 25-40 hours a week for at least 2 years will no longer meet the diagnostic criteria for an ASD diagnosis (Howard, et al. 2005). Recent research, including the National Standards Project, emphasizes the importance of empirically based Speech Language Pathology (SLP) intervention in addition to the primary mode of intervention of ABA. With a success rate of 47 percent for early intensive behavioral intervention (Lovaas, 1987), one study found that cost savings following intensive ABA are estimated to be from $2,439,710 to $2,816,535 with inflation to age 55 per child served (Jacobson, Mulik, & Green, 1998).

This project proposes to enhance availability of specialized therapies, ABA and SLP treatment, for children with ASD consistent with best practices (Howard et al. 2005, National Autism Center's National Standard's Report 2009). The innovative care model proposed

includes interventions to increase language and communication, social skills, play skills, group participation skills, self-help skills, pre-academics skills, natural environment training, feeding intervention, community skills, pre-vocational skills, school-readiness skills, and parent training. Treatment will be developed and supervised by Board Certified Behavior Analysts (BCBA) and licensed Speech and Language Pathologists. Treatment will be provided in a clinic/day treatment, community, or home setting. Eligible persons are individuals with ASD from the age of diagnosis through the age of 10.

This project is consistent with several of the regional goals. First, it contributes to development of a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the region, and improves health care outcomes. Second, the project is consistent with the goal of developing a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes. Lastly, it increases access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, with more available locations regardless of their ability to pay.

Starting Point/Baseline:

The Texana Children's Center for Autism currently only has 1 setting. In this setting, Texana currently serves 42 children diagnosed with Autism Spectrum Disorders or related conditions. Twenty of these children are able to access treatment via private funds or private insurance. The remaining twenty-two children are able to access services through an existing grant from the Department of Assistive and Rehabilitative Services, DARS. The Children's Center for Autism anticipates serving approximately 50 total children by the end of this fiscal year (September 2012-August 31, 2012). These children receive between 15 and 32 hours of intensive ABA per week. Despite this, waiting lists in the area range from 30 to 200 per clinic and waits can be up to 2 years or until the child ages out of eligibility.

The current project will allow us to expand to a second location serving up to 22 additional full time (32.5 hours per week) children *at a time by year 5*. With admission and discharges in year 5, approximately 32 children will be served in just that one year in the new setting. Children will be limited to up to 24 months in the program in order to increase the absolute number of children served. Therefore at least 39 children will be served at the new community-based setting. With the proposed project Texana plans to expand to a second location in year 2. Texana plans to serve 7 additional clients in year 2; beginning within 90 days of being given approval. Texana projects the ramp up to include seeing 7-10 children year 2 with one BCBA hired and increase to 17-20 children year 3 with a second BCBA hired. A BCBA caseload is typically 10-11 clients, so Texana will add to the caseloads in years 4 and 5. There will be only 1 new site across the 5 years. See table below.

	Year 1	Year 2	Year 3	Year 4	Year 5
Number of NEW community-based settings where children are served	0	1	NA	NA	NA
Total Cumulative Number of Children Served at NEW community-based site	0	7	17	27	39

Child census at NEW community-based sites	0	7	17	20	22
Children Admitted to NEW community-based site	0	7	10	10	12
Projected total Children's Center Census (2 sites)	42	49	59	62	64
Children Discharged from NEW community-based site	0	0	0	7	10

Rationale:

Texana Center selected this project for the following reasons:

- This project is data driven. As previously mentioned, there is an increasing number of individuals diagnosed with Autism Spectrum Disorders (ASD). Current statistics from the CDC indicate that 1 in 88 children have a diagnosis of ASD. In fiscal year 2012, through Strategic Planning, Texana Center recognized the need to shift some resources from adult services to children services. Eighty-five percent of the individuals waiting for eligibility determination are under 21, and are seeking behavior supports and/or respite as a primary service. The 25 school districts in our local area reported that in the 2011-2012 school year, 4,332 students with IDD were served and 2,374 of these children had a diagnosis of ASD. As the number of children diagnosed with ASD increases, the need for treatment also increases. ABA and SLP are the treatments with the most evidence supporting their effectiveness (National Autism Center's National Standards Report, 2009). In 1999, the Surgeon General named ABA, the treatment of choice for children diagnosed with Autism. Lovaas (1987) documented 9/19 or 47% children who received early intensive (40 hr per week) ABA before the age of 4 for at least 2 years had cognitive and language scores in the normal range by age of 6-7 years. Numerous additional studies have supported this finding (e.g. Howard, et. al., 2005).
- This project addresses the needs of the community for expanded behavioral healthcare. RHP CN 2 - Insufficient access to behavioral health care services, resulting in lack of care or delay of care, delivery of inappropriate and insufficient care, unnecessary and preventable complications, and increased demand on criminal justice system. Children with ASD diagnoses in our area frequently never access services due to lack of funding or are placed on a waiting list for 1-3 years or until they age out of eligibility. This is highly detrimental to the trajectory of their future outcomes.
- This project is cost effective. In 1998, Jacobson et al found that cost savings following intensive ABA are estimated to be from $2,439,710 to $2,816,535 with inflation to *age 55 per child* served (Jacobson, Mulik, & Green, 1998). Additionally, in 2007, Chasson et al results indicate that the state of Texas will save $208,500 *per child across eighteen years of education* with early intensive ABA.
- Texana center has the experience to implement this project. Since 2004, Texana has been operating an intensive ABA program for children diagnosed with Autism, the Children's Center for Autism. Texana has the administrative support and clinical expertise as well as the existing infrastructure to ensure a smooth and successful expansion.

Related Category 3 Outcome Measure(s):

The Category 3 Quality Improvement Outcome Measure, Quality of Life, relates to the Category 1.12.2 project of increased utilization of community behavioral healthcare services of ABA and SLP for individuals with ASD. These treatments are specifically designed to improve symptoms and function, two essential components of quality of life. Early intensive ABA treatment results in increased language and communication skills, improved social skills, achievement in pre-academic and academic areas, and decreased problem behaviors (Howard et al. 2005). Early intensive ABA as described above can be costly, exceeding $50,000 per year. This project will improve access to needed behavioral health services for low income families.

Baseline data will be collected during years 2 and 3 using a variety of the below and related assessment tools. One or a combination of 2 or 3 of these tools will be utilized to demonstrate progress during years 3-5 based on baseline data collected during years 2 and 3.

- Demonstrated improvement in quality of life scores on evidence-based, validated standardized assessment tools for the target population. Previous instruments used in the Children's Center for Autism include the Pervasive Developmental Disorders Behavior Inventory (PDDBI) and Psychoeducational Profile-3 (PEP-3). Other recommended instruments include the Developmental Profile-Third Edition (DP-3), Peabody Picture Vocabulary Test-Fourth Edition (PPVT-4), Expressive Vocabulary Test-Second Edition (EVT-2), Bayley Scales of Infant Development-Revised (BSID-R), Wechsler Primary Preschool Scales of Intelligence-Revised (WPPSI-R), Differential Abilities Scale (DAS), Developmental Assessment of Young Children (DAYC), Vineland Adaptive Behavior Scales (VABS), Reynell Developmental Language Scales, and the Merrill-Palmer Scale of Mental Tests (Howard, et al. 2005).
- Demonstrated improvement in quality of life on the Assessment of Basic Language and Learning Skills (ABLLS-R), Verbal Behavior Milestones Assessment and Placement Program (VB-MAPP), and/or the Assessment of Functional Living Skills (AFLS). Progress can be measured by examining changes in the student's scores from one administration to the next (e.g., Goin-Kochel, Myers, Hendricks, Carr, &Wiley, 2007;Sullivan & Perry, 2006). The ABLLS-R and similar tools were selected because they are now commonly used by educators, school personnel, and psychologists to assess and monitor skills of children with autism who are receiving behavior therapy (e.g., Bradley-Johnson, Johnson, & Vladescu, 2008; Goin-Kochel et al., 2007; Schwartz, Boulware, McBride, & Sandall, 2001) and, according to Aman et al. (2004), the ABLLS-R has been selected as an outcome measure by the National Institute of Mental Health Research Units in Pediatric Psychopharmacology and Psychological Intervention Autism Network.

Relationship to other Projects:

The development and improvement of services for patients with behavioral health disorders, such as ASD, is a focus of multiple projects throughout the RHP, including those in Category I for expanding access and Category II for developing innovative solutions to priority issues. This project supports expanding specialty care capacity, developing behavioral health crisis stabilization as alternatives to hospitalization, providing an intervention for targeted behavioral health population to prevent unnecessary use of services in a specified setting, and recruiting, training, and supporting consumers of mental health services to provide peer support services.

Relationship to Other Performing Providers' Projects in the RHP:
The behavioral health crisis in Region 3 is considerable and the proposed initiatives in our RHP plan will only imply a small impression into the overall community need for treatment, but is a good start. The outpatient focus of many RHP Plan initiatives will help numerous facilities focus to treating the patients in an ambulatory setting as well as continued navigation of services with a focus to keeping patients from an inpatient unit. This initiative is similar to many others in the sense that it impacts the category of behavioral health. The Region 3 Initiative Grid attached in the addendum will show the relationship to other programs. Intellectual and developmental disabilities (IDD) are a large focus of our community including our local mental health authorities in the region. There are additional initiatives in the RHP plan with a focus on IDD and are represented in the addendum (Region 3 Initiative Grid). The IDD initiatives primarily support outcome measures of patient satisfaction scores, and admission/re-admission rates.
Local Authorities for intellectual and developmental disabilities (IDD) services throughout the state are proposing the implementation of projects to improve access to services for individuals with IDD for their respective RHP areas. The Department of Aging and Disabilities Services (DADS) has encouraged local authorities to propose projects to address the needs of the IDD population including ASD. Specifically, Harris County MHMRA is proposing 2 projects that included ABA services, STARS and in-home services. The Andrews Center MHMRA is also proposing ABA services for children with autism.
Plan for Learning Collaborative:
Through this project, Texana Center and MHMRA of Harris County will expand the existing collaboration to include monthly telephone conferences to share best practices, new ideas and solutions for the autism intervention project. The established provider meetings will provide an effective forum for gathering input of stakeholders in the project processes. Through this expanded learning collaborative, Texana and participating Local Authorities will share challenges and testing of new ideas and solutions. Additionally, Texana plans to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System as appropriate. Texana's participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system. This exchange will facilitate effective processes, efficient use of resources, and consistent data benchmarking across similar projects statewide.
Outcome Project Valuation:
This project addresses a priority need for the population of individuals with ASD to receive intensive ABA and SLP services in the community. One of the goals of this project is to avert outcomes such as potentially avoidable inpatient admissions and readmissions in settings including general acute and psychiatric hospitals, state supported living centers, and self-contained special education classrooms; to promote wellness and adherence to treatment; to promote independence in the community; and to improve quality of life. The vision will be realized throughout the child's lifetime, however, the reduction in the need for self-contained special education classrooms and in some cases the elimination of the need for special education for children served in this project would be realized during the 4 year DSRIP project.
By providing ABA services to children with autism, it allows for cost avoidance. The current project proposes to serve at least 39 children in years 2-5. Based on the figures derived from the 2007 Chasson study, the state of Texas could save $8,131,500 across 18 years of education by providing ABA treatment to these 39 children. Furthermore, based on the figures derived from

the 1998 Jacobson study, the state of Texas could save $95,148,690 through age 55 for these 39 children by providing early intensive ABA treatment.

Total Five Year Valuation: $9,105,687.

Project Option 1.13.1 - Develop and implement crisis stabilization services to address the identified gaps in the current community crisis system: Behavioral Healthcare Crisis Center for six-county area

Unique RHP Project Identification Number: 081522701.1.2
Performing Provider Name/TPI: Texana Center / 081522701

Project Summary:

Provider:
Texana Center is the Local Authority for Behavioral Healthcare and Intellectual and Developmental Disability Services for six counties within RHP 3: Austin, Colorado, Fort Bend, Matagorda, Waller, and Wharton. Texana Center serves approximately 9,800 individuals annually (an estimated 7,000 in BH services and 3,000 in IDD services), employs 742, and has an annual operating budget of $39,211,988.

Intervention(s):
This project will develop an 8 bed 48-hour extended observation unit and a 14 bed crisis residential unit where individuals in crisis may go to be assessed and stabilized by providing crisis intervention services. This center will provide a clinically appropriate setting and less costly alternative to hospital inpatient stays, emergency room visits, and jail.

Need for the project:
Currently, there is not a behavioral healthcare crisis center or behavioral healthcare emergency services center located in the six county service area. A crisis center is a less costly and more clinically appropriate alternative to hospital emergency rooms, state hospital inpatient beds, and jails. At the present time, there are no other alternatives in the community.

Target Population:
The target population includes all Medicaid and indigent patients in crisis and in need of assessment and stabilization services.

Category 1 or 2 expected patient benefits:
Our DY4 goal is to improve upon DY3 by 3% and for DY5 an additional improvement of 3% over DY4. Over the course of DY3-DY5, this center will see a minimum of 1,872 patients.

Category 3 outcomes:
OD-2 – Potentially Preventable Admissions: IT-2.4 Behavioral Health/Substance Abuse (BH/SA) Admission Rate - Our goal is to decrease the number of state hospital admissions by assessing and stabilizing patients in the crisis center as opposed to transporting them to Austin State Hospital, our designated state hospital for indigent/Medicaid patients.

Project Option 1.13.1 - Develop and implement crisis stabilization services to address the identified gaps in the current community crisis system: Behavioral Healthcare Crisis Center for six-county area

Unique RHP Project Identification Number: 081522701.1.2
Performing Provider Name/TPI: Texana Center / 081522701

Project Description:
Texana Center, the local mental health authority, proposes to start a behavioral healthcare crisis center to serve a six-county area (Fort Bend, Matagorda, Wharton, Colorado, Austin, and Waller Counties).

The center will include an 8 bed 48-hour extended observation unit and a 14 bed crisis residential unit where individuals in crisis may go to be assessed and stabilized. The project number is 1.13.1 – Develop and implement crisis stabilization services to address the identified gaps in the current community crisis system.

When an individual lacks the appropriate behavioral health crisis resolution mechanisms, first responders are often limited in their options to resolve the situation. Sometimes the choice comes down to the ER, jail or inpatient hospital bed. Crisis stabilization services can be developed that create alternatives to these less desirable settings. While hospitalization provides a high degree of safety for the person in crisis, it is very expensive and is often more than what is needed to address the crisis. Community based crisis alternatives can effectively reduce expensive and undesirable outcomes, such as preventable inpatient stays. For example, state psychiatric hospital recidivism trended downward coincident with implementation of crisis outpatient services in some Texas communities. The percent of persons readmitted to a Texas state psychiatric hospital within 30 days decreased from 8.0% in SFY2008 (before implementation of alternatives) to 6.9% in SFY2011[92].

Currently, there is not a behavioral healthcare crisis center or behavioral healthcare emergency services center located in the six county service area. A crisis center is a less costly and more clinically appropriate alternative to hospital emergency rooms, inpatient beds, and jails. At the present time, there are no other alternatives in the community. With the exception of geriatric-psychiatric units in local general hospitals, there are also no inpatient psychiatric beds in the service area. Patients requiring hospitalization are transported to Austin State Hospital in Austin, Texas (170 miles away) or if the patient has a payer source, to a private psychiatric hospital in Houston. This sometimes occurs because of the lack of other stabilization options in the service area primarily, observation, residential and/or respite beds.

In the largest county served by the performing provider, Fort Bend County, approximately 20% of the Fort Bend County jail population has a serious mental illness. Due to the lack of alternatives for community evaluation and treatment, these individuals are often booked into the jail so they will be held in a safe environment where they will receive the limited pharmacological management services provided by the jail. Local emergency rooms also must house individuals for extended periods of time (up to 96 hours) as there are no other local options available and many times no inpatient beds available in the state hospital system.

By having a place to safely house individuals experiencing a behavioral healthcare crisis, we can avoid more costly options of extended stays in hospital emergency rooms and jails. In addition, receiving the most clinically appropriate intervention in the least restrictive setting ensures the maximum potential for successful long term treatment and recovery.

Extended observation units are designed to provide emergency stabilization to individuals experiencing a behavioral healthcare crisis in a secure and protected environment with immediate access to emergent or urgent medical evaluation and treatment. Individuals are provided appropriate and coordinated transfer to a higher level of care if and when needed. Many times, a higher level of care can be avoided due to the immediate intervention offered in the observation unit.

Crisis residential services provide short-term, community-based residential, crisis treatment to persons who may pose some risk of harm to self or others and who may have fairly severe functional impairment. Crisis residential facilities provide a safe environment with staff on site at all times. However, these facilities are designed to allow individuals to come and go and therefore do not accept individuals who are court ordered committed for treatment. Recommended maximum length of stay is 14 days and the average length of stay is between 3 and 7 days.

Goals and Relationship to Regional Goals:

While the Region has many specific objectives and improvement targets based on stakeholder input and community needs assessments, the over-arching goals that have guided many of our decisions include the following which is consistent with this project's goals:

- Develop a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the entire region, and improves health care outcomes and patient satisfaction.
- Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay.
- Develop a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes.

Texana Center, the performing provider currently does not have space in existing facilities to create this crisis center. However, an existing building for sale has been located. Texana Center proposes to purchase and renovate the building by using existing funds and fund-raising for the purchase price and cost of renovations. This project would be modeled after an existing 2011 American Psychiatric Association Gold Achievement Award[93] winning facility located in Lufkin, Texas and operated by the Burke Center. The identified facility is also close to the Texana Center at Rosenberg Behavioral Healthcare Clinic which will provide back-up staffing support and cost efficiencies by sharing staff (i.e. psychiatrists.) In addition, this location provides easy access for all six counties as it is located two blocks from Interstate Hwy. 59. Stakeholders have voiced an easily accessible location for this proposed facility as a primary concern. The location proposed alleviates the stakeholder's concerns. Texana Center plans to

[93] **Psychiatric Services** November 2011, Volume 62, No. 11; ps.pyschiatryonline.org

purchase the building and begin renovations as soon as the plan is approved and be ready to open doors at the beginning of DY3.

5-Year Expected Outcome for Provider and Patients:

The 5-year expected outcome of this project is to provide alternatives to hospitalization, emergency rooms, and incarceration and therefore reduce the events in these settings. Every patient seen the crisis center is a potentially preventable admission to one of the current available settings. Not only will this reduce costs in inappropriate settings, it will improve the outcome and potential for recovery for the patient.

Starting Point/Baseline:

There are currently no patients serviced by the crisis center as it does not exist as an option in the community. Texana Center anticipates serving approximately 50 individuals per month or 600 per year in the first year the crisis center is open.

Rationale:

The population of the six counties included in this project is more than 800,000 and extends over 6,000 square miles. The significant growth rate in both Fort Bend and Waller counties increases the population by 25,000 to 30,000 annually. Having virtually no inpatient beds or crisis center for a region this size means there is no place for these individuals to go. These patients often end up for extended periods in local hospital emergency rooms and/or the jail as a last resort. The closest psychiatric inpatient facilities are located in Harris County, fairly close to parts of Fort Bend and Waller Counties but increasingly distant from other rural counties. These facilities are often at capacity as well as the state hospital system. The psychiatric hospitals in Harris County also do not have beds for uninsured, indigent patients. For these patients, the wait in the emergency room is even longer.

The most recent Needs Assessment of Fort Bend County conducted by the Lyndon Baines Johnson School of Public Affairs in the summer of 2011 states that the lack of services for the mentally ill has resulted in "mental health becoming a law enforcement issue."[94]

Texana Center has worked very closely over the last five years with the Sheriff's Office Detention and Patrol, Fort Bend NAMI, Mental Health America – Fort Bend, Adult Probation, and numerous other organizations to identify the gaps in service and work on solutions. One of the primary gaps identified by this group is a "place" to take individuals other than the hospital emergency rooms and jails. In addition, throughout the collaborative RHP process, stakeholders have ranked a crisis center as the priority for this service area.

The unique community need this project addresses is CN2 – Insufficient access to behavioral healthcare services, resulting in lack of care or delay of care, delivery of inappropriate and insufficient care, unnecessary and preventable complications, and increased demand on the criminal justice system.

Project Components:

Although a great deal of work has already been done around the core components of this project, Texana Center will use DY2 to finalize these core components. These components are as follows:

---

[94] http://www.rgkcenter.org/sites/default/files/file/research/FB%20Report_for_posting.pdf

- Convene community stakeholders who can support the development of crisis stabilization services to conduct a gap analysis of the current community crisis system and develop a specific action plan that identifies specific crisis stabilization services to address identified gaps (Since stakeholders have been meeting for the last 4 – 5 years, this component has already been fulfilled.)
- Analyze the current system of crisis stabilization services available in the community including capacity of each service, current utilization patterns, eligibility criteria and discharge criteria for each service
- Assess the behavioral health needs of patients currently receiving crisis services in the jails, EDs, or psychiatric hospitals. Determine the types and volume of services needed to resolve crises stabilization alternatives that will meet the behavioral health needs of the patients
- Explore potential crisis alternative service models and determine acceptable and feasible models for implementation
- Texana Center will use DY3-DY5 to conduct quality improvements for the project as described in the following core component.
- Review the intervention(s) impact on access to and quality of behavioral health crisis stabilization services and identify "lessons learned," opportunities to scale all or part of the intervention(s) to a broader patient population, and identify key challenges associated with expansion of the intervention(s), including special considerations for safety-net populations

Milestones & Metrics:
For this project, Texana Center has selected the following process milestones and metrics. These were chosen to ensure core components, some of which have already been fulfilled, are completed and documented appropriately.

- P-2 – Conduct mapping and gap analysis of current crisis system.
  - Metric: Produce a written analysis of community needs for crisis services.
- P-3 – Develop implementation plans for needed crisis services.
  - Metric: Produce data-driven written action plan for development of specific crisis stabilization alternatives that are needed in each community based on gap analysis and assessment of needs.
- P-4 - Hire and train staff to implement identified crisis stabilization services.
  - Metric: Number of staff hired and trained.
- P-5 – Develop administration of operational protocols and clinical guidelines for crisis services.
  - Metric: Completion of policies and procedures.
- P-9 – Participate in face-to-face learning (i.e. meetings or seminars) at least twice per year with other providers and the RHP to promote collaborative learning around similar or shared projects.
  - Metric: Participate in semi-annual face-to-face meetings or seminars organized by the RHP.

Since this is a start-up project and these services are not available, all of these milestones/ metrics are necessary for a successful project.

In addition, the following improvement milestone and metrics were chosen.

- I-12 – Utilization of appropriate crisis alternatives.

- Metric: 3% increase in utilization of appropriate crisis services over baseline DY3.

This milestone was chosen to ensure the crisis center is being used appropriately in lieu of hospital emergency rooms and jails.

Related Category 3 Outcome Measure(s):

Currently, the Category 3 Outcome Measure to be chosen falls within OD-2-Potentially Preventable Admissions and/or OD-3 Potentially Preventable Re-Admissions – 30 day Readmission Rates (PPRs). Texana Center needs to identify data sources (hospitals) and processes to obtain the data in order to make a data-driven decision for a specific outcome measure. By focusing on these outcome measures, low income populations with no funding source for these services will have a place to go in the local community which will allow them to remain close to natural supports which will help prevent admissions and readmissions into psychiatric hospitals.

Relationship to Other Projects:

This project is very closely tied with the creation of a law enforcement Crisis Intervention Team proposed by Fort Bend County. Once a law enforcement team is trained to recognize mental illness and appropriate law enforcement interventions to use for this population, they must have a place to take these individuals other than the jail and emergency rooms for complete evaluation and assessment.

Relationship to Other Performing Providers' Projects in the RHP:

Numerous community needs assessments reflect an extreme need for behavioral health services to include outpatient treatment centers, crisis stabilization units, inpatient beds, and much more. The lack of funding as well as complexity of the regions patient base has limited the amount of behavioral health treatments available to our region and continues to drive cost in emergent and inpatient situations. The Crisis Stabilization Unit has a direct correlation to all behavioral health programs recommended in the RHP plan and will be a focus of two of the largest Local Mental Health Authorities of our region. Both CSU's share the outcome measures of mental health admissions & readmissions, and improvement of patient satisfaction scores. The Region 3 Initiative Grid attached in the addendum reflects the direct relationships of this initiative.

Texana Center

Pass 2

Category 1: Infrastructure Development
Project Option 1.9.2: Expand Specialty Care Capacity: Improve access to specialty care.
RHP Project Identification Number: 081522701.1.3
Performing Provider Name: Texana Center
Texas Provider Identifier: 081522701

Project Description: Establish or expand initiatives to increase the availability of targeted specialty care providers for infants and toddlers 0-3 years old who exhibit mild developmental delays or have a recognized risk factor that puts them at risk of developmental delay.

Provider: Texana Center is the Local Authority for Behavioral Healthcare and Intellectual Developmental Disabilities Services for 6 counties within the RHP 3 area: Austin, Colorado, Fort Bend, Matagorda, Waller and Wharton. Texana Center serves approximately 9,800 people annually (an estimated 7,000 in BH services and 3,000 in IDD services), employs 742, and has an annual operating budget of $39,211,988.

Intervention: This project will implement a system of early identification and delivery of therapeutic services that blends the best aspects of private therapy and a natural environment based model and includes social work and/or monitoring by a child development specialist to support parental involvement and supplement the number of clinical hours recommended.

Need for the project: Currently there is no unified program for children under the age of three years available to provide comprehensive services to children with developmental delays that do not qualify for Early Childhood Intervention services or children with established risk factors for developing delays.

Target population: This project will serve children and families in Austin, Colorado, Fort Bend, Matagorda, Waller and Wharton Counties and coordinate with the Region III Educational Service Center ECI and Project GROW ECI programs.

Category 1 expected patient benefits: This project will enroll a minimum of 24 children for services in DY 2. The number of service slots will be increased to a minimum of 48, 56 and 60 children in DY 3,4,and 5. As children exit services due to achieving developmental proficiency or aging out and being referred to other services, vacancies will be filled. It is expected that the total number of children served will be twice the number of enrollment slots in a given reporting period. Children receiving therapeutic interventions through this project will have an increased likelihood of age appropriate skill development and a decreased likelihood of needing continued therapy or IDEA Part B special education services at age 3.

Category 3 outcomes: IT-2.13: Our goal is to provide interventions and supports to children 0-3 years with mild developmental delays or established risk factors reducing or eliminating the need for continued specialized therapy or IDEA Part B special education services at age 3, with benefits extending throughout the elementary school years.

Project Option 1.9.2: Improve access to specialty care- Therapeutic Intervention for Infants and Toddlers at Risk

Unique RHP Project ID: 081522701.1.3 / Pass 2
Performing Provider Name / TPI: Texana Center / 081522701

Project Description:
This category 1 project, 1.9.2 will increase the capacity to provide specialty care services (occupational, physical, behavior, and speech therapy) and the availability of targeted specialty providers to better accommodate the high demand for specialty care services so that patients have increased access to care.

The time between birth and 36 months of age is a critical developmental period[95] when the neural circuits of a child's brain are most flexible and subject to change[96]. Intervention provided to children during this critical period is likely to be more effective and less costly[97] and can decrease the need for special education and related services when a child enters school[98]. *Voices for America's Children* states that children, who start school behind, particularly on more than one dimension of school readiness, have difficulty catching up[99]. Children who fall behind in oral language in the years before formal schooling are less likely to be successful beginning readers and their achievement lag is likely to persist[100]. While not every child who experiences mild developmental delays or is at risk for delays will need special education services at school age, those who receive therapeutic supports at an early age have an increased likelihood of being "school ready." The per-pupil expenditures for special-education students can be estimated to be near double the per-pupil expenditures for general-education students[101].

This project will implement a system of early identification and delivery of therapeutic services that blends the best aspects of private therapy and a natural environment based model and includes social work and/or monitoring by a child development specialist to support parental involvement. Modeled on Department of Assistive and Rehabilitative Services Early Childhood Intervention (ECI) program[102], recognized by Medicaid as cost efficient, the proposed project would establish procedures for accepting referrals from local ECI programs for children with developmental delays of 15%-24% based on standardized testing or risk factors not qualifying for ECI services, as well as accepting referrals from community resources or families and assessing the need for intervention and support. Children identified by the proposed project as meeting eligibility for ECI services would be referred to the appropriate local ECI program.

Therapy services will be provided in a center-based setting to maximize both personnel and fiscal resources. Families without transportation, will be eligible for home-based therapy services. Home visits will be made by social workers and/or child development specialists to monitor progress and functionality in the natural environment as well as to support parents as their child's first and most important teacher[103].

Goals and Relationship to Regional Goals:

- To develop a unified system of therapeutic services and supports for infants and toddlers, 0-3 years old, who have established risk factors for developmental delay or who already demonstrate a mild delay of 15%-24% on a standardized test.
- To provide necessary services and supports to very young children and increase the chance of age appropriate development and decrease potential eligibility for IDEA Part B services at age 3 years.
- To increase access to services and supports to families who are uninsured, underinsured, who live in rural areas with limited available resources or who desire a family centered service model rather than a medical model of services.

The above project goals meet the Regional Goal to "increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition regardless of where they live or their ability to pay."

Challenges and how to address:

The proposed project faces challenges in more than one area. All anticipated challenges present with viable solutions.

- Availability of licensed therapists in rural areas: as the proposed project will serve a 6 county area, staff serving more populated/urban areas will travel to rural areas if a shortage of available, licensed therapeutic staff is identified.
- Maximizing staff and funding resources for greatest efficiency: the proposed project will offer a blend of center-based services and home-based services. While center-based services make most efficient use of staff time and program economic resources, home-based services increase access for families without transportation and promotes family involvement.
- Public awareness of available services: initially, the proposed project will draw referrals from the local Early Childhood Intervention programs to serve those children determined ineligible for ECI services but still showing delays or having risk factors. A joint plan for public awareness will be developed and implemented with the two ECI programs serving the 6 county catchment area.
- Documentation and record keeping in a large geographic area: Texana will support electronic note submittal and all reimbursement activities for the proposed project. All staff will have assigned laptop computers and any signature or portable copiers necessary for efficient business use.

5-Year Expected Outcome for Provider and Patients:

The expected outcome for the proposed project is to become a sister program to the two ECI programs serving the 6 county area. Families of children with established developmental risk factors or developmental delay would be assured of available, economically accessible services

[103] Voices for America's Children(2010). *Early learning left out: building an early learning childhood system to secure America's future*, 3rd edition.

to meet identified needs through the waiver program if a child is ineligible for ECI services. All infants and toddlers faced with challenges to typical development would be given the best possible opportunity to be age appropriate and school ready on aging out of the proposed project.

Starting Point/Baseline:

Currently there is no unified program for children under the age of three years available to provide comprehensive services to children with developmental delays that do not qualify for Early Childhood Intervention services or children with established risk factors for developing delays.

This project will serve children and families in Austin, Colorado, Fort Bend, Matagorda, Waller and Wharton Counties and coordinate with the Region III Educational Service Center ECI and Project GROW ECI programs. The estimated population of children 0-3 in the six counties served is 21,450[104]. It is estimated that at least 3% of this population potentially qualifies for ECI services, but local programs qualified 8% fewer children referred during the current fiscal year than were qualified in FY 2011 due to the narrowing of eligibility.

This project will enroll a minimum of 24 children for services in DY 2. The number of service slots will be increased to 48, 56 and 60 children in DY 3,4,and 5. As children exit services due to achieving developmental proficiency or aging out and being referred to other services, vacancies will be filled. It is expected that the total number of children served will be twice the number of enrollment slots in a given reporting period.

Rationale:

Texana Center selected this project for the following reasons:

- This project addresses the needs of the community for expanded access to specialty services (RHP CN.2). At the direction of the Texas Legislature, eligibility for Early Childhood Intervention (ECI) services was narrowed starting in FY 2012 with a goal of reducing the number of children served by 8.4%[105]. With this narrowing of eligibility, ECI identifies a significant number of children who display developmental delays, but less than the 25+% delay that qualifies them for ECI services. The Early Childhood Intervention program hosted by Texana Center has seen a decrease in total number of children enrolled for services of 9% in FY 2012. The total children referred for services that were determined eligible and were enrolled decreased by 8%. In addition, children identified as being at-risk for developmental delay due to prematurity or prenatal drug exposure are not eligible for ECI services without first developing a qualifying delay[106]. Families of these children have only two options: do nothing until their child is school age, or seek private therapy. Families who are uninsured or under-insured often find the private therapy option financially prohibitive.
- This project is cost effective. Modeled on the proven and successful parental involvement philosophy of Early Childhood Intervention, the cost of delivering therapy services during a

[104] US Census 2010

[105] Source: Department of Assistive and Rehabilitative Services Early Childhood Intervention website: www.dars.state.tx.us/ecis

[106] Texas Administrative Code §108.805

child's enrollment in the proposed project will be ½ of traditional recommendations from private providers. Savings continue to be realized after exiting the proposed project as each child receiving therapeutic interventions and supports as infants or toddlers has an increased likelihood of entering regular education at age 5 rather than special education at age 3, This saves the local school districts $17,816 per child over that two year period. Each additional year a child is in regular education services rather than special education services realizes an additional savings of approximately $8,000 a year per child. This equals to a potential savings of $48,000 per child during the elementary school years (K-5th grade) for a combined savings (2 years pre-K plus K-5th grade) of $65,816 per child.

- Texana Center has the experience to implement this project. Texana Center has a history of successfully operating an Early Childhood Intervention (ECI) program. Texana has the administrative support and clinical expertise as well as the existing infrastructure to ensure an easy and successful expansion of services to include infants and toddlers with milder delays or risk factors.

Project Components:

a) Increase service availability with extended hours: as this is a new program, there are not yet any established hours to extend. However, it is planned to establish a flexible schedule to accommodate family's unique needs.
b) Increase number of specialty clinic locations: each location of operation will increase or establish (if none is available in a given area) access to specialty services in each of the 6 county catchment areas.
c) Implement transparent, standardized referrals across the system: the project will use a single referral system that includes notification of outcome when accepting referrals from local ECI programs or other community referral sources. The project will also make consistent use of an agreed upon referral system when making referrals to other providers for children determined to be eligible for or in need of services from other community resources.
d) Conduct quality improvement for project: as this project rolls out over the 6 county area, it will be implemented using plan-do-study-act (PDSA) principles. Each successive area of service will build on the experiences and lessons learned from the preceding establishment of a service area. Areas of improvement identified will be applied to all services as appropriate, understanding that different geographic areas may have unique challenges and needs. Due to the scope of the project and the need to provide services to all 6 counties, the initial phase of PDSA will necessitate rapid cycle improvement to ensure highest quality outcomes for the entire project. Ongoing quality improvement initiatives will be identified through the examination of data and documentation and consultation/collaboration with consumers and community partners. Given the young age, rapid rate of developmental change and limited time to receive services of the target population, rapid cycle improvement when addressing identified challenges will be key in ensuring enacted improvements benefit the maximum number of children.

Unique community need identification number the project addresses and how it is a new initiative:

- CN.2-Inadequate access to specialty care: the proposed project is an expansion to the established Early Childhood Intervention services hosted by Texana Center in 2 of the 6 county (Fort Bend, Waller) service area. It will expand access to available services and supports for infants and toddlers 0-3. It is a new initiative for Texana in 4 of the 6 county area (Wharton, Matagorda, Austin, Colorado) as Texana does not provide services nor host an ECI program that serves this population.

Related Category 3 Outcome Measure(s):
IT-2.13 Other: Potentially Preventable Admissions
Reasons/rationale for selecting the outcome measure:

The Category 3 Quality Improvement Measure, Potentially Preventable Admissions, relates to the Category 1.9.2 project of improved access to specialty care (occupational therapy, physical therapy, speech therapy, and behavior analysis/therapy). These therapies are designed to improve the developmental functioning of infants and toddlers with developmental delays and to provide supports to children at-risk, thus preventing future delays. In the private marketplace, each of the therapies often costs in excess of $100 per hour. For families that are uninsured or under insured, the costs are prohibitive. By helping children develop age appropriate skills, they acquire the independence and school readiness that best prepares them for success educationally and socially. By providing parent training and support during service delivery, families feel better able to meet the needs of their child.

It is challenging to find evidenced-based answers to specific questions about assessment and intervention for young children with developmental delays.[107] This project proposes to use the Battelle Developmental Inventory 2nd Edition (BDI-2) to establish eligibility for enrollment and an individual baseline score on each child on entry into services. The developmental test will be administered a second time prior to exiting services. The BDI-2 provides a measure of progress during the preschool years and has been designed to help assess the effects of various intervention strategies for individual children and for groups of children.[108]

Relationship to Other Projects: The development and improvement of programs providing specialty care to all individuals is a focus of multiple projects throughout the RHP, including those in Category 1 expanding access to services for children with autism spectrum disorder (ASD). Identifying and addressing needs in infants and toddlers has the primary goal of decreasing the need for ongoing specialized services but also serves to link children to additional available services meeting a wide variety of needs through existing and expanded programs throughout the state.

Relationship to Other Performing Providers' Projects in the RHP:
Local Authorities for intellectual and developmental disabilities (IDD) services throughout the state are proposing the implementation of projects to improve access to services for individuals with IDD for their respective RHP areas. The Department of Aging and Disabilities Services (DADS) has encouraged local authorities to propose projects to address the needs of the IDD

[107] Noyes-Grossner, D.M., Holland, J. P.., Lyos, Dl, Holland, C.I., Romanczyk, R. G., Gillis, J,M.(2005), Rationale and methodology for developing guidelines for early intervention service for young children with developmental disabilities. *Infants & Young Children, Vol. 18, No. 2. Pp 119-135.*
[108] Newborg, J, (2005) *Battelle Developmental Inventory 2nd Edition, Examiner's Manual. Rolling Meadows, IL: Riverside Publishing.*

population. Both Harris County MHMRA and Andrews Center MHMRA are proposing increased services to children through expanded provision of applied behavioral analysis. Increased access to specialty care (OT, PT, ST, and BCBA) for infants and toddlers with developmental delays is an important component in the continuum of needed services available to individuals provided by Texana Center.

Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Plan for Learning Collaborative: Texana Center plans to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris County Health Systems as appropriate. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system. This exchange will facilitate effective processes, efficient use of resources, and consistent data benchmarking across similar projects statewide.

Texana Center also plans to develop a referral collaboration with Region III Educational Service Center ECI and Project GROW ECI to coordinate the referral processes, ensure appropriate access to services for children referred and monitor the proposed projects progress toward meeting the needs of the identified population.

Outcome Project Valuation: This project addresses the need for children to have easy and affordable access to specialty care services (occupational therapy, physical therapy, speech therapy and behavioral intervention). The goal of this program is to avert the need for special education services at age 3 years and increase school readiness and success in grades K-5 by intervening early and maximizing developmental scores and early learning.

The proposed project plans to identify and serve at least 24 children during demonstration year 2 for a potential savings of $427,584 to local school districts for those children. Demonstration years 3-5 plan for an increase to 60 children identified and served at any given time. Without adjusting planned enrollment numbers for children exiting the program while increasing total enrollment, potential savings to public education would be approximately $3.9 million. Replacing children exiting the program while increasing overall enrollment would increase total number of unique children served to 106. Anticipating that 70% of children exiting the waiver program would not qualify for special education services, this would bring anticipated savings to $4.9 million.

In addition to the long term savings to community educational systems, Medicaid will realize an immediate savings of 50% on the level of recommended therapy employing the parent training model of service delivery rather than the medical model of service delivery. Exact savings will be dependent on percentage of total enrollment who are Medicaid eligible children and the level of services recommended.

Texana Center

Pass 3

Project Option 1.12.2 – Expand the Number of Community Based Settings where Behavioral Health Services may be Delivered in Underserved Areas: Enhance Service Availability of appropriate levels of behavioral health care (i.e., applied behavior analysis and speech-language pathology for children diagnosed with autism).
Unique RHP Project Identification Number: 081522701.1.4
Performing Provider Name/TPI: Texana Center / 081522701
Project Description:
Enhance service availability of appropriate levels of behavioral health care (applied behavior analysis and speech-language pathology for children diagnosed with autism spectrum disorders) to expand the number of community based settings where behavioral health services may be delivered in underserved areas.
Provider Description:
Texana Center is the Local Authority for Behavioral Healthcare and Intellectual Developmental Disabilities Services for 6 counties within the RHP 3 area: Austin, Colorado, Fort Bend, Matagorda, Waller and Wharton. Texana Center serves approximately 9,800 people annually (an estimated 7,000 in BH services and 3,000 in IDD services), employs 742, and has an annual operating budget of $39,211,988.
Intervention(s):
This project will develop and implement evidence-based interventions of applied behavior analysis (ABA) and speech-language pathology (SLP) in an additional location for children with a diagnosis of autism spectrum disorder. Interventions include assessment, treatment development, and intervention overseen by Board Certified Behavior Analyst and SLP as well as training care givers using ABA.
Need for the Project:
There are increasing numbers of children diagnosed with ASD as evidenced by the latest statistics from the Center for Disease Control indicating 1:88 children have an ASD diagnosis. Texana Children's Center for Autism only has 1 setting, currently serving 42 children. This pass 3 project proposes to serve and additional 20 children. Waiting lists in the area can be as high as 200 per clinic and waits can be up to 2 years or until the child ages out of eligibility.
Target population:
Children with ASD diagnosis or related condition from age of diagnosis through the age of 10.
Category 1 expected patient benefits:
Our goal is to increase utilization of community behavioral healthcare (i.e., ABA and SLP services for ASD). Capacity in DY1 was 42 at current site. Texana has proposed an 1115 Waiver project in pass 1 to serve 39 additional unique children. The goal of this pass 3 project is in DY3 to add 1 additional site. At the proposed third location Texana would serve the following numbers of additional unique children beginning with 9 children DY3, 11 children DY 4, and at least 20 cumulative unique children by DY 5. A 24 month treatment cap will be imposed allowing for more unique children to be served by the 1115 waiver through DY5.
Category 3 Outcomes:
The project seeks to increase the quality of life for individuals served specifically these treatments are designed to increase functional skills, language/communication, social interactions, pre-academic achievement, as well as decrease problem behaviors as measured by an evidence-based and validated assessment tool for children diagnosed with ASD.

Project Option 1.12.2 - Expand the number of community based settings where behavioral health services may be delivered in underserved areas: Enhance service availability of appropriate levels of behavioral health care (applied behavior analysis and speech-language pathology for children diagnosed with autism spectrum disorders)

Unique RHP Project Identification Number: 081522701.1.4 / Pass 3
Performing Provider Name/TPI: Texana Center / 081522701

Project Description:
This category 1 project, 1.12.2, will provide specialized behavioral health care services to the complex behavioral health population of children with diagnoses of autism spectrum disorders and related conditions.

Texana Children's Center for Autism will add a third location to provide access to Applied Behavior Analysis (ABA) and Speech Language Pathology (SLP) interventions to serve 11 additional children at a time (from a current level of approximately 40 children at a time) as a 1115 Waiver pass 3 project. This will result in a minimum of 20 unique children to receive this type of service through year 5 in as the pass 3 project. Texana previously proposed a pass 1 project of adding a second location to provide access to ABA and SLP interventions to serve 22 additional children at a time as a pass 1 project, resulting in a minimum of 39 additional children receiving services through year 5 in the pass 1 project. With adding both new locations from pass 1 and pass 3, Texana will be able to serve an additional 59 though both sites, offering life changing intervention. The identified children with an autism diagnosis or related condition children require 1:1 intensive services for 25-40 hours per week for at least 2 years. Treatment is most effective if initiated before the age of 4 but it is effective for all ages. The proposed age group includes age of diagnosis through age 10. Treatment will be provided in a clinic/day treatment, community, or home setting. Treatment will be limited to up to 24 months per child so that more children can benefit from the program.

The population of children with an autism diagnosis often has key health challenges and multiple issues such as lack of daily living skills, cognitive challenges, and limited support in the community. The State's mental health system provides some minimal services, but can only serve a fraction of the population. The existing behavioral healthcare environment does not provide the necessary range of specialized therapies needed to address the complex needs of a child with autism. Positive healthcare outcomes are contingent on the ability of the patients to obtain services as soon as possible after diagnosis. However, many Texas children are unable to access these much needed services.

There are increasing numbers of individuals diagnosed with Autism Spectrum Disorders (ASD). The latest statistics from the Center for Disease Control (CDC) indicate that 1 in 88 children have a diagnosis of autism. Repeated studies by special tasks forces and others such as the US Surgeon General and the National Autism Standards Project have consistently found that Applied Behavior Analysis (ABA) intervention is the most effective intervention for children with ASD. In fact, research indicates that approximately 50% of children that receive 1:1 intensive ABA before the age of 4 for 25-40 hours a week for at least 2 years will no longer meet the diagnostic criteria for an ASD diagnosis (Howard, et al. 2005). Recent research, including the National Standards Project, emphasizes the importance of empirically based Speech Language Pathology (SLP) intervention in addition to the primary mode of intervention of ABA.

DRAFT

With a success rate of 47 percent for early intensive behavioral intervention (Lovaas, 1987), one study found that cost savings following intensive ABA are estimated to be from $2,439,710 to $2,816,535 with inflation to age 55 per child served (Jacobson, Mulik, & Green, 1998).

This project proposes to enhance availability of specialized therapies, ABA and SLP treatment, for children with ASD consistent with best practices (Howard et al. 2005, National Autism Center's National Standard's Report 2009). The innovative care model proposed includes interventions to increase language and communication, social skills, play skills, group participation skills, self-help skills, pre-academics skills, natural environment training, feeding intervention, community skills, pre-vocational skills, school-readiness skills, and parent training. Treatment will be developed and supervised by Board Certified Behavior Analysts (BCBA) and licensed Speech and Language Pathologists. Treatment will be provided in a clinic/day treatment, community, or home setting. Eligible persons are individuals with ASD from the age of diagnosis through the age of 10.

This project is consistent with several of the regional goals. First, it contributes to development of a regional approach to health care delivery that leverages and improves on existing programs and infrastructure, is responsive to patient needs throughout the region, and improves health care outcomes. Second, the project is consistent with the goal of developing a culture of ongoing transformation and innovation that maximizes the use of technology and best-practices, facilitates regional collaboration and sharing, and engages patients, providers, and other stakeholders in the planning, implementation, and evaluation processes. Lastly, it increases access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, with more available locations regardless of their ability to pay.

Starting Point/Baseline:

The Texana Children's Center for Autism currently only has 1 setting. In this setting, Texana currently serves 42 children diagnosed with Autism Spectrum Disorders or related conditions. Twenty of these children are able to access treatment via private funds or private insurance. The remaining twenty-two children are able to access services through an existing grant from the Department of Assistive and Rehabilitative Services, DARS. The Children's Center for Autism anticipates serving approximately 50 total children by the end of this fiscal year (September 2012-August 31, 2012). These children receive between 15 and 32 hours of intensive ABA per week. Despite this, waiting lists in the area range from 30 to 200 per clinic and waits can be up to 2 years or until the child ages out of eligibility.

Texana Center submitted an 1115 Waiver pass 1 project to serve an additional 22 children at a time, with admission and discharges resulting in 39 children through DY5. With this pass 3 project Texana plans to expand to a third location in year 3. There will be only 1 additional site as part of pass 3 across the 5 years. This pass 3 project proposes serving an additional 11 children at a time beginning with 9 children in DY 3, with admissions and discharges, serving at least 20 total unique children through DY5. Children will be limited to up to 24 months in the program in order to increase the absolute number of children served. See table below.

	Year 1	Year 2	Year 3	Year 4	Year 5

Children Discharged from NEW community-based site pass 3	0	0	0	0	9
Projected total Texana Children's Center census at any one time (3 sites: original, pass 1 and pass 3)	42	49	68	73	75

DRAFT

Rationale:

Texana Center selected this project for the following reasons:

- This project is data driven. As previously mentioned, there are an increasing numbers of individuals diagnosed with Autism Spectrum Disorders (ASD). Current statistics from the CDC indicate that 1 in 88 children have a diagnosis of ASD. In fiscal year 2012, through Strategic Planning, Texana Center recognized the need to shift some resources from adult services to children services. Eighty-five percent of the individuals waiting for eligibility determination are under 21, and are seeking behavior supports and/or respite as a primary service. The 25 school districts in our local area reported that in the 2011-2012 school year, 4,332 students with IDD were served and 2,374 of these children had a diagnosis of ASD. As the number of children diagnosed with ASD increases, the need for treatment also increases. ABA and SLP are the treatments with the most evidence supporting their effectiveness (National Autism Center's National Standards Report, 2009). In 1999, the Surgeon General named ABA, the treatment of choice for children diagnosed with Autism. Lovaas (1987) documented 9/19 or 47% children who received early intensive (40 hr per week) ABA before the age of 4 for at least 2 years had cognitive and language scores in the normal range by age of 6-7 years. Numerous additional studies have supported this finding (e.g. Howard, et. al., 2005).
- This project addresses the needs of the community for expanded behavioral healthcare. RHP CN 2 - Insufficient access to behavioral health care services, resulting in lack of care or delay of care, delivery of inappropriate and insufficient care, unnecessary and preventable complications, and increased demand on criminal justice system. Children with ASD diagnoses in our area frequently never access services due to lack of funding or are placed on a waiting list for 1-3 years or until they age out of eligibility. This is highly detrimental to the trajectory of their future outcomes.
- This project is cost effective. In 1998, Jacobson et al found that cost savings following intensive ABA are estimated to be from $2,439,710 to $2,816,535 with inflation to *age 55 per child* served (Jacobson, Mulik, & Green, 1998). Additionally, in 2007, Chasson et al results indicate that the state of Texas will save $208,500 *per child across eighteen years of education* with early intensive ABA.
- Texana center has the experience to implement this project. Since 2004, Texana has been operating an intensive ABA program for children diagnosed with Autism, the Children's

Center for Autism. Texana has the administrative support and clinical expertise as well as the existing infrastructure to ensure a smooth and successful expansion.

Related Category 3 Outcome Measure(s):

The Category 3 Quality Improvement Outcome Measure, Quality of Life, relates to the Category 1.12.2 project of increased utilization of community behavioral healthcare services of ABA and SLP for individuals with ASD. These treatments are specifically designed to improve symptoms and function, two essential components of quality of life. Early intensive ABA treatment results in increased language and communication skills, improved social skills, achievement in pre-academic and academic areas, and decreased problem behaviors (Howard et al. 2005). Early intensive ABA as described above can be costly, exceeding $50,000 per year. This project will improve access to needed behavioral health services for low income families.

Baseline data will be collected during years 2 and 3 using a variety of the below and related assessment tools. One or a combination of 2 or 3 of these tools will be utilized to demonstrate progress during years 3-5 based on baseline data collected during years 2 and 3.

- Demonstrated improvement in quality of life scores on evidence-based, validated standardized assessment tools for the target population. Previous instruments used in the Children's Center for Autism include the Pervasive Developmental Disorders Behavior Inventory (PDDBI) and Psychoeducational Profile-3 (PEP-3). Other recommended instruments include the Developmental Profile-Third Edition (DP-3), Peabody Picture Vocabulary Test-Fourth Edition (PPVT-4), Expressive Vocabulary Test-Second Edition (EVT-2), Bayley Scales of Infant Development-Revised (BSID-R), Wechsler Primary Preschool Scales of Intelligence-Revised (WPPSI-R), Differential Abilities Scale (DAS), Developmental Assessment of Young Children (DAYC), Vineland Adaptive Behavior Scales (VABS), Reynell Developmental Language Scales, and the Merrill-Palmer Scale of Mental Tests (Howard, et al. 2005).
- Demonstrated improvement in quality of life on the Assessment of Basic Language and Learning Skills (ABLLS-R), Verbal Behavior Milestones Assessment and Placement Program (VB-MAPP), and/or the Assessment of Functional Living Skills (AFLS). Progress can be measured by examining changes in the student's scores from one administration to the next (e.g., Goin-Kochel, Myers, Hendricks, Carr, &Wiley, 2007;Sullivan & Perry, 2006). The ABLLS-R and similar tools were selected because they are now commonly used by educators, school personnel, and psychologists to assess and monitor skills of children with autism who are receiving behavior therapy (e.g., Bradley-Johnson, Johnson, & Vladescu, 2008; Goin-Kochel et al., 2007; Schwartz, Boulware, McBride, & Sandall, 2001) and, according to Aman et al. (2004), the ABLLS-R has been selected as an outcome measure by the National Institute of Mental Health Research Units in Pediatric Psychopharmacology and Psychological Intervention Autism Network.

Relationship to other Projects:

The development and improvement of services for patients with behavioral health disorders, such as ASD, is a focus of multiple projects throughout the RHP, including those in Category I for expanding access and Category II for developing innovative solutions to priority issues. This project supports expanding specialty care capacity, developing behavioral health crisis stabilization as alternatives to hospitalization, providing an intervention for targeted behavioral health population to prevent unnecessary use of services in a specified setting, and recruiting, training, and supporting consumers of mental health services to provide peer support services.

Relationship to Other Performing Providers' Projects in the RHP:

Intellectual and developmental disabilities (IDD) are a large focus of our community including our local mental health authorities in the region. There are additional initiatives in the RHP plan with a focus on IDD and are represented in the addendum (Region 3 Initiative Grid). The IDD initiatives primarily support outcome measures of patient satisfaction scores, and admission/re-admission rates. Local Authorities for intellectual and developmental disabilities (IDD) services throughout the state are proposing the implementation of projects to improve access to services for individuals with IDD for their respective RHP areas. The Department of Aging and Disabilities Services (DADS) has encouraged local authorities to propose projects to address the needs of the IDD population including ASD. Specifically, Harris County MHMRA is proposing 2 projects that included ABA services, STARS and in-home services. The Andrews Center MHMRA is also proposing ABA services for children with autism.

Plan for Learning Collaborative:

Through this project, Texana Center and MHMRA of Harris County will expand the existing collaboration to include monthly telephone conferences to share best practices, new ideas and solutions for the autism intervention project. The established provider meetings will provide an effective forum for gathering input of stakeholders in the project processes. Through this expanded learning collaborative, Texana and participating Local Authorities will share challenges and testing of new ideas and solutions. Additionally, Texana plans to participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System as appropriate. Texana's participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system. This exchange will facilitate effective processes, efficient use of resources, and consistent data benchmarking across similar projects statewide.

Outcome Project Valuation:

This project addresses a priority need for the population of individuals with ASD to receive intensive ABA and SLP services in the community. One of the goals of this project is to avert outcomes such as potentially avoidable inpatient admissions and readmissions in settings including general acute and psychiatric hospitals, state supported living centers, and self-contained special education classrooms; to promote wellness and adherence to treatment; to promote independence in the community; and to improve quality of life. The vision will be realized throughout the child's lifetime, however, the reduction in the need for self-contained special education classrooms and in some cases the elimination of the need for special education for children served in this project would be realized during the 4 year DSRIP project.

By providing ABA services to children with autism, it allows for cost avoidance. The current project proposes to serve at least 20 unique children in years 2-5. Based on the figures derived from the 2007 Chasson study, the state of Texas could save $4,170,000 across 18 years of education by providing ABA treatment to these 20 children. Furthermore, based on the figures derived from the 1998 Jacobson study, the state of Texas could save $48,794,200 through age 55 for these 20 children by providing early intensive ABA treatment.

Total Five Year Valuation: $ 4,449,821.

Texas Children's Hospital

Pass 1

DRAFT

Project Option-1.9.2 Expand Access to Specialty Care: Expand Pediatric Neurology

Unique Project ID: 139135109.1.1

Performing Provider Name/ TPI: Texas Children's Hospital/139135109

Project Summary:
This project will increase capacity in our Neurology Clinic at Texas Children's Hospital. Referrals into the TCH pediatric neurology clinic increased significantly from a monthly average of 600 in 2010 to a monthly average of 760 in 2012. The focus of this project is to equip the clinical service with the resources needed to address the significant patient care need for pediatric neurological services in the area.

Provider:
Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

Volume Statistics - FY2012	**Patient Payor Mix**	**Patient Demographics**
Hospital Admissions- 25,966 Births (babies delivered)- 2,181 Emergency visits-113,586 Outpatient visits- 3,066,765	Medicaid and CHIP- 53.6% Commercial Insurance- 40.6% Self-Pay- 1.8% Medicare- 1.2%	Hispanic- 35.9% African American- 16.6% Caucasian- 31.0% Asian- 3.8% Other- 12.4% American Indian- 0.3%

Intervention(s):
The Neurology Service will focus on provider productivity and hire additional clinical providers in order to expand internal capacity. Current scheduling processes will be reviewed to increase the availability of providers to increase volumes, and the service will evaluate increasing services at the five additional community locations to increase the volume of patients seen through pediatric neurology clinics across the Houston area.

Need for the project:
Pediatric neurology is an identified subspecialty, both at the national and state level, to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012).

Target Population:
The areas of clinical focus include multiple sclerosis, muscular dystrophy, Rhett syndrome, cerebral palsy, epilepsy, seizure disorders, headaches, movement disorders, neurogenetics, pediatric stroke, and peripheral nerve disorders or injuries.

Category 1 or 2 expected patient benefits:
Our DY3 goal is to improve upon DY2 baseline of patient volume by 2.5%. Our DY4 goal is for 5% increase of patient visits above DY2 baseline. Our DY5 goal is for 7.5% increase of patient visits above DY2 baseline.

Category 3 outcomes:
IT-5.1 Improve Cost of Care

DRAFT

Project Option-1.9.2 Expand Access to Specialty Care: Expand Pediatric Neurology

Unique Project ID: 139135109.1.1
Performing Provider Name/ TPI: Texas Children's Hospital/139135109

Project Description
Texas Children's Hospital proposes to increase capacity for care in Pediatric Neurology Clinic.

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

Specifically this project will increase capacity in our Neurology Clinic. Pediatric neurology is an identified subspecialty, both at the national and state level, to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012). Referrals into the TCH pediatric neurology clinic increased significantly from a monthly average of 600 in 2010 to a monthly average of 760 in 2012. The focus of this project is to equip the clinical service with the resources needed to address the significant patient care need for pediatric neurological services in the area.

The Neurology Service at TCH offers a wide range of clinical services for pediatric neurologic conditions in six locations across the Houston metropolitan area. In addition to general needs related to pediatric neurology, areas of clinical focus include multiple sclerosis, muscular dystrophy, Rhett syndrome, cerebral palsy, epilepsy, seizure disorders, headaches, movement disorders, neurogenetics, pediatric stroke, and peripheral nerve disorders or injuries.
The Neuroscience programs at TCH provide outstanding multidisciplinary programs in clinical child neurology training and basic science research training. Areas of clinical training include pediatric neurology, neurodevelopmental pediatrics and behavioral pediatrics. Basic science programs focus upon the genetic and molecular basis of neurodevelopmental disorders and brain development. Training fellows benefit from close interaction with faculty, state of the art facilities and diverse patient populations. The division is committed to nurturing the careers of individuals entering these training programs.

Neuroscience sponsors innovative clinical and basic science research into the underlying causes of childhood neurological and developmental disorders. A wide array of clinical research is underway to improve the understanding and treatment of several neurological conditions, including epilepsy, autism, muscular dystrophy, headaches, pediatric stroke, and sleep disorders. Basic science research is being conducted in the Cain Foundation Laboratories into the underlying mechanisms of brain development and the genesis of early life seizures and epilepsy.

DRAFT

Researchers at the Jan and Dan Duncan Neurological Research Institute at Texas Children's are now working on new breakthroughs in the treatment of childhood neurological diseases.

Goals and Relationship to Regional Goals:

Project Goals: To meet the growing demand for specialized pediatric services TCH will:

- Focus on provider productivity to optimize clinical time for all providers
- Establish an initiative to review scheduling processes to increase the availability of these targeted providers
- Expand internal capacity by hiring additional clinical providers
- Enhance service availability by targeting new providers to not only work in the Texas Medical Center but to also serve and increase hours at the five additional community locations for specialty care.

This project meets the following Region 3 Goals:

- Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care.
- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction

Challenges:

In Texas, limited Medicaid reimbursement is an ongoing challenge for children's hospitals and the workforce that provides health care services for the pediatric population enrolled in this program. As advocates for improving and sustaining quality children's health care, our organization informs and educates elected officials and community leaders about the importance of Medicaid and the need to adequately fund the program. We will continue these efforts throughout the duration of waiver to ensure existing programs and services will be maintained and expanded. While we continue to increase our overall volumes at all of our locations by an average of about 13% in the last 3 years, the service struggles to keep up with increased demand given that Neurology serves patients locally, statewide, across the nation and internationally. By reconfiguring clinic processes, scheduling and the addition of more providers, we will try to improve this measure. Ultimately, the overall success of this project is dependent upon the compliance rate of our patients and primary caretakers arriving for their appointments. If the compliance rate is poor, it will be a challenge to realize a reduction in the cost of care and improved access.

Five year expected outcome for provider and patients:

Texas Children's Hospital expects to see improvements in access to subspecialty care for our pediatric patients; this in turn will improve patient satisfaction due to the delivery of the right care at the right place at the right time.

Pediatric neurology is an identified subspecialty, both at the national and state level, to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012). Referrals into the TCH pediatric neurology clinic increased significantly from a monthly average of 600 in 2010 to a

monthly average of 760 in 2012. Given the high demand and provider shortage, for the majority of FY10 and FY11, access to neurological services remains a challenge.

Starting Point/Baseline: The baseline of patient volumes for FY 12 is 20,031 across all service locations. Our fiscal year is from October 1st to September 30th.

Rationale:
The significant increase in access to specialty care created by this project attempts to address the growing demands in our community for specialized pediatric providers. This project will create increased capacity through more efficient operations and new physician recruitment. Our project significantly enhances TCH's existing neurology services to improve patient satisfaction by aspiring to provide the right care in the right setting at the right time. The Neurology service line at TCH has consistently ranked in the top ten programs nationally in US News and World Report, with a ranking of 5th in its latest report. Specifically, this service will provide comprehensive care for children within focused specialty programs across six locations of care including: multiple sclerosis, muscular dystrophy, Rhett syndrome, cerebral palsy, epilepsy, seizure disorders, headaches, movement disorders, neurogenetics, pediatric stroke, and peripheral nerve disorders or injuries.

Our project significantly enhances TCH's existing neurology services. Region 3 RHP summit identified inadequate number of specialty providers as an area of community need (CN.2). This project aims to tackle this issue from multiple angles. The service plans to recruit nationally for these highly specialized clinicians. The strong clinical, research, and academic programs within TCH and Baylor College of Medicine provides an advantage for recruitment of these experts. Additionally, the service will look within its own clinical service lines to examine the activity levels of the providers and look to more efficiently utilize clinician schedules so as to increase access to patient care. The service will also examine roles and responsibilities of physician and clinical support to ensure that individuals are working as efficiently as possible within the scope of their license so that clinical time can be focused on providing additional clinical services to patients.

Project Components:
Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics do relate to project components.

a. Conduct specialty care gap assessment based on community need for subspecialty.
b. Implement transparent standardized referrals across the system
c. Increase specialty care volume of visits and evidence of improved access for patients seeking services
d. Increase service availability hours and increase number of specialty clinic locations.
e. Conduct quality improvement for projects including rapid cycle and learning collaborative exchanges.

Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. For children with health care needs that exceed the abilities of the primary care

provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home.[109]

Milestones and Metrics
The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted pediatric population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1); P-17 (P-17.1)
- Improvement milestones and metrics: I-23 (I-23.1)

Unique community need identification number the project addresses: CN.2: Inadequate access to specialty care, CN.6: Inadequate access to treatment and services designed for children.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:
This project will allow Texas Children's to significantly enhance our existing Neurology appointment availability. The providers working within the Neurology service at TCH are experts in their field. Part of the reason for increased referrals and the need for greater access stems from the fact that children statewide, nationally, and internationally would like access to the professionals working at TCH and specifically In the area of neurology. Adding to the pool of expert clinicians, as well as working within the current service lines to identify how current providers can expand their clinical practices will greatly enhance the services currently offered to our patients by not only reaching more children, but also enhancing the types of clinical services we can offer those children.

Related Category 3 Outcome Measure(s):
OD-5 Cost of Care
IT- 5.1 Improved Cost Savings
IT- 5.2 Per episode cost of care
IT-5.3 Length of stay

Reasons/rationale for selecting the outcome measures:
Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care services and subsequent costs.[110] We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

[109] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.
[110] *Reducing Costs Through the Appropriate Use of Specialty Services*. Cambridge: Institute for Healthcare Improvement, 2007.

Relationship to other Projects: All of Texas Children's projects are working to expand access to subspecialty care for the pediatric population. Texas continues to have a growing pediatric population and a shortage of specialized pediatric providers.

Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[111] Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[112] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.[3]

DRAFT

Project Option- 1.9.2 Expand Access to Specialty Care: Pediatric Hematology/Cancer

Unique Project ID: 139135109.1.2

Performing Provider Name/TPI: Texas Children's Hospital/ 139135109

Project Summary: This project will increase capacity in our Cancer and Hematology Clinic as the demand for health care services grows in the state of Texas. It will fulfill our tri-part mission of providing quality pediatric care, training the next generation of pediatric providers and investigating ways to improve care through innovative therapies specific to Sickle Cell Disease.

Provider:

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

Volume Statistics - FY2012	**Patient Payor Mix**	**Patient Demographics**
Hospital Admissions- 25,966 Births (babies delivered)- 2,181 Emergency visits-113,586 Outpatient visits- 3,066,765	Medicaid and CHIP- 53.6% Commercial Insurance- 40.6% Self-Pay- 1.8% Medicare- 1.2%	Hispanic- 35.9% African American- 16.6% Caucasian- 31.0% Asian- 3.8% Other- 12.4% American Indian- 0.3%

Intervention(s):

This project will increase capacity in our Cancer and Hematology Clinic as the demand for health care services grows in the state of Texas. It will fulfill our tri-part mission of providing quality pediatric care, training the next generation of pediatric providers and investigating ways to improve care through innovative therapies specific to Sickle Cell Disease.

Need for the project:

The pediatric population continues to grow in Texas resulting in an increase in demand of health care services for the treatment of rare blood and tissue disorders. The demand for services for Sickle Cell patients continues to increase due to the growing African American and Hispanic populations. Additionally, Pediatric hematologists and oncologists have been identified as a subspecialty facing a workforce shortage.

Target Population:

All patients diagnosed with Sickle Cell Disease within the Texas Children's Cancer and Hematology Service line.

Category 1 or 2 expected patient benefits:

DY3 goal is to reduce overall cycle time for office visit appointments by 15% from baseline. Our goal is to increase the number of visits by 3% in DY4, and by 6% in DY5 compared to baseline established in DY2.

Category 3 outcomes:

IT- 5 Improving Cost of Care

Project Option- 1.9.2 Expand Access to Specialty Care: Pediatric Hematology/Cancer

Unique Project ID: 139135109.1.2
Performing Provider Name/TPI: Texas Children's Hospital/ 139135109

Project Description:

Increase access to care by providing comprehensive, integrated, multidisciplinary and family-centered care to children with non-malignant blood disorders.

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

Specifically, this project will increase capacity in our Cancer and Hematology Clinic. Funding for this project will allow Texas Children's to fulfill our tri-part mission of providing quality pediatric care, training the next generation of pediatric providers and investigating ways to improve care through innovative therapies. Texas Children's Cancer and Hematology Center is ranked # 4 in the *2012 U.S. News and World Report Best Children's Hospitals* and is the only pediatric cancer center in Texas ranked in the top 10. As the pediatric population continues to grow in Texas, so does the demand for health care services, especially, programs that treat rare blood and tissue disorders. Pediatric hematologists and oncologists are identified as subspecialty facing a workforce shortage and their profession's growth lags consumer demand both at the national and state levels (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012). This is a high Medicaid population, currently our cancer clinic is 70% Medicaid. The Cancer and Hematology Center aspires to provide comprehensive, integrated, multidisciplinary and family-centered care to children with non-malignant blood disorders. This center is the largest hematology-oncology service line in the nation and the only Sickle Cell Center in the Harris County area. Specifically, the Hematology Center offers a state-of-the-art, team-based program which will provide comprehensive care for children within focused specialty programs including:

- Hemoglobinopathies (sickle cell disease and thalassemias)
- Hemostasis and Thrombosis Disorders (HAT) (bleeding and clotting disorders)
- Bone Marrow Failure Syndromes
- General Disorders of red blood cells, Platelets, and Neutrophils
- Conduct clinical and basic science research to seek to develop new knowledge and treatment options that lead to a cure
- Train future leaders in areas of non-malignant blood disorders.

The integrated approach includes the development and implementation of a series of clinical practice guidelines to ensure patients receive the best possible care. One of the areas of focus will be the treatment and management of Sickle Cell Disease. Currently there are an estimated 7,000 people in the state of Texas with this disease. For children afflicted with this disease, Texas Children's Sickle Cell Center is the only comprehensive Sickle Cell Center in the region. The shortage of hematologists that can provide care to both adolescents and young adults is already creating major problems for the transition of these patients into adult life. Demand for services for sickle cell patients continues to increase due to the growing African American and Hispanic populations. In addition, recent data demonstrates that increased patient encounters improves patient compliance and better management of the disease - thus decreases mortality and morbidity, while preserving productivity.

Goals and Relationship to Regional Goals:

Project Goals**:** To meet the growing demand for acute pediatric hematology/oncology services, TCH will:

- Focus on provider productivity to optimize clinical time for all providers and enhance training of subspecialists and fellows, including the training of dual board certified physicians (adult and pediatric hematology and/or oncology)
- Establish an initiative to review scheduling processes to increase the appointment availability of these targeted providers that aligns with new clinic capacity,
- Expand provider capacity by hiring additional clinicians and support staff,
- Expand service availability through the designing and building of a Comprehensive Hematology Center at Texas Children's Hospital.

This project meets the following Region 3 Goals:

- Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care.
- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction

Challenges: There is an acute shortage of hematologists and oncologists who can provide care to our older adolescents and young adults. Recent data from the American Society of Clinical Oncology's Workforce Study published in 2007 has shown that by the year 2020 there will be a shortage of between 2,350 and 3,800 oncologists, a problem that will be magnified by a 48% increase in the overall demand for oncology visits. Since physicians trained in adult hematology also see patients with "malignant" hematological disorders (such as leukemias), there will be few hematologists that will have the capacity to see "benign" hematological disorders, such as sickle cell disease. Due to the aging of the population and the associated increase in the prevalence of cancers in the elderly population will drastically limit the availability of trained oncologists to take care of young adults with cancer. Furthermore, many young adults have better treatment outcomes when treated according to pediatric protocols. There is thus a growing need to train physicians in both pediatrics and medicine (med/peds) who then also can specialize in taking care of adolescents and young adults (up to 25 years of age) with cancer or blood disorders. In

Texas, limited Medicaid reimbursement is an ongoing challenge for children's hospitals and the workforce that provides health care services for the pediatric population enrolled in this program. As advocates for improving and sustaining quality children's health care, our organization informs and educates elected officials and community leaders about the importance of Medicaid and the need to adequately fund the program. We will continue these efforts throughout the duration of waiver to ensure existing programs and services will be maintained and expanded.

Five year expected outcome for provider and patients:
Texas Children's Hospital expects to see improvements in access to subspecialty care for our pediatric patients; this in turn will improve patient satisfaction due to the delivery of the right care at the right place at the right time.

Starting Point/Baseline: The baseline of patients in FY 2012 is 4,000. Our fiscal year runs from October 1st to September 30th. The baseline for patient cycle time is 150 minutes.

Rationale:
The significant increase in access to specialty care created by this project attempts to address the growing demands in our community for specialized pediatric providers. This project will create increased capacity through more efficient operations and new physician recruitment. Our project significantly enhances TCH's existing pediatric cancer and hematology services to improve patient satisfaction by aspiring to provide the right care in the right setting at the right time. In order to increase access The Cancer and Hematology Center aspires to provide comprehensive, integrated, multidisciplinary and family-centered care to children with non-malignant blood disorders. The center is renowned for its research and therapies for blood disorders. This center employs faculty who are extensively published and who are sought after for national conference speaking opportunities to educate the medical community at large of hematologic/oncologic disorders. Specifically, the hematology faculty presented locally, nationally and internationally 53 oral presentations, authored 25 manuscripts and/or book chapters and led 2 national symposiums on the care of hematology patients.

Specifically, the Hematology Center will provide comprehensive care for children within focused specialty programs including:

- Hemoglobinopathies (sickle cell disease and thalassemias)
- Hemostasis and Thrombosis Disorders (HAT) (bleeding and clotting disorders)
- Bone Marrow Failure Syndromes
- General Disorders of red blood cells, Platelets, and Neutrophils
- Conduct clinical and basic science research to develop new knowledge and treatment options that lead to a cure
- Train future leaders in areas of non-malignant blood disorders.

Project Components:
Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics do relate to project components.

f. Conduct specialty care gap assessment based on community need for subspecialty.
g. Implement transparent standardized referrals across the system
h. Increase specialty care volume of visits and evidence of improved access for patients seeking services

i. Increase service availability hours and increase number of specialty clinic locations.
j. Conduct quality improvement for projects including rapid cycle and learning collaborative exchanges. It is our goal to reach the industry standard of less than 14 days for the 3rd available appointment.

Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. For children with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home.[113]

The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted pediatric population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1); P-17 (P-17.1)
- Improvement milestones and metrics: I-23 (I-23.1)

Customizable Improvement Milestone and Metric was chosen in order to specifically tailor the intent of project to the targeted pediatric population.

- Unique community need identification number the project addresses: CN.2: Inadequate access to specialty care., CN.6: Inadequate access to treatment and services designed for children.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:

Our initiative will increase our capacity to see a growing population of children, adolescents and young adults with blood disorders or cancer through increased efficiencies. The expanded program will not only provide services to larger population of children in need but will also provide much needed services for the vulnerable population of older adolescents and young adults by increasing the age range of patients served from 21 to 25 years. The program will help train a future generation of pediatric hematologists/oncologists that can provide care to a large segment of the population of Harris County with blood disorders or cancer.

Related Category 3 Outcome Measure(s):

OD-5 Cost of Care
IT 5.1: Improved Cost Savings
IT 5.2: Per Episode of Care
IT 5.3: Other Outcome Improvement Target

Reasons/rationale for selecting the outcome measures:

Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children, adolescents and young adults and reduction in unnecessary health care costs.[114] We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The affordable Care Act

[113] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.
[114] *Reducing Costs Through the Appropriate Use of Specialty Services*. Cambridge: Institute for Healthcare Improvement, 2007.

focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

Relationship to other Projects: All of Texas Children's projects are working to expand access to subspecialty care for the pediatric population. Texas continues to have a growing pediatric population and a shortage of specialized pediatric providers.

This project will compliment other projects designed to improve appropriate access to specialty care, improve chronic care management, facilitate transition to adulthood and those designed to improve the patient experience.

Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[115] Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[116] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.[3]

Project Options-1.9.2 Expand Specialty Access: Pediatric Rheumatology Care

Unique Project ID: 139135109.1.3

Performing Provider Name and TPI: Texas Children's Hospital/ 139135109

Project Summary: Increase critical access for the Harris County and surrounding communities to care for pediatric patients with diseases characterized by inflammation of the joints, muscles, and/or tendons.

Provider:

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital Admissions- 25,966 Births (babies delivered)- 2,181 Emergency visits-113,586 Outpatient visits-	Medicaid and CHIP- 53.6% Commercial Insurance- 40.6% Self-Pay- 1.8% Medicare- 1.2%	Hispanic- 35.9% African American- 16.6% Caucasian- 31.0% Asian- 3.8% Other- 12.4% American Indian- 0.3%

Intervention(s):

Increase critical access for the Harris County and surrounding communities to care for pediatric patients with diseases characterized by inflammation of the joints, muscles, and/or tendons.

Need for the project:

Pediatric Rheumatology is an identified subspecialty, both at the national and state level, to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012).

Target Population:

In addition to general pediatric rheumatologic needs, there is a substantial need for increased access for pediatric patients that suffer from multiple forms of high risk Lupus and those requiring semi-urgent/urgent outpatient care.

Category 1 or 2 expected patient benefits:

I-23.1: Our goal is to increase the number of visits by 5% in DY3, by 10% in DY4, and by 15% in DY5 compared to baseline.

Category 3 outcomes:

IT-5 Improving cost of care

Project Options-1.9.2 Expand Specialty Access: Pediatric Rheumatology Care

Unique Project ID: 139135109.1.3
Performing Provider Name and TPI: Texas Children's Hospital/ 139135109

Project Description:
Texas Children's Hospital proposes to increase capacity, improve care and reduce appointment wait time in our Rheumatology Clinic.

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

Our project proposal will significantly improve access to pediatric subspecialty care. Specifically this project will increase capacity in our Rheumatology Clinic. Pediatric Rheumatology is an identified subspecialty, both at the national and state level, to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012). Our clinic provides critical access for the Harris County and surrounding communities to care for pediatric patients with diseases characterized by inflammation of the joints, muscles, and/or tendons. Referrals into the TCH pediatric rheumatology clinic increased significantly from a monthly average of 60 in 2010 to a monthly average of 125 in 2012.

There are two specific areas where we intend to focus the expansion of our access to care. First, there is a substantial need for increased access for pediatric patients that suffer from multiple forms of high risk Lupus in our community. In addition, there is a need to expand access for a semi-urgent/urgent clinic, which will divert them from presenting unnecessarily in our Emergency Center. Part of the task of the urgent/semi-urgent clinic would also include community physician education for rheumatologic diseases. The intention of the education would be to provide the physicians with a comprehensive understanding of initial treatment for possible rheumatology diagnosis and when referrals should be initiated. Education sessions would include exclusive visits to those practices in the west and south side of Houston (these areas account for 80% of the referrals to our service).

Goals and Relationship to Regional Goals:

Project Goals: To meet the growing demand for specialized pediatric services TCH will:

1. Focus on provider productivity to optimize clinical time for all providers
2. Establish an initiative to review scheduling processes to increase the availability of these targeted providers

3. Expand internal capacity by hiring additional clinical providers
4. Enhance service availability by targeting new providers to not only work in the Texas Medical Center but to also serve 1-3 additional community locations for rheumatology care
5. Provide education to community providers
6. Enhance training of subspecialists and fellows
7. Decrease unnecessary Emergency Center visits

This project meets the following Region 3 Goals:

- Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care.
- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction

Challenges:

There are less than 300 active pediatric rheumatologists in the country and many of the providers are approaching retirement (*The Rheumatologist,* July 2012- "Pediatric Rheumatologist Increasing in Number but still Rare"). In Texas, limited Medicaid reimbursement is an ongoing challenge for children's hospitals and the workforce that provides health care services for the pediatric population enrolled in this program. As advocates for improving and sustaining quality children's health care, our organization informs and educates elected officials and community leaders about the importance of Medicaid and the need to adequately fund the program. We will continue these efforts throughout the duration of waiver to ensure existing programs and services will be maintained and expanded. There are currently only 20 active pediatric rheumatology fellowship programs in the United States, which train and graduate a maximum of 15 board-eligible, fellowship-trained pediatric rheumatologists each year.

Five year expected outcome for provider and patients:

Texas Children's Hospital expects to see improvements in access to subspecialty care for our pediatric patients; this in turn will improve patient satisfaction due to the delivery of the right care at the right place at the right time.

Starting Point/Baseline:

The baseline of patient volumes in FY 12 is 1650. Our fiscal year runs from October 1st through September 30th.

Rationale:

The significant increase in access to specialty care created by this project attempts to address the growing demands in our community for specialized pediatric providers. This project will create increased capacity through more efficient operations and new physician recruitment. Our project significantly enhances TCH's existing pediatric rheumatology services to improve patient satisfaction by aspiring to provide the right care in the right setting at the right time. Specifically, we will provide comprehensive care for children within focused specialty programs including: diseases characterized by inflammation of the joints, muscles, and/or tendons, including high risk Lupus and Juvenile Rheumatoid Arthritis.

Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. For children with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home.[117] Increasing pediatric population and continued lack of pediatric subspecialists due to the inequity in reimbursement between Medicaid and Medicare is an ongoing problem for children's hospitals and the pediatric health care workforce. Our project significantly enhances TCH's existing developmental pediatric services. Region 3 RHP summit identified inadequate number of specialty providers as an area of community need (CN.2).

Project Components:
Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics do relate to project components.

k. Conduct specialty care gap assessment based on community need for subspecialty.
l. Implement transparent standardized referrals across the system
m. Increase specialty care volume of visits and evidence of improved access for patients seeking services
n. Increase the number of specialty clinic locations
o. Conduct quality improvement for projects including rapid cycle and learning collaborative exchanges.

Milestones and Metrics
The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted pediatric population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1); P-17 (P-17.1)
- Improvement milestones and metrics: I-23 (I-23.1)

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:
This project will enhance current services by expanding and maximizing provider accessibility that will result in a greater number of patients served. In addition it will result in prompt service and allow more children access to rheumatology subspecialty care.

<u>Related Category 3 Outcome Measure(s):</u>
OD-5: Cost of Care
IT-5.1: Improved cost savings
IT-5.2: Per Episode Cost of Care
IT-5.3: Length of Stay

Reasons/rationale for selecting the outcome measures:

[117] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.

Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care costs.[118]

Relationship to other Projects:
All of Texas Children's projects are working to expand access to subspecialty care for the pediatric population. Texas continues to have a growing pediatric population and a shortage of specialized pediatric providers.

Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Relationship to Other Performing Providers' Projects and Plan for Learning Collaboratives:
This project will compliment other projects designed to improve appropriate access to specialty care, improve chronic care management, and those designed to improve the patient experience. We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[119] Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[120] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.[3]

Project Option- 1.9.2 Expand Access to Specialty Care: Pediatric Cardiology Care

Unique Project ID: 139135109.1.4

Performing Provider and TPI: Texas Children's Hospital/139135109

Project Summary: Increase outpatient access for Harris County and the surrounding communities to care for pediatric patients with congenital heart disease.

Provider:

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

Volume Statistics - FY2012	**Patient Payor Mix**	**Patient Demographics**
Hospital Admissions- 25,966 Births (babies delivered)- 2,181 Emergency visits-113,586 Outpatient visits- 3,066,765	Medicaid and CHIP- 53.6% Commercial Insurance- 40.6% Self-Pay- 1.8% Medicare- 1.2%	Hispanic- 35.9% African American- 16.6% Caucasian- 31.0% Asian- 3.8% Other- 12.4% American Indian- 0.3%

Intervention(s):

Increase outpatient access for Harris County and the surrounding communities to care for pediatric patients with congenital heart disease.

Need for the project:

Pediatric Cardiology is an identified subspecialty, both at the national and state level, to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012).

Target Population:

All children with congenital heart disease ranging from neonate all the way through adulthood.

Category 1 or 2 expected patient benefits:

I-23.1: Our goal is to increase the number of visits by 3% in DY3, by 5% in DY4, and by 7% in DY5 compared to baseline established in DY2.

Category 3 outcomes:

IT-5 Improving Cost of Care

Project Option- 1.9.2 Expand Access to Specialty Care: Pediatric Cardiology Care

Unique Project ID: 139135109.1.4
Performing Provider and TPI: Texas Children's Hospital/139135109

Project Description:
Texas Children's Hospital proposes to increase capacity in Cardiology Clinic.

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

Specifically this project will increase capacity in our Cardiology Clinic. Through recruitment of additional highly-specialized Pediatric Cardiologists with focused training in sub-specialized areas such as fetal cardiology, heart failure, adult congenital cardiology, pediatric electrophysiology, and pediatric interventional cardiology along with focused attention on existing provider productivity and increased efficiencies in patient throughput, this project will enable us to open clinics and increase appointment availability. In doing so, we will begin to improve access for the pediatric community needing general pediatric cardiac care as well as those populations who need the ultra-specialized pediatric and adult congenital cardiac care that we provide at Texas Children's Hospital. This project also focuses on increasing Pediatric Cardiology presence at the 5 satellite locations across the greater Houston area to ensure we target the larger greater Houston population. Through partnerships with other organizations across the city and state, we will be expanding our specialized pediatric and adult congenital cardiac services to additional facilities throughout the greater Houston area as well as central Texas. Pediatric cardiology is an identified subspecialty, both at the national and state level, to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012). The Texas Children's ("TCH") Cardiology Service line is ranked #3 in the 2012 U.S. News and World Report Best Children's Hospitals and is the only pediatric cardiology service line ranked in the top 10 in Texas. Referrals into the TCH pediatric cardiology clinic increased significantly from a monthly average of 600 in 2010 to a monthly average of 760 in 2012.

Goals and Relationship to Regional Goals:
Project Goals: To meet the growing demand for specialized pediatric services TCH will:

- Focus on provider productivity to optimize clinical time for all providers
- Establish an initiative to review scheduling processes to increase the availability of these targeted providers
- Expand internal capacity by hiring additional clinical providers

- Enhance service availability by targeting new providers to not only work in the Texas Medical Center but to also increase availability and scope of services in 1-3 additional community locations.

This project meets the following Region 3 Goals:

- Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care.
- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction

As the demand for pediatric subspecialty services grows, TCH aims to maintain a consistent and significant presence for services at every subspecialty outpatient location in the TCH system. This increase in cardiology services capacity will allow children in our region to have more timely and appropriate access to much needed subspecialty care. We know from research that increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care costs.

Challenges:

Recruitment of pediatric Cardiologists will be one of the larger challenges for this project due to the limited number of pediatric Cardiologists in the country which is compounded with the decreasing number of those currently in residency and fellowships focusing on pediatric cardiology. In order to attempt to resolve this challenge, TCH, and specifically pediatric cardiology, is funding additional fellowship training slots. This increase in trainees not only adds support for current patient care needs but helps face the challenge of declining pediatric cardiologists-in-training. Another challenge we will face with this project is the recruitment and retention of diagnostic and testing technologists. These technologists are highly specialized for pediatric cardiac diagnostics and are extremely difficult to recruit. With increased volume of patients, an increase in diagnostic studies is projected. We are developing partnerships with local training programs/schools to assist in on-site learning opportunities which will aid us in ultimately recruiting top students from those programs to support our additional patient capacity. In Texas, limited Medicaid reimbursement is an ongoing challenge for children's hospitals and the workforce that provides health care services for the pediatric population enrolled in this program. As advocates for improving and sustaining quality children's health care, our organization informs and educates elected officials and community leaders about the importance of Medicaid and the need to adequately fund the program. We will continue these efforts throughout the duration of waiver to ensure existing programs and services will be maintained and expanded.

Five year expected outcome for provider and patients:

Texas Children's Hospital expects to see improvements in access to subspecialty care for our pediatric patients; this in turn will improve patient satisfaction due to the delivery of the right care at the right place at the right time.

Starting Point/Baseline:

The baseline for patient volumes in FY 12 is 17100. Our fiscal year runs from October 1st to September 30th.

Rationale:

The significant increase in access to specialty care created by this project attempts to address the growing demands in our community for specialized pediatric providers. This project will create increased capacity through more efficient operations and new physician recruitment. Our project significantly enhances TCH's existing pediatric and adult congenital cardiac services to improve patient satisfaction by aspiring to provide the right care in the right setting at the right time. Specifically, we will provide comprehensive care for children within focused specialty programs, many of which are not offered at other local institutions, including: fetal cardiac imaging and consultation, adult congenital cardiology, heart failure/cardiomyopathy and transplantation, cardiac genetics follow-up, cardiac developmental outcomes for children who have undergone open-heart surgery, pediatric electrophysiology and pacing including the use of stereotaxis, and advanced pediatric interventional cardiology. For children with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home.[121] Increased access to appropriate care leads to better long term outcomes in children and reduction in unnecessary health care costs.[122]

Project Components:

Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics do relate to project components.

p. Conduct specialty care gap assessment based on community need for subspecialty.
q. Implement transparent standardized referrals across the system
r. Increase specialty care volume of visits and evidence of improved access for patients seeking services
s. Increase service availability hours and increase number of specialty clinic locations.
t. Conduct quality improvement for projects including rapid cycle and learning collaborative exchanges.

Milestones and Metrics:

The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted pediatric population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1); P-17 (P-17.1)
- Improvement milestones and metrics: I-23 (I-23.1)

Unique community need identification number the project addresses:

- CN.2: Inadequate access to specialty care,
- CN.6: Inadequate access to treatment and services designed for children.

[121] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.

[122] *Reducing Costs Through the Appropriate Use of Specialty Services*. Cambridge: Institute for Healthcare Improvement, 2007.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:
Patients often experience lengthy wait times from the time they schedule the appointment to the time of the appointment; it can take weeks and, in some cases, months to see one of our providers. Funding for this project will allow us to significantly enhance our ability to see additional patients in a timelier manner and ensure the right patients are scheduled with the appropriate provider based on their specific specialized needs which will increase patient satisfaction and increase access to pediatric cardiac care. Our project will enable us to continue to grow our services at additional locations throughout the greater Houston area as well as some growth in Central Texas which is important because we are able to provide highly-specialized pediatric cardiac services that are not usually available at other institutions.

Related Category 3 Outcome Measure(s):
OD-5 Cost of Care

- IT 5.1: Improved Cost of Care
- IT 5.2: Per Episode Cost of Care
- IT 5.3: Lengthy of Stay

Reasons/rationale for selecting the outcome measures:
Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care services and subsequent costs.[123] We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

Relationship to other Projects: All of Texas Children's projects are working to expand access to subspecialty care for the pediatric population. Texas continues to have a growing pediatric population and a shortage of specialized pediatric providers.

Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects

[123] *Reducing Costs Through the Appropriate Use of Specialty Services*. Cambridge: Institute for Healthcare Improvement, 2007.

will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[124] Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[125] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Project Options- 1.9.2 Expand Specialty Care Access: Pulmonology Pediatric Care

Unique Project ID: 139135109.1.5

Performing Provider and TPI: Texas Children's Hospital/139135109

Project Summary: Increase outpatient access for Harris County, specifically North Houston, to care for pediatric patients with conditions affecting the lungs and respiratory tract.
Provider:
Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital Admissions- 25,966 Births (babies delivered)- 2,181 Emergency visits-113,586 Outpatient visits- 3,066,765	Medicaid and CHIP- 53.6% Commercial Insurance- 40.6% Self-Pay- 1.8% Medicare- 1.2%	Hispanic- 35.9% African American- 16.6% Caucasian- 31.0% Asian- 3.8% Other- 12.4% American Indian- 0.3%

Intervention(s):
Increase outpatient access for Harris County, specifically North Houston, to care for pediatric patients with conditions affecting the lungs and respiratory tract.
Need for the project:
Pediatric Pulmonology is an identified subspecialty, both at the national and state level, to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012).

Target Population:
Our target population is patients seeking the full spectrum of services from general pumonary care to treatment for life threatening conditions such cystic fibrosis and life threatening athsma.

Category 1 or 2 expected patient benefits:
I-23.1: Our goal is to increase the number of visits by 5% in DY3, by 8% in DY4, and by 10% in DY5 compared to baseline established in DY2.

Category 3 outcomes:
IT-5 Improving Cost of Care

Project Options- 1.9.2 Expand Specialty Care Access: Pulmonology Pediatric Care

Unique Project ID: 139135109.1.5
Performing Provider and TPI: Texas Children's Hospital/139135109

Project Description:
Texas Children's Hospital proposes to increase capacity in the Pulmonology Clinic, which will improve access to care and ensure reduce appointment wait time.

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

Specifically this project will increase capacity in our Pulmonology Clinic. Pediatric pulmonology is an identified subspecialty, both at the national and state level, to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012). The TCH Pulmonary Clinic receives an average of over 2,000 new patient referrals annually and that number can increase significantly during years of severe flu and respiratory virus outbreaks. The primary focus for this project will be increased availability at our community health centers in North Houston and surrounding areas where we currently have an average wait of 58 days for a new pulmonary appointment. This expansion into the community will also greatly benefit a significant number of our patients who do not have reliable transportation into the medical center and find it easier to access care in their own community at one of the above mentioned health centers. This increased availability will be accomplished by adding additional providers at those locations as well as optimizing current provider schedules to allow them so see more patients each day.

Additionally, we will focus on maintaining the accessibility of our lung transplant program by recruiting an additional faculty member to help care for this population of patients. Texas Children's is one of busiest pediatric lung transplant programs in the country and has performed 9 transplants year to date in 2012. Only a handful of these programs exist in the United States and Texas Children's is the only pediatric lung transplant program in the Southern region. Because there are so few pediatric lung programs in the country, there are inadequate training opportunities which have lead to a severe shortage of lung transplant trained physicians available to treat these patients. Our program helps children from around the country and the recruitment of an additional provider is vitally important if we are to maintain the viability of this program.

Goals and Relationship to Regional Goals:

Project Goals: To meet the growing demand for specialized pediatric services TCH will:

8. Focus on provider productivity to optimize clinical time for all providers
9. Establish an initiative to review scheduling processes to increase the availability of these targeted providers
10. Expand internal capacity by hiring additional clinical providers
11. Enhance service availability by targeting new providers to not only work in the Texas Medical Center but to also serve the five additional community locations for specialty care.

This project meets the following Region 3 Goals:

- Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care
- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction

As the demand for pediatric subspecialty services grows, TCH aims to maintain a consistent and significant presence for services at every subspecialty outpatient location in the TCH system. This increase in pulmonology services capacity will allow children in our region to have more timely and appropriate access to much needed subspecialty care. We know from research that increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care costs.

Challenges:
In Texas, limited Medicaid reimbursement is an ongoing challenge for children's hospitals and the workforce that provides health care services for the pediatric population enrolled in this program. As advocates for improving and sustaining quality children's health care, our organization informs and educates elected officials and community leaders about the importance of Medicaid and the need to adequately fund the program. We will continue these efforts throughout the duration of the waiver to ensure existing programs and services will be maintained and expanded.

Five year expected outcome for provider and patients:
Texas Children's Hospital expects to see improvements in access to subspecialty care for our pediatric patients; this in turn will improve patient satisfaction due to the delivery of the right care at the right place at the right time.

Starting Point/Baseline:
The average wait time for an appointment for pulmonology at our two northern TCH health center locations is 58 days. The baseline for patient volumes in FY 12 is 5,450. Our fiscal year runs from October 1st to September 30th.

Rationale:
The significant increase in access to specialty care created by this project attempts to address the growing demands in our community for specialized pediatric providers. This project will create

increased capacity through more efficient operations and new physician recruitment. Our project significantly enhances TCH's existing pulmonology services to improve patient satisfaction by aspiring to provide the right care in the right setting at the right time. The Texas Children's ("TCH") Pulmonology Service line is ranked # 3 in the 2012 *U.S. News and World Report* Best Children's Hospitals and is the only pediatric pulmonology service line ranked in the top 10 in Texas. The TCH Pulmonary Service Line also boasts one of the largest lung transplant programs in the country and is currently recruiting an additional lung transplant physician in order to maintain access to this vital program for patients from across the country.

For children with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home.[126] Increased access to appropriate care leads to better long term outcomes in children and reduction in unnecessary health care costs.[127] Increasing pediatric population and continued lack of pediatric subspecialists due to the inequity in reimbursement between Medicaid and Medicare is an ongoing problem for children's hospitals and the pediatric health care workforce.

Project Components:
Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics do relate to project components.

u. Conduct specialty care gap assessment based on community need for subspecialty.
v. Implement transparent standardized referrals across the system
w. Increase specialty care volume of visits and evidence of improved access for patients seeking services
x. Increase service availability hours and increase number of specialty clinic locations. Conduct quality improvement for projects including rapid cycle and learning collaborative exchanges.

Milestones and Metrics
The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted pediatric population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1); P-17 (P-17.1)
- Improvement milestones and metrics: I-23 (I-23.1)

Unique community need identification numbers the project addresses:

- CN.2: Inadequate access to specialty care.
- CN.6: Inadequate access to treatment and services designed for children.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:

[126] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.
[127] *Reducing Costs Through the Appropriate Use of Specialty Services*. Cambridge: Institute for Healthcare Improvement, 2007.

Patients often experience lengthy wait times from the time they schedule the appointment to the time of the appointment; it can take weeks and, in some cases, months to see one of our providers. Funding for this project will allow us to significantly enhance our ability to see additional patients in a timelier manner and ensure the right patients are scheduled with the appropriate provider based on their specific specialized needs which will increase patient satisfaction and increase access to care. Our project will enable us to continue to grow our services at additional locations throughout the greater Houston area which is important because we are able to provide highly-specialized pediatric pulmonary services that are not usually available at other institutions.

Related Category 3 Outcome Measure(s):
OD-5 Cost of Care
IT-5.1: Improved cost savings
IT-5.2: Per episode of care cost
IT-5.3: Length of stay

Reasons/rationale for selecting the outcome measures:
Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care services and subsequent costs.[128] We recognize that while increasing access to care we need to continue to focus on delivering quality, efficient and cost effective care. Medicaid is an entitlement program, but there is only a finite amount of money. The affordable Care Act focused on the triple aim- improving quality, reducing costs and improving access. This project strives to meet those same goals. We agree that increased access should be coupled with controlling unnecessary costs.

Relationship to other Projects: All of Texas Children's projects are working to expand access to subspecialty care for the pediatric population. Texas continues to have a growing pediatric population and a shortage of specialized pediatric providers.

Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum).

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.

---

[128] *Reducing Costs Through the Appropriate Use of Specialty Services*. Cambridge: Institute for Healthcare Improvement, 2007.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[129] Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[130] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Project Option- 1.9.2 Expand Access to Specialty Care: Pediatric Ophthalmology Care

Unique Project ID: 139135109.1.6

Performing Provider and TPI: Texas Children's Hospital/139135109

Project Summary: Increase outpatient access for Harris County and the surrounding communities to care for pediatric patients with Ophthalmological needs which may possibly include surgical interventions.

Provider:
Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

Volume Statistics - FY2012	**Patient Payor Mix**	**Patient Demographics**
Hospital Admissions- 25,966 Births (babies delivered)- 2,181 Emergency visits-113,586 Outpatient visits- 3,066,765	Medicaid and CHIP- 53.6% Commercial Insurance- 40.6% Self-Pay- 1.8% Medicare- 1.2%	Hispanic- 35.9% African American- 16.6% Caucasian- 31.0% Asian- 3.8% Other- 12.4% American Indian- 0.3%

Intervention(s): The division is working to expand its services and increase outpatinet access by utilizing the addition of an Optometrist. As well as in the next 5 years the Ophthalmology division would like to grow its services with programs such as Ocular Trauma, Occular Plastics, Pediatric Glaucoma, and focus of the Retina and Cornea pediatric Patients.
Need for the project: Pediatric Ophthalmology is an identified both at the national and state level to have a shortage of resources to meet consumer demands (Children's Hospital Association – Pediatric Specialist Physician Shortages Affect Access to Care, August 2012). There are providers who also not only focus on the pediatric population but also the adult
Target Population:
Our target population is pediatric patients with Ophthalmological needs which may possibly include surgical interventions. Untreated care of these patients due to the inability to provide quick access to our services, can lead to less or reduced eyesight.

Category 1 or 2 expected patient benefits:
I-23.1: Our goal is to increase the number of visits by 3% in DY3, by 3% in DY4, and by 6% in DY5 compared to baseline established in DY2.

Category 3 outcomes: IT-5 Improving Cost of Care

Project Option- 1.9.2 Expand Access to Specialty Care: Pediatric Ophthalmology Care

Unique Project ID: 139135109.1.6
Performing Provider and TPI: Texas Children's Hospital/139135109

Project Description:
Texas Children's Hospital will increase capacity in the Ophthalmology Clinic to expand access and reduce appointment wait times.

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

Specifically this project will increase capacity in our Ophthalmology Clinic. Pediatric Ophthalmology is an identified subspecialty, both at the national and state level, to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012). Currently the division is working to expand its services by utilizing the addition of an Optometrist. The Optometrists are able see the division's lower acuity patients freeing up our Ophthalmic Surgeons to see more complex patients in clinic as well as increase their time spent in the Operating Room. They would be able to screen all the patients and determine if they are a surgical candidate or not. In the next 5 years the Ophthalmology division has several areas in which it would like to grow its services. These new programs include Ocular Trauma, Occular Plastics, Pediatric Glaucoma, and focus of the Retina and Cornea of pediatric patients. TCH uses the industry standard of 3rd available appointment as a measure of access to care - ideal access would be less than 14 days. For the majority of FY10 and FY11, the average 3rd available appointment at the TCH Ophthalmology clinic is greater than 14 days.

Goals and Relationships to Regional Goals:

Project Goals: To meet the growing demand for specialized pediatric services TCH will:

12. Focus on provider productivity to optimize clinical time for all providers
13. Establish an initiative to review scheduling processes to increase the availability of these targeted providers
14. Expand internal capacity by hiring additional clinical providers
15. Enhance service availability by targeting new providers to not only work in the Texas Medical Center but to also serve 1-3 additional community locations for rheumatology care Focus on provider productivity to optimize clinical time for all providers and enhance training of subspecialists and fellows.

This project meets the following Region 3 Goals:

- Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care.
- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction

Challenges:

One of the challenges we face is that these providers not only focus on the pediatric population but also the adult. Another challenge is the untreated or delay in care for these patients and if we are unable to provide quick access to our services, that can lead to less or reduced eyesight. For many patient families, vision problems aren't readily diagnosed at the primary care visit or discussed as other health problems may dominate the conversation during that patient visit. In Texas, limited Medicaid reimbursement is an ongoing challenge for children's hospitals and the workforce that provides health care services for the pediatric population enrolled in this program. As advocates for improving and sustaining quality children's health care, our organization informs and educates elected officials and community leaders about the importance of Medicaid and the need to adequately fund the program. We will continue these efforts throughout the duration of waiver to ensure existing programs and services will be maintained and expanded.

Five year expected outcome for provider and patients:

Texas Children's Hospital expects to see improvements in access to subspecialty care for our pediatric patients; this in turn will improve patient satisfaction due to the delivery of the right care at the right place at the right time.

Starting Point/Baseline:

The baseline for patient volumes in FY 12 is 12,150. Our fiscal year runs from October 1st through September 30th. The average patient cycle time in FY12 in minutes was
Clinical Care Center – 100 minutes; CyFair Health Center-90 minutes; The Woodlands Health Center – 75minutes; West Campus – 90minutes.

Rationale:

The significant increase in access to specialty care created by this project attempts to address the growing demands in our community for specialized pediatric providers. This project will create increased capacity through more efficient operations and new physician recruitment. Our project significantly enhances TCH's existing Ophthalmology pediatric services to improve patient satisfaction by aspiring to provide the right care in the right setting at the right time. Specifically, we will strive to provide comprehensive care for children within focused specialty programs and expand clinical focus upon small but very acute patient needs.

Increasing pediatric population and continued lack of pediatric subspecialists due to the inequity in reimbursement between Medicaid and Medicare is an ongoing problem for children's hospitals and the pediatric health care workforce.

Project Components:
Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics do relate to project components.

y. Conduct specialty care gap assessment based on community need for subspecialty.
z. Implement transparent standardized referrals across the system
aa. Increase specialty care volume of visits and evidence of improved access for patients seeking services
bb. Increase service availability hours and increase number of specialty clinic locations.
cc. Conduct quality improvement for projects including rapid cycle and learning collaborative exchanges. It is our goal to reach the industry standard of less than 14 days for the 3rd available appointment.

Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. For children with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home.[131]

Milestones and Metrics
The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted pediatric population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1); P-17 (P-17.1)
- Improvement milestones and metrics: I-23 (I-23.1)

Unique community need identification number the project addresses:

- CN.2: Inadequate access to specialty care,
- CN.6: Inadequate access to treatment and services designed for children.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:
Our project will enable us to continue to grow our services at additional locations as well as increase capacity through programmatic growth and new Physician and NPP recruitment. We will be able to increase access to care so that patients are not left with untreatable conditions. In addition, with our project we would have pediatric focused MDs caring for Pediatric Patients.

Related Category 3 Outcome Measures:

OD-5 Cost of Care
IT-5.1: Improved cost savings
IT-5.2: Per episode of care cost
IT-5.3: Length of stay

Reasons/rationale for selecting the outcome measures:

[131] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.

Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care costs.[132]

Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Relationship to Other Performing Providers' Projects and Plan for Learning Collaborative: This project will compliment other projects designed to improve appropriate access to specialty care, improve chronic care management, and those designed to improve the patient experience. We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[133] Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[134] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Project Option: 1.9.2 Improve access to specialty care: Expand Pediatric Gastroenterology Care

Unique Project ID: 139135109.1.7

Performing Provider and TPI: Texas Children's Hospital/139135109

Project Summary: Increase outpatient access for Harris County and the surrounding communities to care for pediatric patients with conditions affecting the digestive system.
Provider:
Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

Volume Statistics - FY2012	**Patient Payor Mix**	**Patient Demographics**
Hospital Admissions- 25,966 Births (babies delivered)- 2,181 Emergency visits-113,586 Outpatient visits- 3,066,765	Medicaid and CHIP- 53.6% Commercial Insurance- 40.6% Self-Pay- 1.8% Medicare- 1.2%	Hispanic- 35.9% African American- 16.6% Caucasian- 31.0% Asian- 3.8% Other- 12.4% American Indian- 0.3%

Intervention(s):
Increase outpatient access for Harris County and the surrounding communities to care for pediatric patients with conditions affecting the digestive system.
Need for the project:
Pediatric Gastroenterology is an identified subspecialty, both at the national and state level, to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012).

Target Population:
Our target population is patients seeking the full spectrum of services from general digestive and liver care to quartenary programs for Inflammatory Bowel Disease, Intestinal Rehabilitation, Neurogastroenterology and Motility, Viral Hepatitis, Eosinophilic Gastrointestinal Disorders and Hepatobiliary Disease.

Category 1 or 2 expected patient benefits:
I-23.1: Our goal is to increase the number of visits by 10% in DY3, by 15% in DY4, and by 20% in DY5 compared to baseline established in DY2.

Category 3 outcomes:
IT-5 Improving Cost of Care

Project Option: 1.9.2 Improve access to specialty care: Expand Pediatric Gastroenterology Care

Unique Project ID: 139135109.1.7
Performing Provider and TPI: Texas Children's Hospital/139135109

Project Description:
Texas Children's Hospital proposes to increase access for children to pediatric subspecialty services in the gastroenterology, hepatology and nutrition (GHN) clinic.

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

The proposed project seeks to increase access for children to pediatric subspecialty services in the gastroenterology, hepatology and nutrition (GHN) clinic at Texas Children's Hospital ("TCH"). Access to GHN services has been identified, both at the national and state level, as problematic (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012); barriers include a shortage of trained subspecialists, the geographic concentration of subspecialists in major urban areas and growing patient demand. The Texas Children's Gastroenterology, Hepatology and Nutrition service is ranked # 4 in the 2012 *U.S. News and World Report* Best Children's Hospitals and is the only pediatric gastroenterology service line ranked in the top 10 in Texas. The GHN service provides care at Texas Children's Main Campus, Texas Children's West Campus, four community Health Centers located in Harris County as well as the pediatric subspecialty clinic of Harris Health System. Though GHN serves children with routine digestive and liver diseases such as abdominal pain, gastroesophageal reflux, failure-to-thrive and hepatitis, Texas Children's GHN service is also home to the largest pediatric liver transplant program in the United States (34 transplants performed year-to-date), and the only program in the Southwestern United States. A number of quaternary care programs have been developed, including Inflammatory Bowel Disease, Intestinal Rehabilitation, Neurogastroenterology and Motility, Viral Hepatitis, Eosinophilic Gastrointestinal Disorders and Hepatobiliary Disease. The GHN service also provides a complete range of diagnostic and therapeutic endoscopy procedures, many of which are not available anywhere else in Texas.

The number of children referred to Texas Children's GHN clinics increased significantly from a monthly average of 950 in 2010 to a monthly average of more than 1,300 in 2012. We anticipate this number will continue to grow due to recent external GHN practice reductions and closures in Texas and neighboring regions. The clinic now serves as a frequent regional referral site for multiple states in the south, including Arizona, New Mexico, Louisiana, Mississippi, Alabama

and Florida. The program currently accepts three pediatric gastroenterology fellows per training year (total of nine), and is thereby doing its part to train and replenish other communities with quality pediatric subspecialty physicians.

Specifically, this project will increase capacity in our gastroenterology, hepatology and nutrition (GHN) clinic. Pediatric gastroenterology is an identified subspecialty, both at the national and state level, to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012). TCH uses the industry standards of 3rd available appointment and total annual as measures of access to care.   However, given the high demand and provider shortage, for the majority of Fiscal Year 2010 and Fiscal Year 2011, the average 3rd available appointment at the TCH gastroenterology clinic is greater than 30 days. The increased focus on the prevalence of childhood obesity at both the national and state levels has added additional pressure on the clinic because 47.3% of children in Harris County are classified as either overweight or obese according to the 2012 FITNESSGRAM assessment (Children at Risk - *Growing Up in Houston: Assessing the Quality of Life of Our Children; 2012 -2014 edition).*

As the demand for pediatric subspecialty services grows, TCH aims to maintain a consistent and significant presence for services at every subspecialty outpatient location in the TCH system. This increase in gastroenterology service capacity will allow children in our region to have more timely and appropriate access to much needed subspecialty care. We know increased access to appropriate care leads to better long term outcomes in children and reduction in unnecessary health care costs.[135]

Goals and Relationship to Regional Goals:

Project Goals: To meet the growing demand for specialized pediatric services, TCH will enhance service availability by targeting new providers to not only work in the Texas Medical Center but to also serve 1-3 additional community locations for gastrointestinal specialty clinics and on provider productivity to optimize clinical time for all providers and enhance training of subspecialists and fellows by:

- Increase the number of patients seen in GHN clinics by focusing on provider productivity to optimize clinical time for all providers, and establishing an initiative to review scheduling processes to increase the availability of these targeted providers
- Decrease time from initial referral to appointment
- Expand internal capacity by hiring additional clinical providers
- Provide training and outreach to local and regional practitioners

This project meets the following Region 3 Goals:

- Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care

[135] *Reducing Costs Through the Appropriate Use of Specialty Services*. Cambridge: Institute for Healthcare Improvement, 2007.

- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction

Challenges:
The need for pediatric gastroenterology subspecialists is underserved nationally. The current number of gastroenterology fellows in training across the nation is inadequate to meet the growing demand. Our training program consistently seeks out and successfully recruits the brightest talent from across the country each year, due to its national reputation. Over the past five years, our trainees have gone on to not only serve in our community, but also in multiple underserved communities in South Texas. Additionally, in Texas, limited Medicaid reimbursement is an ongoing challenge for children's hospitals and the workforce that provides health care services for the pediatric population enrolled in this program. As advocates for improving and sustaining quality children's health care, our organization informs and educates elected officials and community leaders about the importance of Medicaid and the need to adequately fund the program. We will continue these efforts throughout the duration of the waiver to ensure existing programs and services will be maintained and expanded.

Five year expected outcome for provider and patients:
Texas Children's Hospital expects to see improvements in access to subspecialty care for our pediatric patients; this in turn will improve patient satisfaction due to the delivery of the right care at the right place at the right time.

Starting Point/Baseline:
The baseline for patient volumes in Fiscal Year 2012 across all locations of care is 19,780. Our fiscal year runs from October 1st to September 30th.

Rationale:
The significant increase in access to specialty care created by this project attempts to address the growing demands in our community for specialized pediatric providers. This project will create increased capacity through more efficient operations and new physician recruitment. Our project significantly enhances TCH's existing gastroenterology services to improve patient satisfaction by aspiring to provide the right care in the right setting at the right time. Specifically, we will provide comprehensive care for children within focused specialty programs such as: liver transplant, fatty liver, viral hepatitis, motility, inflammatory bowel disease or eosinophilic disease.

Increasing pediatric population and continued lack of pediatric subspecialists due to the inequity in reimbursement between Medicaid and Medicare is an ongoing problem for children's hospitals and the pediatric health care workforce.

Project Components: Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics do relate to project components.

dd. Conduct specialty care gap assessment based on community need for subspecialty.
ee. Implement transparent standardized referrals across the system

ff. Increase specialty care volume of visits and evidence of improved access for patients seeking services
gg. Increase service availability hours and increase number of specialty clinic locations.
hh. Conduct quality improvement for projects including rapid cycle and learning collaborative exchanges.

Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. For children with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home.[136]

Milestones and Metrics
The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted pediatric population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1); P-17 (P-17.1)
- Improvement milestones and metrics: I-23 (I-23.1)

Unique community need identification number the project addresses:

- CN.2: Inadequate access to specialty care,
- CN.6: Inadequate access to treatment and services designed for children.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:
This project will enhance current services by expanding and maximizing provider accessibility that will result in a greater number of patients served. In addition it will result in prompt service and allow more children access to GI subspecialty care.

Related Category 3 Outcome Measure(s):
OD -5: Cost of Care
IT – 5.1: Improved Cost Savings
IT – 5.2: Per Episode Cost of Care
IT – 5.3: Length of Stay

Reasons/rationale for selecting the outcome measures:
Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care costs.[137]

Relationship to other Projects: All of Texas Children's projects are working to expand access to subspecialty care for the pediatric population. Texas continues to have a growing pediatric population and a shortage of specialized pediatric providers.

[136] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.
[137] *Reducing Costs Through the Appropriate Use of Specialty Services*. Cambridge: Institute for Healthcare Improvement, 2007.

Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[138] Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[139] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.[3]

<u>Project Summary:</u> Increase outpatient access for Harris County and the surrounding communities to care for pediatric patients with conditions affecting the endocrine system.
<u>Provider:</u>
Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital Admissions- 25,966 Births (babies delivered)- 2,181 Emergency visits-113,586 Outpatient visits- 3,066,765	Medicaid and CHIP- 53.6% Commercial Insurance- 40.6% Self-Pay- 1.8% Medicare- 1.2%	Hispanic- 35.9% African American- 16.6% Caucasian- 31.0% Asian- 3.8% Other- 12.4% American Indian- 0.3%

<u>Intervention(s):</u>
Increase outpatient access for Harris County and the surrounding communities to care for pediatric patients with conditions affecting the endocrine system.
<u>Need for the project:</u>
Pediatric Diabetes/Endocrinology is an identified subspecialty, both at the national and state level, to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012).

<u>Target Population:</u>
Our target population is patients seeking the full spectrum of services for metabolic syndrome, type I, and type II diabetes. In particular, the focus is on patients who are at risk for diabetic retinopathy, the leading cause of blindness for those diagnosed with diabetes.

<u>Category 1 or 2 expected patient benefits:</u>
I-23.1: Our goal is to increase the number of visits by 10% in DY3, by 15% in DY4, and by 20% in DY5 compared to baseline established in DY2.

<u>Category 3 outcomes:</u>
IT-5 Improving Cost of Care

Project Option: 1.9.2 Expand Specialty Care Capacity Diabetes: Endocrinology Pediatric Care

Unique Project ID: 139135109.1.8
Performing Provider Name/TPI: Texas Children's Hospital/ 139135109

Project Description:
Texas Children's Hospital proposes to expand access to pediatric care in diabetes and endocrinology.

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

Our project proposal will significantly improve access to pediatric subspecialty care in diabetes and endocrinology. Funding for this project will allow Texas Children's to fulfill our tri-part mission of providing quality pediatric care, training the next generation of pediatric providers and investigating ways to improve care through innovative therapies. Pediatric diabetes/endocrinology is an identified subspecialty, both at the national and state level, to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012). The Texas Children's ("TCH") Diabetes / Endocrine Service line is ranked # 14 in the 2012 *U.S. News and World Report* Best Children's Hospitals. The Diabetes/Endocrine Service at TCH has purchased a retinal camera for screening of patients ≥10 years of age. This camera will help to track and manage patients ≥10 years of age who have had diabetes for >5 years. These patients are at risk for diabetic retinopathy, the leading cause of blindness for those diagnosed with diabetes. The American Diabetes Association recommends yearly screening for diabetic retinopathy. The majority of our patients do not receive this screening due to socioeconomic challenges and lack of availability. Our improved service increases access to screening and minimizes impact on a parent's time away from work. The TCH Diabetes/Endocrine Section, next to Barbara Davis, will be the only outpatient clinic to provide this service to patients with Type I/II diabetes.

Referrals into the TCH pediatric diabetes/endocrinology clinic are at a monthly average of 500 in 2012. TCH uses 3rd available and total annual volume increase as two of the metrics to measure access.

Goals and Relationship to Regional Goals:

Project Goals:

To meet the growing demand for acute pediatric diabetes/endocrinology services, TCH will:

16. Initiate processes to increase provider productivity, optimizing provider clinical time and enhancing training of subspecialists and fellows.
17. Streamline processes for patient scheduling, thus increasing availability of provider appointments.
18. Expand provider capacity by hiring additional clinicians and support staff.
19. Enhance service availability by delivering patient care closer to where patients live rather than only in a centralized location (Texas Medical Center). We will continue to expand access at our community locations for specialty care.

This project meets the following Region 3 Goals:

- Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care.
- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction

Challenges:

In Texas, limited Medicaid reimbursement is an ongoing challenge for children's hospitals and the workforce that provides health care services for the pediatric population enrolled in this program. As advocates for improving and sustaining quality children's health care, our organization informs and educates elected officials and community leaders about the importance of Medicaid and the need to adequately fund the program. We will continue these efforts throughout the duration of the waiver to ensure existing programs and services will be maintained and expanded. Increased access to clinical care has unexpectedly led to increased demand for our services. Our goal is to match access to demand, which may require additional reconfigurations of clinic processes, schedules, and staffing.

Five year expected outcome for provider and patients:

Texas Children's Hospital expects to see improvements in access to subspecialty care for our pediatric patients; this in turn will improve patient satisfaction due to the delivery of the right care at the right place at the right time.

Starting Point/Baseline:

The baseline for patient volumes in FY 12 is 16,226 visits across all locations of care. Our fiscal year runs from October 1st to September 30th.

Rationale: As the pediatric patient population grows in our area so does the prevalence of diseases needing care and treatment by subspecialists. Specifically, in Texas, and in particular, Houston/Harris, more children are being diagnosed with metabolic syndrome, diabetes and obesity: 47.3% of children in Harris County are classified as either overweight or obese

according to the 2012 FITNESSGRAM assessment (Children at Risk - *Growing Up in Houston: Assessing the Quality of Life of Our Children; 2012 -2014 edition).*

Type II diabetes and other hormonal disorders can be attributed to this disease which in turn strains a health care system that lacks these highly trained subspecialists, especially, in a state whose population is dramatically increasing. Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. For children with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home. The significant increase in access to specialty care created by this project attempts to address the growing demands in our community for specialized pediatric providers. This project will create increased capacity through more efficient operations and new physician recruitment. Our project significantly enhances TCH's existing pediatric diabetes and endocrine services to improve patient satisfaction by aspiring to provide the right care in the right setting at the right time. In order to increase access

Project Components:
Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics do relate to project components.

ii. Conduct specialty care gap assessment based on community need for subspecialty.
jj. Implement transparent standardized referrals across the system
kk. Increase specialty care volume of visits and evidence of improved access for patients seeking services
ll. Increase service availability hours and increase number of specialty clinic locations.
mm. Conduct quality improvement for projects including rapid cycle and learning collaborative exchanges.

Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. For children with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home.[140]

Milestones and Metrics
The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted pediatric population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1); P-17 (P-17.1)
- Improvement milestones and metrics: I-23 (I-23.1)

Customizable Improvement Milestone and Metric was chosen in order to specifically tailor the intent of project to the targeted pediatric population.

Unique community need identification number the project addresses:

- CN.2: Inadequate access to specialty care,
- CN.6: Inadequate access to treatment and services designed for children.

[140] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:
The overall goal of this project is increased access. Expanding clinical appointments coupled with clinical efficiencies will significantly enhance delivery of patient care by providing unavailable and/or unprecedented levels of clinical service. Additional appointment availability will allow much more frequent interventions in diabetes and endocrinology patient care management, which result in improved clinical outcomes.

Related Category 3 Outcome Measure(s):
OD-5 Cost of Care
IT-5.1: Improved cost savings
IT-5.2: Per episode of care cost
IT-5.3: Length of stay

Reasons/rationale for selecting the outcome measures:
Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care costs.[141]

Relationship to other Projects: All of Texas Children's projects are working to expand access to subspecialty care for the pediatric population. Texas continues to have a growing pediatric population and a shortage of specialized pediatric providers.

Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to

---

[141] *Reducing Costs Through the Appropriate Use of Specialty Services*. Cambridge: Institute for Healthcare Improvement, 2007.

reduction in emergency room visits and reduction in inpatient hospital visits.[142] Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[143] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program. We have academic literature citing the link between access to appropriate pediatric subspecialty care and decrease in hospital visits, both inpatient and emergency room.[3]

Project Option- 1.9.2 Improve access to specialty care: Expand Child Abuse Care

Unique Project ID: 139135109.1.9

Performing Provider Name/TPI: Texas Children's Hospital/139135109

Project Summary: This project will allow us to increase the number of children evaluated for abuse and neglect by a child abuse specialist by increasing clinic appointments and the number of providers.

Provider:
Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital Admissions- 25,966 Births (babies delivered)- 2,181 Emergency visits-113,586 Outpatient visits- 3,066,765	Medicaid and CHIP- 53.6% Commercial Insurance- 40.6% Self-Pay- 1.8% Medicare- 1.2%	Hispanic- 35.9% African American- 16.6% Caucasian- 31.0% Asian- 3.8% Other- 12.4% American Indian- 0.3%

Intervention(s):
This project will allow us to increase the number of children evaluated for abuse and neglect by a child abuse specialist by increasing clinic appointments and the number of providers.

Need for the project:Child Maltreatment is the medical and psychological result of enormous social dysfunction in families. The system that strives to support or change this is based on improving and solidifying the social needs as well as the medical needs of these patients and their families and/or guardians. Providers with extensive training and experience in child maltreatment and family violence are a necessary component of this subspecialty.

Target Population:
All patients within the system who are suspected vicitms of child maltreatment may benefit from this project.
Category 1 or 2 expected patient benefits:
Our DY3 goal is to increase the percentage of patients evaluated for abuse and/or neglect by a child abuse pediatrician by 4%. Our DY4 goal is to increase the percentage of patients evaluated for abuse and/or neglect by a child abuse pediatrician by 6%. Our DY5 goal is to increase the percentage of patients evaluated for abuse and/or neglect by a child abuse pediatrician by 8%.
Category 3 outcomes:
IT-10.1 Improved quality of Life

Project Option- 1.9.2 Improve access to specialty care: Expand Child Abuse Care

Unique Project ID: 139135109.1.9
Performing Provider Name/TPI: Texas Children's Hospital/139135109

Project Description:
Texas Children's Hospital proposes to establish a specialty care program for children who have experienced abuse or neglect.

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.
This project will allow us to increase the number of children evaluated for abuse and neglect by a child abuse specialists. Child Maltreatment is the medical and psychological result of enormous social dysfunction in families. The system that strives to support or change this is based on improving and solidifying the social needs as well as the medical needs of these patients and their families and/or guardians. Providers with extensive training and experience in child maltreatment and family violence are a necessary component of this subspecialty.[144]

The patients evaluated by these providers are then connected with our nurse managers and social workers who act as patient navigators to help these high risk special needs children and families coordinate the care and services necessary to ensure the child's health and safety. Our program provides for accurate diagnosis, treatment, follow-up and ongoing care for these high risk and vulnerable patients. Our follow-up clinic is unique in its focus, as a majority of these children are medically complex with special needs as a result of the abuse inflicted upon them.

Over 4,000 children live in foster homes in this area and in 2010 the number of CPS investigations in Harris County was 28,549. Six thousand five hundred and thirty-five children were confirmed victims of abuse or neglect and 44 of these cases resulted in child deaths. Expanding the focus to the entire southeast Texas region from which our patients originate, that number is doubled to over 12,000 confirmed cases of abuse or neglect.

In 2006 the American Board of Pediatrics certified pediatric child abuse as a subspecialty, in recognition of the growing and multifaceted need for accurate diagnosis of child maltreatment, working with the community in ensuring child safety, providing medical expertise to the legal system, and overseeing child abuse prevention programs. The number of children evaluated by our physician specialists has steadily increased each year, totaling 1198 in 2012, which accounts

---

[144] Block, R.W, and V.J Palusci. "Child Abuse Pediatrics: a New Pediatric Subspecialty." *The Journal of Pediatrics*. 148.6 (2006): 711-712.

for only 50% of all our child abuse evaluations. Due to the limited number of providers, many patients evaluated for child maltreatment are not seen by child abuse specialists. In most of these cases they are evaluated by non-child abuse specialists in an emergency center rather than a more appropriate clinic environment.[145] Currently clinic appointments for physical abuse and neglect are only available 2 half days a week, and for sexual abuse only 4 days a week resulting in the use of an emergency center when the outpatient facilities are unavailable or at capacity.

Goals and Relationship to Regional Goals:
Project Goals:

To meet the growing demand for **high impact** pediatric child abuse services, TCH will:

- Focus on provider productivity to **optimize** clinical time for all providers,
- Expand internal capacity by offering a child abuse fellowship to staff an additional clinic day and adding additional providers to evaluate patients and mentor fellowship level learners.

This project meets the following Region 3 Goals:

- Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care.
- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction

Challenges: In Texas, limited Medicaid reimbursement is an ongoing challenge for children's hospitals and the workforce that provides health care services for the pediatric population enrolled in this program, especially for the child victim population. As advocates for improving and sustaining quality children's health care, our organization informs and educates elected officials and community leaders about the importance of Medicaid and the need to adequately fund the program. We will continue these efforts throughout the duration of waiver to ensure existing programs and services will be maintained and expanded. Without additional funding provider by this project we have limited child abuse specialists, resulting in some children being evaluated in an emergency center by an emergency medicine physician rather than a child abuse specialist. In addition, many of our patients have long term consequences of maltreatment and it is important that their follow up care coordinated.
We anticipate difficulty in adding providers as the market for board certified or board eligible child abuse pediatricians is limited due to the newness of the specialty. Our child abuse fellowship program has been available since July 2012 and we have yet to fill our fellowship position in spite of vigorous recruitment efforts. With the assistance of our marketing team, a TCH Child Abuse Pediatrics fellowship news release was distributed on the wire on June 20, 2012, and was picked up by **252 placements**. The news was highlighted in numerous national outlets, key competitive markets and local/regional outlets. The release was even picked up by

[145] Arnold, D. H., Spiro, D. M., Nichols, M. H., & King, W. D. (2005). Availability and perceived competence of pediatricians to serve as child protection team

medical consultants: A survey of practicing pediatricians. *Southern Medical Journal*, *98*(4), 423–428.

international media including outlets in Japan, China, Germany, India, Philippines and Guam. In addition, recruitment for a pediatric nurse practitioner for the Child Abuse Pediatrics program has proven difficult to fill. After several months of recruiting, we hired a NP in August of last year only to lose her after a little more that a year in the position. The training time for both a fellow and a nurse practitioner is at least one year before they are ready to function independently in the realm of child abuse.

Five year expected outcome for provider and patients:
Texas Children's Hospital expects to see improvements in access to subspecialty care for our pediatric patients; this in turn will improve patient satisfaction due to the delivery of the right care at the right place at the right time.

Starting Point/Baseline: Number of children evaluated for abuse and neglect by a child abuse specialists in FY 12. 338 children were evaluated by a child abuse specialists in our clinic in FY 12. Our fiscal year runs from October 1st to September 30th.

Rationale:
Houston is one of the fastest growing communities with a Harris County total population of 4,092,459 according to 2010 US Census Bureau data, with almost 1.3 million under the age of 20 years. Re-designing medical specialty clinics in order to shorten appointment cycle time and maximize provider productivity allows the most efficient utilization of specialty provider resources. The number of physical abuse and neglect cases evaluated by our child abuse specialists has steadily increased each year, totaling 1198 (49.7% of all abuse evaluations). Our project significantly enhances TCH's existing child abuse services. Child Abuse Pediatrics is subspecialty that has been identified at both at the national and state levels to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012).

In many cases throughout the Houston area and throughout the southeast Texas region, children at risk or suspected to be victims of child abuse are often seen by general pediatricians, emergency medicine physicians or family practitioners due to availability of child abuse pediatricians. In the current state of our program we struggle to meet the needs of this patient population with only 2 dedicated physician specialists and the clinical demands of an inpatient consult service and 2 outpatient clinics as well as the additional community responsibilities of court appearances, outreach education, clinical research and directing prevention programs. This funding will allow our program to increase the availability of child abuse specialists for hospital consultations, clinic appointments for evaluations as well as for longer term follow-up care.

Project Components: Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics relate to project components.

nn. Conduct specialty care gap assessment based on community need for subspecialty.
oo. Implement transparent standardized referrals across the system
pp. Increase specialty care volume of visits and evidence of improved access for patients seeking services
qq. Increase service availability hours and increase number of specialty clinic locations.

rr. Conduct quality improvement for projects including rapid cycle and learning collaborative exchanges. It is our goal to reach the industry standard of less than 14 days for the 3rd available appointment.

Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. For children with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home.[146]

Milestones and Metrics
The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted pediatric population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1); P-17 (P-17.1)
- Improvement milestones and metrics: I-23 (I-23.1); I

Unique community need identification number the project addresses:

- CN.2: Inadequate access to specialty care,
- CN.6: Inadequate access to treatment and services designed for children.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:
At present, the TCH child abuse pediatricians are a valuable part of the medical team in the time of a child's acute illness precipitated by child abuse or neglect in the cases of the most severely injured or neglected victims. Those children who may have suffered less grievous injury or had abusive injury go unrecognized by other subspecialists are not currently accommodated with our limited clinic infrastructure. An established system designed for the unique needs of this patient population, to address injury detection and repair, and also to bridge the gap for ongoing health needs while children are in foster care and will be most beneficial for the children and families, and can only be accomplished by increasing physician staffing and clinic resources[147].

<u>**Related Category 3 Outcome Measure(s):**</u>
OD-10 Quality of Life
The outcome for our project will increase the number of patients evaluated by a child abuse specialist by 4% in year 3, 6% in year 4 and 8% in year 5 as result of increased providers and clinic resources and improved efficiency in program processes. Many children are evaluated in the emergency center setting without the clinical expertise of a child abuse specialist. With additional providers, the expansion of clinic availability and improved processes, patients

[146] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.
[147] Lane WG, Dubowitz H. Primary care pediatricians' experience, comfort and competence in the evaluation and management of child maltreatment: Do we need child abuse experts? Child Abuse & Neglect 33 (2009) 76–83

Ref: Anderst J, Kellog N, Jungo I. Is the diagnosis of physical abuse changed when Child Protective Services consults a Child Abuse Pediatrics subspecialty group as a second opinion? Child Abuse & Neglect 33 (2009) 481–489

who do not clinically meet the criteria for the emergency setting would be evaluated in the clinic by a child abuse specialist.

Reasons/rationale for selecting the outcome measures:
Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care costs.[148]

Relationship to other Projects: All of Texas Children's projects are working to expand access to subspecialty care for the pediatric population. Texas continues to have a growing pediatric population and a shortage of specialized pediatric providers.

Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the acuity of the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused to percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[149] Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[150] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Project Option: 1.9.2 Expand Access to Specialty Care: Developmental Pediatrics

<u>Unique Project ID</u>: 139135109.1.10

<u>Performing Provider Name/ TPI</u>: Texas Children's Hospital/ 139135109

<u>Project Summary:</u>
The Meyer Center for Developmental Pediatrics works with children with suspected motor, cognitive, language, and/or social-emotional developmental delays, suspected developmental disabilities, and children at risk for developmental-behavioral disorders. This project will build the volume of services provided in developmental-behavioral health in order to better serve the high demand for these children.

<u>Provider:</u>
Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

lume Statistics - FY2012	**tient Payor Mix**	**tient Demographics**
spital Admissions- 25,966 rths (babies delivered)- 2,181 nergency visits-113,586 tpatient visits- 3,066,765	edicaid and CHIP- 53.6% mmercial Insurance- 40.6% lf-Pay- 1.8% edicare- 1.2%	spanic- 35.9% rican American- 16.6% ucasian- 31.0% ian- 3.8% her- 12.4% nerican Indian- 0.3%

<u>Intervention(s):</u>
Interventions include expanding the training of subspecialists, expanding the role of a referral center to better allocate children with different needs to a provider that can best suit their needs, refine the role of a Primary Care Pediatrician to help provide long term care, and expanding internal provider capacity and hiring additional clinical providers.

<u>Need for the project:</u>
Developmental-behavioral disorders are by far the most common chronic problems faced in primary care pediatric practice, yet there is a severe shortage of fellowship trained subspecialists. In the United States, approximately 1 in 5 children have a condition that our specialists help treat.

<u>Target Population:</u>
The providers in the Meyer Center work with children with suspected motor, cognitive, language, and/or social-emotional developmental delays, children with suspected developmental disabilities, and children at risk for developmental-behavioral disorders.

<u>Category 1 or 2 expected patient benefits:</u>
Our DY3 goal is to improve upon DY2 baseline of patient volume by 3%. Our DY4 goal is for 6% of patients in registry have at least 1 contact in the prior year period. Our DY5 goal is to improve upon DY2 baseline of patient volume by 9%.

<u>Category 3 outcomes:</u>
IT-5.1 Improved Cost Savings

Project Option: 1.9.2 Expand Access to Specialty Care: Developmental Pediatrics

Unique Project ID: 139135109.1.10
Performing Provider Name/ TPI: Texas Children's Hospital/ 139135109

Project Description:
Texas Children's Hospital will increase capacity in the Developmental Pediatrics Clinic.

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

Specifically this project will increase capacity in our Developmental Pediatrics Clinic. Developmental Pediatrics and Behavioral Medicine are identified subspecialties, both at the national and state level, to have a shortage of resources to meet consumer demands (Children's Hospital Association - Pediatric Specialist Physician Shortages Affect Access to Care, August 2012). The Meyer Center for Developmental Pediatrics consists of 9 Developmental Pediatricians, 1 Social Worker, 1 Nurse Practitioner, 1 Neuropsychologist and 1 Licensed Professional Counselor. This service is among the largest in the country to provide medically-based diagnostic services and longitudinal care to children with developmental-behavioral concerns. The providers in the Meyer Center work with children with suspected motor, cognitive, language, and/or social-emotional developmental delays, children with suspected developmental disabilities (learning disabilities, intellectual disabilities, AD/HD, autism spectrum disorders, cerebral palsy, spina bifida, vision impairments, hearing impairments), and children at risk for developmental-behavioral disorders (former premature infants and high risk term infants; children with congenital anomalies or genetic syndromes, such as Down syndrome or Fragile X syndrome). In the United States, approximately 1 in 5 children have a condition that our specialists help treat.

The most significant challenge in the field of developmental-behavioral pediatrics is that developmental-behavioral disorders are by far the most common chronic problems faced in primary care pediatric practice, yet there is a severe shortage of fellowship trained subspecialists to whom primary care pediatricians can refer their patients. Despite developmental-behavioral disorders affecting approximately 20% of children, less than 1% of board-certified pediatricians are subspecialty-certified in either Neurodevelopmental Disabilities or Developmental-Behavioral Pediatrics. Thus, a most critical mission of the Meyer Center remains educating pediatric residents, subspecialty fellows, and pediatric heath care professionals in practice. Of nearly 200 pediatric training programs in the country, since 2003, the Meyer Center has been one of only 8 programs nationally to provide residency training in Neurodevelopmental Disabilities. In 2011, the Meyer Center was approved by the Accreditation Council of Graduate

Medical Education to begin a new fellowship program in Developmental-Behavioral Pediatrics (one of only 35 programs nationally). This makes Texas Children's Hospital one of only two hospitals nationally to house accredited training programs in *both* Neurodevelopmental Disabilities and Developmental-Behavioral Pediatrics and the only one in the nation to have both of these programs led within a single Section of Developmental Pediatrics. In 2011, Meyer Center faculty also obtained grant funding to develop a new competency-based curriculum in developmental pediatrics to provide pediatric residents longitudinal training in developmental-behavioral pediatrics across their three years of residency, so that they will be equipped to identify and manage children with developmental and behavioral concerns in their future practices. Finally, Meyer Center faculty have continued to actively present at local, regional, national, and international continuing medical education venues to provide in-service developmental-behavioral education to pediatric health care professionals in practice.

Within the last three to five years, the referral triage mechanism for the Behavioral and Developmental Sciences at Texas Children's Hospital (TCH), which includes the Meyer Center for Developmental Pediatrics, has been somewhat loose, and tracking has been inconsistent. With the introduction of the Behavioral and Developmental Sciences Referral Center in 2011, which serves as a central portal for the receipt and tracking of all behavioral and developmental sciences clinical service requests, a clear understanding of the demand for service in Developmental Pediatrics has been established. Given the frequency of children impacted by conditions that the Meyer Center specialists treat (1 in 5 children in the United States), the wait time for a new patient appointment in this service line has been as high as 36 months. The Referral Center allows TCH to examine specific needs of patients asking for services through the Behavioral and Developmental Sciences. In the past, these referrals may have gone just to one service line. Now, the Referral Center can look to see if other behavioral specialists, like a Psychiatrist, Psychologist or a specialist through the Autism Center may serve the patient's needs. With this model, TCH can look sometimes match patients with alternate providers to meet their needs rather than wait the significant wait time for services specifically within Developmental Pediatrics. Looking at Behavioral and Developmental Sciences across service lines also allows TCH to monitor closely wait times across service areas (not just Developmental Pediatrics, but also Autism) work through leadership to shift provider resources or to clearly outline recruitment needs.

Goals and Relationship to Regional Goals:

Project Goals: To meet the growing demand for specialized pediatric services TCH will:

20. Focus on provider productivity to optimize clinical time for all providers and enhance training of subspecialists and fellows.
21. Expand the role of the Behavioral and Developmental Referral Center to refine algorithms to triage patients to the most appropriate providers based on patient need and provider availability to ensure that only the most appropriate patients for a Developmental Pediatrics evaluation are routed to this service line, thereby increasing the availability for new patient appointments of these targeted providers.

22. Refine new clinical care model to expand the role of the Primary Care Pediatrician so as to reduce the need for return patient appointments, increasing the availability for new patient appointments by current providers.
23. Expand internal capacity by hiring additional clinical providers.
24. Enhance service availability by targeting new providers to not only work in the Texas Medical Center but to also serve the five additional community locations for specialty care
25. Optimize clinical care through the use of social workers to reach out to families as they wait for formal medical assessments through our services.

<u>This project meets the following Region 3 Goals:</u>

- Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care.
- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction

Challenges:

In Texas, limited Medicaid reimbursement is an ongoing challenge for children's hospitals and the workforce that provides health care services for the pediatric population enrolled in this program. In Behavioral and Developmental Health, reimbursement is particularly challenging. Certain testing codes cannot be used on the same date as some medical codes, which forces TCH practices to choice between what is best for patient care in terms of convenience for families (to have all procedures performed on the same visit date so that parking, commuting, time off from work and other personal expenses related to the visit can be limited) or asking the patient to come in multiple times so that services can be billed in a manner that can be fully reimbursed. As advocates for improving and sustaining quality children's health care, our organization informs and educates elected officials and community leaders about the importance of Medicaid and the need to adequately fund the program. We will continue these efforts throughout the duration of waiver to ensure existing programs and services will be maintained and expanded.

TCH continues to increase our overall volumes at all of our locations by 5.7% year over year in our pediatric physician practices. In Developmental Pediatrics specifically, over the last year, the Service has been able to reduce wait time by 64% from its peak wait time of 36 months. However, there is still a significant amount of work that needs to be done to improve access to services in Developmental Pediatrics. By reconfiguring clinic processes, scheduling, and the addition of more providers (including maximizing clinical support like social workers and other mid-level providers to the top of their license), we will try to improve this measure.

Five year expected outcome for provider and patients:

Texas Children's Hospital expects to see an increase in the volume of patients who are able to access subspecialty care for our pediatric patients; this in turn will improve patient satisfaction due to the delivery of the right care at the right place at the right time.

<u>Starting Point/Baseline:</u>

The baseline for patient volumes in FY 12 is 1,977. TCH fiscal year is from October 1st to September 30th.

Rationale:

The significant increase in access to specialty care created by this project attempts to address the growing demands in our community for specialized pediatric providers. This project will create increased capacity through more efficient operations and new physician recruitment. Our project significantly enhances TCH's existing developmental pediatric services to improve patient satisfaction by aspiring to provide the right care in the right setting at the right time

For children, especially those with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home. Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. Increasing pediatric population and continued lack of pediatric subspecialists due to the inequity in reimbursement between Medicaid and Medicare is an ongoing problem for children's hospitals and the pediatric health care workforce.

Project Components:
Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics do relate to project components.

ss. Conduct specialty care gap assessment based on community need for subspecialty.
tt. Implement transparent standardized referrals across the system
uu. Increase specialty care volume of visits and evidence of improved access for patients seeking services
vv. Increase service availability hours and increase number of specialty clinic locations.
ww. Conduct quality improvement for projects including rapid cycle and learning collaborative exchanges.

Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. For children with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home.[151]

Milestones and Metrics
The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted pediatric population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1); P-17 (P-17.1)
- Improvement milestones and metrics: I-23 (I-23.1)

Unique community need identification numbers the project addresses:

- CN2: Inadequate access to specialty care

[151] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.

- CN6: Inadequate access to treatment and services designed for special needs populations, including disabled, homeless, children, elderly

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:
As stated throughout this proposal, the special needs of children with developmental disabilities or delays are significant. This project will allow Texas Children's to significantly enhance our exisiting Neurosurgery appointment availability. With the shortage of specialists in this area, TCH has had work within the resources available nationwide to build a program that provides superior care for children with these conditions. This project, by focusing not only on national recruitment of the limited number of developmental pediatricians, but also focusing on the use of mid-level providers for care, aims at improving access to these services for children in the state of Texas.

Related Category 3 Outcome Measure(s):
OD- 10 Quality Of Life/ Functional Status
IT-10.1 Quality of Life

Reasons/rationale for selecting the outcome measures:
Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care costs.[152] Additionally, increased access to care leads to faster evaluation and treatment which will lead to an improved quality of life for the children. This project will allow us to not only increase access to medical care for these children, but also community resources coordinated by our social work team.

Relationship to other Projects: All of Texas Children's projects are working to expand access to subspecialty care for the pediatric population. Texas continues to have a growing pediatric population and a shortage of specialized pediatric providers.

Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects

[152] *Reducing Costs Through the Appropriate Use of Specialty Services*. Cambridge: Institute for Healthcare Improvement, 2007.

will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[153] Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[154] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Project Option- 1.9.2 Improve access to specialty care: Expand Pediatric Allergy/Immunology Care

Unique Project ID: 139135109.1.11
Performing Provider and TPI: Texas Children's Hospital/ 139135109

Project Summary: Increase outpatient access for Harris County and the surrounding communities to care for pediatric patients with allergy, asthma, primary immunodeficiency and secondary immunodeficiency.
Provider:
Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital Admissions- 25,966 Births (babies delivered)- 2,181 Emergency visits-113,586 Outpatient visits- 3,066,765	Medicaid and CHIP- 53.6% Commercial Insurance- 40.6% Self-Pay- 1.8% Medicare- 1.2%	Hispanic- 35.9% African American- 16.6% Caucasian- 31.0% Asian- 3.8% Other- 12.4% American Indian- 0.3%

Intervention(s):
Increase outpatient access for Harris County and the surrounding communities to care for pediatric patients with allergy, asthma, primary immunodeficiency and secondary immunodeficiency.
Need for the project:
The number of children referred into the TCH Allergy/Immunology clinic has increased by over 40% from 2010 to 2012 and subsequently is unable to meet the continually increasing demand.

Target Population:
Our target population is patients seeking the full spectrum of services from general allergy and immunology care to specialized treatment for Severe Combined Immunodeficiency Disorder and patients that are at risk for anaphylaxis. One particular area of focus is the diagnosis and care management of food allergies in the pediatric population.

Category 1 or 2 expected patient benefits:
I-23.1: Our goal is to increase the number of visits by 10% in DY3, by 15% in DY4, and by 20% in DY5 compared to baseline in DY2.

Category 3 outcomes:
IT-5 Improving cost of care

Project Option- 1.9.2 Improve access to specialty care: Expand Pediatric Allergy/Immunology Care

Unique Project ID: 139135109.1.11
Performing Provider and TPI: Texas Children's Hospital/ 139135109

Project Description:
Texas Children's Hospital proposes to expand access to care in the Allergy/Immunology clinic in order to meet increased demand for care and reduce appointment wait time.

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

The TCH Allergy & Immunology (A&I) Service treats patients with allergy, asthma, primary immunodeficiency and secondary immunodeficiency and provides a variety of research and treatment options for infants, children and adolescents with immunodeficiency. TCH Allergy & Immunology Service also operates a full-function lab that examines cell function and surface markers that screen for and monitor immune deficiencies such as Severe Combined Immunodeficiency Disorder (SCID). The proposed project seeks to increase access for children to pediatric subspecialty services in the A&I clinic at Texas Children's Hospital. The number of children referred into the TCH Allergy/Immunology clinic has increased significantly from a monthly average of 185 in 2010 to a monthly average of 260 in 2012. One particular area of focus of the TCH A&I clinic is the diagnosis and care management of food allergies in the pediatric population. According to the Center for Disease Control and Prevention, there has been an 18% increase in food allergies among school-aged children from 1997 to 2007. Between 1 in 13 and 1 in 25 are now affected, with 40% reporting a severe reaction (Texas Department of State Health Services – "Guidelines for the Care of Students With Food Allergies At-Risk for Anaphylaxis: To Implement Senate Bill 27 (82nd Legislative Session)").

Goals and Relationship to Regional Goals:

Project Goals:

To meet the growing demand for specialized pediatric services, TCH will enhance service availability by targeting new providers to not only work in the Texas Medical Center but to also serve 1-3 additional community locations for allergy & immunology specialty clinics and on provider productivity to optimize clinical time for all providers and enhance training of subspecialists and fellows by:

1. Focusing on provider productivity to optimize clinical time for all providers
2. Establishing an initiative to review scheduling processes to increase the availability of these targeted providers
3. Expanding internal capacity by hiring additional clinical providers
4. Enhancing service availability by targeting new providers to not only work in the Texas Medical Center but to also serve 1-3 additional community locations for allergy and immunology care

This project meets the following Region 3 Goals:

- Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care
- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction

Challenges:
In Texas, limited Medicaid reimbursement is an ongoing challenge for children's hospitals and the workforce that provides health care services for the pediatric population enrolled in this program. As advocates for improving and sustaining quality children's health care, our organization informs and educates elected officials and community leaders about the importance of Medicaid and the need to adequately fund the program. We will continue these efforts throughout the duration of the waiver to ensure existing programs and services will be maintained and expanded.

Five year expected outcome for provider and patients:
Texas Children's Hospital expects to see improvements in access to subspecialty care for our pediatric patients; this in turn will improve patient satisfaction due to the delivery of the right care at the right place at the right time.

Starting Point/Baseline:
The baseline for patient volumes in fiscal year 2012 is 3,050. Our fiscal year runs from October 1st through September 30th.

Rationale:
The significant increase in access to specialty care created by this project attempts to address the growing demands in our community for specialized pediatric providers. This project will create increased capacity through more efficient operations and new physician recruitment. Our project significantly enhances TCH's existing allergy & immunology services to improve patient satisfaction by aspiring to provide the right care in the right setting at the right time. Specifically, we will provide comprehensive care for children within focused specialty programs such as: allergy, asthma, primary immunodeficiency and secondary immunodeficiency.

Increasing pediatric population and continued lack of pediatric subspecialists due to the inequity in reimbursement between Medicaid and Medicare is an ongoing problem for children's hospitals and the pediatric health care workforce.

Project Components:
Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics do relate to project components.

xx. Conduct specialty care gap assessment based on community need for subspecialty
yy. Implement transparent standardized referrals across the system
zz. Increase specialty care volume of visits and evidence of improved access for patients seeking services
aaa. Increase the number of specialty clinic locations
bbb. Conduct quality improvement for projects including rapid cycle and learning collaborative exchanges

Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. For children with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home.[155]

Milestones and Metrics
The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted pediatric population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1);
- Improvement milestones and metrics: I-23 (I-23.1)

Unique community need identification number the project addresses:

- CN.2: Inadequate access to specialty care,
- CN.6: Inadequate access to treatment and services designed for children.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:
This project will enhance current services by expanding and maximizing provider accessibility that will result in a greater number of patients served. In addition it will result in prompt service and allow more children access to allergy & immunology subspecialty care.

Related Category 3 Outcome Measure(s):
OD-5 Cost of Care
IT-5.1: Improved cost savings
IT-5.2: Per episode of care cost
IT-5.3: Length of stay

Reasons/rationale for selecting the outcome measures:

[155] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.

Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care costs.[156]

Relationship to other Projects: All of Texas Children's projects are working to expand access to subspecialty care for the pediatric population. Texas continues to have a growing pediatric population and a shortage of specialized pediatric providers.

Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[157] Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[158] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Project Option- 1.9.2 Expand Access to Specialty Care: Otolaryngology Pediatric Care

Unique Project ID: 139135109.1.12

Performing Provider Name/TPI: Texas Children's Hospital/ 139135109

Project Summary: Increase outpatient access for Harris County and the surrounding communities to care for pediatric patients with hearing loss to sinus disease and swallowing abnormalities and those patients with disorders of the ear, nose and/or throat.

Provider:
Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital Admissions- 25,966 Births (babies delivered)- 2,181 Emergency visits-113,586 Outpatient visits- 3,066,765	Medicaid and CHIP- 53.6% Commercial Insurance- 40.6% Self-Pay- 1.8% Medicare- 1.2%	Hispanic- 35.9% African American- 16.6% Caucasian- 31.0% Asian- 3.8% Other- 12.4% American Indian- 0.3%

Intervention(s): The division is establishing a Voice and Swallowing clinic to evaluate, diagnose, and treat complex disorders in swallowing and vocalization.
Need for the project: In 2012, referrals into the TCH Otolaryngology clinic averaged 900 per month. Given the increasing demand for these specialized services for the majority for FY10 and FY11, the average 3rd Available appointment was less than 30 days. Over the last 6 moths of 2012, at our Texas Medical Center site and other community locations (except our West Campus clinic) exceed 30 days.

Target Population: Our target population is pediatric patients seeking the full spectrum of services from general otolaryngology services, patients with hearing loss, swallowing and vocalization disorders, cochlear implants, aerodigestive diseases, and those patients with disorders of the ear, nose and/or throat.

Category 1 or 2 expected patient benefits:
I-23.1: Our goal is to increase the number of visits by 3% in DY3, by 3% in DY4, and by 6% in DY5 compared to baseline established in DY2.

Category 3 outcomes: IT-5 Improving Cost of Care

Project Option- 1.9.2 Expand Access to Specialty Care: Otolaryngology Pediatric Care

Unique Project ID: 139135109.1.12
Performing Provider Name/TPI: Texas Children's Hospital/ 139135109

Project Description:
Texas Children's Hospital proposes to expand access to pediatric Otolaryncology care through the establishment of a Voice and Swallowing clinic to diagnose and treat complex disorders related to swallowing and vocalization.

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

Our project proposal will significantly improve access to pediatric subspecialty care. The Texas Children's ("TCH") Pediatric Otolaryngology Division provides diagnoses and treatment for conditions from hearing loss to sinus disease and swallowing abnormalities. The Otolaryngology Division is establishing a Voice and Swallowing Clinic to evaluate diagnose and treat complex disorders in swallowing and vocalization. The Otolaryngology Division established the Aerodigestive Disease
Clinic in 2011 and added the first laryngologist to practice at Texas Children's Hospital, one of only three pediatric fellowship-trained voice specialists in the nation. We also began offering laryngealstroboscopy, an innovative way of looking at vibratory characteristics of the vocal chord. The Aerodigestive clinic is a multidisciplinary clinic with the pulmonary and gastroenterology sources for complex patients in participation in the Down Syndrome Clinic for specialized expertise with this patient population.

To help improve the diagnosis and treatment of children and babies with disorders of the ear, nose or throat, our physicians are involved in research projects concerning hearing, cochlear implantation, sleep apnea, neck masses and vocal fold mobility. In addition, we are participating in a National Institutes of Health (NIH) grant to study cochlear implants in children with multiple disabilities as well as a Texas Children's Hospital-funded study of sleep apnea in children. In 2012, referrals into the TCH Otolaryngology clinic averaged 900 per month. TCH uses the industry standard of 3rd available appointment as a measure of access to care - ideal access would be less than 14 days. However, given the increasing demand for these specialized services for the majority of FY10 and FY11, the average 3rd Available appointment was less than 30 days. Over the last 6 months of 2012, at our Texas Medical Center site and other community locations (except our West Campus clinic), exceeds 30 days.

Goals and Relationship to Regional Goals:

Project Goals: To meet the growing demand for acute pediatric Otolaryngology services, TCH will:

26. Focus on provider productivity to optimize clinical time for all providers and enhance training of subspecialists and fellows,
27. Establish an initiative to review scheduling processes to increase the appointment availability of these targeted providers that aligns with new clinic capacity,
28. Expand provider capacity by hiring additional clinicians and support staff,
29. Enhance service availability by targeting new providers to not only work in the Texas Medical Center but also serve 1-3 additional community locations for specialty care.

This project meets the following Region 3 Goals:

- Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care.
- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction

Challenges:
In Texas, limited Medicaid reimbursement is an ongoing challenge for children's hospitals and the workforce that provides health care services for the pediatric population enrolled in this program. As advocates for improving and sustaining quality children's health care, our organization informs and educates elected officials and community leaders about the importance of Medicaid and the need to adequately fund the program. We will continue these efforts throughout the duration of waiver to ensure existing programs and services will be maintained and expanded.

Five year expected outcome for provider and patients:
Texas Children's Hospital expects to see improvements in access to subspecialty care for our pediatric patients; this in turn will improve patient satisfaction due to the delivery of the right care at the right place at the right time.

Starting Point/Baseline:
The baseline for patient volumes in FY 12 is 12,150. Our fiscal year runs from October 1st to September 30th. The baseline patient cycle time for FY12 in minutes: CCC – 85; Clear Lake Health Center – 90; CyFair Health Center 124 Sugarland Health Center – 65; West Campus – 85 minutes; The Woodlands Health Center – 69. The average across all locations of care 84 (note this is not a weighted average and includes time that the patient spends alone this is not average of minutes spent with provider)

Rationale:
This project will create increased capacity through more efficient operations and new physician recruitment. Our project significantly enhances TCH's existing pediatric otolaryngology services to improve patient satisfaction by aspiring to provide the right care in the right setting at the right

time. In order to increase access Otolaryngology is working to expand its services with a Voice & Swallowing clinic and multi-disciplinary Aerodigestive clinic. The expansion of this service is necessary as many of our patients have medically complex conditions involving the airway, pulmonary function, upper digestive tract, as well as feeding disorders resulting from prematurity, congenital anomalies, trauma, etc. To improve patient outcomes and overall health status of these patients, access must be enhanced so that conditions can be treated timely and effectively.

Project Components:
Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics do relate to project components.

- ccc. Conduct specialty care gap assessment based on community need for subspecialty.
- ddd. Implement transparent standardized referrals across the system
- eee. Increase specialty care volume of visits and evidence of improved access for patients seeking services
- fff. Increase service availability hours and increase number of specialty clinic locations.
- ggg. Conduct quality improvement for projects including rapid cycle and learning collaborative exchanges. It is our goal to reach the industry standard of less than 14 days for the 3rd available appointment.

Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. For children with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home.[159]

Milestones and Metrics
The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted pediatric population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1); P-17 (P-17.1)
- Improvement milestones and metrics: I-23 (I-23.1)

Unique community need identification number the project addresses:

- CN.2: Inadequate access to specialty care.
- CN.6: Inadequate access to treatment and services designed for children.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:
The resources provided by this project will allow us to significantly expand our current program. Increased collaboration and the ability to grow programs are currently things we focusing on. To provide comprehensive multidisciplinary care for our patients the Otolaryngology Division has partnerships with other departments within the hospital including Audiology, Speech Language

[159] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.

and Learning, Pediatric General Surgery, Texas Children's Cancer Center, Neurology, Pediatric Radiology, GI, Pulmonary, and Plastic Surgery.

Related Category 3 Outcome Measure(s):
OD-5 Cost of Care
IT-5.1: Improved cost savings
IT-5.2: Per episode of care cost
IT-5.3: Length of stay

Reasons/rationale for selecting the outcome measures:
Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care costs.[160]

Relationship to other Projects: All of Texas Children's projects are working to expand access to subspecialty care for the pediatric population. Texas continues to have a growing pediatric population and a shortage of specialized pediatric providers.

Relationship to Other Performing Providers' Projects : This project will compliment other projects designed to improve appropriate access to specialty care, improve chronic care management, and those designed to improve the patient experience.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[161] Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[162] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Project Option: 1.9.2 Expand Access to Specialty Care: Pediatric Plastic Surgery

Unique Project ID: 139135109.1.13

Performing Provider Name/TPI: Texas Children's Hospital/139135109

Project Summary: Increase outpatient access for Harris County and the surrounding communities to care for pediatric patients needing treatment and surgical correction of cleft lip and palate anomalies amongst other diagnosis.

Provider:
Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital Admissions- 25,966 Births (babies delivered)- 2,181 Emergency visits-113,586 Outpatient visits- 3,066,765	Medicaid and CHIP- 53.6% Commercial Insurance- 40.6% Self-Pay- 1.8% Medicare- 1.2%	Hispanic- 35.9% African American- 16.6% Caucasian- 31.0% Asian- 3.8% Other- 12.4% American Indian- 0.3%

Intervention(s): The Plastic Surgery division has and will continue to add clinic coverage at Texas Children's West Campus and expand its clinical locations. Other programs the division is working to establish are hand and microvascular surgery, Craniosynostosis, Peripheral Nerve, Oral Surgery, and Orthognathic Surgery.
Need for the project: There is no ACGME Pediatric Plastics program, so many of the providers dip into the adult practice as well as pediatric. Plastic Surgery can be invaluable to help children's psychological needs that are associated with deformomities. Given the high demand and provider shortage currently the average 3rd Available for a patient with a cleft lip and palate diagnosis is greater than 30 days.

Target Population: Our target population is pediatric patients needing treatment and surgical correction of cleft lip and palate anomalies amongst other diagnosis.

Category 1 or 2 expected patient benefits:
I-23.1: Our goal is to increase the number of visits by 3% in DY3, by 3% in DY4, and by 6% in DY5 compared to baseline established in DY2.

Category 3 outcomes: IT-5 Improving Cost of Care

Project Option: 1.9.2 Expand Access to Specialty Care: Pediatric Plastic Surgery

Unique Project ID: 139135109.1.13
Performing Provider Name/TPI: Texas Children's Hospital/139135109

Project Description:
Texas Children's Hospital proposes to expand capacity for Pediatric Plastic Surgery.

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

Specifically, this project will increase capacity within Pediatric Plastic Surgery. Funding for this project will allow Texas Children's to fulfill our tri-part mission of providing quality pediatric care, training the next generation of pediatric providers and investigating ways to improve care through innovative therapies. The Texas Children's ("TCH") Plastic Surgery Division provides treatment and surgical correction of cleft lip and palate anomalies amongst other diagnosis. The Plastic Surgery Division recently began performing Orthognathic Surgery, a specialized procedure to help correct the misalignment of the upper and lower jaws in certain types of cleft palate disorders. Plastic Surgery has and will continue to add clinic coverage at Texas Children's West Campus, and expand its clinical locations. Other programs the Plastic Surgery Division is working to establish are hand and microvascular surgery, Craniosynostosis, Peripheral Nerve, and Oral Surgery. TCH uses the industry standard of 3rd available appointment as a measure of access to care - ideal access would be less than 14 days. However, given the high demand and provider shortage, currently the average 3rd Available for a patient with a cleft lip and palate diagnosis is greater than 30 days.

Goals and Relationship to Regional Goals:

Project Goals: To meet the growing demand for high impact pediatric plastic surgery services, TCH will:

1) Focus on provider productivity to optimize clinical time for all providers,
2) Establish an initiative to review scheduling processes to increase the availability of these targeted providers,
3) Expand internal capacity by hiring additional clinical providers and
4) Enhance service availability by targeting new providers to not only work in the Texas Medical Center but to also serve 1-3 additional community locations for specialty care,

This project meets the following Region 3 Goals:

- Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care.
- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction

Challenges: There is no ACGME Pediatric Plastics program, so many of the providers dabble in adult practice as well as pediatric. Plastic Surgery can be invaluable to help children's psychological needs that are associated with deformities.[163] Unfortunately, due to monetary constraints in health care budgets, corrective surgeries are often viewed as 'elective or cosmetic' and not reimbursable or lowly reimbursed. [164]In Texas, limited Medicaid reimbursement is an ongoing challenge for children's hospitals and the workforce that provides health care services for the pediatric population enrolled in this program. As advocates for improving and sustaining quality children's health care, our organization informs and educates elected officials and community leaders about the importance of Medicaid and the need to adequately fund the program. We will continue these efforts throughout the duration of waiver to ensure existing programs and services will be maintained and expanded. While we continue to increase our overall outpatient volumes at all of our locations by 5.7% year over year in our pediatric physician practices, we still have not been able to significantly decrease the patient available appointment wait time. By reconfiguring clinic processes, scheduling and the addition of more providers, we will try to improve this measure.

Five year expected outcome for provider and patients:
Texas Children's Hospital expects to see improvements in access to subspecialty care for our pediatric patients; this in turn will improve patient satisfaction due to the delivery of the right care at the right place at the right time.

Starting Point/Baseline:
The baseline of patient volume in FY 2012 is 2,250. Our fiscal year runs from October 1st to September 30th. The baseline patient cycle time across all locations is 170 minutes (Clinical Care Center – 145 minutes; West Campus – 25 minutes) (Note this includes time that the patient spends alone this is not average of minutes spent with provider)

Rationale:
The significant increase in access to specialty care created by this project attempts to address the growing demands in our community for specialized pediatric providers. This project will create

[163] Andersson, G.-B., Gillberg, C., Fernell, E., Johansson, M., & Nachemson, A. (November 01, 2011). Children with surgically corrected hand deformities and upper limb deficiencies: Self-concept and psychological well-being. *Journal of Hand Surgery: European Volume, 36,* 9, 795-801.

[164] Pierce, T. R., Mehlman, C. T., Tamai, J., & Skaggs, D. L. (January 01, 2012). Access to care for the adolescent anterior cruciate ligament patient with Medicaid versus private insurance. *Journal of Pediatric Orthopedics, 32,* 3.)

increased capacity through more efficient operations and new physician recruitment. Our project significantly enhances TCH's existing pediatric plastic surgery services to improve patient satisfaction by aspiring to provide the right care in the right setting at the right time.

Cleft lip and palate are among the most common genetic defects in the United States. Cleft patients have complex needs that require lifelong care, treatment, and monitoring by an interdisciplinary team. The Texas Children's ("TCH") Plastic Surgery Division provides treatment and surgical correction of cleft lip and palate anomalies amongst other diagnosis. A new service TCH is looking to expand into is Orthognathic surgery which is typically done on patients to correct conditions of the jaw and face or who have bilateral cleft lip and palate. Orthognathic surgery is performed by an oral and maxillofacial surgeon, plastic surgeon or ENT in collaboration with an orthodontist.

Project Components: Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics do relate to project components.

hhh. Conduct specialty care gap assessment based on community need for subspecialty.
iii. Implement transparent standardized referrals across the system
jjj. Increase specialty care volume of visits and evidence of improved access for patients seeking services
kkk. Increase service availability hours and increase number of specialty clinic locations.
lll. Conduct quality improvement for projects including rapid cycle and learning collaborative exchanges. It is our goal to reach the industry standard of less than 14 days for the 3rd available appointment.

Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. For children with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home.[165]

Milestones and Metrics

The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted pediatric population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1); P-17 (P-17.1)
- Improvement milestones and metrics: I-23 (I-23.1)

Unique community need identification number the project addresses:

- CN.2: Inadequate access to specialty care,
- CN.6: Inadequate access to treatment and services designed for children.

[165] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:

With the new offerings and increase in collaborations there will be less untreated care and less out of state travel for care for our patients and families.

Related Category 3 Outcome Measure(s):
OD-5 Cost of Care
IT-5.1: Improved Cost Savings
IT-5.2: Per Episode Cost of Care
IT-5.3: Length of Stay

Reasons/rationale for selecting the outcome measures:
Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care costs.[166]

Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Relationship to Other Performing Providers' Projects: This project will compliment other projects designed to improve appropriate access to specialty care, improve chronic care management, and those designed to improve the patient experience.

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[167] Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric

Project Option: 1.9.2 Expand Pediatric Neurosurgery CareProject Option: 1.9.2 Expand Pediatric Neurosurgery Care,

Unique Project ID/TPI:139135109.1.14

Performing Provider Name/TPI: Texas Children's Hospital/ 139135109

Project Summary: Increase outpatient access for Harris County and the surrounding communities to care for pediatric patients with conditions affecting the brain and neurological system

Provider:
Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital Admissions- 25,966 Births (babies delivered)- 2,181 Emergency visits-113,586 Outpatient visits- 3,066,765	Medicaid and CHIP- 53.6% Commercial Insurance- 40.6% Self-Pay- 1.8% Medicare- 1.2%	Hispanic- 35.9% African American- 16.6% Caucasian- 31.0% Asian- 3.8% Other- 12.4% American Indian- 0.3%

Intervention(s): This project will create increased capacity through more efficient operations and new provider recruitment. In order to maintain prompt access to our Neurosurgeons the division is working to expand its services by utilizing Advanced Practice Providers who can see lower acuity patients thereby freeing up our Neurosurgeons to see more complex spine and epilepsy patients, as well as be able to expand services to fetal, craniofacial and trauma cases.
Need for the project: The purpose of this project is to meet the growing demand for high impact pediatric Neurosurgery services. There are few "skilled" surgeons that focus upon Pediatric Neurosurgery. Texas Children's Hospital became the first hospital in the world to use real-time MRI guided thermal imaging and laser technology to destroy lesions in the brain that cause Epilepsy. Currently, 100% of these post operative patients are seizure free.
Target Population:
The target population of patients being served are those patients that are comprehensive and require lifelong care.
Category 1 or 2 expected patient benefits:
I-23.1: Our goal is to increase the number of visits by 3% in DY3, by 3% in DY4, and by 6% in DY5 compared to baseline established in DY2.
Category 3 outcomes: IT-5 Improving Cost of Care

Unique Project ID/TPI:139135109.1.14
Performing Provider Name/TPI: Texas Children's Hospital/ 139135109

Project Description:
Texas Children's Hospital proposes to expand access to pediatric Neurosurgery care, enabling patients to receive care in a more timely manner and reduce wait times for appointments.

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

Our project proposal will significantly improve access to pediatric subspecialty care. Specifically, the expansion of capacity funded by this project will allow us to increase appointment capacity in our Neurosurgery Clinic thereby improving patient access to care. While this improved access will benefit all families we expect at least half of the increased access will serve the Mediciad population. Funding for this project will allow Texas Children's to fulfill our tri-part mission of providing quality pediatric care, training the next generation of pediatric providers and investigating ways to improve care through innovative therapies.

Funding for this project will allow Texas Children's to fulfill our tri-part mission of providing quality pediatric care, training the next generation of pediatric providers and investigating ways to improve care through innovative therapies. The Texas Children's ("TCH") Neurosurgery Division is ranked # 5 in the 2012 U.S. News and World Report Best Children's Hospitals. We are one of the largest pediatric neurosurgery units in the United States. We take a collaborative approach to care; working closely with Texas Children's Cancer Center, Texas Children's Fetal Center, the comprehensive Epilepsy Program, neurology, adolescent medicine, developmental pediatrics, interventional neuroradiology, and trauma. In 2011, Texas Children's Hospital became the first hospital in the world to use real-time MRI guided thermal imaging and laser technology to destroy lesions in the brain that cause Epilepsy. Currently, 100% of these post operative patients are seizure free.

Project Goals: To meet the growing demand for high impact pediatric Neurosurgery services, TCH will:

1. Focus on provider productivity to optimize clinical time for all providers,
2. Establish an initiative to review scheduling processes to increase the availability of these targeted providers,
3. Expand internal capacity by hiring additional clinical providers, and
4. Enhance service availability by targeting new providers to not only work in the Texas Medical Center but to also serve 1-3 additional community locations.

This project meets the following Region 3 Goals:

- Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care.
- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction

Challenges: The challenges we are faced with are that these patients are comprehensive and require lifelong care. There are few "skilled' surgeons that focus upon Pedi Neurosurgery. There is the possibility of taking the Neurosurgery program out to West Campus but that would depend of Neurology focus and the expansion of the epilepsy and Vagas nerve stimulator – which require significant financial and intellectual investment. In Texas, limited Medicaid reimbursement is an ongoing challenge for children's hospitals and the workforce that provides health care services for the pediatric population enrolled in this program. As advocates for improving and sustaining quality children's health care, our organization informs and educates elected officials and community leaders about the importance of Medicaid and the need to adequately fund the program. We will continue these efforts throughout the duration of waiver to ensure existing programs and services will be maintained and expanded. While we continue to increase our overall outpatient volumes at all of our locations by 5.7% year over year in our pediatric physician practices, we still have not been able to significantly decrease the patient available appointment wait time. By reconfiguring clinic processes, scheduling and the addition of more providers, we will try to improve this measure.

Five year expected outcome for provider and patients:
Texas Children's Hospital expects to see improvements in access to subspecialty care for our pediatric patients; this in turn will improve patient satisfaction due to the delivery of the right care at the right place at the right time.

Starting Point/Baseline: Our fiscal year runs from October 1st to September 30th. The average 3rd available appointment at the TCH Neurosurgery Division is less than 14 days. The baseline for patient volumes in FY 12 is 3,450. The baseline for FY12 average patient cycle time is 89.98 minutes. This includes when the patient is 'alone waiting' this is not just an average of 89.98 minutes with the provider.

Rationale:
The significant increase in access to specialty care created by this project attempts to address the growing demands in our community for specialized pediatric providers. This project will create increased capacity through more efficient operations and new physician recruitment. In order to maintain prompt access to our Neurosurgeons the division is working to expand its services by utilizing the use of Advance Care Providers. These providers are able see the division's lower acuity patients thereby freeing up our neurosurgeons to see more complex spine and epilepsy patients, as well as be able to expand services to fetal, craniofacial and trauma cases. The NPPs are also able to see more patients in the Neonatal and Pediatric Intensive Care Units and provide the continuum of care from the inpatient stay through the necessary follow up in the outpatient clinic setting.

Project Components: Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics do relate to project components.

mmm. Conduct specialty care gap assessment based on community need for subspecialty.
nnn. Implement transparent standardized referrals across the system
ooo. Increase specialty care volume of visits and evidence of improved access for patients seeking services
ppp. Increase service availability hours and increase number of specialty clinic locations.
qqq. Conduct quality improvement for projects including rapid cycle and learning collaborative exchanges. It is our goal to reach the industry standard of less than 14 days for the 3rd available appointment.

Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. For children with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home.[169]

Milestones and Metrics
The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted pediatric population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1); P-17 (P-17.1)
- Improvement milestones and metrics: I-23 (I-23.1);

Customizable Improvement Milestone and Metric was chosen in order to specifically tailor the intent of project to the targeted pediatric population.

Unique community need identification number the project addresses: CN.2: Inadequate access to specialty care., CN.6: Inadequate access to treatment and services designed for children.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative: This project will allow Texas Children's to significantly enhance our exisiting Neurosurgery appointment availability. With the shortage of specialists in this area, TCH has had to work within the resources available nationwide to build a program that provides superior care for children with these conditions. This expansion project, through its focus on national recruitment as well as the use of mid-level providers for care, aims to improve access to these services for children in the state of Texas.

Related Category 3 Outcome Measure(s):
OD-5 Cost of Care
Reasons/rationale for selecting the outcome measures:

---

[169] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.

Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care costs.[170]

Relationship to other Projects: All of Texas Children's projects are working to expand access to subspecialty care for the pediatric population. Texas continues to have a growing pediatric population and a shortage of specialized pediatric providers.

Children are the future of healthcare and will dictate the treatments needed as well as the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[171] Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[172] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

Project Option -1.9.2 Expand Access to Specialty Care: Orthopedic Pediatric Care

Unique Project ID: 139135109.1.15

Performing Provider Name/TPI: Texas Children's Hospital/ 139135109

Project Summary: Increase outpatient access for Harris County and the surrounding communities to care for pediatric patients with simple to high complex acute or chronic orthpedic problems.

Provider:
Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

Volume Statistics - FY2012	**Patient Payor Mix**	**Patient Demographics**
Hospital Admissions- 25,966 Births (babies delivered)- 2,181 Emergency visits-113,586 Outpatient visits- 3,066,765	Medicaid and CHIP- 53.6% Commercial Insurance- 40.6% Self-Pay- 1.8% Medicare- 1.2%	Hispanic- 35.9% African American- 16.6% Caucasian- 31.0% Asian- 3.8% Other- 12.4% American Indian- 0.3%

Intervention(s): The division is working to enhance its sub-specialization in the following areas of Sports Medicine, Orthopedic Oncology, Leg and Limb Deformity, and Hand/Upper Extremity. TCH West Campus will expand services to include a new sports medicine program.
Need for the project: The division of Orthopedics provides 24/7 emergency coverage at TCH Medical Center Campus, Outpatient, Operating Room, and emergency services at TCH West Campus. The number of children referred into the TCH Orthopedics clinic averages 230 referrals per month. In FY10 and FY11 the averge 3rd Available appoitnment at the TCH Orthopedics cilnic is greater than 30 days. Due to the demand and the wait times and access into the service our patients do not get the care they need and therefore are faced living with "treatable" defomities.
Target Population: Our target population is pediatric patients with simple to high complex acute or chronic orthpedic problems. One particular area of focus will be the interdiscpliary Sports Medicine program for patients from the physically active to the pediatric or adolsecent athlete.
Category 1 or 2 expected patient benefits:
I-23.1: Our goal is to increase the number of visits by 3% in DY3, by 3% in DY4, and by 6% in DY5 compared to baseline established in DY2.
Category 3 outcomes: IT-5 Improving Cost of Care

Project Option -1.9.2 Expand Access to Specialty Care: Orthopedic Pediatric Care

Unique Project ID: 139135109.1.15
Performing Provider Name/TPI: Texas Children's Hospital/ 139135109

Project Description:
Texas Children's Hospital proposes to expand access to pediatric orthopedic care, enabling patients to receive care in a more timely manner and reduce wait times for appointments.

Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds at our main campus and West Houston facilities. In 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of children locally, nationally and internationally.

Our project proposal will significantly improve access to pediatric subspecialty care. The Texas Children's ("TCH") Orthopedics Division is ranked # 33 in the 2012 U.S. News and World Report Best Children's Hospitals. Orthopedics provides 24/7 emergency coverage at TCH. Outpatient, Operating Room, and emergency services are available at TCH West Campus, and clinics are held at all TCH Health Center locations. From minor fractures to complex disorders the Orthopedic Surgery division at Texas Children's Hospital provides exemplary care for pediatric patients from newborn to skeletal maturity with simple to high complex acute or chronic orthopedic problems. In 2010, the Orthopedic Surgery division established the Adolescent and Young Adult Hip clinic, the only one of its kind in the region and focuses on diagnosis and treatment of hip conditions.

The division is currently working to continue to enhance is sub-specialization in the following areas of Sports Medicine, Orthopedic Oncology, Leg and Limb Deformity, and Hand/Upper Extremity. Texas Children's West Campus will expand patient services to include a new Sports Medicine Program dedicated to treating children for all types of sports-related injuries and disorders. This new program will utilize an interdisciplinary approach for the diagnosis, evaluation and treatment of children and adolescents from the physically active to the pediatric or adolescent athlete. Currently referrals into the TCH pediatric Orthopedics clinic average 230 referrals per month. New programs within the Orthopedic Surgery Department include Sports Medicine, Ortho Oncology, Leg and Limb Deformities, and Hand and Upper Extremity subspecialization. TCH uses the industry standard of 3rd available appointment as a measure of access to care - ideal access would be less than 14 days. However, given the high demand and provider shortage, for the majority of FY10 and FY11, the average 3rd Available appointment at the TCH Orthopedics clinic is greater than 30 days.

Goals and Relationship to Regional Goals:

Project Goals: To meet the growing demand for acute pediatric orthopedic services, TCH will:

- Focus on provider productivity to optimize clinical time for all providers and enhance training of subspecialists and fellows,
- Establish an initiative to review scheduling processes to increase the appointment availability of these targeted providers that aligns with new clinic capacity,
- Expand provider capacity by hiring additional clinicians and support staff,
- Expand service availability through the provision of services with additional providers not only in the Texas Medical Center clinic site, but also in at least 1-3 community care settings.

This project meets the following Region 3 Goals:

- Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care.
- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction

Challenges:

Some of the challenges we may face while trying to improve access in the Orthopedics area is with providers who have an adult practice as well as pediatric patient panel. Due to demand and the wait times and access into the service our patients do not get the care need, and therefore are faced living with "treatable" deformities. In many cases these deformities can lead to other health issues. In Texas, limited Medicaid reimbursement is an ongoing challenge for children's hospitals and the workforce that provides health care services for the pediatric population enrolled in this program. As advocates for improving and sustaining quality children's health care, our organization informs and educates elected officials and community leaders about the importance of Medicaid and the need to adequately fund the program. We will continue these efforts throughout the duration of waiver to ensure existing programs and services will be maintained and expanded. While we continue to increase our overall outpatient clinic volumes at all of our locations by 5.7% year over year in our pediatric physician practices, we still have not been able to significantly decrease the patient available appointment wait time. By reconfiguring clinic processes, scheduling and the addition of more providers, we will try to improve this measure.

Five year expected outcome for provider and patients:
Texas Children's Hospital expects to see improvements in access to subspecialty care for our pediatric patients; this in turn will improve patient satisfaction due to the delivery of the right care at the right place at the right time.

Starting Point/Baseline:
The average 3rd Available appointment at the TCH Orthopedics clinic is greater than 30 days. The baseline of patient volumes in FY 12 is 6,350. Our fiscal year runs from October 1st to September 30th. The baseline average patient cycle time in FY12 in minutes: Clinical Care Center-90 minutes; Clear Lake Health Center-87 minutes; CyFair – 96 minutes; Sugarland- 98

minutes; The Woodlands-78 minutes; West Campus – 85 minutes. (Note this is not a weighted average and includes time that the patient spends alone this is not average of minutes spent with provider)

<u>Rationale:</u>

Reasons for selecting project option:

Pediatric orthopedic specialists diagnose, treat, and manage children's musculoskeletal problems including Limb and spine deformities (such as club foot, scoliosis), Gait abnormalities (limping), Bone and joint infections and broken bones. Texas Children's Hospital is a level 1 trauma center; therefore, sees an increasing number of children who may require orthopedic services. Likewise, its orthopedics division is nationally recognized for its treatment and diagnosis of rare musculoskeletal diseases/abnormalities. For many families living in the Gulf coast region of the United States, our orthopedics department is the sole point of care for their medically complex child or a child who may suffer from a rare bone/muscular abnormality or joint disorder.

Project Components:

Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics do relate to project components.

- rrr. Conduct specialty care gap assessment based on community need for subspecialty.
- sss. Implement transparent standardized referrals across the system
- ttt. Increase specialty care volume of visits and evidence of improved access for patients seeking services
- uuu. Increase service availability hours and increase number of specialty clinic locations.
- vvv. Conduct quality improvement for projects including rapid cycle and learning collaborative exchanges. It is our goal to reach the industry standard of less than 14 days for the 3rd available appointment.

Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. For children with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective health care and in securing a comprehensive medical home.[173]

The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted pediatric population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1); P-17 (P-17.1)
- Improvement milestones and metrics: I-23 (I-23.1); I-X (I-X.1)

Customizable Improvement Milestone and Metric was chosen in order to specifically tailor the intent of project to the targeted pediatric population.

Unique community need identification number the project addresses:

- CN.2: Inadequate access to specialty care. CN.6: Inadequate access to treatment and services designed for children.

[173] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:
This project will significantly enhance current services by providing new care to the patient population. Expanding locations provides increased access and convenience for patients and their families. Also being able to utilize a health system for best outcomes thru a multi-specialty collaboration will enhance the existing delivery system initiative.

Related Category 3 Outcome Measure(s):
OD-5 Cost of Care
IT 5.1: Improved Cost Savings
IT 5.2: Per Episode Cost of Care
IT 5.3: Other Outcome Improvement Target: Reduced Length of Stay

Reasons/rationale for selecting the outcome measures:
Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care costs.[174]

Relationship to other Projects: All of Texas Children's projects are working to expand access to subspecialty care for the pediatric population. Texas continues to have a growing pediatric population and a shortage of specialized pediatric providers.

the cost of healthcare in future years so it is critical that they receive the access needed throughout their pediatric lives. The focus of pediatric specialty care is similar throughout the region with a concentrated focus in the Harris county proper geographic region and allows for the expansion of access to numerous specialties such as cardiology, neurology, ENT, and many more. The outcome measures focus to appropriate length of stay, per episode cost of care, and improved cost savings. The Region 3 Initiative grid allows for a cross reference of similar initiatives in our region. (addendum)

Plan for Learning Collaborative: We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[175] Our valuation

Project Option: 1.9.2 Improve access to specialty care: Expand Women's Mental Health Care

Unique Project ID: 139135109.1.16

Performing Provider Name/TPI: Texas Children's Hospital/ 139135109

Project Summary:
To increase access in providing women's reproductive mental health services to the meet the needs of this population.

Provider:
Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county specializing in the care of medically fragile children in Houston and across the country as a regional safety net provider. We currently are licensed for 564 beds and in 2011 we had over 2.7 million patient encounters. Our mission is to provide the finest possible pediatric and women's patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals.

Volume Statistics - FY2012	Patient Payor Mix	Patient Demographics
Hospital Admissions- 25,966 Births (babies delivered)- 2,181 Emergency visits-113,586 Outpatient visits- 3,066,765	Medicaid and CHIP- 53.6% Commercial Insurance- 40.6% Self-Pay- 1.8% Medicare- 1.2%	Hispanic- 35.9% African American- 16.6% Caucasian- 31.0% Asian- 3.8% Other- 12.4% American Indian- 0.3%

Intervention(s):
This project will allow us to create access resources which will allow us to diagnosis women quicker and enhance their quality of life. Educating and training obstetricians and pediatricians to improve screening in post-partum depression, to understand the challenges of psychiatric medications during pregnancy and breastfeeding, and to understand the mental health needs of menopausal women.

Need for the project:
This project will increase access for women with reproductive mental health issues. American women are two times more likely to experience depression than men and depression is considered to be the leading cause of disease-related disability among women today. Approximately 13-15% of new mothers are diagnosed with Postpartum Depression (PPD).

Target Population:
All women within the Houston community who can benefit from this project, specifically with reproductive mental health issues.

Category 1 or 2 expected patient benefits:
Our DY 4 goal is to increase patient visits by 10% from the baseline in fiscal year 2012. DY5 goal is to increase patient visits by 20% from the baseline in fiscal year 2012.

Category 3 outcomes:
IT-2.4 Our goal is to reduce preventable admissions for patients with Behavioral Health/ Post Partum Psychosis

Project Option: 1.9.2 Improve access to specialty care: Expand Women's Mental Health Care

Unique Project ID: 139135109.1.16
Performing Provider Name/TPI: Texas Children's Hospital/ 139135109

Project Description:
Texas Children's Hospital will expand provider capacity, improve processes and increase availability of mental health services for women
Texas Children's Hospital, located in Houston, is the largest free standing children's hospital in the county. Our mission is to provide the finest possible pediatric and women's patient care, education, and research. Texas Children's is an integrated delivery system comprising of a health plan for Medicaid and CHIP pregnant women and children, the nation's largest general pediatrician group and two world class hospitals. Texas Children's supports a commitment to quality service and cost-effective care to enhance the health and well-being of women and children locally, nationally and internationally.
In November 2011, Texas Children's Hospital embarked on a unique opportunity and built a state of the art Pavilion for Women to provide comprehensive inpatient and outpatient services in Obstetrical and Gynecological care. In addition, the Pavilion for Women has recently opened The Women's Place - Center for Reproductive Psychiatry. It is one of only a handful of programs in the United States dedicated to the care and treatment of women's reproductive mental health issues. The services offered will range from premenstrual dysphoric disorder, prenatal evaluation and treatment, care, postpartum mental health care, perimenopausal and menopausal mental health conditions. Our philosophy is to focus on the health of women because it leads to healthy families.
Approximately 13-15% of new mothers are diagnosed with Postpartum Depression (PPD).[9] The *Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition* (DSM-IV) defines PPD as a nonpsychotic, major depressive disorder with a specifier of postpartum onset within 4 weeks after childbirth.[177] Among younger and socioeconomically disadvantaged mothers, the prevalence is even higher: about 1 in 4 women.[178] Other risk factors for developing PPD include a history of depression, experience of depression or anxiety during the pregnancy, or a family history of psychiatric illness.[179],[180],[181] Also, a woman's relationship with her partner can be a predictive variable for PPD; women that are less satisfied, have higher levels of conflict, and receive less support from their partners are potentially at greater risk for PPD. [9]
Evidence suggests that some mental illnesses are more prevalent in women; that women use mental health services more frequently than men do and that women want a different range of treatment and support options than is currently available. Additionally, women's mental health needs change across their lifespan. Specifically during the postpartum period, about 85% of

women experience some type of mood disturbance. (Massachusetts General Center for Woman's Mental Health, http://www.womensmentalhealth.org/specialty-clinics/postpartum-psychiatric-disorders/) For most the symptoms are mild and short-lived; however, 10% to 15% of women develop more significant symptoms of depression or anxiety. Postpartum psychiatric illness is typically divided into three categories: (1) postpartum blues (2) postpartum depression and (3) postpartum psychosis. Mental illness can also occur during pregnancy and women require expert help in determining which treatments, including medication are safe during pregnancy. Without expert care women are more likely to not receive treatment or to abruptly discontinue psychiatric medication which can have serious negative consequences for both mother and child. Evidence supports that untreated maternal depression can have negative consequences for her child, including increased risk of school problems, psychiatric illness, and even physical illness such as reactive airway disease. http://www-ncbi-nlm-nihgov.ezproxyhost.library.tmc.edu/pubmed/19850709

Goals and Relationship to Regional Goals:

Project Goals**:**

To meet the growing demand for high impact reproductive psychiatry services, TCH will:

1. Focus on provider productivity to optimize clinical time for all providers and enhance training of subspecialists and trainees.
2. Establish an initiative to review scheduling processes to increase the appointment availability of these targeted providers that aligns with new clinic capacity.
3. Expand provider capacity by hiring additional clinicians and support staff, in order to offer non-medical treatments to pregnant and breastfeeding mothers with depression.
4. Enhance service availability by targeting new providers to not only work in the Texas Medical Center but also serve additional 1-2 community locations.
5. Engage pediatricians in screening mothers for postpartum depression and providing effective systems for referral and treatment.

This project meets the following Region 3 Goals:

- (CN.2, CN.15) Increased access to specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their conditions, regardless of where they reside or their ability to pay for care.
- Develop a regional approach to healthcare delivery that leverages and improves on existing programs and infrastructure, is responsive to patients' needs throughout the entire region, and improves health care outcomes and patient satisfaction.
- (CN.18) Address the insufficient access to integrated care programs for behavioral health and physical health conditions as a need in our community.

Challenges: One of the greatest challenges in mental health is the stigma surrounding the disease. Women who are suffering from psychiatric illness during pregnancy and the postpartum period are especially afraid to seek treatment. And if women reach out for help access to mental health services is a challenge. Finding a provider who understands the unique features of women's care during the reproductive years is particularly challenging. There are very few comprehensive women's mental health programs across the country and we will be one of them. The Pavilion for Women is particularly unique because our women's mental health program is embedded in the hospital where women come to seek care. Access to care is easier and more accepted than going to another facility; there is less stigma to seeking help.Across the nation, there is limited reimbursement for mental health services with private and public payors. In

many instances psychiatrists have chosen a fee for service practice that is prohibitively expensive for most women. Finding a provider who is knowledgeable about the unique needs of women during the reproductive is particularly difficult. Finding expert, reimbursed care is challenging can sometimes be impossible in most communities. Because of the lack of mental health providers to treat this population many women fall through the cracks. Although it is estimated that 10 to 15% of women will suffer from postpartum depression, most hospitals and physicians do not offer screening. If there is no mental health care available then identifying illness creates a problem with limited solutions. Although screening for postpartum depression has been advocated to be the standard of care, many health care facilities and physicians are reluctant to do so due to lack of appropriate referrals. Women are sent home with new babies and either don't receive care or receive inadequate care. Untreated depression has increased morbidity and mortality for both mother and child.

Five year expected outcome for provider and patients:

Texas Children's Hospital expects to see improvements in access to subspecialty care for our obstetric and gynecologic patients; this in turn will improve patient satisfaction and patient health due to the delivery of the right care at the right place at the right time.

Starting Point/Baseline:

The baseline of patient volume in FY 12 is 500. Our fiscal year runs from October 1st to September 30th.

Rationale:

The significant increase in access to specialty care created by this project attempts to address the growing demands in our community for specialized women's mental health providers. This project will create increased capacity through more efficient operations and new licensed provider recruitment. Specifically in our region there are only 3.5 providers who specialize in woman's reproductive mental health, three of those providers provide fee for service care only. Until recently patients who for financial reasons must use insurance have been unable to access appropriate specialized care for serious mental illness during the reproductive years. Region 3 identified (CN.18). Texas Children's Hospital is working to develop The Women's Place - Center for Reproductive Psychiatry at Texas Children's Pavilion for Women. It will be one of only a handful of programs in the United States dedicated to the care and treatment of women's reproductive mental health issues. The services offered will range from premenstrual dysphoric disorder, prenatal evaluation and treatment, postpartum mental health care, perimenopausal and menopausal mental health conditions. Texas Children's identified these services as a foundation for our women's health strategies in our community -- as healthy women lead to healthy families. The program has started with .5 FTE Reproductive Psychiatrist providing clinical services.

According to the Mental Health Report conducted by the World Health Organization, depression affects nearly 121 million people worldwide each year and is the fourth leading contributor to the global burden of disease. Of these cases, 850,000 result in tragic fatalities via means of suicide annually and fewer than 25% of those affected have access to effective treatments.[182] In the United States alone, major depressive disorder affects about 14.8 million adults or 6.7% of the

[182] World Health Organization. Mental health: Depression. http://www.who.int/mental_health/management/depression/definition/en/. 2010. Accessed March 8, 2010.

population age 18 and older within a given year.[183] American women are two times more likely to experience depression than men and depression is considered to be the leading cause of disease-related disability among women today.[184]

While researchers continue to explore the reasons for women's increased risk for depression over men, studies have shown that changes in hormone levels directly affect brain chemistry, a significant factor contributing to depressive disorders. Women during pregnancy and after delivery of their infants are particularly vulnerable to depression due to the rapid decline in estrogen and progesterone[185], as well as
the new responsibility of caring for a newborn.[1] In fact, epidemiologic studies have demonstrated that women are more likely to be admitted to a psychiatric unit after giving birth than at any other time in their lives.[186]

Approximately 13-15% of new mothers are diagnosed with Postpartum Depression (PPD).[9] The *Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition* (DSM-IV) defines PPD as a nonpsychotic, major depressive disorder with a specifier of postpartum onset within 4 weeks after childbirth.[187] Among younger and socioeconomically disadvantaged mothers, the prevalence is even higher: about 1 in 4 women.[188] Other risk factors for developing PPD include a history of depression, experience of depression or anxiety during the pregnancy, or a family history of psychiatric illness.[189],[190],[191] Also, a woman's relationship with her partner can be a predictive variable for PPD; women that are less satisfied, have higher levels of conflict, and receive less support from their partners are potentially at greater risk for PPD. [9]

To have a diagnosis of PPD, a woman must present with depressed mood or loss of interest or pleasure in daily activities that represents a change in normal behavior and impairs everyday functioning for a minimum time frame of two weeks.[6] Additionally, four of the following symptoms must also be present in order to constitute a diagnosis of PPD: weight change in absence of dieting, insomnia or hypersomnia, psychomotor agitation or retardation, fatigue or loss of energy, feelings of worthlessness or guilt, decreased ability to think or concentrate, and recurrent thoughts of death or suicide.[6]

Once PPD has been identified, immediate treatment is essential. Patients that are not treated promptly are at risk for a longer duration of the illness which can lead to impaired functioning, refusal of treatment, prolonged symptoms, and suicide. Evidence-based treatment options that

have been shown effective include focused psychotherapy, antidepressants, or a combination approach.[192] In 2011, Harris County had 69,896 births alone, at a minimum 6,900 of those women would benefit from treatment just during the postpartum period.

Project Components: Through the expanded access to specialty care, we propose to meet all required project components listed and these selected milestones and metrics do relate to project components.

a. Conduct specialty care gap assessment based on community need for subspecialty.
b. Implement transparent standardized referrals across the system.
c. Increase specialty care volume of visits and evidence of improved access for patients seeking services.
d. Increase service availability hours and increase number of specialty clinic locations.
e. Conduct quality improvement for projects to improve access and learning collaborative exchanges.

Inadequate access to specialty care has contributed to the limited scope and size of safety net health systems. For women with health care needs that exceed the abilities of the primary care provider, access to and coordination with subspecialty care is critical to ensuring the provision of efficient and effective mental health care and in securing a comprehensive medical home.[193]

Milestones and Metrics

The following milestones and metrics have been chosen for the project based on the core components and the needs of the targeted women's mental health population.

- Process milestone and metrics: P-1 (P-1.1); P-8 (P-8.1); P-17 (P-17.1)
- Improvement milestones and metrics: I-23 (I-23.1); I-X (I-X.1)

Customizable Improvement Milestone and Metric was chosen in order to specifically tailor the intent of project to the targeted women's mental health population.

Unique community need identification number the project addresses:

- CN.2: Inadequate access to specialty care,
- CN.6: Inadequate access to treatment and services designed for women.
- CN15: Insufficient access to services for pregnant women, particularly low income women
- CN18: Insufficient access to integrated care programs for behavioral health and physical health conditions

How the project represents a new initiative or significantly enhances an existing delivery system reform initiative:

This initiative in women's mental health will allow us to provide a comprehensive program that creates resources, for this patient population, that is currently limited in Houston. Increasing access, will allow us to diagnosis women quicker which will enhance their quality of life. Educating and training obstetricians and pediatricians to improve screening in post-partum depression, to understand the challenges of psychiatric medications during pregnancy and breastfeeding, and to understand the mental health needs of menopausal women will significantly enhance the quality of care women receive and allow us to collaboratively identify the most appropriate mental health services a women may need.

<u>Related Category 3 Outcome Measure(s):</u>

---

[192] Wisner K, Parry B, Piontek C. Clinical practice. Postpartum depression. *The New England Journal of Medicine*. July 18, 2002;347(3):194-199.

[193] Redlener, Irwin, Grant Roy, and Krol David M. "Beyond Primary Care: Ensuring Access to Subspecialists, Special Services, and Health Care Systems for Medically Underserved Children." *Advances in Pediatrics*. 52 (2005): 9-22.

OD-2 Potentially Preventable Psychiatric Admissions
IT-2.4 Behavioral Health/Major Depressive Disorder(BH/MDD)

Reasons/rationale for selecting the outcome measures:
Our project will increase appropriate access to care. Increased access to appropriate subspecialty care leads to better long term outcomes in children and reduction in unnecessary health care costs.[194]

Relationship to other Projects: All of Texas Children's projects are working to expand access to subspecialty care for the women's mental health population. This project focuses on expanding access to women's reproductive mental health. Texas Children's is investing in women's health services as one of the best ways to truly impact children's health by starting before conception and supporting maternal mental health after delivery. These interventions have a major impact on the mental and physical health of the child.

Relationship to Other Performing Providers' Projects and Plan for Learning Collaborative: This project will compliment other projects designed to improve appropriate access to specialty care, improve chronic care management, and those designed to improve the patient experience. We plan to participate in a region-wide learning collaborative as offered by the anchor for Region 3, Harris Health System. Our participation in this collaborative with other performing providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our region's health care system.
The behavioral health crisis in Region 3 is considerable and the proposed initiatives in our RHP plan will only imply a small impression into the overall community need for treatment, but is a good start. The outpatient focus of many RHP Plan initiatives will help numerous facilities focus to treating the patients in an ambulatory setting as well as continued navigation of services with a focus to keeping patients from the inpatient unit. This initiative is similar to many others in the sense of the category of behavioral health. The Region 3 Initiative Grid attached in the addendum will show the relationship to other programs.

Project Valuation: This project's value is based on the benefits related to cost avoidance of medical expenses and improved quality of life. For example, increased provider capacity leads to reduction in emergency room visits and reduction in inpatient hospital visits.[195] Our valuation also includes an increase in the patient's quality of life. We are using a conservative Quality Adjusted Life Year ("QALY") per year and a percentage of that QALY for the pediatric population.[196] The QALY is used as a one-time improvement in the quality of life, even though we know the patient's quality of life will be improved for many years. We recognize that this is a government funded waiver and thus we chose to have conservative valuations out of respect for the taxpayer funded program.

The University of Texas Health Science Center - Houston

Pass 1

Project Option 1.1.2 - 1.1 Expand Primary Care Capacity: Expand Existing Primary Care Capacity at UT Physicians Clinics

Unique RHP Project ID: 111810101.1.1
Performing Provider Name/TPI: UTHealth, UTPhysicians / 111810101

Project Summary:

Provider:
UT Physicians is the clinical practice of The University of Texas Medical School at Houston. With more than 900 physicians certified in 80 medical specialties and subspecialties, 906 residents and fellows, and 283,920 patient visits in 2011, it is the fastest growing academic practice in the nation for the last five years. In addition to our flagship location in the Texas Medical Center, UT Physicians has 4 neighborhood locations throughout the Greater Houston area, and also offers specialty clinics at several Memorial Hermann Hospital locations.

Intervention(s):
UT Physicians will expand primary care capacity at each of its 4 outlying clinics. Space will be purchased for additional consulting, exam and procedure rooms. Additional providers and support staff will be added to provide primary care services, and the hours of service will be extended, including evenings and Saturdays. A minimum of 4 FTE providers will be added, which has the potential for 16,800 additional primary care contacts per year (using the HRSA physician productivity target).

Need for the project:
This project addresses the county's inadequate access to primary care and high rates of inappropriate emergency department utilization. For the fiscal year 2010, 10% of all potentially preventable hospitalizations (PPR) were ambulatory care sensitive. In 2009, 41% (390,945) of ED visits in Houston were primary care related (PCR), including non-urgent, primary care treatable, and primary care preventable, and for 26.8% (104,762) of these PCR visits, Medicaid was the payer.

Target Population:
The service areas of our 4 outlying clinics include large populations with economic, cultural, language, and transportation barriers to receiving primary care. Using the Harris County rate (14.5%) of Medicaid clients, there are an estimated 1,423,176 Medicaid clients living within the service areas of the UT Physician Clinics.

Category 1 or 2 expected patient benefits:
Our goal is to increase primary care clinic visits and improve access for patients seeking services. This will trasnlate to better patient satisfaction with primary care services.

Category 3 outcomes:
T-1.1: Our goal is, by DY5, to reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam to zero (0) days.

Project Option 1.1.2 – Expand Primary Care Capacity: C3 Expand Existing Primary Care Capacity at UT Physicians Clinics

Unique RHP Project Identification Number: 111810101.1.1
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Project Description: 1.1 Expand Primary Care Capacity (Option 1.1.2)

UT Physicians (UTP) will expand primary care capacity at each of its 4 outlying (outside the Texas Medical Center) clinics. UTP has defined the service area for its clinics to include the census tracts within a seven-mile radius of each clinic. The Bayshore Clinic is in the southeast area of Houston and includes parts of Pasadena, South Houston, and areas immediate south of the ship channel. The service area of this clinic has a population of 431,199, with 36.5% living at/below the federal poverty level (FPL). The population is 49.2% Hispanic and of those, 51.1% are not proficient in English. The Bellaire Clinic, with a population of 472,698, is on the west side of Houston and also has a large minority population, with 24.1% Black/African American and 46% Hispanic, and 52.2% live at/below the FPL. Of the Spanish-speaking population in the Bellaire Clinic service area, 62.8% are not proficient in English. The Cinco Ranch (population 287,744) and Sienna Village (population 231,535) clinics serve populations reaching into Ft. Bend County that closely mirror the overall county demographics, with the exception of Sienna Village Clinic, which has a large Black/African American population of 33.5%. There are 20.8% of the Cinco Ranch Clinic population and 26.2% of the Sienna Village Clinic population living at/below the FPL. These two clinics also serve rural populations. The service areas of these 4 clinics include large populations with economic, cultural, language, and transportation barriers to receiving primary care. Using the Harris County rate (14.5%) of Medicaid clients, there are an estimated 1,423,176 Medicaid clients living within the service areas of the UT Physician Clinics. (All population statistics are from the U.S. Census Bureau, 2010 Census. Poverty statistics are from the U.S. Census Bureau, Small Area Estimates Branch. Release date: 11.2011. Table 1: 2010 Poverty and Median Income Estimates - Counties. The Medicaid rate is from the U.S. Census Bureau and the Centers for Disease Control and Prevention, State and County by Demographic and Income Characteristics. SAHIE, 2009.)

Additional space will be purchased to expand UT Physicians' Clinics. This will include additional consulting, exam and procedure rooms. Additional providers will be added to provide primary care services, support staff will be increased to accommodate the additional providers and increased patient load, and the hours of service will also be extended, including additional evening hours and Saturdays. With a minimum of one additional primary care provider and related support staff at each of the 4 clinics, there is the potential for 16,800 additional primary care contacts per year using the HRSA physician productivity target.

Goal and Relationship to Regional Goals:

Project Goals:

Expand primary care capacity to better accommodate the needs of the regional patient population and community, so that patients have enhanced access to the right health care services, at the right time, in the right setting.

This project addresses the following regional goals:

One of the goals of the region is to "Increase access to primary and specialty care services, with a focus on underserved populations, to ensure patients receive the most appropriate care for their condition, regardless of where they live or their ability to pay". Expansion of primary care capacity certainly relates to this goal as it will make it easier for UT Physicians to provide care to underserved populations.

Challenges:

Need: 1) Inadequate access to primary care. 2) High rates of inappropriate emergency department utilization.

Implementation: 1) Staff recruitment and retention. 2) Marketing of expansion.

By expanding the capacity of their clinics, UT Physicians will be better able to deliver timely care to more patients when needed thereby diverting patients away from the emergency room. UT Physicians will recruit physicians from the UTHealth residents placed at Memorial Hermann Hospital-TMC and will offer them a competitive salary and other incentives to practice in the outlying clinics. A marketing campaign that addresses the culture(s) and needs of the community will be implemented to inform the community of our expanded capacity to provide quality care that is convenient for them.

5-Year Expected Outcome for Provider and Patients:

There will be shortening of waiting times for primary care appointments and increased uptake of primary care services in our service areas, which will increase the percentage of patients who receive regular screenings for breast cancer and colon cancer. Detecting cancer early can reduce the burden of the disease in terms of both improved health outcomes and lower costs. In addition to benefiting the current Medicaid (23% as of 2011, or 65,302 patient visits) and low-income client base of UTP clinics, the expansion of services will be marketed to the additional 1,423,176 Medicaid and Medicaid-eligible residents living within the service areas of the UT Physician Clinics. The expansion of service hours to nights and Saturdays will be of particular benefit to those unable to see a physician during business hours. The increase in primary care capacity, coupled with our transition to the team-based, proactive healthcare delivery model of medical homes, all conveniently located where there is great need, will help to address many of the barriers that the low-income population typically encounter in getting the appropriate care, facilitating better health outcomes.

Starting Point/Baseline:

To be determined during DY3.

Rationale:

Research has shown that access to primary care is associated with better health outcomes at less cost. Access to primary care ensures better preventive care and better management of chronic disease; on the other hand lack of access often results in more expensive care, received in hospitals and emergency departments (ED). For the fiscal year 2010, 10% of all potentially preventable readmissions (PPR) were ambulatory care sensitive. In 2009, 41% (390,945) of ED visits in Houston were primary care related (PCR), including non-urgent, primary care treatable, and primary care preventable, and for 26.8% (104,762) of these PCR visits, Medicaid was the payor. Getting more patients into primary care will help to reduce the use of this more costly care. Placing more primary care providers out in the communities served by the UT Physcians

will help to address transportation access barriers and the expansion of clinic service hours will provide a greater selection of available appointment times. By increasing primary care capacity and engaging more people in the primary care system, avoiding inappropriate utilization of costly services, the community will experience better health outcomes and greater patient satisfaction. (PPR rate was from the Texas Health and Human Services Commission report on Potentially Preventable Readmissions in the Texas Medicaid Population, Fiscal year 2010, published January, 2012. The statistics for ED use were from the Houston Hospitals Emergency Deaprtment Use Study (January 1, 2009 through December 31, 2009), Final Report, prepared by the UT School of Public Health, May 2011, included in the 2010 Harris County Community Needs Assessment for Memorial Hermann.)

Project Components:

As part of the program to Expand Existing Primary Care Capacity at UT Physicians Clinics, we propose to meet all required project components listed below:

a) UTP will identify and purchase/lease additional primary care clinic space to include additional consulting, exam and procedure rooms.

b) UTP will recruit additional primary care providers and support staff to implement the expansion.

c) The hours of UTP clinics will be expanded to include evening and Saturday hours.

Milestones and Metrics:

For the Expand Existing Primary Care Capacity at UT Physicians Clinics Program, we have chosen the below milestones and metrics based upon the above project components and relationship to project goals and population needs. All baselines and goals will be determined during DY2.

Process Milestones and Metrics:

Milestone 1 [P-1]: Expand existing primary care clinics
Metric 1 [P-1.1]: Amount of additional space aquired to expand clinic services.
Milestone 2 [P-5]: Hire additional primary care providers and staff
Metric 1 [P-5.1]: Documentation of increased number of providers and staff.
Milestone 3 [P-4]: Expand the hours of a primary care clinic, including evening and/or weekend hours
Metric 1 [P-4.1]: Increased number of hours at primary care clinic over baseline

Improvement Milestones and Metrics:

Milestone 4 [I-12]: Increase primary care clinic volume of visits and evidence of improved access for patients seeking services.
Metric 1 [I-12.1]: Documentation of increased number of visits. Demonstrate improvement over prior reporting period.
Milestone 5 [I-11]: Patient satisfaction with primary care services.
Metric 1 [I-11.1]: Improved Patient satisfaction scores

Unique community need identification numbers the project addresses:

This project addresses community needs CN.1 (Inadequate access to primary care) and CN.8 (High rates of inappropriate emergency department utilization).

How the project represents a new initiative or significantly enhances an existing delivery

system reform initiative:

UT Physicians operates 4 clinics that serve areas that include large populations with economic, cultural, language, and transportation barriers to receiving primary care. This project proposes to add space, providers, support staff, and extend service hours to include evenings and weekends at these locations where the demand for services is high. This project is an expansion of services in order to improve access to care.

Related Category 3 Outcome Measure(s):

OD-1 Primary Care and Chronic Disease Management

- IT-1.1 Third next available appointment (Non- standalone measure)
  Reduce the average length of time in days between the day a patient makes a request for an appointment with a physician and the third available appointment for a new patient physical, routine exam, or return visit exam. The goals will be to decrease number of days to third next available appointment to zero days (same day) for Primary Care.

OD-12 Primary Care and Primary Prevention

- IT-12.1 Breast Cancer Screening (HEDIS 2012) (Non-standalone measure)
  Numerator: Number of women aged 40 to 69 that have received an annual mammogram during the reporting period. Denominator: Number of women aged 40 to 69 in the patient or target population. Women who have had a bilateral mastectomy are excluded.

OD-12 Primary Care and Primary Prevention

- IT-12.3 Colorectal Cancer Screening (HEDIS 2012) (Non-standalone measure)
  Numerator: Number of adults aged 50 to 75 that have received one of the following screenings. Fecal occult blood test yearly, Flexible sigmoidoscopy every five years, Colonoscopy every 10 years
  Denominator: Number of adults aged 50 to 75 in the patient or target population. Adults with colorectal cancer or total colectomy are excluded.

Relationship to other Projects:

1.2 (A2, SPH1) - Increased training of primary care workforce will provide physicians and support staff needed to expand primary care capacity.

1.7 (A1) - Expanded primary care capacity will facilitate and enhance access to specialty care via telemedicine.

1.10 (MS1) - The systems engineering and user dashboards will give providers greater access to information and provide reports facilitating a continuous quality improvement process.

2.1 (C1-2) - As part of the medical home project, all patients will be assigned to a primary care provider within the UT Health medical home. Expanded primary care capacity will be a necessary step to making this possible.

2.2 (CL3, C5-C9) - Expanded capacity in primary care will ensure the availability of staff to implement the expansion of the chronic care management model for the targeted diseases.

2.11 (C10) - The medication management program will be an integral part of the coordinated care provided by the primary care physicians.

2.12 (A3, CL1, CL2, MS4) - For the various care transition projects to be succesful, UT Health needs to ensure it has adequate primary care capacity to handle the increased volume of patients.

Relationship to Other Performing Providers' Projects in the RHP:

Primary Care/Ambulatory Care clinics are a top priority to Region 3 due to the regional patient mix, population concentration, and lack of primary care access points for our patient base. The regional approach of collaboration as well as existing patient referral pattern relationships allowed our team to properly identify the community needs based on the necessity of population, uninsured, and medically underserved patient bases. This program is consistent with our region and similar to numerous initiatives in our RHP plan sharing both concepts as well as outcome measures focused on percent improvement over baseline of patient satisfaction scores, reduction of inappropriate ED utilization, and third next available appointment status. The Region 3 Initiative Grid attached as a RHP Plan addendum reflects a grid of relationship for all initiatives.

Plan for Learning Collaborative:

UTHealth will participate in a region-wide learning collaborative(s) as offered by the Anchor entity for Region 3, Harris Health System. Our participation in this collaborative with other Performing Providers within the region that have similar projects will facilitate sharing of challenges and testing of new ideas and solutions to promote continuous improvement in our Region's healthcare system.

Project Valuation:

The anchor, Harris Health, provided a spreadsheet that contained 6 criteria, which could be used to rate each project on a 10-point scale. The ratings for each criterion were weighted, summed for each project to arrive at a total score (value weight) for each project. The sum of all the project's total scores were then divided by the percent of total DSRIP funds to be secured for that year to arrive at a dollar value multiplier to be applied towards each project's total score (value weight), thereby allocating a greater proportion of the funds towards those projects valued highest based upon the 6 criteria. UTHealth used this approach, with one exception—we did not use two of the criteria. Following are the criteria, the considerations for awarding points for projects using that criterion, and the reasons two of the criteria were not used:

1. Transformational Impact (Weight = 20%): Points were awarded for projects that meet the community benefit criteria, such as: improving access; improving quality; improving costs (long-term cost-savings); transformative (Innovative), collaborative (partners with other organization(s)). This project's score for this criterion: **6**

2. Population Served/Project Size (Weight = 20%): Points were awarded based on the size of the population affected and whether the target population is uninsured or on Medicaid. This project's score for this criterion: **6**

3. Aligned with Community Needs (Weight = 20%): Points were awarded based on judgments in two categories: whether or not the CNA indicates a need in the area of the project and the severity of the health/healthcare need(s) the project addresses. This project's score for this criterion: 111810101.1.1 X 2 = **7**

4. Cost Avoidance (Weight = 15%): Points were awarded based on judgment of project's cost effectiveness relative to similar projects. This project's score for this criterion: **6**

5. Partnership/Collaboration (Weight = 10%): ***This was not rated***, because UTHealth planned to partner with Harris Health to perform many similar projects, so the rating would have been

the same for all projects. This would have diluted the scores, hiding the more significant variations in other value criteria.

6. Sustainability (Weight = 15%): ***This was also not rated***, because UTHealth does not consider any of the projects to be unsustainable, or at the very least do not consider one project less sustainable than another. Giving the projects the same, or very similar ratings on this criterion again would have had a diluting effect, hiding the more significant variations in other value criteria.

Total Valuation Score for this project: **4.7**

Project Option 1.2.1- 1.2 Increase Training of Primary Care Workforce: UT Health Regional Academy for Translational Medicine and UT Health Academy for Patient Quality and Safety

Unique RHP Project ID: 111810101.1.2
Performing Provider Name/TPI: UTHealth, UTPhysicians / 111810101

Project Summary:

Provider:
UT Physicians is the clinical practice of The University of Texas Medical School at Houston. With more than 900 physicians certified in 80 medical specialties and subspecialties, 906 residents and fellows, and 283,920 patient visits in 2011, it is the fastest growing academic practice in the nation for the last five years. In addition to our flagship location in the Texas Medical Center, UT Physicians has 4 neighborhood locations throughout the Greater Houston area, and also offers specialty clinics at several Memorial Hermann Hospital locations.

Intervention(s):
This innovative program will train residents in the "new primary care" model that is capable of staffing "enhanced medical homes." The training program for health care providers will be updated to lay emphasis on team-based practice, quality and cost control. Faculty staff at UT Health will be trained to implement the new residency program.

Need for the project:
In addition to the overall shortage of primary care physicians in the region and Texas as a whole, the current curriculum used in residency training needs to be updated by emphasizing the importance of team based care, care coordination and the central role of the patient in achieving desirable health outcomes and controlling costs.

Target Population:
All patients within the greater Houston area and beyond will potentially benefit from this project, since it will produce new cohorts of physicians that will serve as invaluable resource for the transformation of the health care system in Houston and Texas as a whole.

Category 1 or 2 expected patient benefits:
By DY4 the project will increase the number of faculty staff completing educational courses, and by DY5 increase primary care training in Continuity Clinics.

Category 3 outcomes:
IT – 14.6 Percent of trainees who have spent at least 5 years living in a healthprofessional shortage area (HPSA) or medically underserved area (MUA)
IT- 14.7 Percent of trainees who report that they plan to practice in HPSAs or MUAs based on a systematic survey
IT – 14.8 Percent of trainees who report that they plan to serve Medicaid populations based on a systematic survey

Project Option 1.2.1 – Increase Training of Primary Care Workforce: A2 UT Health Regional Academy for Translational Medicine and UT Health Academy for Patient Quality and Safety

Unique RHP Project Identification Number: 111810101.1.2
Performing Provider Name/TPI: UTHealth, UTPhysicians/111810101

Project Description: 1.2 Increase Training of Primary Care Workforce (Option 1.2.1)

In addition to the overall shortage of primary care physicians in the region and Texas as a whole, the current curriculum used in residency training needs to be updated by emphasizing the importance of team based care, care coordination and the central role of the patient in achieving good health outcomes and controlling costs. To transform primary care in the region, there is a need to train a generation of physicans that will embrace the concepts of the patient-centered medical home (PCMH) practice, cost control, and place emphasis on quality improvement in their practice.

An innovative residency program in translational medicine will be developed and implemented by the UT Health Regional Academy for Translational Medicine. This innovative program, linked to new scholarly concentration(s), will train residents in the "new primary care" in Texas and the United States capable of staffing "enhanced medical homes." Also, the UT Health Academy for Patient Quality and Safety will operate a structured educational training for health care providers with emphasis on team-based practice, quality and cost control. These training programs will update the current model of training for primary care physicians by including training on the medical home and chronic care models, disease registry use for population health management, patient panel management, oral health, and quality/performance improvement. Faculty and staff at UT Health (including family medicine, internal medicine, obstetrics and gynecology, geriatrics, and pediatrics) will be trained to implement the new residency training.

Goal and Relationship to Regional Goals:

Project Goal:

To update primary care training programs to include organized care delivery models, with an emphasis on team-based practice, quality and cost control.

This project addresses the following regional goals:

Among the goals of the region is to "transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes, reduces unnecessary or duplicative services, and builds on the accomplishments of our existing health care system". By reorienting the education of physicians, this project will produce a new generation of physcians that better appreciate the importance of team care, patient focus, and role of care coordination in achieving satisfactory outcomes.

Challenges:

Need: 1) Shortage of primary care physicians trained in team-based models of care, such as the medical homes model.

Implementation: 1) Training for the trainers. 2) Attracting physicians to primary care.

This project will ensure that physicians trained in family medicine, internal medicine, obstetrics and gynecology, geriatrics, and pediatrics will be prepared to deliver coordinated care in institutions using the "new primary care model" or medical home model, thereby giving the population access to care teams better suited to attend to their needs. Training for attending physicians will be provided as a part of UTHealth's transition to a medical home model of practice and the necessary support given during and after the transition by putting in place monitoring, quality control, and evaluation systems. Since the study of medical students reaction to their training showed that they valued training that better prepared them for this type of practice experience, we expect that this program will be attractive to future physicians.

5-Year Expected Outcome for Provider and Patients:
