Regional Healthcare Partnership 3 – Health Navigation Station

Have you ever wondered if there is an easier, more efficient way to find healthcare services to meet your patient's needs? Developed for this purpose, the Health Navigation Station (HNS) is a collaborative project by the Regional Healthcare Partnership 3 Patient Navigation Cohort and OneStar Foundation.

The Health Navigation Station (HNS) is an online, easy-to-use, Patient Navigation tool with a search engine specifically designed for patient/client navigation staff, health service providers, and health administrators. It contains healthcare services provided by hospitals, health clinics, and physicians from participating providers in Region 3 healthcare systems. Using a set of specifically designed questions, this tool allows users to conduct customized searches in a patient's neighborhood and according to type of specialty or health service needed, insurances accepted or clinic type. With a few clicks of a button, you can create a list of clinics tailored to your patient's needs; email, print or export results, or even view clinics on the Texas Connector mapping platform. This generator was designed with you in mind to make valuable changes in the manner health services are discovered, by bringing together Region 3 healthcare systems to work in partnership to make these services more easily accessed. **The HNS is available at no cost for users in Region 3 until September 30, 2016. Visit www.texasconnects.org and sign up for a free account to try the HNS today.**
