Please note that a contact designated "Lead Contact" will be included in the RHP Plan and on the DSRIP Provider Distribution List. A contact designated as "Both" will be included in the RHP Plan, on the DSRIP Provider Distribution List, and will be given access to the DSRIP Online Reporting System.

Section 3: Optional Withdrawal From DSRIP

Please select an option below. By selecting "Yes - Withdraw from DSRIP," this organization acknowledges it understands that any DY6 DSRIP payments will be recouped as required by the DY6 Program Funding and Mechanics Protocol. This does not include recoupment of DY4-5 payments that may have occurred in DY6 due to allowable carryforward.

Do Not Withdraw from DSRIP]
Section 4: Performing Provider Overview	
Performing Provider Description:	As the medical group practice of McGovern Medical School, UT Physicians is a national leader in the delivery of integrated, personalized care, with many of our doctors listed among the "Best Doctors in America." With more than 1,500 providers certified in 80 medical specialties and subspecialties and more than 100 clinic locations, UT Physicians provides multi-specialty care for the entire family. Our community based clinics are located throughout Harris and Fort Bend counties. Our care specialties include: family medicine, pediatrics, internal medicine, behavioral health, adult and pediatric psychiatry, cardiology, endocrinology, pulmonary, allergy/immuology, obstetrics/gynceology. Since Demonstration Year 3, we have implemented 22 DSRIP projects to improve access to primary and specialty care, using a patient-centered approach. We provide approximately 300,000 encounters annually. To address the high levels of uninsured among low-income Texans, UT Physicians instituted a financial assistance program in order to make healthcare affordable to all. Through our DSRIP projects, we provide our patients with access to evening and weekend appointments, access to a 24/7 nurse triage phone line, care coordination, medication management, integrated primary and behavioral healthcare, and patient education. To continue to expand patient care, ware instituting a medical-legal partnership that will address social determinants of health and will also add telehealth programs to our community based clinics to serve patients in the communities where they live.
Г	UT Physicians employs a patient-centered model of care that provides high quality, evidence-based care to all patients; coordinates healthcare across
Overall DSRIP Goals:	the medical neighborhood; increases access through enhanced technology; and empowers patient to be active partners in care. To that end, through multidisciplinary care teams and ongoing quality improvement activities, UT Physicians is committed to implementing chronic disease management interventions that improve health outcomes for diabetic and hypertensive patients. This also includes preventing disease sequelae and reducing unnecessary utilization for emergency care. Preventive care, including immunizations, wellness visits, disease testing, and cancer screening are an important part of primary care services for Texans. We will continue to provide care coordination for pediatric, pregnant, and adult Texans under the patient-centered medical home model. For the last several years, we have co-located physical and behavioral health so that screening and treatment of high risk patients occur in an integrated setting. UT Physicians will continue managing behavioral health patients in a primary care setting including focusing on depression and ADHD. Using the integrated model, both primary care providers and behavioral health specialists will share timely updates and treatment plans for shared patients.
Alignment with regional community needs assessment:	The 2017 regional community health needs assessment (CHNA) showed that the funding and implementation of DSRIP programs have made several improvements in the health of residents living in our region. Since DSRIP began in Texas, we improved access to primary and specialty care, evidenced by the addition of more than 2.800 primary care and specialty care providers from 2012-2016. The region has also seen decreases in adult smokers from 18% in 2013 to 15% in 2017. A similar reduction in preventable hospital stays for ambulatory-care sensitive conditions among Medicare enrollees occurred between 2012 and 2016. However, Region 3 still has significant unmet needs that we will address during DY7-10. There remains significant gaps in care related to behavioral health, teen pregnancy and births, and high prevalence of chronic disease and poor overall health. The CHNA also cites insufficient access to care, inadequate transportation options for individuals needing health care, inadequate education and services to provide support for healthy environments and health outcomes of an ever growing and more diverse population. UT Physicians has made strides to improve maternal health, behavioral health, and prevention/management of chronic diseases. Since program inception, we have transformed health care delivery by diversifying our workforce. We have added community health workers, case managers, social workers, clinical pharmacists, and community health education specialists. These additional roles allow each clinician to work at the top of his/her license while supporting traditional providers to comprehensively address most factors influencing patient health. For example, to improve the education via certified diabetes educators and community health education specialists, and medication education and management via clinical pharmacists.
Section 5: DY7-8 DSRIP Total Valuation	
	DY7-8 DSRIP Valuation Distribution

Section 1: Attributed Population

Attributed Population for Physician Practice affiliated with an Academic Health Science Center (AHSC) For Hospital organizations and Physician Practices, the DSRIP attributed population includes individuals from the DSRIP system defined in Category B that meet at least one of the criteria below. Individuals do not need to meet all or

multiple criteria to be included.

a. Medicaid beneficiary attributed to the Performing Provider during the measurement period as determined by assignment to a primary care provider (PCP), medical home, or clinic in the performing providers DSRIP defined system OR

o. Individuals enrolled in a local coverage program (for example, a county-based indigent care program) assigned to a PCP, medical home, or clinic in the performing providers DSRIP defined system OR c. One preventive service provided during the measurement period (Includes value sets of visit type codes for annual wellness visit, preventive care services - initial office visit, preventive care services - established office visit,

preventive care individual counseling) OR

d. One ambulatory encounter during the measurement year and one ambulatory encounter during the year prior to the measurement year OR e. Two ambulatory encounters during the measurement year OR

Other populations managed with chronic disease in specialty care clinics in the performing providers DSRIP defined system

g. One emergency department visit during the measurement year OR h. One admission for inpatient or observation status during the measurement year OR

One prenatal or postnatal visit during the measurement year OR One delivery during the measurement year OR

. One dental encounter during the measurement year OR

Enrolled in a palliative care or hospice program during the measurement year

Please describe any other attributed population (optional). Our a

Please describe your rationale for selecting this Measure Bundle, and describe the primary system components (clinics, facilities) that will be used to report on and drive improvement in this Measure Bundle.

Hepatitis C is the most common chronic blood-borne pathogen in the U.S. and is a leading cause of complications from chronic liver disease. Approximately 1.6% of noninstitutionalized individuals in the U.S. have hepatitis C antibodies, indicating current or prior infection. There were an estimated 16,000 new cases of hepatitis C infection in 2009 and 15,000 deaths in 2007. Hepatitis C accounts for more than 30% of liver transplant cases in U.S. adults. Hepatitis C also accounts for about one half of the rising incidence of hepatocellular carcinoma.

Aany individuals with chronic hepatitis C infection are unaware of their condition. Considering the high accuracy of the screening test and the availability of effective

yearly basis throughout the greater H Hepatitis C presence in our patients, t the Extension for Community Healthc patients live. A team of liver specialis who in turm will treat their own patien capacity to provide hepatitis C treatm	ouston area, there is great opport hus, this is an opportunity to build are Outcomes (ECHO) model (http ts will use live videoconferencing tts for hepatitis C. mprovement in this Measure Bundle. JT Physicians is a physician practice that provides multi-specialty patient-centered care in ambulatory, outpatient settings. The 2017 RHP3 community needs assessment reports that the State of Texas has the fourth highest birth rate and fifth highest pregnancy rates among teenage girls, ages 15-19. UT Physicians mplemented a comprehensive DSRIP project to improve maternal care and has been successful in improving maternal health outcomes during DY4-DY6. Specifically, a arger proportion of our female post-partum patients are receiving follow-up visits and care coordination. Other aspects of our existing maternal health program assess and provide preconception and postpartum contraceptive counseling, behavioral health support, and support for intimate partner violence. We are confident that we can apply the best practices and lessons learned during the first six years of DSRIP to create improvements in maternal health across our system.

The primary system components that Locations include: Bayshore, Bellaire,			ty and specialty community-based clinics that serve C erg and UT Professional Building.)b/Gyn patients.

increinception in this mechanic bolt and developed integrated services in our clinics as a frontline response to the need for increased access to behavioral health screening, dentification, referral, shared treatment planning and integration meetings. The need for this expansion has been indicated through multiple community needs assessments. For example, the monthly average number of poor mental health days reported in 2012 and in 2015 remains steady (3 per month), a third of local teens report feeling sad every day over a two week period, and service access remains an issue. Texas has a higher proportion of psychiatrists who use a cash only payment system and do not take insurance. The integrated service offerings in our clinics, which include financial counselors, mitigate these barriers while addressing behavioral health needs across the life span. We continue to standardize clinical pathways relative to depression treatment and remission, screening for substance use, and nattention problems in youth across the practice plan.

The primary system components that we select for this measure bundle are our multi-specialty and specialty community-based clinics that serve primary care and behavioral health patients. Locations include: Bay Area Pediatric Associates, Bayshore, Cinco Ranch and Cinco Ranch Pediatrics, Dashwood-Bellaire, Sienna Village, Southwest, Victory, Jensen, Greens, and Heights and UT Professional Building.

Co Section 1: Measure Exemption Requests and Measure Setting System Components Section 1: Measure Exemption Requests and Measure Setting System Components

In order to be eligible for payment for a measure's reporting milestone, the Performing Provider must report its performance on the all-payer, Medicaid-only, and LU-only payer types. Performing Providers may request to be exempted from reporting a measure's performance on the Medicaid-only payer type or the LU-only payer type with good cause, such as data limitations. Note that reporting a measure's all-payer performance is still required to be eligible for payment for a measure's reporting milestone.

UT Physicians is a physician practice that provides community-based, outpatient care to residents throughout Harris. Fort Band, and
UT Physicians is a physician practice that provide patients on an annual basis, with the vast majority consisting of adults aged 18
The statement of the stat

Please address the amount of improvement required for the Messure Bundle() with increased valuation including estimated baseline and goals for key measures that may require high amounts of improvement within the bundle. For the AL bundle, we are sustained the improvement in homolgoin AL accord for diabetic patients achieved over the last several years (A1-115). Some efforts the focus on blood pressure control in diabetic patients (A1-207) would help improve the measure; baseline is 68.95 with a DV7 goal of 25.654 MIE. Auditisciplinary care teams, made up of certified diabete acutors, will support patient self-manageme of diabetes and its complications. We will deploy wide scale training on proper and consistent documentation.

r the C1 bundle, there is room for improvement on every measure. Our estimated baseline for C1-113: Comprehensive Diabetes moglobin (HbAtC) testing is approximately 79.88% with a DYZ goal of meeting MPL which is 82.29%. We will need to work stree prove the testing rates for eligible partient using a multi-method strategy: educate patients, provide patients with follow up ren d educate staff on proper documentation.

the E1 bundle, we will devote significant effort to improving E1-232: Timeliness of Prenatal Care. This measure comprises two rates: tellness of prenatal care and timeliness of postpartum care. Although the American College of Obstetricians and Gynecologists commonds prenatal care within the first timester, approximately 13% of mothers living Houtons receive either no rate prenatal care ds Count data center, 2016). This issue is confounded by the fact that more than half of prepanances in the United States are unintended the may also lead to delays in prenatal care. To improve on this measure, we will use care teams to actively engage with prepanat tents to receive timely prenatal care as soon as they establish care with UT Physicians.

Please address the level of effort required for improvement for the Measure Bundle(s) with increased valuation. The level of effort required for improvement in bundles A1 C1 and E1 is moderate to high. Fortunately, several of our DSBP 10

is an infrastructure of activities that support our measure bundle selections, including quality improvement initiatives. Over the past veral years, we strengthened our care coordination efforts with the establishment of care teams that will support the work needed to outcomes of our selected measure bundles.

Please describe the size of the population impacted as compared to the size of other selected Measure Bundle(s) for the Measure Bundle(s)

Please describe the size of the population impacted as compared to the size of other selected Measure Bundle(s) with increased valuation. UT Physicians provides care to over 300,000 unique patients each year. The majority of our patients are adults whereas only 23% of our patients are indicent legges 0.17. To reflect the demographics of our patient population, we choose to slightly increase the valuation allocation of A1: Diabetes care, C1: Primary Care Prevention – Healthy Texans, and E1: Improved Maternal Care. Approximately 25% of our adult patients have diabetes; therefore we increased the valuation of the A1 bundle to correlate with our patient's profiles. Approximately 13% of our patients meet the target population for improved maternal care; consequently, we request an increase of the valuation of the E1 howdon.

DY7-8 Provider RHP Plan Update Template - Category A Core Activities

Section 1: Transition from DY2-6 Projects to DY7-8 Provider-Level Outcomes and Core Activities Section 2: Core Activities

All Selected Measure Bundles/Measures Associated with at Least One Core Activity

Performing Provider Information

RHP:

TPI and Performing Provider Name: Performing Provider Type: Ownership: 3 111810101 - Unv of Tx HSC at Houston-UTHSC Sponsored Projects Physician Practice affiliated with an Academic Health Science Center (AHSC) Non-State Owned Public

Section 1: Transition from DY2-6 Projects to DY7-8 Provider-Level Outcomes and Core Activities

DY6 Project ID	Project Option	Project Summary	Completed/ Continuing	Enter a description for continuation (optional)
RHP 3_111810101.1.1	1.1.2	Expand primary care specialty at each of its 4 outlying clinics. Space will be purchased for additional consulting, exam and procedure rooms. Additional providers and support staff will be added to provide primary care services, and the hours of service will be extended, including evenings and Saturdays.	Continuing as Core Activity in DY7-8	Through this project, the UT Physicians community based clinics (CBCs) at Bayshore, Bellaire-Dashwood, Cinco Ranch and Sienna Village, will continue to improve access to comprehensive, integrated and coordinated primary care services that are focused on patient-centered preventive care. Also, the UT Physicians CBCs will continue to promote and expand access to care by providing patients with scheduling options on evenings and Saturdays, a 24/7 continuous access to a Nurse Triage Line and, the UT Physicians patient portal. A multitude of primary care services, including provision of screenings and vaccinations to target population, will contribute to the achievement of clinical outcomes and immunization measures included in C1 and D1 measure bundles, as well as cancer screening measures included in the C2 measure bundle. In addition, these CBCs will continue to provide integrated physical and behavioral services which will help to improve the measures listed in the
RHP 3_111810101.1.10	1.9.2	Recruit specialists for the new primary care clinic in North Harris County. The new primary care clinic's service hours will be extended to provide evening and weekend appointment options, which will be covered by the UTP specialty services as well. Standardized referral systems will be put in place to ensure access to these specialists.	Continuing as Core Activity in DY7-8	UT Physicians will maintain providers and support staff to continue providing specialty care services in the Heights and Greens clinics. Services offered will include cardiology, endocrinology, pulmonary and rheumatology. We will also continue to provide obstetrics/gynecology and gastrointestinal services. The two clinics will continue to provide patients with access to extended weekday and weekend appointments and, a 24/7 nurse triage line. The continuation of this project will contribute to our success in achieving some of the clinical outcomes contained within the DY7 and DY8 measure bundles. The specialty care project will allow us to address measures in A1 measure bundle through our endocrinologists.
RHP 3_111810101.1.2	1.2.1	Train residents in the "new primary care" model that is capable of staffing enhanced medical homes.	Completed in DY2	
RHP 3_111810101.1.3	1.2.2	Partner with Gateway to Care, Harris Health System, and UT Physicians to increase the number of certified CHWs in the region (currently approx 500) and respond to specific continuing education needs. In addition, providers and clinic staff will be trained on how to integrate CHWs as members of the health care team.	Continuing as Core Activity in DY7-8	During DY2-6, this project focused on increasing the number of certified community health workers (CHWs) in the region, provided specific continuing education needs identified by providers and CHWs and trained providers and clinic staff on how to integrate CHWs as members of the health care team. Moving forward, we continue to provide skilled CHWs across clinics to assist in achieving the region's goal to transform health care delivery from a disease-focused model of episodic care to a patient-centered, coordinated delivery model that improves patient satisfaction and health outcomes.

RHP 3_111810101.1.4		Data entered into a unique chronic disease registry will be use to proactively contact, educate, and track pts by disease status, risk status, self management status, community and family need. Reports drawn from the registry will be used to develop and implement targeted quality improvement plans for diabetes, hypertension, asthma, COPD, and CHF.	Continuing as Core Activity in DY7-8	The Chronic Disease Registry (CDR) will continue to be employed as a tool for staff and providers to track and manage patient populations with one or more chronic disease/s. Case managers as well as other staff use the CDR to reach out to patients with care gaps in order to prevent complications as well as emergency care utilization. The CDR will have its greatest impact on the metrics in bundles A1 (Chronic Disease Management: Diabetes Care) as diabetes is one of the six chronic conditions currently tracked in the CDR. In order to ensure that the CDR continues to successfully serve DSRIP and organizational aims, the CDR team will assess ways to modify the software so that some of the new Category C metrics can be tracked and impacted.
RHP 3_111810101.1.5	1.6.2	Expand access to medical advice and guidance to the appropriate level of care in order to reduce emergency dept use for non-emergent conditions by implementing a nurse-line medical triage call center that will be staffed 24/7/365.	Continuing as Core Activity in DY7-8	The principal objective of the Nurse Triage line is to reduce utilization of the emergency department by either scheduling same day appointments with a UT provider or by servicing patients with non-emergent medical needs by providing sound home care advice to self-treat health conditions. This supports the Primary Care services core activity of Expanding Practice Access by providing services, both during and beyond clinic hours, including 24-hour medical advice and education services, answers to health related questions, home care advice, scheduling of urgent/sick appointments and addressing concerns regarding the effects of medication.
RHP 3_111810101.1.6	1.1.1	Establish a new primary care clinic in the Northwest area of Houston. Space will be acquired for additional consulting, exam and procedure rooms. Additional providers and support staff will be added to provide primary care services, and the hours of service will be extended, including evenings and Saturdays	Continuing as Core Activity in DY7-8	Through this project, UT Physicians at the Heights Clinic will continue to address the inadequate access to primary care and high rates of inappropriate emergency department utilization for our target population. This project provides quality access to comprehensive and coordinated primary care services focused on patient- centered preventive care for adult and pediatric patients. Additionally, our patients will continue to have access to: extended weekday and weekend appointments, a 24/7 nurse triage line and a care coordination team which includes a case manager, social worker and community health worker. A multitude of primary care services including provisions of screenings and vaccinations to our target population, will contribute to the achievement of clinical outcomes and immunization measures included in C1 and D1 measure bundles, as well as cancer screening measured including in the C2 measure bundle. In addition, this clinic will continue to provide integrated

RHP 3_111810101.1.7	1.9.2	Recruit specialists for outlying clinics. Clinic service hours will be extended to provide evening and weekend appt. options. Standardized referral systems will be put in place to ensure access to these specialists.	Continuing as Core Activity in DY7-8	UT Physicians will maintain providers and support staff to continue providing specialty care services in the four outlying clinics: Bayshore multispecialty, Dashwood multispecialty, Cinco Ranch and Sienna Village clinics. Services offered will include cardiology, endocrinology, pulmonary and rheumatology. We will also continue to provide obstetrics/gynecology and gastrointestinal services. The clinics will continue to provide patients with access to extended weekday and weekend appointments and, a 24/7 nurse triage line. The continuation of this project will contribute to our success in achieving some of the clinical outcomes contained within the DY7 and DY8 measure bundles. The specialty care project will allow us to address measures in A1 measure bundle through our endocrinologists.
RHP 3_111810101.1.8	1.10.2	Develop a regional systems engineering center, that will recruit systems engineers to integrate with healthcare QI teams to cross train by applying systems engineering science to healthcare processes and develop interdisciplinary courses for health professional, students, engineers and administrative healthcare leadership.	Completed in DY2- 6	
RHP 3_111810101.1.9	1.1.1	Establish the North Harris County Primary Care Clinic. Space will be leased to open the clinic.	Continuing as Core Activity in DY7-8	Through this project, UT Physicians Greens Clinic will continue to address the inadequate access to primary care and high rates of inappropriate emergency department utilization for our target population. This project provides quality access to comprehensive and coordinated primary care services focused on patient- centered preventive care for adult and pediatric patients. Additionally, our patients will continue to have access to: extended weekday and weekend appointments, a 24/7 nurse triage line and a care coordination team which includes a case manager, social worker and community health worker. A multitude of primary care services including provisions of screenings and vaccinations to our target population, will contribute to the achievement of clinical outcomes and immunization measures included in C1 and D1 measure bundles, as well as cancer screening measured including in the C2 measure bundle. In addition, this clinic will continue to provide integrated
RHP 3_111810101.2.1	2.1.3	The UT medical homes will include services in the areas of dentistry, women's' health, maternal-fetal health, trauma and rehabilitation, sports medicine/ orthopedics, behavioral & mental health, cardiovascular diseases, neurosciences, pediatrics and geriatrics. This Multispecialty Physician Group will provide an extensive network of specialty support centers for primary care providers, built on the concept of an "advanced medical home". Patients will be assigned to a primary care provider within the UT Physicians system of primary & specialty care physicians.	Continuing as Core Activity in DY7-8	The patient-centered medical home (PCMH) project will continue as a core activity as it is UT Physicians' model of comprehensive primary care delivery. As more primary care clinics employ this model and pursue PCMH recognition through the National Committee for Quality Assurance, it is critical to continue developing coordinated services for medically complex patients delivered by multidisciplinary care teams. Services such as pre-visit planning, self-management support, disease education, empanelment, care transitions, and integrated resource referrals are important components to this core activity. These services, and others, will help improve clinical outcomes outlined in the diabetes (A1) measure bundle.

RHP 3_111810101.2.2	2.2.1	The outpatient delivery system of UT Physicians will be redesigned to coordinate care for patients with chronic diseases (asthma, CHF, COPD, diabetes and hypertension), based on Wagner's chronic care model.	Continuing as Core Activity in DY7-8	The chronic care coordination program will continue as a core activity to support UT Physicians' provision of chronic care management services, including education in chronic disease self-management, to the target population. Disease-specific protocols and services help to support high- risk patients meeting care goals, including transitioning patients back to the patient- centered medical home after unplanned ED visits and hospitalizations. Delivered by a multidisciplinary care team, evidence-based care management such as care planning, chronic disease education, monitoring, and psychosocial support, will target diabetic and hypertensive patients, and those who have congestive heart failure and angina. In this way, this program can positively impact achieving measure bundle A1.
RHP 3_111810101.2.3	2.9.1	Target pts at high risk of disconnect from institutionalized health care; specifically, patients admitted to Memorial Hermann Hospital-TMC, and/or potentially other health systems in our region, who do not have a primary care provider. Care navigators will support these pts to navigate through the continuum of health care services.	Completed in DY2 [.] 6	
RHP 3_111810101.2.4	2.10.1	Patients admitted to any adult or pediatric ICU at Memorial Herman Hospital-TMC who are at high risk of death in or soon after hospitalization will receive a palliative care consultation to supplement their clinical therapy and assist in determination of goals of care which may include transitioning the patients from acute hospital care into home care, hospice or a skilled nursing facility.	Completed in DY2 6	
RHP 3_111810101.2.5	2.11.1	Implement a technologically driven patient-centered medication therapy management program. Allscripts analytics tool will enable staff to identify pts at high risk for developing complications and co-morbidities, and pts that have not refilled their medications	Continuing as Core Activity in DY7-8	The medication therapy management program will continue as a core activity to support UT Physicians' provision of chronic care management services, including education in chronic disease self- management, to the target population. The program will expand his scope with the utilization of pharmacist-led chronic disease medication management services through the implementation of Collaborative Drug Therapy Management agreements between clinical pharmacist(s) and primary care providers. The continuation of the medication management program will contribute to improving management of diabetes, heart disease and comorbidities, as well as improving health outcomes and quality of life, preventing disease complications, and reducing unnecessary ED utilization. Therefore, the program will help to address and improve some of the clinical outcome measures included in the A1 measure bundle.
RHP 3_111810101.2.6	2.12.2	Implement a comprehensive transitions of care program which will ensure that pts have an appt for follow-up with an appropriate physician(s) prior to leaving the hospital, understand their discharge medications and other instructions and are followed up post discharge.	Completed in DY2 [.] 6	
RHP 3_111810101.2.7	2.15.1	Implement and evaluate a project that will integrate primary and behavioral healthcare services within UT Physicians' clinics to achieve a close collaboration in a partly integrated system of care (Level IV). A behavioral health provider will be placed in the primary care setting to provide patients with behavioral health services at their usual source of health care.	Continuing as Core Activity in DY7-8	During DY2-6, this project focused upon a building and establishing an integrated care service line. In this time, we have established protocols for documenting behavioral health screening, referrals, and developed integrated treatment plans. Moving forward, we continue to standardize pathways across clinics and intensify interdisciplinary collaboration efforts. This project has laid the foundation for our selection of the H1 bundle focused on integration of behavioral health in a primary or specialty care setting.
RHP 3_111810101.2.8	2.15.1	Implement and evaluate a project that will integrate primary and behavioral healthcare services for children and adolescents within UT Physicians' clinics to achieve a close collaboration in a partly integrated system of care (Level IV). A pediatric behavioral health provider will be placed in the primary care setting to children and adolescents with behavioral health services at their usual source of health care.	Continuing as Core Activity in DY7-8	During DY2-6, this project focused upon a building and establishing an integrated care service line. In this time, we have established protocols for documenting behavioral health screening, referrals, and developed integrated treatment plans. Moving forward, we continue to standardize pathways across clinics and intensify interdisciplinary collaboration efforts.

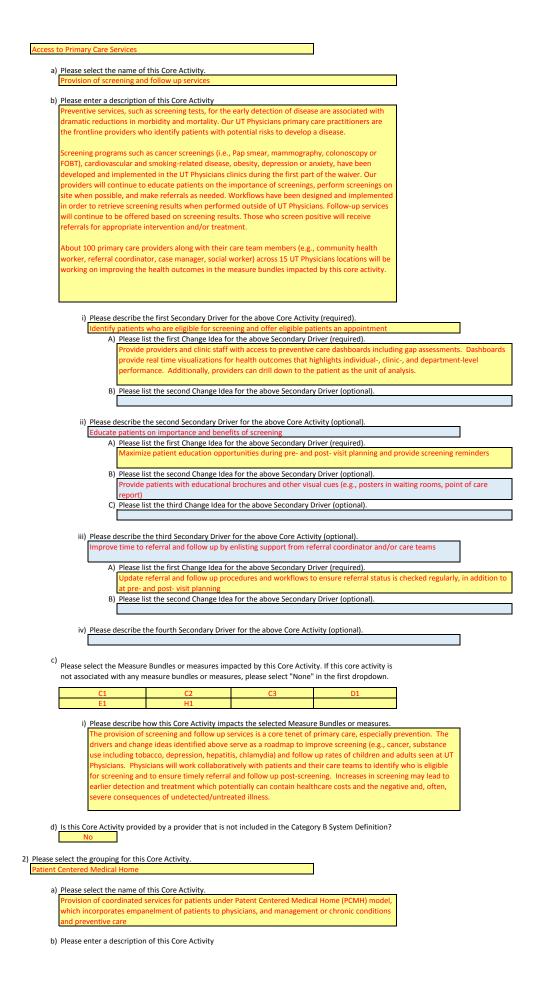

RHP 3_111810101.1.100	1.12.2	The program will expand capacity and access to Trauma Informed care (TIC)		
		mental health services for children and adolescents and will conduct mental health assessments, and provide a number of interventions with a particular focus on addressing trauma in underserved children. The TIC primary intervention offered will include Trauma-Focused Cognitive Behavioral Therapy (TF-CBT), an evidence-based practice and general counseling (such as Cognitive Behavioral Therapy). In order to expand access and capacity, these interventions will be anchored in DePelchin satellite clinics in proximity to several areas of socioeconomic need and will then progressively expand to community settings such as schools and primary care clinics. Developing a telemedicine capability for children in Foster Care.	Completed in DY2 6	
RHP 3_111810101.1.101	1.1.1	This project seeks to establish a prevention and wellness community health center (CHWC) in a low income areas in our region along with the provision of wellness services provided by ACPs. This center will operate using expanded hours that include evening and weekend hours. The center will be well integrated with existing resources in the community. Community leaders and stakeholders will be included in identifying gaps and priority services needed, as well as in the planning and implementation of support services	Continuing as Core Activity in DY7-8	UT Physicians - Southwest will continue to improve access to comprehensive, integrated and coordinated primary care services that are focused on patient- centered preventive care. Our patients also have access to: expanded evening and Saturday hours, a 24/7 Nurse Triage Line, and health education and wellness programs. A multitude of primary care services including provision of screenings and vaccinations to target population which will contribute to the achievement of clinical outcomes and immunization measures included in C1 and D1 measure bundles, cancer screening measures included in the C2 measure bundle and the hepatitis screening and vaccination measures in the C3 bundle. In addition, UT Physicians - Southwest will continue to provide integrated physical and behavioral services which will help to improve the measures listed in the H1 measure bundle.
RHP 3_111810101.2.100	2.7.4	UTP will implement four evidence-based interventions that will ensure that women receive quality preconception, prenatal, intrapartum, postpartum, and interconception care. These interventions include: 1) the CHOICES Plus program for women at-risk of alcohol- and/or tobacco-exposed pregnancies and women who are obese, 2) care coordination for pregnant women and/or care navigation for women having received minimal or no prenatal care, 3) home visits during pregnancy and postpartum period using evidence-based and piloted home visitation program, and 4) nutrition and physical activity promotion programs – A Legacy of Health (Un Legado de Salud) and The Happy Kitchen (La Cocina Alegre [®]).	Continuing as Core Activity in DY7-8	During DY2-6, this project focused on implementing four evidence-based interventions in clinics that serve a population of women with high rates of risk factors for adverse pregnancy outcomes, including low income status, lack of health insurance, high rates of chronic disease, and high prevalence of smoking, alcohols abuse, and obesity. Moving forward, we'll continue to provide these services to deliver comprehensive preconception, prenatal, postpartum, and interconception care that includes health promotion and psychosocial intervention to improve birth outcomes as it has laid the framework to achieve outcomes in the E1: Improved Maternal Care bundle.
RHP 3_111810101.2.101	2.1.2	The UT medical homes for post-detention adolescents and at-risk youth will provide all medical and psycho-social services for this population. Our innovative program involves facilitating access to the medical home by assisting youths and their guardians in arranging clinic visits, transportation, overcoming language barriers, and other challenges that may interfere with clinic visits.	Continuing as Core Activity in DY7-8	This project will continue as a core activity to support UT Physicians' provision of medical and psycho-social services to the pediatric and adolescent population. The teen clinic will continue to expand patient access to primary care services and promote wellness through the following activities: provision of a 24/7 nurse triage line, conducting of preventive screenings, coordination of primary care and behavioral health services, and implementation of evidence-based strategies to prevent obesity and decrease risky behavior. The continuation of this project will support the achievement of clinical outcomes and immunization measures included in the D1 measure bundle through the provision of weight assessments, counseling for nutrition and physical activity, adolescent well-care visits and provision of immunizations. Similarly, the project will contribute to the achievement of measures contained in the H1 measure bundle through provision of screening and counseling for unhealthy unabel use.

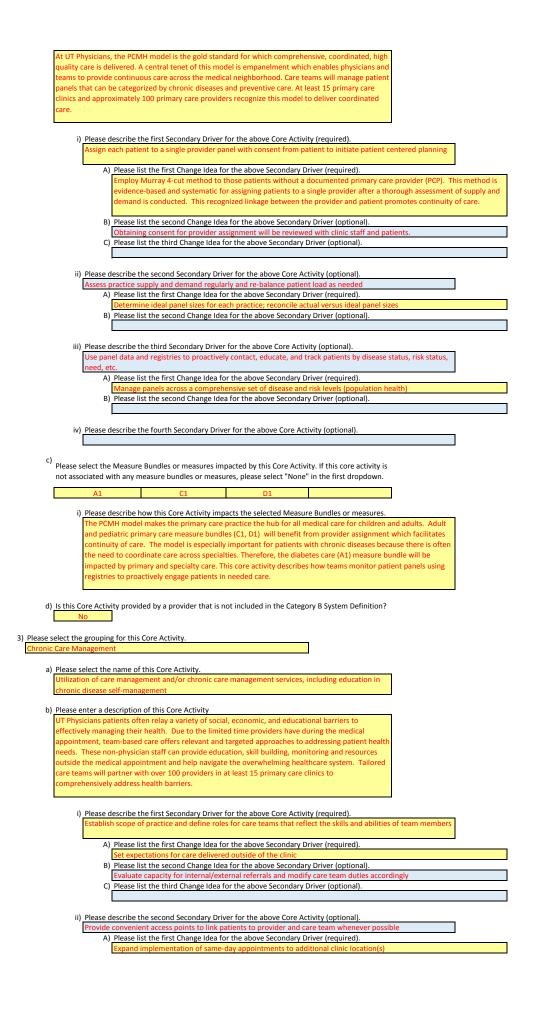

Section 2: Core Activities

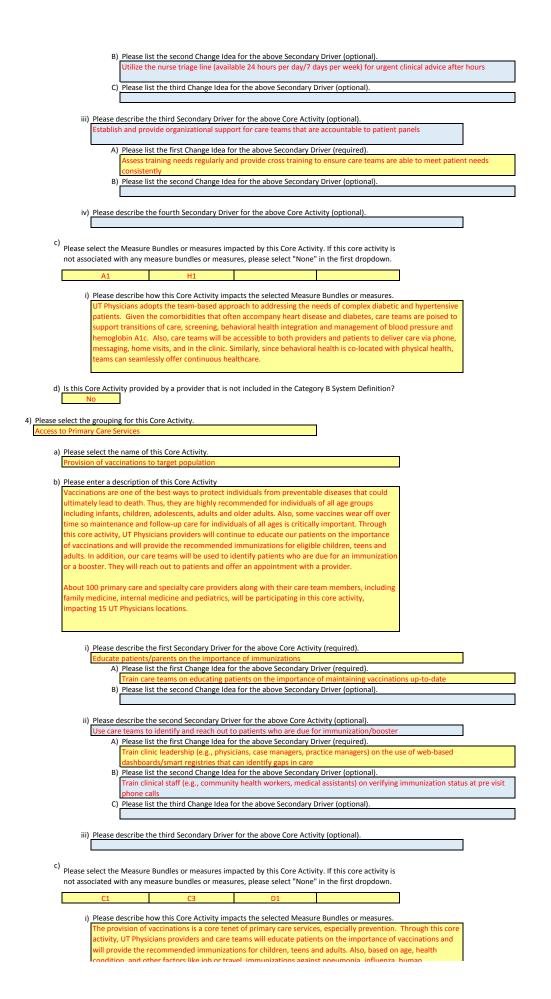

Please enter your organization's number of Core Activities:

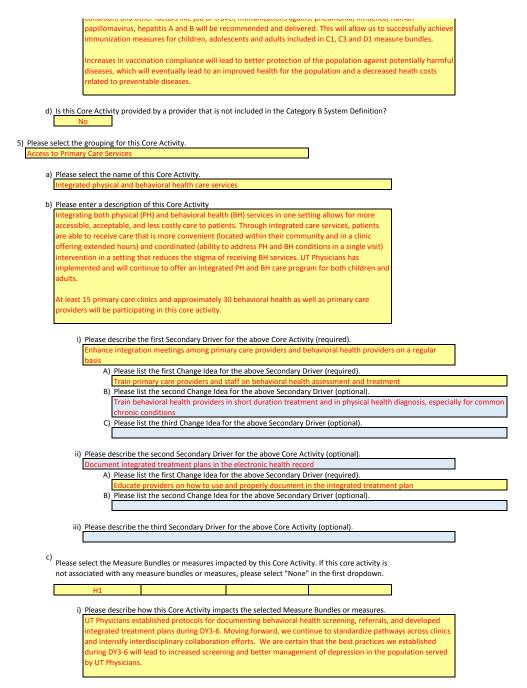

1) Please select the grouping for this Core Activity.

5

d) Is this Core Activity provided by a provider that is not included in the Category B System Definition?

Urinary Tract Infection Admission Rate	\$1,059,702.31	\$353,234.10
Uncontrolled Diabetes Admission Rate	\$1,059,702.31	\$353,234.10
Asthma in Younger Adults Admission Rate	\$1,059,702.31	\$353,234.10
Lower-Extremity Amputation among Patients with Diabetes Rate	\$1,059,702.28	\$353,234.13

How do your selected Core Activities impact the Prevention Quality Indicators (PQIs) listed above?

Our core activities focus on long term disease management provided under the patient-centered medical home model. Multidisciplinary care teams prioritize chronic disease patients, such as those with hypertension, diabetes, or respiratory conditions, with self-management education, follow-up and support as they transition from acute care back to the outpatient setting. Considering our scope of practice, our efforts may contribute to improvements in the admission rates for the following Prevent Quality Indicators: Diabetes Short-Term Complications, Diabetes Long-term Complications, COPD or Asthma, Hypertension, Heart Failure, Low Birth Weight, and Uncontrolled Diabetes.

Section 2: Verification

Please indicate below that you understand that Category D reporting requires qualitative reporting and data will be provided by HHSC as indicated in the Measure Bundle Protocol.

Do you confirm the information in this section and acknowledge the understanding of limited allowed changes as described in the Program Funding and Mechanics Protocol and Measure Bundle Protocol?

Yes

Section 4: Category A Core Activities Associated with Category C Measure Bundles/Measures

Bundle-Measure ID

Measure Bundle/Measure Name

Associated Core Activities

A1	Improved Chronic Disease Management: Diabetes Care	
C1	Primary Care Prevention - Healthy Texans	
C2	Primary Care Prevention - Cancer Screening	
C3	Hepatitis C	
D1	Pediatric Primary Care	
E1	Improved Maternal Care	
H1	Integration of Behavioral Health in a Primary or Specialty Care Setting	

Do you confirm the information in this section and acknowledge the understanding of limited allowed changes as described in the Program Funding and Mechanics Protocol and Measure Bundle Protocol?

Section 5: Category D Valuations

Statewide Reporting for Physicians Practices

Yes

Measure	Category D valuation per DY distributed across measures (if regional hospital participation requirement is met)	Category D valuation per DY distributed across measures (if regional hospital participation requirement is <u>not</u> met)
Diabetes Short-term Complications Admission Rate	\$1,059,702.31	\$353,234.10
Perforated Appendix Admission Rate	\$1,059,702.31	\$353,234.10
Diabetes Long-term Complications Admission Rate	\$1,059,702.31	\$353,234.10
Chronic Obstructive Pulmonary Disease (COPD) or Asthma in Older Adults Admission Rate	\$1,059,702.31	\$353,234.10
Hypertension Admission Rate	\$1,059,702.31	\$353,234.10
Heart Failure Admission Rate	\$1,059,702.31	\$353,234.10
Low Birth Weight Rate	\$1,059,702.31	\$353,234.10
Dehydration Admission Rate	\$1,059,702.31	\$353,234.10
Bacterial Pneumonia Admission Rate	\$1,059,702.31	\$353,234.10
Urinary Tract Infection Admission Rate	\$1,059,702.31	\$353,234.10
Uncontrolled Diabetes Admission Rate	\$1,059,702.31	\$353,234.10
Asthma in Younger Adults Admission Rate	\$1,059,702.31	\$353,234.10
Lower-Extremity Amputation among Patients with Diabetes Rate	\$1,059,702.28	\$353,234.13

Do you confirm the information in this section and acknowledge the understanding of limited allowed changes as described in the Program Funding and Mechanics Protocol and Measure Bundle Protocol?

Section 6: Certification

By my signature below, I certify the following facts: • I am legally authorized to sign this document on behalf of my

organization;

• I have read and understand this document:

• The statements on this form regarding my organization are true, correct, and complete to the best of my knowledge and belief.
